

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

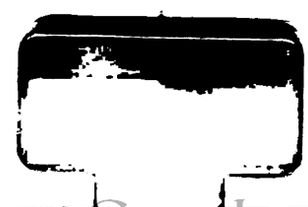
Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.



+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

GRAY & DAVIS

STARTING
LIGHTING
IGNITION

QUALITY STRENGTH ACCURACY

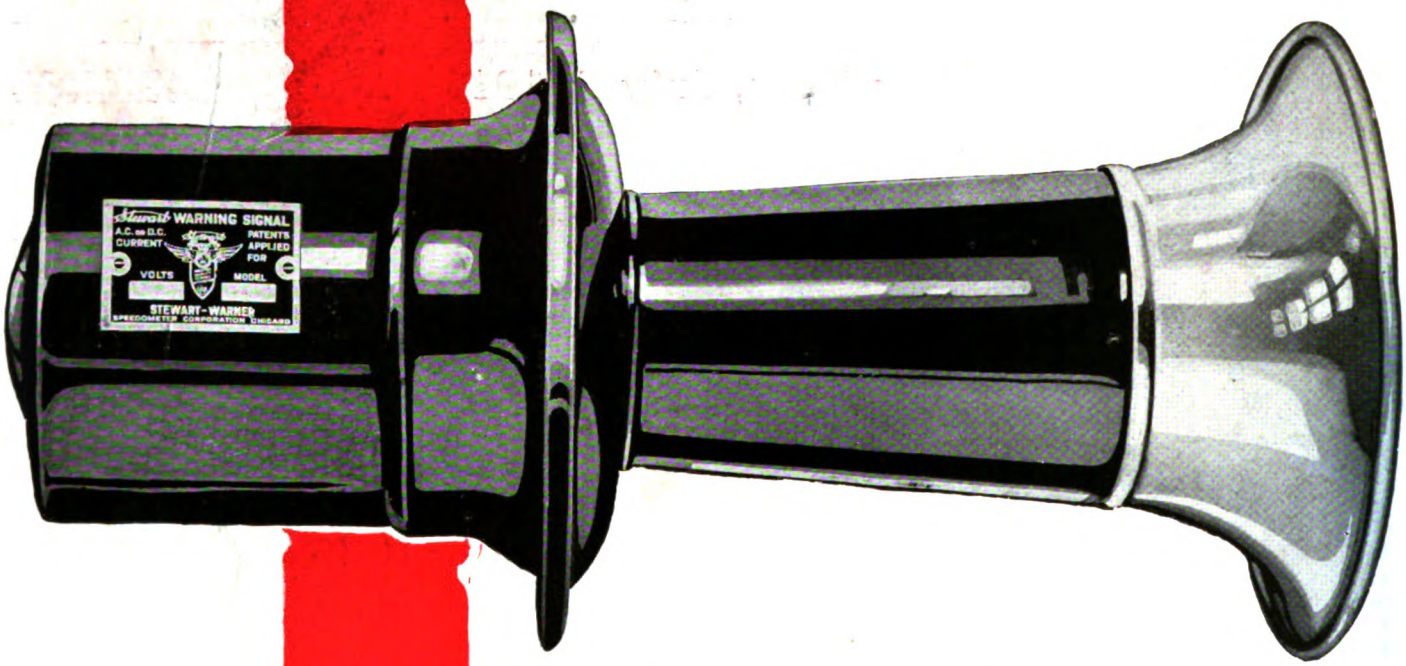
AS the Light House, *founded on a rock*, throws its distant beam in calm or storm, so Gray & Davis starting and lighting units, *built fundamentally right*, give uninterrupted service.

QUALITY. The frames are formed from flat bars of soft high grade dynamo steel. The ends are electrically welded together.

STRENGTH. The commutator end bracket is formed into channel section of tough steel for *added* strength. The frame and brackets are then fashioned into one piece by electric welding, thus permitting dis-assembling of units without disturbing bearing alignment.

ACCURACY. The units are so designed that all work operations are easily made accurate. The frames, bored in one operation, bring field poles and bearings into absolutely true alignment and give perfect magnetic balance which affords smooth, continuous operation.

This is why Gray & Davis units consume so little of the engine's power.



Every instrument is *the same!* Every instrument is *right!*

GRAY & DAVIS, Inc., Boston, Mass.

Stewart $6

Motor Driven Warning Signal

Some Orders—

Last week we took an order for 10,000 Stewart Warning Signals.

Only a couple of weeks ago we took another order for 40,000.

Several days ago we received one for 8,000.

And so it goes.

The Stewart Warning Signal is the recognized standard signal of the industry.

It has the quality and the "staying powers."

It's the fastest selling signal in America.

Why I am a Studebaker Dealer!

Until three years ago I hadn't realized what an asset I had in the Studebaker agency. At that time I took on another popular and well-advertised car selling at about the same price. In a very short time I began to realize the difference in the business methods of the two concerns. Studebaker has always given me unlimited co-operation and service, and I believe that it has the best car on the market as to quality, appearance and price.

After having been satisfactorily associated with this company for eight years, I am confident that my connection with it safeguards my investment and efforts for years to come.

It Stops the Thief

GOODRICH AUTO SWITCH WITH YALE LOCK FOR FORDS

FORMERLY B. M. FORD SWITCH LOCK

Price
$3.25
Canadian Price $3.75

IT takes the place of the regular Ford ignition switch—its screws fit the screw holes already in the metal coil box.

IT is a Yale Lock which none but the right key can operate.

IT is a switch which when locked in the "off" position cannot be taken off, because the screws which fasten the lock to the coil box are concealed—covered—*protected by a metal shutter.* See diagram illustration above.

IT is a lock that is a switch, a switch that cannot be removed—lock and all. The Yale Key is the switch key.

IT gives perfect, positive protection. It stops the thief.

PLAN!

Digitized by Google

Is Mrs. Smythe Ashamed

to Ride in an

Instalment Payment Car?

Is the prospect ashamed to be seen riding in a car which the public knows can be bought on the Instalment Plan?

Does the advertising of the Instalment Plan cheapen the car that is so sold?

Aside from whether the plan is good or bad, is it wise to advertise it?

MRS. SMYTHE'S CASE

THE Instalment Car may be a perfectly good car and all that, but I wouldn't dare drive down Main Street and let Mrs. Montague see me in it. She would stick up her nose and I never could look her in the face again. And maybe the news wouldn't travel. By the time it got back to me my husband would be on the verge of bankruptcy, we would have a mortgage on our home and the best circles in town would have us classed with these nouveau riche steel mill men and such dreadful persons. The idea! I couldn't think of it!

MRS. NEWLYWED'S CASE

THE Instalment Car is a dandy. John and I probably wouldn't have enjoyed the pleasure of a car for several years if we had not seen the Instalment ad, which told us how we could have a car and pay for it in several payments. The car is fine and we're having no trouble paying for it; anyway, the trouble can't compare with the joy we get out of it. Ashamed of it? I should say not! That false pride is all tommy-rot! What we are we are, and why should we try to make folks think we're rich when we're not?

Dealers in $1000-$1500 Class Express Opinions

ON the time-payment question Motor World sent letters to a selected list of dealers representing every section of the United States and representing cars in the $1,000-$1,500 class. A number of questions were asked in an effort to get a representative opinion on this new factor in the industry. Among the questions was this:

"Are you advertising the time-payment plan? If not, why not?"

The responses were interesting. Quite a number stated that they are advertising the time-payment plan and have encountered no disastrous results.

Others stated that they are not advertising, because it cheapens the car and drives off desirable trade if the time-payment plan is flaunted in the face of the public.

Others asserted that the advertising of time payments tends to check cash business and is undesirable from that standpoint.

It is not to be disputed that a certain class of buyers does not look with favor upon an article that is known as a time-payment article; on the other hand, there are many buyers who are not actuated by such proud motives and who buy from the value standpoint alone.

Also, the class of population served by the dealer must be taken into consideration. While the dealers who have expressed opinions on this question are in the $1,000-$1,500 class, the dealers in the $500-$700 class might not encounter the pride element. Here follow the opinions:

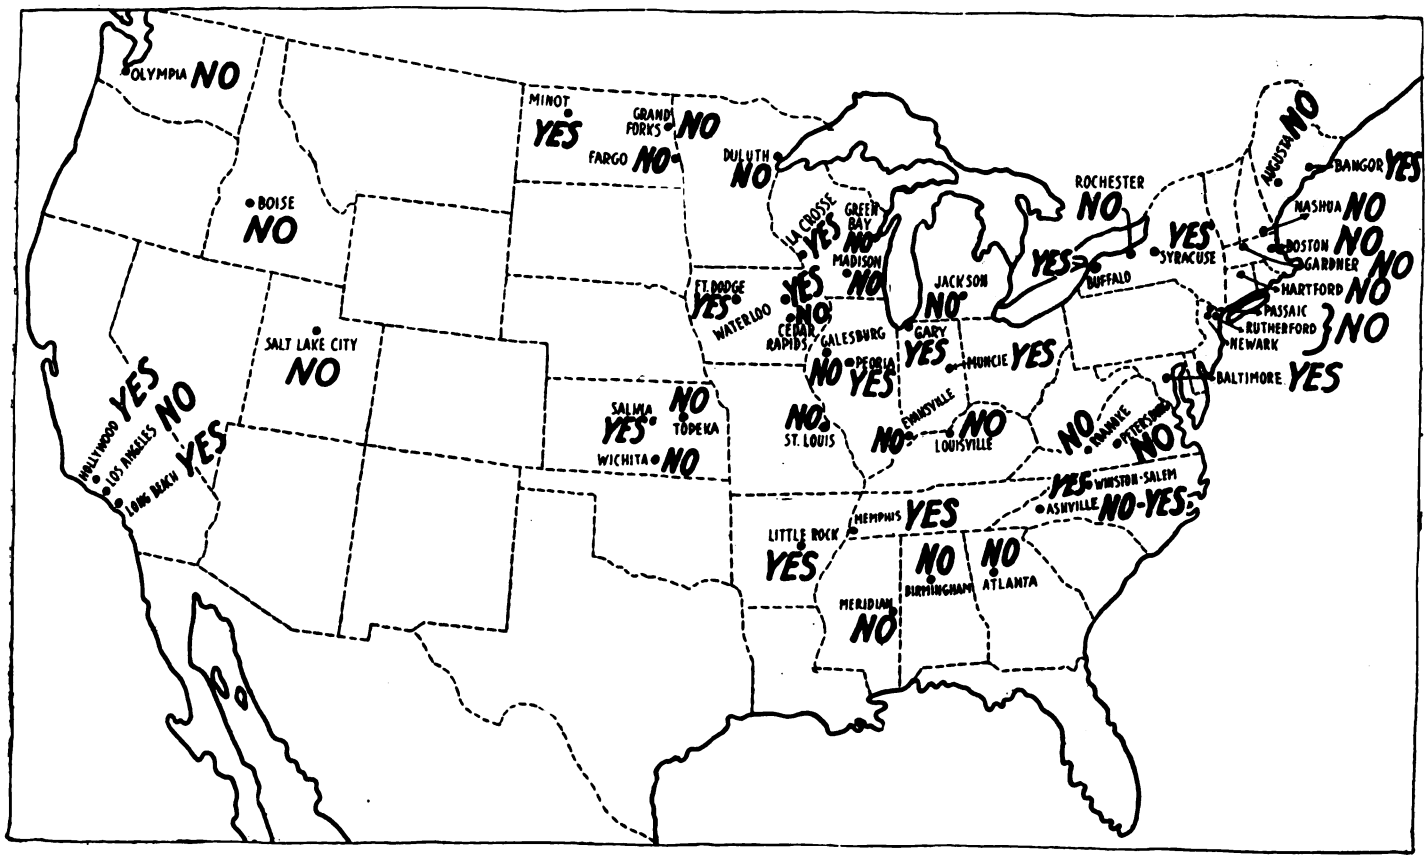
These Dealers Say Advertising Time Payments Tends to Cheapen the Car and Offends Buyers

Cash buyers do not want to buy cars that are advertised on time.—Browning Auto & Supply Co., Salt Lake City, Utah.

Do not believe it best to advertise, because our customers would object.—E. S. Curtice, Meridian, Miss.

We do not think it profitable to advertise. Those who want time are a bit proud and do not want it said that they ride in a car obtained on borrowed cash.—Briscoe Motor Sales Co., Jackson, Mich.

Don't think prospects buying cars want it advertised.—Gardner Auto Co., Gardner, Mass.



It cheapens the article sold.—Bannock Motor Sales Co., Boise, Idaho.

It cheapens the car to advertise time payments.—W. H. Imes & Co., Topeka, Kan.

People do not care to have it known that the cars they drive are sold on time and we handle our own paper and do not wish to increase the time sales.—Overland-Madison Co., Madison, Wis.

If we find a man anxious to purchase a car, and if he doesn't have the full amount and it makes it easier for him to pay part by a note, we take the note, but we do not advertise this plan, for the great majority of our customers are persons who have cash ready.—West Side Garage, Green Bay, Wis.

Digitized by Google

DO YOU ADVERTISE TIME PAYMENTS? The map shows the location of 32 dealers who say No and 18 who say Yes.

Yes! We Advertise the Plan, Say 18 Dealers

At first we were not favorably inclined to the advertising plan, as we believed that a good many people would feel toward it the same as you or I would feel going into a furniture or clothing store that sold on the instalment plan; but we have not experienced any bad effect from this source.—Overland Syracuse Co., Syracuse, N. Y.

Yes.—Waterloo-Overland Co., Waterloo, Iowa.

Yes.—Minot Auto Co., Minot, N. D.

Yes.—We favor the plan.—Ollinger Auto Co., Salina, Kan.

Yes. — Cummings - Rutherford Motor Car Co., Peoria, Ill.

Yes.—Mission Garage, Long Beach, Cal.

Not yet; but intend to advertise from this time on.—Memphis-Overland Co., Memphis, Tenn.

The monthly-payment ads bring in a large class of people who cannot make the first payment nor the following payments, and most of them are undesirable. The farm business is on 90, 180 and 365 days basis and their credit is good and they usually are prompt.—Walnut Auto Co., Muncie, Ind.

Yes.—Eugene Polk, Little Rock, Ark.

Yes.—Overland-Fort Dodge Co., Fort Dodge, Iowa.

Yes.—Overland Buffalo Co., Buffalo, N. Y.

In the winter.—S. L. Crosby Co., Bangor, Me.

Yes.—Hollywood Auto Garage, Hollywood, Cal.

Yes.—The Auto Repair Co., Winston-Salem, N. C.

Yes.—Motor Car Co., Baltimore, Md.

Yes.—O. K. Auto Supply & Transit Co., Asheville, N. C.

Yes.—Fifth Avenue Garage, Gary, Ind.

Yes.—Rybold-Weihaupt Auto Co., La Crosse, Wis.

And This Man Says Time Sales Increase the Service Cost and Tend to Decrease Cash Business

Motor cars have always been sold on time and probably will always be. However, I do not believe that the various time-payment plans as advertised and offered by certain credit concerns will assist us to any extent. There are a great many objections to these propositions.

In the first place, we want to get all cash for the cars if possible. This advertising of time payments has kept us from getting all cash for several cars, because if the purchasers had not seen advertisements of this they would have gone to their bank and given their notes and gotten the money and paid cash for their cars. This would have relieved us of the responsibility.

Another objection; the terms of payment do not suit many purchasers. For instance, a purchaser who cannot afford to pay $85 a month and pay for the operating expense of his car. In other words, a man who has only $450 in bank with which to buy a car, as a rule does not make enough income to put better than $100 a month into an automobile. As a rule, when we do sell cars on time payments we have to make much smaller monthly notes than $85; as a rule, $50 per month is as much as such purchasers can afford to pay and operate their cars at the same time.

Another very serious objection is the question of service; that is, free service. We find that we have about twice as much free service to give on cars sold on time as we do on cash sale cars. We find that we have to give free service on cars until the payments are all made. This does not sound reasonable, but you can

What Do YOU Think?

On this important factor in the motor car business your opinion will be welcomed. It is something on which an expression of dealers' opinions will be valuable to all.

Digitized by Google

see how human nature works in this as in all cases where credit is concerned. For instance, you probably have been in a dealer's when a customer came in with some such exhaust as this: "My note is due to-day and I was going to pay it, but that d—— car is working so rotten that I am not going to pay one red cent more on it until it is made right, and so forth."

I find about ten objections to the time payments against one for it. If the purchaser can pay for his cars on time, why cannot the dealer get cars in the same manner?

Why do many manufacturers advertise time payments to owners and ship their cars to their dealers with a sight draft attached to the bill of lading?

Certain manufacturers make as high as 60 per cent dividends, some more; but whoever heard of a retail dealer making any such enormous profit?

If a purchaser has any credit he can take his notes to his local bank and get them discounted, and at a more reasonable rate of interest than charged by these credit corporations. I think that this time-payment plan will eventually work great harm to the dealers who practice it to any extent.

The dealer needs all of the money that he can get to handle the cars until sold, and if he has to indorse paper to the extent of one-quarter of his yearly business, or even less, he is in a bad plight indeed. I am very sorry that this proposition has been opened up on such a large scale and so highly advertised. I can see nothing in it but more trouble for the dealers.—The Model Garage, Roanoke, Va.

Advertising Time Payments Is Not Favored by These Dealers for a Number of Reasons

We do not believe it good for the reputation of the dealer to advertise time sales. It encourages too many poor buyers.—Overland Motor Co., Wichita, Kan.

We do not believe in the present-day "payment proposition." If the purchaser is worth selling, we handle his selling ourselves, as we have been doing for 8 years. A good salesman and a less intelligent prospective purchaser mixed with eight notes, a bonding company and an automobile, doesn't look just right to sign our name with.—Judd Seacord & Son, Galesburg, Ill.

No. I believe in borrowing money in my own town.—Ladd Automobile Co., Augusta, Me.

No. It is not good to encourage it.—Olympia Garage, Olympia, Wash.

No Necessity for Advertising

No. We do not use the factory plan, but do sell on time, not asking any bonus or premium. Everyone here sells on time, so there is no necessity for advertising it.—Greer-Robbins Co., Los Angeles.

No. Am not in favor of the general use of the time-payment plan.—Seneca Motor Car Co., Rochester, N. Y.

No.—Indian Head Garage, Nashua, N. H.

No. Don't believe in it.—Connell & McKone Co., Boston.

No. Everybody knows it.—Birmingham Auto Co., Birmingham, Ala.

No, sir. Because it will lead to the ruination of a business.—Bergen Auto Co., Passaic, N. J.

No. We do not sell cars on the time-payment plan.—Paddock-Zusi Motor Car Co., Newark, N. J.

No. Because it is absolutely against our business methods.—Bergan Auto Co., Rutherford, N. J.

We are doing business for cash only.—Chalmers Auto Agency, Hartford, Conn.

This we have never done and we do not propose to unless there comes a condition other than what prevails at the present time with the car we sell. From the very start of this time-payment plan we were not in sympathy with it in the least. We believe it only induces some dealers to take a greater risk than ever in selling cars, and the company handling the paper takes no chance. If a man who has a good rating wants to buy a car, we can always go to our home bank and take care of a time dealer very nicely, and as late as to-day we are in receipt of a letter from our manufacturer which convinces us more strongly than ever that the time-payment plan is bad practice.—Lyons Auto Co., Grand Forks, N. D.

Should Hold Until the Last

No. We prefer to have the salesman place the plan before the customer as a special inducement to buy. The customer receiving accommodation on payment seldom asks for concessions, whereas if the plan were advertised he would look on the time-payment plan the same as he would on the car equipment.—Overland Southern Automobile Co., Atlanta, Ga.

No.—Overland Sales Co., Jackson, Mich.

We believe it is especially true in this section of the country that people are urged into contracting obligations which they should not and often cannot meet. This has been proven to us on several instances.—Asheville Garage Co., Asheville, N. C.

Not necessary.—More Bros., Fargo, N. D.

All our cars are sold for cash. In exceptional instances part of the purchase price may be deferred. Each case is handled individually, according to the circumstances affecting it.—Park Automobile Co., St. Louis.

We are not advertising this time-payment plan.—Overland Louisville Co., Louisville, Ky.

Because it will hurt the cash trade.—Bennighof-Nolan Co., Evansville, Ind.

Will Hurt the Cash Business

Because I believe it will hurt the business, as the dealer who lays too much stress on time sales would probably lose considerable cash business.—George B. Carter, Petersburg, Va.

We have sold no cars on this plan and will not do so unless we are compelled to do so by competition, as we do not believe in the plan. It seems to the writer that it is a case of poor salesmanship or lack of sticktoitiveness when a salesman cannot settle for his car when delivered, either in cash or a bankable note. The average purchaser of a car in Iowa is, as a rule, more than willing to make a settlement on delivery.—Elson-Minnick Co., Inc., Cedar Rapids, Iowa.

Get enough time sales now without advertising too much.—Mutual Auto Co., Duluth.

Should Leave It to Dealer

We do not use the time-payment plan nor advertise for time sales. We have been taking notes for automobiles for 8 years where they suited us, with no fixed amount down. Every deal or sale is just what we agree upon with the purchaser and no two are alike. We have looked over the time-payment plan and would consider it a dangerous proposition. No good business man or firm could afford to indorse Tom, Dick and Harry's note. It looks as if the scheme would put the dealers in debt. It would be better for the business in the long run if they would advocate cash sales and leave the time part of the sale to the dealer and his customer.—The Overland Co., Topeka, Kan.

Is It Easier to Sell Cars on Time?

Half a hundred dealers give the answer next week in Motor World

Gas Engine Men Talk Farm Tractors

Merchandising Methods, Possibility of Standard Ratings and Requirements of Tractor Engines Principal Topics

CHICAGO, June 29—Tractor and gas engine men are as much exercised over the present and prospective fuel situation as are the motor car makers, if the purports of the papers and discussions at the ninth annual meeting of the National Gas Engine Association is any criterion. The convention of the N. G. E. A., which closed to-day after a 3-day session at Hotel Sherman, was featured by a number of papers and discussions on tractors, and another series on various ramifications of the fuel problem. Other papers of interest, from the manufacturing standpoint, included scientific management of factories, uniform methods of figuring costs, ignition selections, reducing shop cost, and an address by Dr. Frank R. Rutter, assistant chief, Bureau of Foreign and Domestic Commerce, on the internal combustion engine in foreign trade.

Affiliate with S. A. E.?

Affiliation of the National Gas Engine Association with the Society of Automobile Engineers was informally broached at the business meeting yesterday, while John T. R. Bell, engineering representative of the Norma Co. of America, and a member of both societies, in the informal discussion pointed out that the standards committee of the Gas Engine Association has been working in very close touch with the standards committee of the S. A. E. and has adopted wherever possible the standards already in force among the motor car manufacturers, and also that two other associations in allied industries, the marine engineers and the aeronautic engineers, have asked to become affiliated with the Society of Automobile Engineers.

Inasmuch as complete plans for the co-operation of these societies have not been worked out as yet, it was decided to defer action for the time being. Comment in general was favorable.

The standards committee adopted standard specifications for a number of features of stationary gas engines, and it was notable that recommendations were, insofar as possible, to follow the present standards of the Society of Automobile Engineers. The association formally adopted a standard guarantee for gas engines, warranting them to be free from defects in materials and guaranteeing replacement of parts proving defective in material for a period of 1 year and to develop rated horsepower and rated speed in factory testing room. This does not include ignition or other accessories, which are guaranteed by their manufacturers.

At the election of officers the president, secretary and treasurer were reelected, as were most of the vice-presidents and executive committee. C. E. Bement of the Novo Engine Co., Lansing, Mich., is president; H. R. Brate is secretary, and Otto M. Knoblock, treasurer.

The former low price of gasoline is a thing of the past, is the belief of E. E. Grant, secretary of the Independent Oil Men's Association of Chicago, who, in an address entitled the "Fuel Problem as it Pertains to the Internal Combustion Engine," discussed the present factors which have caused the rise in the price of gasoline and the probability of the future. He stated that it was his belief that the average price of the future would be from 15 to 25 cents, and did not anticipate that the cost to the consumer would be very much less than 15 cents or very much higher than 25, at least for several years. He confirmed the general impression among gasoline users that the demands for motor fuel has become enormous; that quite frequently the quantity of fuel is increased by adulteration. He made a plea for co-operation between oil men and engine makers and proposed an association of gas engines, motor car, marine, aviation engineers and the oil men; experts who could work together for the solution of a proper fuel.

Crude Oil Up 700 per Cent

He brought out the point that during the last 2 years the increase in the price of crude oil had been 700 per cent, and in addition to that it often was necessary to pay premiums over the market price. He figured that the consumption of gasoline for 1916 would be 1,934,000,000 gal., but stated that much progress in increasing the yield had been made within the past year and that at present 2 per cent of the gasoline is made from natural gas. The gasoline from this source has a low boiling point of 65 to 85 deg. Fahr. and a high boiling point of 300 deg. Fahr.

He mentioned the fact that a process of pressure distillation for increasing the yield from crude was patented by a Dr. Parker as early as 1907, this antedating both the Rittman and the Burton process patent. He emphasized the need of the development of engines to use low-grade distillates, and stated that when the troubles with Mexico are over that country will be able to supply sufficient crude for the entire world—this, however, is not rich in gasoline.

Mexican Oil American Controlled

Seventy-five per cent of the oil industry in Mexico at the present time is owned and controlled by American capital. Mr. Hall also confirmed the general impression as to the decrease in Baume gravity of motor fuel during the past 2 years. He stated that not long ago gasoline of 76 deg. Baume was common. Now it is not over 58 deg., and sometimes as low as 50. Within the next 2 years it will be mostly 50 deg. Baume. He said that gasoline users are gradually coming to kerosene and that before long we may expect to be using kerosene. He believes that within 5 years engines would be so designed and distillation process so refined that of the crude oil 75 per cent will be used as fuel and the remaining 25 per cent as lubricant.

In the discussion Mr. Hall was asked, since the profit of 3 cents between the cost of manufacture and selling price is reasonable, the profit between 3 cents for the manufacture of kerosene and the sale price of 10½ cents is exorbitant. Hall said it was impossible to figure it that way and that was one of the points that was engaging the Federal Trade Commission at the present moment. That it is competition that set the price of crude and set the price of the finished product. There was no discussion on the paper on carburetion presented by E. E. Dean, chief engineer Byron, Kingston Co.

In the discussion of E. W. Roberts's paper on liquid fuels present and future, the fact was brought out, in England there has been considerable experimenting with the use of pulverized coal, and in Germany with naphthalene—no one, however, recalled the fiasco of a few years ago with Zoline, which was supposed to be chiefly naphthalene and water. The statement was made that it would not be surprising in a few years to see gas engines using coal as fuel. In confirming this, Knowles stated that his company has been experimenting with coal in solution in water, that it could be pulverized so fine that it partakes of the nature of defloculated graphite and can be atomized and ejected into a

Digitized by Google

burner just the same as fuel oil, and that subtracting the heat necessary to dispose of the water there would be left 13,000 B.t.u. per pound of heat from the coal The chief difficulty with its use in internal combustion engines would be the ashes that would accumulate and must be thrown out.

Tractors Cannot Be Sold by Mail

There Must Be a Man on the Spot to Educate the Farmer and Handle Service

MAIL-ORDER practices and direct-from-factory selling methods in the merchandising of tractors cannot prove successful, said W. A. Horthy of the International Harvester Co., Chicago, in a paper entitled "Design and Evolution of Modern Gas Tractors," read before the National Gas Engine Association.

These methods cannot succeed, he said, because it is necessary that there be a local representative who cannot only sell the tractor, but who can be tractor expert and instruct the farmer in the use of the machine and in its care and repair as well.

Another point upon which he lays particular emphasis is the necessity for the dealer being a counseler to the farmer. He must be able to tell the farmer what kind of tractor to buy and how powerful a machine he will need. He said, in part:

Larger concerns distribute their tractors through their regular selling agencies. Besides these the logical distributer is the farm implement dealer. Mail-order house practices and direct-from-factory selling methods to supply the market cannot prove efficacious, since it is very necessary to have a local trade representative acting simultaneously as tractor expert, at this early stage in the tractor industry, when so much scepticism and prejudice are encountered and when the instructing and enlightening of the farmer in the use of applied mechanical power is one and the same with the spreading of the gospel of civilization.

Dealers Are Hesitant

Irrespective of the amount of commission attributed, there is a hesitancy on the part of dealers to accept agencies, even for reputable tractors, on account of newly inaugurated selling methods on full cash basis. The dealer ought to consider that every tractor customer is a prospect for other farm implements necessitated or suggested by the application of mechanical power.

A very important phase in a selling organization's policy should be to recommend the type and size of tractor which, to the best of its belief, based upon wide field experience and reports from various territories, is most suitable to perform its daily task. It is equally important to sell only such implements which are consistent with the type of tractor and its power output, and with geographical conditions. We all know the farmer's pet tendency to overload power machinery—the natural outgrowth of the necessity to perform a certain work in just a certain lapse of time. Hence, conservatism in our guaranteed power estimate is good policy.

We found that the very secret of success lies in the following up of all complaints and suggestions sent in from the field to the factory. Upon these reports, based upon the practical experiences of farmers, dealers, salesmen and tractor experts, the designer can safely build and in many instances they are worth far more even than extensive shop experimenting.

Purely as a manufacturing proposition the small tractor, with its initially low cost, great flexibility and present-day popularity, seemingly offers the greatest possibilities. But let us not forget that this sudden and amazing popularity may be only psychological, owing to the fact that this light-weight tractor gave the first sign of permanent success after many years of failure with larger tractors. It is easier to build and sell a small tractor than a large one, notwithstanding there are thousands of farms where they will not even consider the small tractor for their purposes and where they are looking for the large modern high-power tractor.

In the earlier part of the last decade, at the beginning of the gas tractor industry, nothing but four-wheelers were imaginable. With the demand for light-weight small tractors the three-wheel truck grew just as popular, having no decided advantage or drawback compared with the four-wheel chassis.

94 Makers of Tractors

There are to-day in the United States ninety-four manufacturers making 135 different style tractors. Of these, there are seventy-five four-wheelers, forty-four three-wheelers and seventeen models of endless tracklayers, two-wheelers and four-wheel drive tractors. Among the very latest modern light tractors of less than 10 drawbar horsepower rating, 70 per cent are three-wheelers.

We are making no marked progress in the development of four-wheel drive tractors in this country, although much experimenting is done abroad with rather good success. It seems as if the high price and unusual construction do not sufficiently balance the guaranteed advantages over two-wheel drive tractors.

Then, again, manufacturers, and customers as well, are tired of experimenting. They are to-day after the positive, and though nobody will deny that the drawbar efficiency on four-wheel drives may surpass 70 per cent, at the same time we confess that there are problems to be worked out in connection with this model where the question of single or double differential, sliding universal joints or endless chain drive and like contrivances are still in their experimental stage.

As soon as the universal success of tractors gives manufacturers sufficient confidence and lifts the ban of uncertainty from the market, the resumption of this highly efficient type of tractor by those who had most success on other type tractors will surely follow.

Must Rate Tractors on Pounds Pulled

This Is Only Method That Gives Farmer a Tangible Figure for Comparison

THERE is only one logical way to rate a farm tractor as to its ability to perform work. That way is in pounds pull. If tractors were rated in this way, says Raymond Olney, M.E., editor of Power Farming & Gas Power, in a paper entitled "A Standard Drawbar Rating for Farm Gas Tractors," read before the convention of the National Gas Engine Association, the farmer then would have something tangible to work with.

The one great need of the tractor industry and of the farmers who purchase tractors, he says, is a standard method of rating tractors. The horsepower rating is illusive and easily misunderstood by the farmer, whose knowledge of mechanics is limited and who cannot understand the real difference between animal power and mechanical power. Olney strongly urges that the method of rating tractors in pounds-pull be adopted as the standard method. He says in part:

The motor rating should be in terms of horsepower; I believe all engineers are agreed on that point. But the drawbar rating is another matter.

The term "horsepower" is one that is easily misunderstood by the average farmer, especially so when it is applied to drawbar power. His knowledge of mechanics being limited, he ordinarily thinks of a tractor rated at so many drawbar horsepower as the equal in pulling ability of that number of horses, which, of course, is not true.

The greatest objection, as I see it, to the present method of rating is that it gives the prospective purchaser no understandable means of comparing at once the actual pulling ability of the different makes and sizes of tractors.

There is a tendency at the present time to rate the pulling capacity of tractors according to the number of plows they will haul under average soil conditions, say, a two-, three- or four-plow machine. But this method is equally as unsatisfactory as the one now in use, for the reason that the term "average soil conditions" means something different for different kinds of soil. The draft of plows not only varies widely in different kinds of soil, but in the same soils under different conditions.

I am convinced that the only logical method of rating the pulling ability of tractors is in pounds. Tractor engineers have already discussed this subject to some extent, and this method seems to be gaining some support.

Provided the manufacturers adopt the plan that is being worked out by Director Page [of the U. S. Dept. of Agriculture] and his assistants, it is my opinion that the U. S. D. A. rating should include a motor as well as a drawbar rating. A Prony brake test should be made on the motor to obtain data for determining the torque and brake horse-

Digitized by Google

power at various speeds. The torque curve of any motor will indicate the normal or critical speed of the motor, or the speed at which the motor produces the greatest torque. The brake horsepower rating should be given on the basis of the torque produced at this speed.

The basis for the drawbar rating should be the pounds pull exerted in an actual pulling test. The drawbar test should be made with the motor running at its critical speed and with the tractor traveling at its best working speed as fixed by the gear ratio. Whether or not it would be advisable to provide expensive apparatus, similar to that used for testing locomotives, or a plank roadway that would give an absolute standard surface, is a question that merits considerable further discussion than the scope of this paper will permit, as well as some experimentation.

Personally, I am of the opinion that, for all practical purposes, it would be sufficient to have tests for establishing drawbar ratings made on hard, level ground, such as a good, dragged dirt road, where slippage for most tractors would be practically negligible. The necessary data could be obtained by means of a recording traction dynamometer such as the one developed and perfected by the Hyatt Roller Bearing Co., with which the majority of tractor manufacturers are already familiar.

While draft tests conducted on a dirt road would show a higher drawbar pull than a tractor would be capable of delivering in a sod, stubble or plowed field, it would be a much less difficult problem to secure standard conditions of footing there than in a field where ground conditions may be extremely variable.

A method of indicating a tractor's rating, that has already been suggested, is by means of a double figure, as is the present practice, but to use pounds-pull instead of the drawbar horsepower; as 1500-20 instead of 10-20, or 2000-25 in place of 12-25, the first figure in the combination representing the pounds-pull and the second the brake horsepower. With this rating should also be included the tractive speed at which the machine will operate best under load.

What Is a Good Tractor Engine

McVicker Lays Down Requirements That Tractor Makers Must Live up to for Success

A SUCCESSFUL tractor engine must have the following qualifications, regardless of its type, according to W. J. McVicker, general manager of the McVicker Engineering Co., Minneapolis, who set them forth in a paper entitled "Tractor Engines," read before the National Gas Engine Association:

(1) *It must be so constructed that it can develop its maximum horsepower continuously without self destruction. The element of limited overload must be eliminated because it cannot be controlled.*

(2) *It must start and operate without undue loss of time and must do a season's work with ordinary care and without the services of an expert. Instructions advising that the user must spend considerable time each day in doing expert work in order to keep it going must be discarded from the instruction books, because time is too valuable during that period and such advice will be ignored.*

(3) *It must develop its rated power economically and operate successfully with the kinds of fuel common in the locality where it is to be used.*

Slow-Speed Types First

The first gas engines used on tractors were of the slow-speed, stationary type, but as soon as the light-weight, high-speed automobile engine was developed to where it was accepted as a success, it was incorporated in a new type of tractor. We then had the slow-speed stationary type of tractor engine and the high-speed automobile type. Neither of these types was universally accepted by the manufacturers. The result was that several modifications of each have been brought out, and also that some designs in the two-cycle marine engine have been developed for tractor work.

Among the different types of engines that have been applied to tractors are as follows:

Single-cylinder horizontal, two-cylinder opposed, four-cylinder opposed, six-cylinder vertical, two-cylinder twin, four-cylinder parallel, four-cylinder vertical.

Single Cylinder the Simplest

The horizontal single-cylinder type has the advantage of being simple in construction and operation. It can be constructed so as to be very accessible. The parts are few in number and therefore are easier to take care of and less expensive to repair. The simple type of single-cylinder ignition can be used. It does not require any gas manifold, therefore a simple type of carbureter can be used, easily adapted to the use of low grades of fuel. Its disadvantages are that it is heavy in weight for the power developed, it cannot be well balanced mechanically, and, on account of its low impulse frequencies and long stroke, it requires extra heavy flywheels to keep the speed regulation within the required limits, and it is difficult to devise satisfactory transmission for its tractor work.

The two-cylinder twin is somewhat lighter for its power than the single-cylinder, and, like the single-cylinder, can be made so that the connecting-rods and other moving parts are quite accessible. In ordinary sizes the cylinder can be cast en bloc, which simplifies and cheapens the construction. One carbureter can be situated close to and in the same relation to both cylinders so that the gas distribution is simplified, which makes it more easily adapted to the use of low-grade fuels.

The disadvantages are that it is impossible to get both a good mechanical and a good power balance. If the crank pins are concentric, it is practically impossible to counterbalance so as to reduce the vibration. If the crank pins are at 180 deg., the power balance is distributed so as to give an even torque and an uneven suction on the carbureter, which later is very undesirable, especially when using low grades of fuel. It is also difficult to devise a suitable transmission and keep the proper width with the weight properly distributed in the tractor.

The four-cylinder parallel can be made very accessible. Its center of gravity is low, and by reason of its high and even impulse frequencies, gives a very good torque and power balance. It is well balanced mechanically, so that it sets up but little vibration. Among the undesirable features are its extra width and the difficulty encountered in providing a satisfactory dust-proof transmission within the required limits of width for a practical tractor. The multiple cylinder gas manifold and carbureter make the use of low grades of fuel much more difficult.

The two-cylinder opposed has a good power and mechanical balance. It is a desirable shape for certain classes of tractors and is cheap to build for the power developed. On account of its long manifold it is hard to carburate, especially with low-grade fuels. In some cases two carbureters have been used, but this adds complications, so that there is but little advantage. Owing to the rotary motion of the crank and connecting-rods the lubrication of the cylinders at different speeds becomes a difficult matter and it is also a difficult matter to provide adjustable crankshaft bearings.

The four-cylinder opposed has the advantage of being very compact, has a good torque and is well balanced. It is light in weight and cheap to manufacture and can be made readily accessible. It has the same difficulties of carburetion and lubrication as the two-cylinder opposed, and it is hard to construct a satisfactory adjustable main bearing for the crankshaft.

The four-cylinder vertical, which is one of the most popular types, is well balanced mechanically, especially with reference to horizontal movements. It is easy to lubricate and one in which the splash system can be used most satisfactorily. The most serious objection to this type of engine for tractor work is that the bearings are not accessible and the pistons are hard to remove for cleaning and inspection.

Two-Cycle Possibilities

The two-cycle engine has some very desirable features. It gives twice the number of impulses per cylinder as the four-cycle for the same speed, which makes it easy to balance and gives a very even torque. So far, this type has not been developed generally to the point where its reliability and fuel consumption are satisfactory for tractor work.

The two-cylinder opposed is used most extensively on two-plow tractors, and the four-cylinder on all larger sizes, with the exception of a few six-cylinders on the extra large types. The principal reason for this is that the four-cylinder suitable for a tractor of two plows will have a rather small cylinder of approximately 3¾ x 5 and must be run at a fairly high speed of approximately 1200 r.p.m. to give proper efficiency. The two-cylinder opposed, of about the same power, will have cylinders of approximately 5¼ x 7 and will run at a speed of approximately 675 r.p.m. Inasmuch as speeds of 1000 r.p.m. or over have been considered undesirable, it has made the slower speeds of two-cylinder opposed more popular for the small-size machine. For tractors of more than two plows the one- and two-cylinder motors are large and heavy, and for this and other reasons are not so desirable

Digitized by Google

as the other types. The four-cylinder engine with a bore of 4½ or over and a speed of 900 r.p.m. or less is very satisfactory for tractors of more than two plows.

There has been considerable discussion with reference to the merits of a vertical and a horizontal type of engine for tractor use. Some of the objections have been made to the horizontal type on the theory that the pistons, due to their weight, would rapidly wear the lower part of the cylinder, so that it would soon become elliptic, but the pressure due to the weight of the pistons is so small compared to the angular pressure from the connecting-rods that it is hardly worth considering.

Another theory is that the horizontal valves will soon wear the lower sides of their stems and guides, so that they will not properly seat, but if the spring and operating mechanism are properly designed the weight of the valve will have no effect on its wearing; in fact, either the horizontal or vertical valves will rapidly wear their stems and burn out seats if the springs and lifters are not properly designed.

There is also some question as to whether the valve in the head motor has any advantage over the other types, such as the L and T heads. There appears to be no question but that the valve in the head type, due to its more symmetrical combustion chamber and relatively less waterjacket, is the more efficient when the valves are properly adjusted, but as the valve mechanism is more complicated and more liable to get out of adjustment, that fact offsets its other advantages, so that in practice there is but little difference in their efficiencies.

The poppet valve with a conical seat is more generally used for four-cycle tractor engines at the present time, but there is a possibility of the sleeve valve, such as the Knight, being developed for this class of work. The advantage of the sleeve valve is that it will give approximately 25 per cent more power than the poppet valve and practically eliminate carbon trouble. The engine with these valves also shows a high efficiency, due to spherical shaped combustion chamber and to the perfect action of the valves.

Lubrication Is Important

One matter of great importance in tractor engines is the lubrication. Successful lubrication depends upon the proper kind of oil being used and adequate methods for supplying it to the bearings. The method of lubrication commonly used is the splash system, in which the oil is carried in the crankcase and distributed to the bearings by means of the connecting-rods dipping into troughs, which are kept filled by a small pump. This system is satisfactory when using gasoline or high grades of distillate as fuels, but does not work so well for the lower grades of distillate and kerosene.

The objection to this system is that the oil, after being used for some time, becomes fouled with dirt and residue from the cylinders and soon heats up to where it loses its viscosity and other lubricating qualities. With engines using heavy fuels, such as kerosene or low grades of distillate, there is a residue which works past the pistons into the crankcase, which seriously interfere with the lubrication if allowed to mix with the oil. For engines using these fuels it is desirable to use a system in which a definite amount of fresh oil is delivered to the cylinders and bearings by a multiple force-feed lubricator; in fact, this is undoubtedly the best system for all gas engines if it can be installed without too much complication.

Another matter of importance in the construction of heavy duty engines is the bearings, and more especially those of the connecting-rods. It is usually an easy matter in designing an engine to provide as much bearing surface in the main bearing as necessary, but it is more difficult with the connecting-rods. The weight of the rotating and reciprocating parts, owing to inertia at high speed, must be kept down as low as possible, and the weight and size of the whole engine must also be kept at a minimum.

Inasmuch as the weight of the connecting rods increases very rapidly with both the diameter and length of their bearings, and as the weight of the whole engine also increases in proportion to the length of all the bearings, it requires considerable skill in designing an engine to get the proper bearing surface without detrimental weight.

The method of transmitting the power of the engine to the tractor has more or less effect on the bearings and must be taken into consideration in determining the size of the different crank bearings. The best construction is one in which the transmission mechanism is separated from and independent of the crank shaft and is connected with it by a flexible clutch so that none of the transmission load is carried by the crank shaft bearings and vice-versa.

Most Serviceable Bearing

The most serviceable type of bearing is one in which the walls of the bearing housing are first tinned and the bearing metal cast in place so that it forms a metallic contact. The objection to this bearing, however, is that it is hard to replace. The best type of replaceable bearing is the one which a bronze shell is made to fit the bearing housing and then lined with a suitable bearing metal.

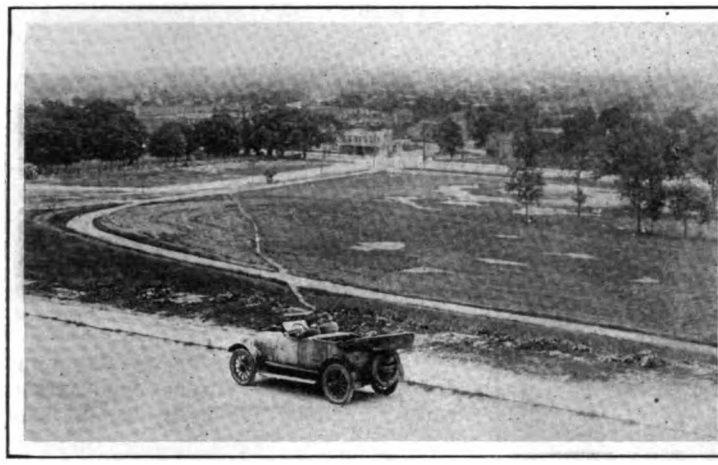
A very practical construction, especially for connecting rod bearings, is one in which the bearing housings are machined to receive a replaceable bearing and then lined with a bearing metal cast in place. The advantage of this construction is that it gives the service of the cast lining and in case it is necessary to make an emergency repair, the lining may easily be removed and the shell bearing substituted.

Engines for tractor use should have a very conservative power rating so that they can actually develop their rated hp. under unfavorable conditions. One of the most confusing things at the present time is the understanding of tractor horsepower. Tractor horsepower is determined by multiplying the drawbar pull by the speed and reducing the product to standard horsepower of 33,000 foot-pounds.

For instance, a tractor that will pull a 2250 pounds at a speed of 2 miles per hour is rated 15 horsepower and is capable of hauling four 14-in. plows, under favorable conditions, whereas ten horses could do the same work under the same conditions. This tractor would have an engine rated between 25 horsepower and 30 horsepower. Now the user cannot understand why he has to buy a 30-horsepower engine to do the work of ten horses, and as yet no one has offered a satisfactory explanation.

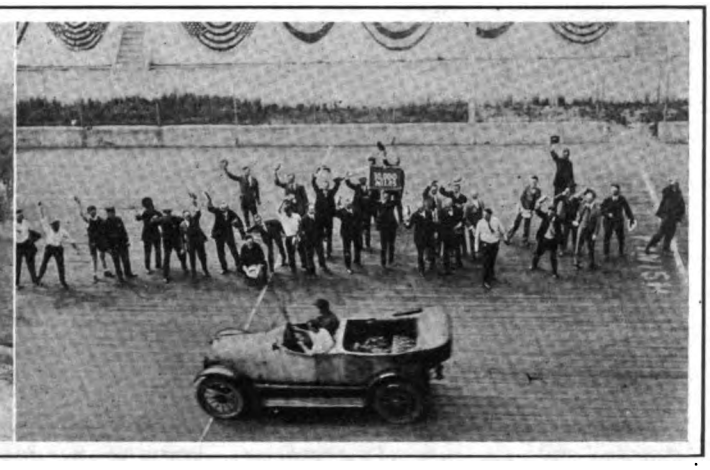
The Government has recently been considering the matter and it is possible that it will provide some means of testing the different tractors and advising how they should be rated. However, the matter should be cleared up for the benefit of the manufacturers as well as for the users, by establishing a new standard that cannot be confused with animal horsepower.

Motor World Guide



THIS condensed tabulation of the principal specifications of pleasure cars on the American market appears in Motor World once every month; it is in the last issue of each month. Each month it is revised up to date. It will appear in the July 26 issue of Motor World.

This Is an Inexpensive, Attractive Window for a Garage



This display was staged by C. A. Miller of the Firestone Tire & Rubber Co., Detroit branch in the garage of Deutsch Bros., Detroit. The only expense was for crepe paper, the flags and card being supplied by the Firestone company

When the Police Games interfered with the Speedway Test, the King Eight was run out on the roads through heavy traffic and in the country

When 10,000 miles had been covered, as much as an owner ordinarily would drive in two years, there was rejoicing, but the test was not stopped

Running for Two Weeks, King Eight Makes 10,850 Miles

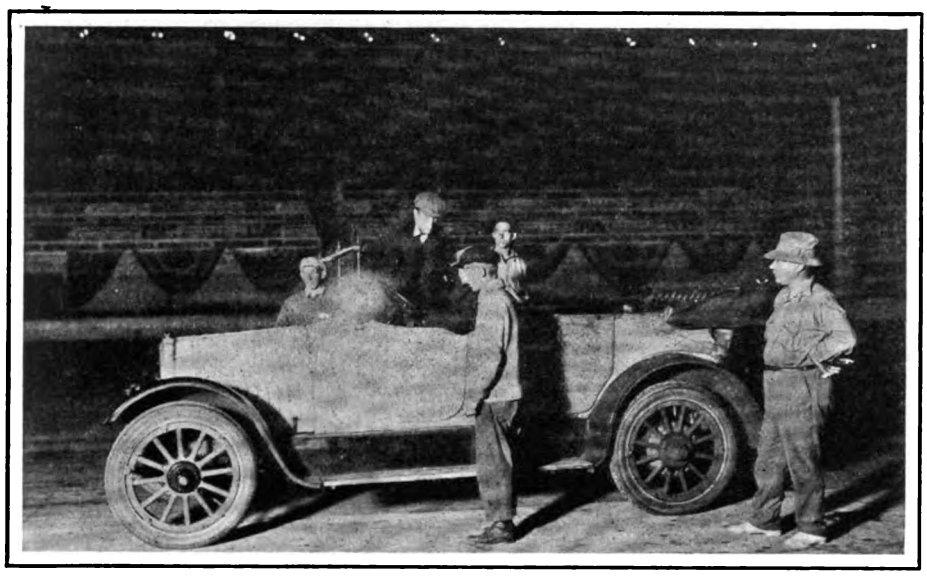
Circles Sheepshead Bay Speedway Most of Time at 32 m.p.h. Without a Motor Stop—Finish With 200 Miles on Roads

SHEEPSHEAD BAY, June 29—Just a little after noon to-day the King eight-cylinder car, which has been undergoing a non-motor-stop test for the last 2 weeks, rolled across the finishing line of the board track here, having covered practically 11,000 miles without a falter in its power plant.

The object of the test, which started at noon on June 15, was to demonstrate the stability of the King eight-cylinder motor and to approach a condition of actual service by concentrating the running and operation of 2 years' car service into 2 weeks of test work. To accomplish this the car maintained an average of over 32 miles an hour, including the stops to take on gasoline, oil and other supplies. Excluding the stops, the speed was 34.31 miles per hour. The engine ran 24 hr. a day and was not stopped from the moment the test started until it was switched off by F. E. Edwards, technical representative of the American Automobile Association, before the New York King salesroom late this afternoon.

The test was methodically arranged and carried out from start to finish. It was under direct sanction and supervision of A. A. A. officials, who worked in shifts of 8 hr. observing the running of the car and noting, on the score sheet, the time of each lap around the 2-mile track. The drivers worked in shifts of 5 hr., with a 10-hr. rest period, and with the driver rode a mechanic, giving a full passenger load in the front seat, while in the rear a bag of sand weighing 500 lb. was carried to represent the full passenger load in the tonneau.

The entire 10,850 miles was run upon the speedway except 200 miles, which were made upon the roads of Long Island between the speedway and the Motor Parkway, and on the Motor Parkway itself, up and down the 40-mile stretch from Jericho Turnpike to Lake Ronkonkoma. No attempt was made to speed the car excessively, but the average was held consistently throughout the run. The car probably made its fastest time when put on the Motor Parkway, as it traveled at times close to 50 m.p.h. over the rolling country traversed by the parkway. Even at this speed, however, due to interruptions to and from the parkway, the average speed while off the board track dropped to about 26 m.p.h., showing the impossibility of maintaining a high average over the open roads.



This is the car as it appeared during the test

As a service test of the car, the King company makes the point that this shows shows actual performance as well as it possibly can be shown in a test, because the distance covered by the car is equal to about 2 years of normal driving and the speed is not very far in excess of that often demanded by the car owner. The King car which made the test was certified by the King company and by A. A. A.

So that no one who saw the car on the roads might be in ignorance of the test great banners were displayed on both sides of the car

Digitized by Google

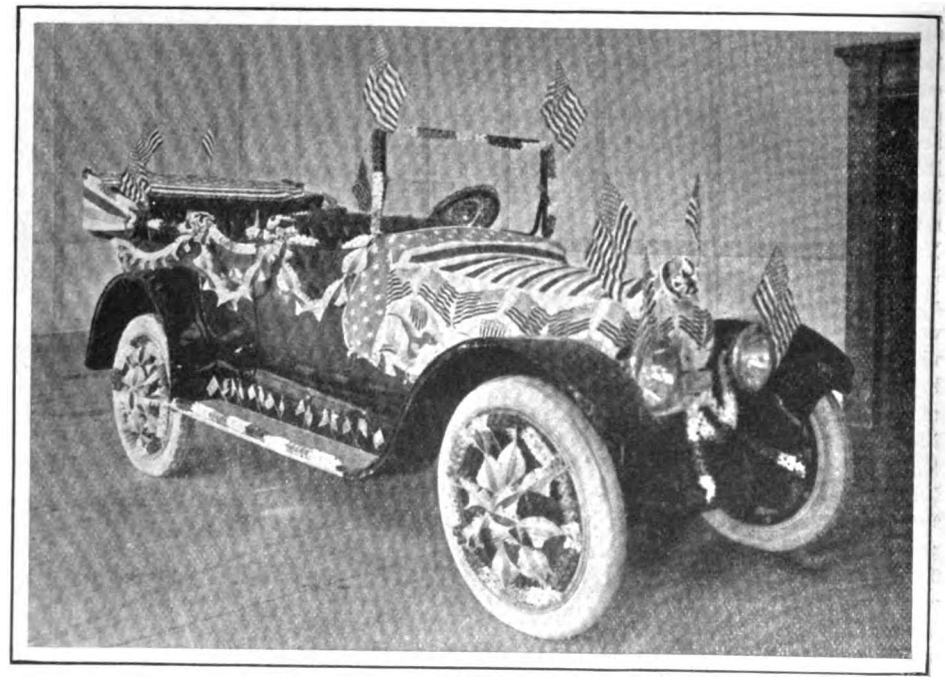
The motor ran 24 hours a day and was not stopped during the entire two weeks. This picture, as well as the one at the right, which shows the camp of the mechanics, was taken at night

officials to be a strictly stock job throughout, even including the details of equipment.

This is a Model E car, with an eight-cylinder 3 x 5 motor, having an S. A. E. rating of 28.8 hp. and a piston displacement of 282.7 cu. in. The motor is a product of the King plant and follows conventional eight-cylinder practice, with the cylinders cast in blocks of four at 45 deg. The valves are on the inside of the V and are operated from a chain-driven camshaft. Cooling circulation is by thermo-syphon, lubrication is by pressure and ignition by single Atwater Kent battery system.

Gasoline is fed by the Carter system to a Ball carbureter. Starting and lighting is by Ward Leonard. The drive is taken through a plate clutch through a three-speed unit plant gearset through a floating American rear axle. The gear ratio used on the test car was a standard 4.25 to 1 and the tires 34 x 4 Firestones, plain tread front and non-skid rear. The only fitting on the car which does not coincide with stock practice was an additional speedometer, which was installed as a double check on distance. The official distance readings, however, were not taken from the speedometer, but measured by the laps made on the speedway. While on the road during Saturday, June 24, while the speedway was occupied by the New York police in their field games, the distance was taken from the speedometers, corrected by a coefficient determined from a comparison of the readings and the known distance traveled on the 2-mile track.

During the course of the run the car made 160 stops. On sixty-nine of these, changes of either driver or mechanic were made. Besides stops for supplies and changes of drivers, the other causes for stops were as follows: Testing electrolyte of battery on several occasions,



SPECIFICATIONS OF THE KING MODEL E CAR

Price	$1,350
Make of Motor	King
Number of cylinders	Eight
Shape	V
Bore	3
Stroke	5
S. A. E. horsepower	28.8
Ignition	Atwater Kent
Carbureter	Ball
Engine starter	Ward Leonard
Gasoline feed	Carter
Clutch	Plate
Gearset	Selective, three-speed
Wheelbase	120 in.
Tires	34 x 4
Speedometer	Stewart
Make of axle	American

replacing bulbs, oiling universals, oiling speedometer drive, tightening grease cups, tightening fan belt, cleaning gas line, taping leak in gas pipe, tire changes, renewing motor oil, splicing horn wire terminal, steering gear adjustment, and at important distances, such as 10,000 miles, the car was stopped for photographs. Throughout the run no adjustments or mechanical work was done that could not be accomplished by the ordinary owner, this being one of the objects of the test.

The weather conditions were very severe during many parts of the run. In one instance the fog was so thick that the driver could hardly stay on the track and had to reduce his speed to about 15 m.p.h. There were several thunder storms during the course of the run, three or four of which amounted to practically cloudbursts and also 2 or 3 days of steady, misty rain. About half the time the weather was bright and fair.

One of the features of the run was the oil economy. The car averaged 1172.7 miles to a gallon of oil, in spite of the speed, which was considerably in excess of average driving, with the added factor that the motor did not stop running for an instant after the test was started.

This car was decorated by the Cadillac Automobile Co., St. Louis, for Flag Day at a very small expense for crepe tissue and flags. Decoration of this kind are excellent for other National holidays such as Decoration day and Fourth of July, too

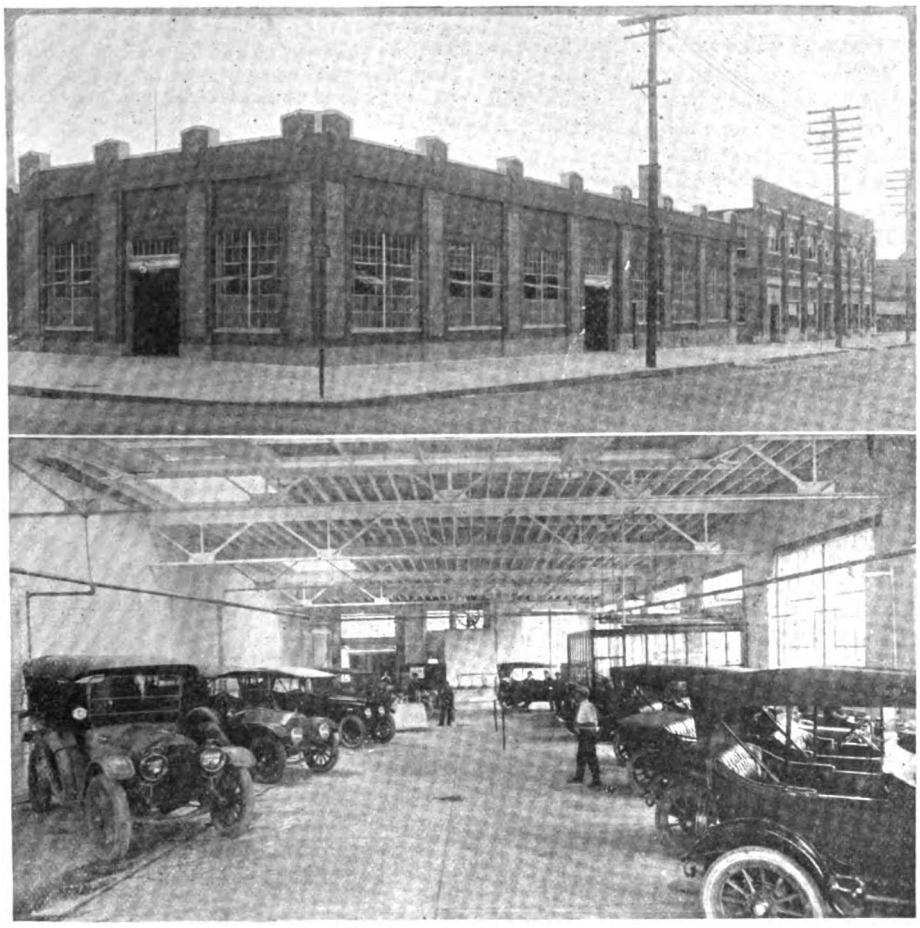
White Walls Promote Efficiency



Broadway front of the block-long Botterill building in Denver, home of the Pierce-Arrow, the Hudson and the Dodge

A CONVINCING illustration of the practicability of white walls and ceiling to emphasize the value of repairshop cleanliness is furnished by the quick-service station just recently built in Denver by Tom Botterill, Pierce-Arrow and Hudson distributer for Colorado, Wyoming and Utah, and Dodge dealer for Denver.

The new $12,000 building is so arranged and equipped that it gives the workmen a sense of pride and pleasure in keeping the place clean. In turn, this attitude makes for an added feeling of responsibility to do a high quality of work in keeping with the surroundings. The whole effect is an impression of the dignity and dependableness which are recognized as vital factors in a successful business institution.

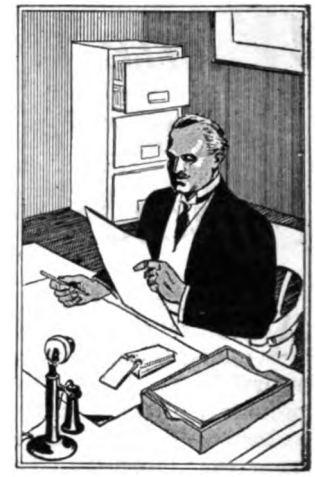
Large and convenient windows fitted with the Detroit Steel Products Co.'s Fenestra sash make for excellent lighting and needed ventilation. Both these features are aided by spacious skylights, while the lighting is conserved and intensified by the white walls and ceiling. All cross-beams and water and steam pipes are painted white, and the only break in the solid white of the whole interior is the natural wood finish of the small partition separating an office for handling shop records, repair parts, accessories, etc.

Above—Another view of the Botterill building with the quick service department in the foreground and the salesroom in the background
Below—Inside the building everything is white, ceiling, walls, pipes, fixtures and even the floors

The one entrance and two exits are equipped with the Richmond Safety Gate Co.'s horizontal trolley doors, which save time and trouble and add their part to the purpose of quick work and a general smoothness and systematic handling of things. A time-clock record is kept of every piece of work, to guard against mistakes, confusion and complaints regarding delays, charges, etc.

Gasoline and oil pumps, steam-heating, air-filling connections all along the walls, sanitary wash-basins and toilet, a basement storage room for carload lots of oil, and a wagon-height elevator for convenient unloading of oil in barrels are other features of up-to-dateness in this new service station.

"The workmen are enthusiastic about the white interior and other features which we believed would prove of more than ordinary value," says Botterill, "and they back up their words of praise and appreciation in a substantial way by making a special effort to keep the place looking neat and clean. Their spirit of pride in their workshop is indeed gratifying. As an evidence of how the heads of this concern value businesslike cleanliness in every department, we employ a special janitor just for this building alone; and it looks as if he is coming to make neatness a hobby and a profession, instead of merely a matter of duty to hold his job."



The new shop is 50 x 125 ft., and is one story in height. The foundations were put in to carry three stories, however, as a matter of foresight for a likelihood of needed enlargement.

With this new building the Botterill establishment is now a full block long, extending the entire distance from Broadway to Lincoln Street along the south side of Thirteenth Avenue. It is recognized as one of the largest and best equipped motor car sales and service concerns in the Rocky Mountain region, if not in the entire West.

Accounting and Business Systems

System and Gasoline Letters

Editor Motor World:

This company was certainly like the Mexican Government — not knowing where it stood in its financial matters or otherwise—before it installed the Motor World Simplified System of Accounting under the leadership of Mr. J. O. Davies, the accountant.

We are glad to state at this writing that results of this system have opened our eyes and showed us the leaks and profits of the separate departments as conducted in any up-to-date garage.

We would appreciate receiving anything more that you may devise as a helpful product to benefit the garageman and dealer.—Mott Haven Garage Co., Fred J. Hinners, New York.

P. S. What do you think of the enclosed letters as an inducement for customers to buy in the garage at which they are storing their cars?

The Letters

No. 1

Dear Sir:

This month our Government has mobilized its armies for defense and is encouraging the enlisting of recruits. This company, like the Government, has mobilized, but we are looking for recruits to fall into the ranks and purchase their gasoline, oils, tires, tubes and accessories from us.

This we ask, for our records still show that some of our customers are not doing their duty toward us. We therefore quote outside prices for comparison with ours.

No. 2

Dear Sir:

"Preparedness" is the watchword of the Universe. So is it with the MOTT HAVEN GARAGE. Is it with you? Are you prepared to receive our thanks for your patronage in the past? If not, WHY not?

Our source of income is so divided that we ought to be prepared to meet our heavy expenses and at the same time to derive a just profit, which, we think, we are entitled to. We are deprived of the above by some of our customers purchasing on the outside their gasoline, oils, tires, tubes and accessories.

"Preparing" to receive your patronage in future, we are,

Yours very truly,

ANSWER—Thank you for your commendatory remarks about our system. We are glad indeed to learn that it has been of benefit to you.

Your letters to your customers are very good, but do you not think that after reading them the customer will still say: Why should I buy my gasoline in a garage when I can get it cheaper elsewhere?

If it is the case that in your garage your storage is sold at a rate which does not give a good profit, and if you feel that you must have the full trade of the car owner in order to make any profit on his business, do you not think that you might have gone a little further into detail on this question, even so far as to quote figures as to what the service costs you and what you get from it? Do you not think a few figures of this kind would be very convincing and show the car owner the reason for the request you have made?

For Better Business

Editor MOTOR WORLD:

Some few months ago you published an account of your Simplified System of Accounting. I saw only the first lesson, or explanation, but it looked very good to me.

I am around considerably, calling on garage proprietors and automobile dealers and am trying to get them to install some little system where possible and I would like a sample of your forms and price of the complete outfit so that I may take the matter up with the people I call on and, if they are so inclined, help them install same and get started as they should.

Any information along these lines will be appreciated. A. A. McCORMICK, Detroit, Mich.

Some Book Agent!

QUESTION—We are about to install the Motor World System and with it we are using a return order in the shop which has a requisition with it. This requisition we are also using as a sales slip.

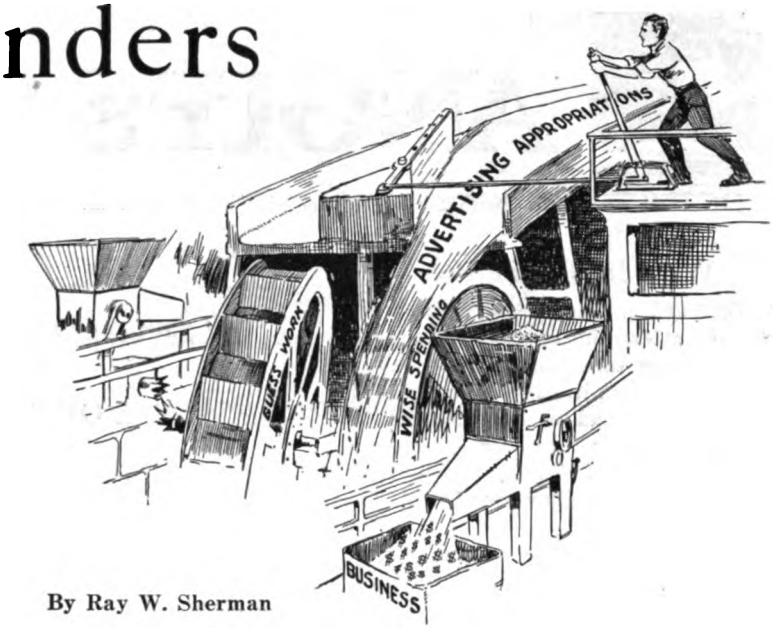
For instance, a customer purchases 5 gal. of gas and wishes it charged. We make the charge, and if the customer wishes we give him a copy. The original charge goes to the office, where the bookkeeper makes the proper entries in your system.

We have explained to you how we are using this requisition for the reason that we would like to know if we are meeting all the requirements of the law.

A sales book agent called here this morning and because we didn't fall in with his ideas he got rather nasty and told us that we might hear from Albany and that we were liable to a $50 fine. With your wide experience you doubtless can put us wise if we are on the wrong track.

We appreciate the many favors extended to us by Motor World and believe that through this publication the garagemen finally will be able to run things in a more business-like manner.—C. A. Chamberlain, Chamberlain's Garage, Skaneateles, N. Y.

ANSWER—If a requisition slip gives you satisfaction as a sales slip, it is sufficient; if a plain, ordinary piece of paper gives you satisfaction as a sales slip, that is sufficient also. The only essential is that you have some form or other that enables you to keep your records straight.



As to the law on this subject, we never heard of any such thing. A book agent is likely to tell you almost anything.

As to your hearing from Albany and being subjected to a $50 fine, we believe that this is a threat without any foundation whatever, because we never heard of any law that required a garageman to use any kind of a system. If there were a law requiring garagemen to use system, there are thousands that we know of that would be in jail at the present time.

The next time this book agent comes along give him the laugh and tell him to "tie it outside."

Wise Spenders

By Ray W. Sherman

REILLY, proprietor of C. J. Reilly, Inc., had just returned to Callawassa from the ad men's convention in Philadelphia and was all settled at his desk, ready to sell more Sennett cars than ever.

"Wonder what the boss'll spring now," sotto-voced Tommy Trumbull, the junior salesman, to Charley McGrain, the senior, for Tommy lived, loved and worried in the belief that Reilly's principal object in life was cooking up new jobs for the salesmen. It wasn't long coming.

"Tommy," said Reilly, "will you find out what we have been spending for advertising and where we have been spending it?"

"Newspaper?"

"Everything!"

Finding Out What

Tommy dug around for a while and finally produced the desired data—so much for form letters; so much for booklets, literature and printing; so much for newspapers, and so on.

Reilly studied the figures.

"Got a new plan?" queried Tommy.

"Not yet; but I'm going to have one," asserted Reilly.

"You see," he continued, "one of the fellows at this convention set me thinking. He said the average business man ceases to be a business man when he buys advertising. He said business men buy advertising because they believe they ought to advertise, and that they don't pay attention to what they're buying and don't buy to get the greatest results from their money."

"Is——" began Tommy.

Unwise Spending

"I believe he's right!" Reilly proceeded. "I don't believe we have been spending our advertising money as wisely as we should. I don't believe we have been using the care in our advertising expenditure that we use when we buy supplies for the shop or material for use in the office. We're fussy enough and particular when it comes to those things, with which we are very familiar; but when it comes to advertising we fall down.

"Now, take our newspaper advertising. We have been running the same ads and the same space at about the same price in the three papers, two evening and one morning. But we never went into an analysis of what we are getting for our money. It stands to reason that there must be a difference. Undoubtedly two of these papers would do just as well as three if we go into the matter.

"If one of the evening papers is more a workingman's paper than a business man's paper, we are not getting full results from our expenditure in the former paper. We might better take our money out of one and put it all in the other.

More Results—Same Expense

"One of the fellows at this convention said that when he took hold of a certain advertising proposition he found eighth- and quarter-page ads running in about twenty papers. He couldn't get any more money appropriated, so he threw out half the papers and doubled his space in the rest. He got 100 per cent more results and everybody thought he was spending twice as much money.

"He said one branch manager wrote in and congratulated him for beginning to use a certain paper, whereas the company had been using that paper for 14 years—but in very small space only.

"And then there's our circularizing, our literature and our form letters. We have always tried to make these things high-grade, but on some of our late efforts the matching up of the addresses has been so poor that it is obvious that they are form letters.

"I don't think a letter that tries to get by as not a form letter but which is a form letter is productive of results. And there are darned few form letters that can't be recognized. I don't know but what I'm in favor of discontinuing form letters entirely and concentrating on high-grade printed matter exclusively.

Check Up Results

"We ought to check up the returns on our form letters and our literature, and find where we're getting results. If we are getting no results we ought to know it and quit throwing our money away."

"But don't we get general results?" pleaded Tommy.

"General results are being pushed into the bush-wah class, Tommy, according to one of these ad men. He said the business man ought to get this general results idea out of his system and begin to look for a few specific results. This means that we must study our effort and its return, and find out what we're getting for the money we spend.

"From our newspaper advertising we can't always trace a specific result, but we can get somewhere near it. And we most assuredly can keep ourselves from spending money in publications that are of no more value to us than a Sunday-school paper or the Police Gazette.

Wasted Billboard Money

"Bogardus, who handles the Colt, spent a lot of money this season for billboards, and every one of his boards is stuck in a row with a lot of other boards where it is not easily read by the man who is skimming along in a car. His expenditure would have been far more valuable if the boards had been set up by themselves somewhere where there was not a lot of other signs to distract attention.

"Some of these moving picture men get slide ads from the motor car dealers and some of these movie shows don't draw three prospective car owners a year. That's a plain waste of money. And there are all sorts of advertising schemes that aren't worth the powder to blow them up.

The Wheel That Grinds

"The big point, Tommy, is that every time we contemplate spending a cent for advertising we should scan the proposition just as closely as though we were buying chamois for the shop or neckties for ourselves.

"And just because we have always sent out form letters in a certain way, or because a certain thing has been done by everyone, is no reason we should continue to do it if it isn't profitable. From now on we're going to watch this current of advertising out-go and send it over the water-wheel that grinds out the greatest grist of returns."

ANGLES OF THE LAW

By George F. Kaiser

Who Is To Blame

RECENTLY a dealer here in New York after attempting to sell a car to a man for some time finally succeeded in interesting him in it. The man looked it over carefully, had several demonstrations, brought his wife to see it, and even practically came to an agreement with the dealer as to an allowance for his old car.

Another demonstration was arranged, and finally the man asked that he be allowed to drive the car. Without any hesitation, and hoping that this would be the final step to the sale, the dealer assented and gave up the wheel to his prospective buyer. The customer had hardly become seated behind the wheel when a passing pedestrian was struck and injured.

Of course, someone had to be sued for the injuries. The customer was a salaried man, with no property to speak of. The dealer had an established business. Suit was brought against the dealer.

As to the responsibility, he asks: "Should not the injured party have sued the customer, as he was driving the car at the time of the accident?"

I do not know of any decided case where the facts are exactly similar to what they are in this one, but my opinion is that the dealer will have to pay the damages sooner or later.

When the case goes to court and it is shown that the dealer was demonstrating the car with a view to selling it, and the prospective buyer was trying it out as a part of the demonstration, the jury will reason something like this:

"The car belonged to the dealer—he wanted to sell it—if he did not demonstrate it successfully he could not sell it—if the accident had occurred while the dealer was driving, the dealer would have been responsible—then he is just as responsible if the accident occurs while the customer is driving, as the purpose of allowing the customer to drive was to consummate the sale and benefit the dealer."

Whether or not the insurance company which insured the dealer will adopt this view is another matter, however, and if the case comes to a trial the decision will undoubtedly be well worth reading.

Dealer Must Pay Freight on Parts

A question frequently asked is, who must pay the freight charges on defective parts replaced by the factory?

Tell Us Your Troubles

Dealers will note that their contract, almost without exception, provides that these parts will be furnished f.o.b. the railroad nearest to the factory. When a provision of this kind is contained in the contract the freight charges must be paid by the dealer.

Hold the Money

Editor Motor World:

I have had a motor car on dead storage for nearly 2 years. The man who stored it with me is now in England. When the storage had not been paid for over 1 year I served notice of sale by mail on the person storing it. I was notified by his father that he had a bill of sale of the car to secure a lien. The car was sold at auction, as prescribed by law on such matters. I also served a copy of the notice on the father holding the bill of sale. The car brought a sum in excess of my charges. The father now makes claim for this excess. Am I safe in paying it to him, with the son having a reputation for going to the courts on every occasion?—Charles C. Tough, New York.

You might ask him to give you a bond to indemnify you in the event that the son should make a claim for the surplus.

If you hold the money until the father compels you to pay it over to him by some legal process you will likewise be safe.

If you have any doubt in the matter do not turn over the money until you have legal authority or are directed to do so.

Lien Comes First

Editor Motor World:

Can a lien be put on a car not in our possession for repair bill and accessories, part of the bill being a year old? If so, will the lien stop the owner from using the car until the bill is paid? What would be the outcome if there is a mortgage on the car?—Varysburg Garage, Varysburg, N. Y.

Under the present New York lien law a dealer has a lien on a car only while it is in his possession. A bill was introduced at the last session of the Legislature which would have allowed a car to be retaken by a garageman or repairman, even though it had passed out of his possession, if his bill were unpaid. Unfortunately, the bill failed to pass and the dealers will not have that right until some future time when the present lien law is amended or repealed and a new one is put through.

If a dealer has a car in his possession he can hold it and prevent the owner from using it until his bill is paid. If he once allows it to go out of his possession, however, he cannot hold it for the old bill if it should ever be brought back again for repairs, but can only hold it as security for the current bill.

Even if a car were mortgaged the dealer has a right to hold it. The lien comes first—the mortgage next.

When You Have a Fire

From time to time cases come to my attention where dealers suffer loss by fire or are sued for injuries caused by negligence and lose all the benefits of their insurance merely because they fail to give the notice to the insurance companies that the policies require they must give immediately on the happening of a fire or accident.

As soon as a fire occurs or an accident occurs, take out your insurance policies and read them very carefully. Find out how soon notice must be given to the insurance company and to which of its representatives it must be given—and then GIVE THAT NOTICE. If you do this, you will get the indemnity you are paying for. If you do not do it, the company will not reimburse you and the money you have paid as a premium is simply wasted.

Corporation Is Responsible

In the event that demonstrating cars are registered by a corporation, actions for damages for injuries resulting from negligence are naturally brought against the corporation and **not** against the individual. This of itself often saves considerably more than the cost of incorporating.

When cars are used for livery work the question as to who is liable for damages is answered by ascertaining who controls the driver. If the driver is subject to the person hiring the car, that person is liable. If the person hiring the car rides in it as he would in a taxicab or on a street car, the owner is responsible.

A Standard Name for Every Part of a Car

TO eliminate confusion and the loss of time and money by dealers, garagemen, supply houses and car manufacturers, has been the purpose of the Standards Committee of the Society of Automobile Engineers in thus standardizing the names applied to all the parts of a motor car.

Heretofore, garagemen and dealers ordering parts from a car manufacturer may have used one term whereas the car manufacturer used another. The result was that much correspondence was needed before the manufacturer knew exactly what the dealer wanted. Again, sometimes a wrong part was shipped because of misunderstanding. This meant delay, dissatisfied customers and increased expense.

Now, however, much of this trouble will be wiped out. There should no longer be any confusion regarding the proper name for a particular part of a car. The Standards Committee has recommended these names for general adoption by the motor car trade. Such action rests with the S. A. E., which will formally vote on the question by mail.

DIVISION I—CYLINDERS

Group
1—Cylinders.
2—Crankcase.
3—Crankshaft.
4—Starting-crank.
5—Connecting-rods.
6—Pistons.

DIVISION II—VALVES

1—Camshaft.
2—Valves.

DIVISION III—COOLING SYSTEM

1—Fan.
2—Radiator.
3—Pump.
4—Pipes and Hose.

DIVISION IV—FUEL SYSTEM

1—Carbureter and Inlet Pipe.
2—Carbureter Control.
3—Carbureter Air Heater.
4—Fuel Tank.
5—Fuel Pipes and Feed System.

DIVISION V—EXHAUST SYSTEM

1—Exhaust Manifold.
2—Exhaust Pipe and Muffler.

DIVISION VI—LUBRICATION SYSTEM

1—Oil Pan or Reservoir.
2—Oil Pump
3—Oil Pipes, Strainers, Gages.

DIVISION VII—IGNITION

1—Spark-plugs, Cables and Switches.
2—Ignition Distributor.
3—Magneto.
4—Ignition Control.

DIVISION VIII—STARTING AND LIGHTING EQUIPMENT

1—Generator.
2—Starting Motor.
3—Wiring.
4—Battery.

DIVISION IX—MISCELLANEOUS ELECTRICAL EQUIPMENT

1—Lamps and Wiring.
2—Switches and Instruments.
3—Horn.
4—Miscellaneous.

DIVISION X—CLUTCH

1—Clutching Parts:
Cone Clutch.
Disk Clutch.
Plate Clutch.
2—Releasing Parts.

DIVISION XI—TRANSMISSION

1—Transmission.
2—Shifting Mechanism.
3—Control.
4—Propeller-shaft.

DIVISION XII—REAR AXLE

1—Housing.
2—Torque Arm and Radius-rod.
3—Drive Pinion.
4—Differential.

DIVISION XIII—BRAKES

1—Outer Brake.
2—Inner Brake.
3—Pedal (or outer) Brake Control.
4—Hand (or inner) Brake Control.

DIVISION XIV—FRONT AXLE AND STEERING

1—Axle Center.
2—Steering-knuckles.
3—Steering-rods.
4—Steering-gear.

DIVISION XV—WHEELS

1—Front Wheels.
2—Rear Wheels.

DIVISION XVI—FRAME AND SPRINGS

1—Frame.
2—Frame Brackets and Sockets.
3—Front Springs.
4—Rear Springs.

DIVISION XVII—HOOD, FENDERS AND SHIELDS

1—Hood.
2—Engine Shield.
3—Fenders and Running-boards.
4—Windshield.

DIVISION XVIII—BODY

1—Floor-boards and Dash.
2—Body.
3—Upholstering.
4—Top.

DIVISION XIX—ACCESSORIES

1—Speedometer.
2—Tire-pump.

General

Where terms "front" and "rear" are used, "front" should always be toward the front end of the car. These terms are sometimes confused in regard to parts that are mounted on the dash. The front side of the dash is always that next the engine.

Where parts are numbered, No. 1 should be toward the front of the car. For instance, No. 1 cylinder is the one nearest the radiator (in conventional construction).

"Right" and "left" are to the right- and left-hands when sitting in one of the seats of the car.

Studs, screws and bolts shall take names from parts they serve to hold in place, although they are assembled with other parts. For example, the cylinder stud is permanently screwed into crankcase but holds the cylinder in place.

The name "engine" should be used rather than "motor" to avoid confusion with electric motors and to secure a lower freight rate.

DIVISION I—CYLINDERS

Group 1—Cylinders.
Cylinder:
L-head cylinder (valves on one side of cylinder).
T-head cylinder (valves on opposite sides of cylinder).
I-head cylinder (valves in cylinder head).
F-head cylinder (one valve in head, other on side directly operated).
(Cast in block, not cast en bloc.)
(Cylinders of V-type engines should be numbered 1R, 1L, 2R, etc.)
Inlet-valve cap.
Exhaust-valve cap.
Valve-cap gasket.
Cylinder-head.
Cylinder-head gasket.
Cylinder-head plug.
Water-jacket top cover.
Water-jacket top cover gasket.
Water-jacket side (or front or rear) cover.
Valve-spring cover.
Valve-spring-cover gasket.
Valve-spring-cover stud.
Valve-stem guide.
Priming-cup.

Group 2—Crankcase:
Crankcase.
Barrel-type crankcase.
Split-type crankcase (split horizontally, at or near center line of crankshaft).
Crankcase upper half.
Crankcase lower half (used only when the lower half contains bearings. A crankcase of either barrel or split type, in which all the bearings are mounted directly on the part to which the cylinders are attached, is called a "crankcase," the terms "upper half" and "lower half" not being used).
Oil pan (used for lower part of split-type or barrel-type crankcase, whether this serves as an oil reservoir or not).
Oil-pan drain-cock (or plug).
Breather.
Oil-pan gasket.
"Bushing" instead of "bearing" for removable and renewable lining used in a plain bearing.
Crankshaft front bearing bushing (upper half and lower half).
Crankshaft front bearing cap.
Crankshaft front bushing support (sometimes used in barrel-type crankcase).
Crankshaft rear bearing bushing.
Crankshaft rear bearing shims (other shims accordingly).
Crankshaft center bearing bushing (if only three bearings or if all except end bearings are alike).
Crankshaft second bearing bushing, etc. (if more than three bearings, for example, front bearing, second bearing, third bearing, fourth bearing, rear bearing).

Digitized by Google

Hand-hole cover.
Hand-hole-cover gasket.
Timing-gear cover.
Timing-gear-cover gasket.
Flywheel housing.
Generator bracket (other brackets take name of part supported).

Group 3—Crankshaft:
Crankshaft.
Flywheel.
Crankshaft timing-gear (or sprocket).
Crankshaft timing-gear key.
Flywheel starter gear.
Crankshaft starter sprocket.
Flywheel studs.
Clutch-spring stud.
Crankshaft starting jaw (or pin).

Group 4—Starting-Crank:
Starting-crank.
Starting-crank jaw.
Starting-crank shaft.
Starting-crank handle.
Starting-crank-handle pin.

Group 5—Connecting-rods:
Connecting-rod.
Straight connecting-rod
Forked connecting-rod
V-type engine.
Connecting-rod cap.
Connecting-rod bushing (upper half and lower half).
Connecting-rod cap stud (or bolt).
Connecting-rod cap nut.
Connecting-rod bearing shims.
Connecting-rod dipper.
Piston-pin bushing.

Group 6—Pistons:
Piston.
Piston-pin.
Piston-pin lock-screw (in connecting-rod or piston).
Piston-ring.
Piston-ring groove.

DIVISION II—VALVES

Group 1—Camshaft:
Camshaft.
Eccentric shaft (Knight engine).
Camshaft timing-gear.
Camshaft timing-gear key.
Camshaft idler gear.
Camshaft oil-pump gear.
Camshaft ignition-distributor gear.
Exhaust cam.
Inlet cam.
Oil-pump eccentric (or cam).

Group 2—Valves:
Valves should be numbered 1 Ex, 1 In, 2 Ex, 2 In, etc., according to the number of the cylinder. On V-type engines the number should be 1 REx, 1 LEx, etc.
Poppet valve.
Inlet valve.
Exhaust valve.

Valve-spring.
Valve-spring retainer.
Valve-spring retainer lock.
Valve-lifter.
Valve-lifter guide.
Valve-lifter-guide clamp.
Valve-lifter roller.
Valve-lifter-roller pin.
Valve adjusting screw.
Valve adjusting screw nut.
Valve-rocker (either at cam or at overhead valve; if both, upper and lower).
Valve-push-rod (intermediate between lifter and valve in I-head engine).

DIVISION III—COOLING SYSTEM

Group 1—Fan:
Fan.
Stationary fan support.
Adjustable fan support.
Fan hub.
Fan-blades.
Fan pulley.
Fan-belt.
Fan driving pulley.

Group 2—Radiator:
Radiator core.
Radiator shell.
Radiator upper tank.
Radiator right side.
Radiator left side.
Radiator lower tank.
Radiator filler-cap.
Radiator strainer.
Radiator drain-cock.

Group 3—Pump:
Water-pump.
Water-pump impeller.
Water-pump-impeller key.
Water-pump body (in case of doubt, body is member mounted on engine).
Water-pump cover.
Water-pump shaft.
Water-pump gland (part in contact with packing whether threaded or not).
Water-pump-gland nut (or screw, or other part used to compress gland).
Water-pump shaft gear.

Group 4—Pipes and Hose:
Engine water outlet.
Engine water inlet.
Radiator hose (upper and lower).
Radiator water fitting (upper and lower).
Water-pump outlet pipe.

DIVISION IV—FUEL SYSTEM

Group 1—Carbureter and Inlet Pipe:
Carbureter.
Inlet manifold (more than one connection to cylinder).
Inlet pipe (only one connection to cylinder).
Inlet manifold or pipe gaskets (at cylinders).
Carbureter gasket.

Group 2—Carbureter Control:
(Throttle control rods will take names from parts they connect, shafts by location or arrangement, and brackets by parts they support).
Accelerator pedal.
Accelerator pedal bracket.
Accelerator pedal pin.
Accelerator pedal rod.
Accelerator pedal rod end pin.
Carbureter mixture hand-regulator.
Carbureter choke.

Group 3—Carbureter Air Heater:
Cabureter air heater.
Carbureter hot-air pipe.

Group 4—Fuel Tank:
Fuel tank.
Fuel reserve tank.
Fuel gage.
Fuel gage float.
Fuel gage glass.
Fuel tank outlet strainer.
Fuel tank outlet (flange, fitting, etc.).
Fuel tank pressure flange (or fitting).

Group 5—Fuel Pipes and Feed Systems:
Main fuel valve.
Reserve fuel valve.
Fuel pipe, main tank to auxiliary tank (or names of other parts connected).
Fuel pressure-pump (power pump).
Fuel hand-pump.
Fuel pressure-gage pipe.
Fuel pressure-gage tee.
Fuel pressure pipe to tank.
Fuel pressure pump pipe.
Fuel hand-pump pipe.
Fuel hand-pump tee.
Fuel pressure gage.

DIVISION V—EXHAUST SYSTEM

Group 1—Exhaust Manifold:
Exhaust manifold.
Exhaust manifold gasket.

Group 2—Exhaust Pipe and Muffler:
Muffler.
Exhaust pipe (extends from exhaust manifold to muffler. If in more than one part name sections front and rear. For V-type engines with two pipes name right and left).
Muffler outlet pipe.

DIVISION VI—LUBRICATION SYSTEM

Group 1—Oil-pan or Reservoir:
Oil-pan.
Oil-tank (when separate).
Oil-filler strainer.
Oil-filler cap.

Group 2—Oil-pump:
Oil-pump.
Oil-pump body (any type of pump).
Oil-pump plunger.
Oil-pump plunger spring.
Oil-pump inlet valve.
Oil-pump outlet valve.
Oil-pump shaft.
Oil-pump shaft gear (outside the pump).
Oil-pumping shaft gear (inside the pump).
Oil-pumping follower gear.
Oil-pump cover.

Group 3—Oil Pipes, Strainers, Gages:
(Oil pipes should be named from the parts they connect, as "Oil-pump to pressure-gage pipe.")
Circulating-oil strainer.
Oil-strainer cap.
Sight feed.
Sight-feed glass.
Oil level-gage.
Oil level-gage float.
Oil level-gage glass.
Oil pressure-gage.

DIVISION VII—IGNITION

Group 1—Spark-plugs, Cables and Switches:
Spark-plugs.
Spark-plug cables (numbered according to cylinders).
Coil high-tension cable.
(Low-tension cables should be named from the parts they connect, as: "Storage battery to ignition switch cable." In case of more than one conductor the cable should be designated as double, triple, etc.)
Ignition coil.
Ignition switch.
Dry cell (two or more cells make a dry battery).

Group 2—Ignition Distributor:
Ignition-distributor breaker.
Ignition-distributor breaker-arm.
Ignition-distributor breaker-arm point.
Ignition-distributor fixed breaker-point.
Ignition-distributor brush.
Ignition-distributor shaft.
Ignition-distributor shaft gear.

Group 3—Magneto:
Magneto.
Magneto distributor.
Magneto breaker-box.
Magneto breaker-arm.
Magneto fixed breaker-point.
Magneto breaker-arm point.
Magneto distributor brush.
Magneto-collector-ring brush.
Magneto coupling, pump end.
Magneto coupling, center member.
Magneto coupling, magneto end.

Group 4—Ignition Control:
Spark control rod (name parts connected).
(Other control parts named as explained under throttle control.)

DIVISION VIII—STARTING AND LIGHTING EQUIPMENT

A one-unit system uses a starter-generator.
A two-unit system uses a generator and a starting motor.
A combined unit system uses a duplex starter-generator.

Group 1—Generator:
Generator.
Generator brush.
Generator brush-holder.
Generator gear.
Generator shaft.
Generator coupling (members as indicated under magneto coupling).

Group 2—Starting Motor:
Starting motor.
Starting-motor brush.
Starting-motor brush-holder.
Starting-motor pinion.
Starting-motor intermediate gear.
Starting-motor intermediate-gear shaft.
Starting-motor intermediate pinion.
Overrunning clutch.

Group 3—Wiring:
(Cables and conduits should be named from parts they connect.)
Starting switch.
Starting-switch pedal (or lever).

Group 4—Battery:
Storage battery.
Filler cap.
Terminal post.
Connector strip.

DIVISION IX—MISCELLANEOUS ELECTRICAL EQUIPMENT

Group 1—Lamps and Wiring:
Head-lamp.
Tail-lamp.
Side-lamp.
Instrument lamp.
Tonneau lamp.
Dome lamp.
Pillar lamp.
Inspection lamp.
Inspection-lamp cord.
Inspection-lamp plug.
Inspection-lamp socket.
Head-lamp socket.
Head-lamp support.
Head-lamp support tie-rod.
Tail-lamp support.
(Cables and conduits should be named from the parts they connect.)
Junction-box (wires not attached to box).
Junction-box screw.
Junction-box cover.
Fuse-box.
Fuse-box cover.
Fuse-block.
Fuse-clip.
Fuse (designated by name of part fed by circuit).
Junction panel.

Group 2—Switches and Instruments:
Lighting switch.
Ammeter.
Voltmeter.
Volt-ammeter.
Charging indicator.
Reverse current cut-out.
Current regulator.

Group 3—Horn:
(No names have been selected for horn parts.)

Group 4—Miscellaneous:
(Will include any additional electrical equipment, such as electrical gearshift.)

DIVISION X—CLUTCH

General

Plate clutch (one plate clamped between two others).

Digitized by Google

Disk clutch (more than three disks).
Dry disk clutch.
Lubricated disk clutch.
Cone clutch (leather faced, asbestos faced).
Expanding clutch.

Group 1—Clutching Parts:

Cone Clutch

Clutch cone.
Clutch facing.
Clutch-facing spring.
Clutch-facing-spring plunger.
Clutch spring.
Clutch thrust-bearing.
Clutch cone hub.
Clutch cone bushing.
Clutch-spring spider (for cone clutch with multiple springs).
Clutch-spring stud.
Clutch-spring retainer.
Clutch-spring nut.
Clutch spindle.
Clutch shaft (not attached to crankshaft).
Clutch shaft bearing (not in transmission case).

Disk Clutch

Clutch case (rotating member).
Clutch housing (non-rotating member).
Clutch cover.
Clutch housing cover.
Clutch driving disk.
Clutch driven disk.
Clutch driving disk stud.
Clutch pressure plate (front and rear, if two—used on both disk and plate clutches).
Clutch driven spider (or drum—driving and driven, if two).
Clutch cork-inserts.
(Facing, spring, thrust-bearing, etc., as under cone clutch.)

Plate Clutch

Clutch driven plate.
Clutch driving plate.
Clutch pressure levers.
(Other parts as under cone and disk clutches.)

Group 2—Releasing Parts:
Clutch release sleeve.
Clutch release shoe or clutch release bearing housing.
Clutch release bearing.
Clutch release fork.
Clutch release fork shaft.
Clutch pedal shaft.
Clutch pedal adjusting link.
Clutch release fork lever.
Clutch pedal.
Clutch pedal pad.
Clutch brake.
Clutch brake facing.

DIVISION XI—TRANSMISSION

Group 1—Transmission:
Transmission case (upper half and lower half, if bearings seat in both).
Transmission case cover.
Clutch gear.
Clutch gear bearing (front and rear, if two).
Clutch gear bearing retainer.
Countershaft.
Countershaft front bearing (if ball or roller).
Countershaft front bearing bushing (if plain bearing).
Countershaft front bearing retainer.
Countershaft rear bearing retainer.
Countershaft drive gear.
Countershaft second-speed gear.
Countershaft-low-speed gear.
Countershaft reverse gear.
Reverse idler gear.
Reverse idler gearshaft.
Reverse idler gear bushing.
Transmission shaft.
Transmission shaft pilot bearing.
Transmission shaft pilot bearing bushing (if plain).
Transmission shaft rear bearing.
Transmission shaft rear bearing retainer.
Second and high sliding gear.
Low and reverse sliding gear.

Group 2—Shifting Mechanism:
High-gear shift fork.
Low-gear shift fork.
Reverse shift fork (if three are used).
High-gear shift bar.
Low-gear shift bar.
Reverse shift bar.

Group 3—Control:
Gearshift bar selector.
Gearshift lever shaft.
Low gearshift connecting-rod.
High gearshift connecting-rod.
Gearshift hand lever ("hand" may be omitted).
Gearshift hand lever bracket ("hand" may be omitted).
Gearshift housing (center control).
Gearshift gate.

Group 4—Propeller-shaft:
Propeller-shaft.
Propeller-shaft front universal-joint (assembly—"propeller-shaft" may be omitted).
Propeller-shaft rear universal-joint (assembly—"propeller-shaft" may be omitted).
Propeller-shaft front bearing (with inclosed shaft).
Transmission shaft universal-joint flange (substitute name of any other shaft on which flange is mounted).
Universal-joint flange yoke.
Universal-joint slip yoke.
Universal-joint plain yoke.
Universal-joint center cross (ring or block).
Universal-joint bearing bushing.
Universal-joint pin (may be designated as long and short, straight and shoulder, etc.).
Universal-joint inner casing.
Universal-joint outer casing.
Universal-joint casing packing.
Universal-joint casing nut.
Universal-joint trunnion (for trunnion type joint).
Universal-joint trunnion block.

DIVISION XII—REAR AXLE

General Types

Dead Axle—An axle carrying road wheels with no provision in the axle itself for driving them.

Live Axle—General name for type of axle with concentric driving shaft.

Plain Live Axle—Has shafts supported directly in bearings at center and at ends, carrying differential and road wheels.

(The plain live axle is practically extinct.)

Semi-Floating Axle—Has differential carried on separate bearings, the inner ends of the shaft being carried by the differential side gears and the outer ends supported in bearings.

The semi-floating axle shaft carries torsion, bending moment and shear. It also carries tension and compression if the wheel bearings do not take thrust, and compression if they take thrust in only one direction.

Three-Quarter Floating Axle—Inner ends of shafts carried as in semi-floating axle. Outer ends supported by wheels, which depend on shafts for alignment. Only one bearing is used in each wheel hub.

The three-quarter floating axle shaft carries torsion and the bending moment imposed by the wheel on corners and uneven road surfaces. It also carries tension and compression if the wheel bearings are not arranged to take thrust.

Full-Floating Axle—Same as three-quarter floating axle, except that each wheel has two bearings and does not depend on shaft for alignment. The wheel may be driven by a flange or a jaw clutch.

The full-floating axle shaft is relieved from all strains except torsion, and in one possible construction, tension and compression.

Types of Axle Drive

The different types of live axle can be driven by *Bevel Gear, Spiral Bevel Gear, Worm, Double-Reduction Gear* or *Single Chain.*

In other constructions the rear wheels are driven by *Double Chains, Internal Gears* or *Jointed Cross-shaft.*

Group 1—Housing:
Rear-axle housing (if one piece).
Right and left halves (if two pieces).
Bevel (or worm) gear housing } (if three pieces).
Right rear-axle tube } (if three pieces).
Left rear-axle tube } (if three pieces).
Rear-axle-housing cover.
Differential carrier (bolted to housing).
Rear-axle spring-seat.
Axle brake-shaft bracket (right and left).
Wheel brake-support, right and left ("wheel" may be omitted).
Wheel brake-shield ("wheel" may be omitted).

Group 2—Torque Arm and Radius Rod:
Radius rods.

Group 3—Drive Pinion:
Axle drive bevel pinion (or worm).
Axle drive pinion (or worm) shaft.
Axle drive pinion front bearing.
Axle drive pinion rear bearing.
Axle drive pinion thrust-bearing.
Axle drive pinion front bearing adjuster.
Axle drive pinion front bearing adjuster lock.
Axle drive pinion rear bearing adjuster.
Axle drive pinion rear bearing adjuster lock.
Axle drive pinion adjusting sleeve (containing both bearings).
Axle drive pinion (or worm) carrier.

Group 4—Differential:
Axle drive bevel (or worm) gear.
Differential.
Differential case, right.
Differential case, left.
Differential side gear.
Differential spider pinion ("spider" may be omitted).
Differential spider (or pinion shaft).
Differential bearing.
Differential thrust-bearing.
Differential bearing adjuster.
Differential bearing adjuster lock.

Group 5—Axle Shafts:
Axle shaft (right and left).
Axle shaft wheel-flange (or clutch).

DIVISION XIII—BRAKES

General

In the following list of brake parts the terms "outer" and "inner" are used, being applicable to any case of two sets of brakes on the rear wheels. Where the brakes are external and internal these terms may be substituted for "outer" and "inner." Where one brake is located at the wheels and the other at the transmission the terms "wheel brake" and "transmission brake" should be substituted. With other concentric or side-by-side brakes the terms "outer" and "inner" should be retained, "outer" indicating in the latter case the ones nearer the wheels.

The list is made up for external contracting and internal expanding brakes. If both brakes are of one type the necessary changes will be obvious. The designation of brake parts on the rear axle as foot-brake or hand-brake parts, or by equivalent terms, is too remote to be clear, especially in the case of stock axle whose brakes may be connected either way according to chassis design. Nearly the same condition prevails in regard to designating parts on the chassis according to whether they are connected to the inner or outer brakes at the axle.

The terms "service brake" and "emergency brake" should not be used. Better designations are "foot brake" and "hand brake"; or if both brakes foot-operated, "right foot-brake" and "left foot-brake."

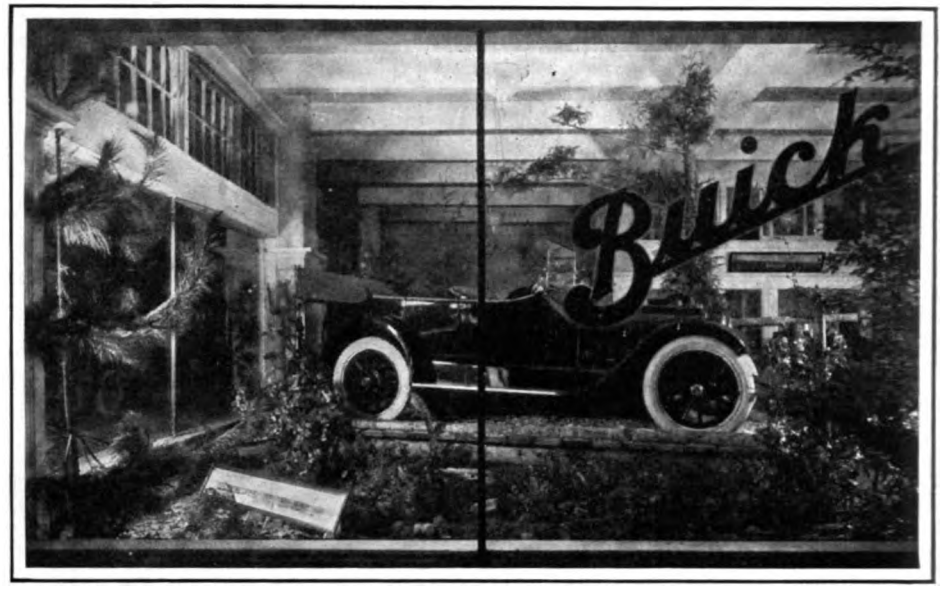
Group 1—Outer Brake:
Outer brake band.
Outer brake band lining.
Outer brake band adjusting nut (yoke, etc.).
Outer brake hand lever.
Outer brake lever shaft.
Outer brake shaft inner end lever.
Outer brake shaft outer end lever.

Group 2—Inner Brake:
Inner brake shoe (or band).
Inner brake shoe (or band) lining.
Inner brake toggle (link, etc.).
Inner brake toggle lever.
Inner brake toggle shaft.
Inner brake cam.
Inner brake camshaft.
Inner brake camshaft (or toggle shaft) lever.

Group 3—Pedal (or outer) Brake Control:
Outer brake rod.
Outer brake rod yoke.
Outer brake intermediate shaft (or tube)—right and left.
Outer brake intermediate shaft (or tube)—right lever.
Outer brake intermediate shaft (or tube)—left lever.
Outer brake intermediate shaft (or tube)—center lever.
Outer brake right equalizer lever.
Outer brake left equalizer lever.
Outer brake equalizer.
Brake pedal.
Brake pedal rod.
Brake pedal rod yoke.
Brake pedal pad.
Brake pedal shaft.

Group 4—Hand (or inner) Brake Control:
Inner brake rod.
Inner brake rod yoke.
Inner brake intermediate shaft (or tube)—right and left.
Inner brake intermediate shaft (or tube)—right lever.
Inner brake intermediate shaft (or tube)—left lever.
Inner brake intermediate shaft (or tube)—center lever.
Inner brake right equalizer lever.
Inner brake left equalizer lever.
Inner brake equalizer.
Brake hand lever rod.
Brake hand lever rod yoke.
Brake hand lever.
Brake lever segment (or sector).
Brake lever pawl.
Brake pawl spring.
Brake pawl button.
Brake pawl finger lever.
Brake pawl rod.

DIVISION XIV—FRONT AXLE AND STEERING



Group 1—Axle Center.
Front axle center.
Front spring seats.
Front axle bushing.

Group 2—Steering Knuckles:
Right steering-knuckle.
Left steering-knuckle.
Steering-knuckle bushing (upper and lower).
Steering-knuckle pivot.
Steering-knuckle pivot nut.

Digitized by Google

The Northwest Buick Company Dressed Up

THE Northwest Buick Co., 802 East Pike Street, Seattle, staged this Dress-Up window. Dirt, stones, gravel and shrubbery were secured at no appreciable cost, and served as the ground foundation. Across a limpid brook was erected a bridge of two logs, some planking and two side binding logs. Aside from the labor there was no great cost, and the display is a credit to the agency.

Steering-knuckle thrust-bearing.
Right steering-knuckle arm.
Left steering-knuckle arm.
Steering-knuckle gear rod arm.

Group 3—Steering-rods:
Steering-knuckle tie-rod.
Steering-knuckle tie-rod end.
Steering-knuckle tie-rod clamp bolt.
Steering-knuckle tie-rod pin.
Steering-gear connecting-rod.

Group 4—Steering-gear:
Steering-gear case.
Steering-gear-case cover.
Steering-gear bracket.
Steering-gear arm.
Steering-arm shaft (if separate from sector or other operating member).
Steering-wheel rim.
Steering-wheel spider.
Steering-wheel tube (or shaft).
Spark and throttle sector.
Spark and throttle sector tube.
Spark hand-lever.
Spark hand-lever tube (or rod).
Throttle hand-lever.
Throttle hand-lever tube (or rod).
Steering-column tube (stationary).
Steering-column cowl (or dash or floor) bracket.

The various bushings in the steering-column take names from parts to which they are permanently fitted, being further distinguished as upper and lower, inner and outer, if necessary. Bushings in the steering-gear case take names from the worm and sector or other main operating parts which they support, as steering-gear worm upper bushing, although the steering-wheel tube may be the member which turns inside the bushing.

Steering worm, Steering-worm sector (or gear), Steering-worn shaft } (Worm and sector gear)

DIVISION XV—WHEELS

Group 1—Front Wheels:
Front wheel felloe.
Front wheel felloe band.
Front wheel rim.
Rim bolts.
Rim clamps.
Front wheel hub.
Front wheel hub flanges.
Front wheel hub-cap.
Front wheel outer bearing.
Front wheel outer bearing inner race.
Front wheel outer bearing outer race.
Front wheel outer bearing balls.
Front wheel outer bearing ball retainer.
Front wheel outer bearing rollers.
Front wheel outer bearing roller cage.
Front wheel inner bearing (parts same as outer bearing).
Front wheel bearing spacer.
Front wheel bearing nut.
Front wheel bearing lock nut.
Front wheel bearing locking washer.

Group 2—Rear Wheels:
Rear wheel hub.
Rear wheel hub-flange.
Rear wheel hub-cap.
Rear wheel outer bearing.
Rear wheel inner bearing.
Wheel brake-drum.
(Other parts named like front wheel parts.)

DIVISION XVI—FRAME AND SPRINGS

Group 1—Frame:
Frame side member (right and left).
Front cross member.
Rear cross member.
Center cross member.
(As above if only three cross members; as below if more than three.)
First cross member.
Second cross member, etc.
Sub-frame side member (right and left).
Sub-frame cross member (front and rear).
Right rear gusset (upper and lower).
(Gussets at other cross members named according to member.)

Group 2—Frame Brackets and Sockets:
Front spring front bracket (right and left).
Front spring rear bracket (right and left).
Rear spring front bracket (right and left).
Rear spring rear bracket (right and left).
Running-board bracket (front, right, etc., if not duplicates).
Running-board bracket brace.
Engine front support bracket.
Engine rear support bracket.
Torque-arm bracket.
Radius-rod bracket.

Group 3—Front Springs:
Front spring (right and left).
Front spring shackle.
Front spring shackle-bolt (upper and lower).
Front spring front bolt.
Front spring rebound-clip.
Front spring seat.
Front spring seat pad.
Front spring clip.
Front spring clip plate.
Front spring center-bolt.

Group 4—Rear Springs:
Rear springs (upper and lower for elliptic and three-quarter elliptic).
Rear spring pivot bolt (or pin), Rear spring pivot seat } (for half-elliptic cantilever spring)
Rear spring double shackle, Rear side spring, Cross spring } (for platform spring)
(Other parts as for front springs.)

DIVISION XVII—HOOD, FENDERS AND SHIELDS

Group 1—Hood:
Hood.
Hood sill.
Hood handle.
Hood fastener.
Hood fastener bracket (spring, lever, etc.).

Group 2—Engine Shield:
Engine shield.
Engine shield fastener.
Engine shield bracket (spring, etc.).

Group 3—Fenders and Running-boards.
Running-board (right and left).
Running-board linoleum coverings.
Running-board outside binding.
Running-board inside binding.
Running-board front binding.
Running-board rear binding..
Running-board shield (right and left).
Right front fender.
Left front fender.
Right rear fender.
Left rear fender.
Fender support socket.
Right front fender front support.
Right front fender rear support.
(Other fender supports accordingly.)

Group 4—Windshield:
(Names for windshield parts have not been selected.)

DIVISION XVIII—BODY

Types of Bodies

Roadster—An open car seating two or three. It may have additional seats on running-boards or in rear deck.

Coupelet—Seats two or three. It has a folding top and full-height doors with disappearing panels of glass.

Coupe—An inside operated inclosed car seating two or three. A fourth seat facing backward is sometimes added.

Convertible Coupe—A roadster provided with a detachable coupe top.

Clover Leaf—An open car seating three or four. The rear seat is close to the divided front seat and entrance is only through doors in front of the front seat.

Touring Car—An open car seating four or more with direct entrance to tonneau.

Salon Touring Car—A touring car with passage between front seats, with or without separate entrance to front seats.

Convertible Touring Car—A touring car with folding top and disappearing or removable glass sides.

Sedan—A closed car seating four or more all in one compartment.

Convertible Sedan—A salon touring car provided with a detachable sedan top.

Open Sedan—A sedan so constructed that the sides can be removed or stowed so as to leave the space entirely clear from the glass front to the back.

Limousine—A closed car seating three to five inside, with driver's seat outside, covered with a roof.

Open Limousine—A touring car with permanent standing top and disappearing or removable glass sides.

Berline—A limousine having the driver's seat entirely inclosed.

Brougham—A limousine with no roof over the driver's seat.

Landaulet—A closed car with folding top, seats for three or more inside, and driver's seat outside.

Group 1—Floor-boards and Dash:
Floor-boards (horizontal).
Toe-boards (sloping).
Heel-boards (under seats).
Dash (separates engine compartment from driver's compartment).
Instrument board.

Group 2—Body.*
Group 3—Upholstering.*
Group 4—Top.*

DIVISION XIX—ACCESSORIES

Group 1—Speedometer.*
Group 2—Tire-pump:
Tire-pump.
Tire-pump driving gear.
Tire-pump shaft gear.
Tire-pump idler gear.

*Names for parts in these groups have not been selected.

Do It This Way

···QUERIES ANSWERED···

TESTING IGNITION

Editor Motor World:

Will you kindly describe what method is used in testing the ordinary magneto coil on the bench and what appliances are necessary? Also, how is the ordinary high-tension magneto tested to insure that it is delivering the spark at high speed?—I. R. Cowdin, Ft. Collins, Col.

To test a magneto coil on the bench, first remove the coil and connect the low-tension circuit with a new battery of the same size as is used on the car, and provide a spark gap of suitable size on the high-tension side. For 60 lb. compression the gap should be ¼ in. in the atmosphere and for 90 lb., ⅓ in. Fig. 2 shows the conventional arrangement which may be used when the coil is not on the magneto armature.

The low-tension circuit is closed and then quickly opened, and if the coil is in good condition a spark should occur at the high-tension gap.

There is no necessity of removing the coil box from the car to do this work if the test wires are long enough to be attached with the coil in place.

Unless the internal wiring of the coil is known, some experimenting will be required in order to connect up with the right terminal. Probably the simplest method of procedure is to note the terminals to which the low- and high-tension wires are attached, and attach the test wires accordingly.

In testing a high-tension magneto, in which the coil is on the armature, a wire running from the battery, Fig. 3, is touched to the insulated side of the breaker. The other terminal of the battery is grounded. If the coil is all right a spark will occur as shown.

Instead of using an enlarged spark gap you may prefer to do your testing under pressure. It is a simple matter to make a device for this purpose, and it is useful not only for testing coils but also complete ignition systems. It may be provided with eight or twelve spark-plug holes as desired, so that it is possible to test all the spark plugs at once. The device is merely a cylindrical chamber made from a piece of tubing, with a heavy plate-glass window at one end and threaded holes for the spark plugs at the other. When testing a magneto, spark plugs which are known to be perfect should be used; but if the spark plugs are under suspicion it will be necessary to use a magneto which is known to be all right. After the spark plugs are screwed into place the pressure is raised to the desired amount, either by a hand-pump attached or by turning on compressed air. A similar device, but different in shape, is shown in Fig. 1. The glass is 5/16 in. thick.

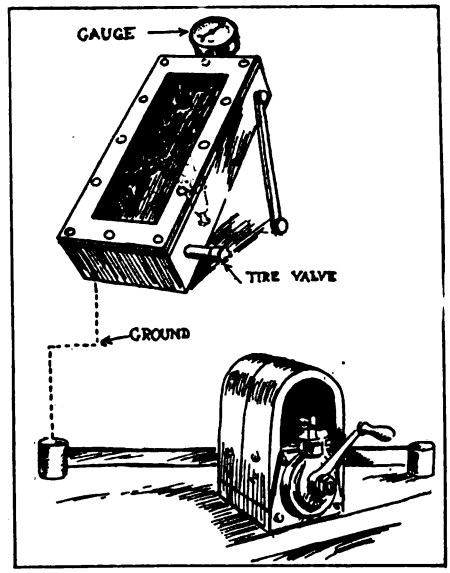

Fig. 1—Compressed air chamber with plate glass front for testing spark plug under compression

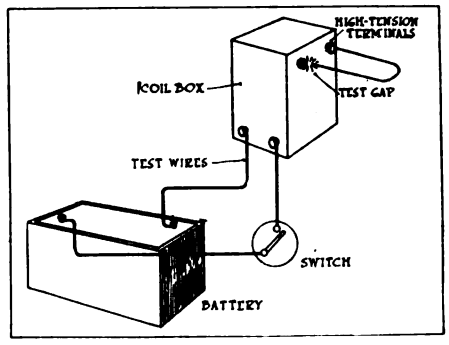

Fig. 2—A battery, switch and test wires are all that are necessary to test a coil

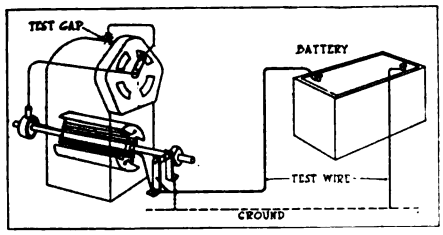

Fig. 3—Testing a high-tension armature. The test wire is attached to the insulated side of the breaker

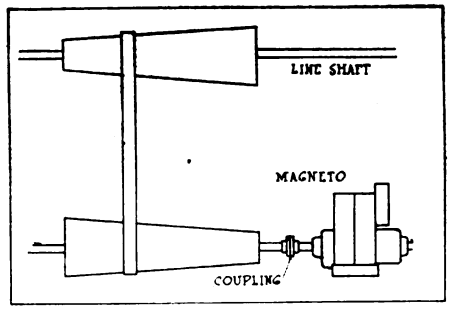

Fig. 4—Simple variable speed pulley arrangement for operating the magneto at varying speeds

The best way to be sure that the magneto is delivering proper sparks at high speed is to test it at the maximum speed desired—say, 3000 r.p.m. There are many ways of driving the magneto at this speed. Probably the simplest is to crank it by hand, as shown in Fig. 5. You should have a reduction varying from 10 to 1 to 15 to 1. A bicycle chain drive will be preferable to a belt. Fig. 4 shows a simple method of driving the magneto from a line shaft, cones providing for the wide variation in speed.

CLUTCH DRAGS—OIL DIRTY

Editor Motor World:

We have a model K Hupmobile with which we have trouble changing the gears from first to second. At times it will charge perfectly, and the next time the gears will grate. The gears shift easily while the car is not in motion.—Melvin O. Weaver, Toledo.

Your trouble probably is due to dirty oil in the motor. The motor and clutch case are lubricated by the same oil, and when it has been used a long while it becomes sticky and interferes with the free action of the clutch. Drain the old oil out, rinse the system thoroughly with kerosene, crank the motor several times with the spark off, and then put in fresh oil. You should have no further trouble unless the grease in the gearbox is too heavy or the box is too full. You should use a very light non-fluid oil or a heavy cylinder oil in the gearbox.

REASON FOR LEAK

Lack of compression in a cylinder in which the valves and pistons are tight may be due to a high spot on the mushroom of the push rod. The remedy is to remove this spot by grinding or else to increase the clearance between push rod and valve stem.

UNIVERSAL FILE HANDLE

A universal file handle may be made of wood or metal and is equipped with a small clamp adjusted by a butterfly screw so that various files may be put in place and locked securely. C. L. Mainland, Auto Garage, Jamaica, L. I.

Scientific Construction

GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

BUILDING 56 x 106 SUITABLE FOR RAMP

Editor Motor World:

I am inclosing a sketch for a two-story building and basement.

I intend using an elevator 18 x 8. Will that be large enough? You will notice that I want the shop on the second floor, partitioned off from the rest, which will be used for storage purposes. Kindly advise how many cars I will be able to store on first and second floors, and give locations of posts.—George H. Ven Denmark, Ven Denmark Motor Car Co., Elmira, N. Y.

The main objection to your plan is that only about thirty-three cars may be stored.

Fig. 4 illustrates a plan which we believe you will find satisfactory. It provides for forty-one cars, yet the space for showroom and accessory store has not been reduced.

The front entrance has been eliminated for two reasons: First, because the frontage is valuable for display purposes, and, second, because the driveway might better be put to some more useful purpose, such as storing cars. A garage sign at the corner of the building should be sufficient to attract trade to your side-street entrance.

The repairshop has been placed on the ground floor because you will find it more convenient to have it here, and also because it fits in better with the first-floor plan than it does with the second. It is an advantage to have the repairshop on the same floor as the offices, showroom and stockroom, particularly the latter, for the reason that minimum time is wasted in going from these various rooms to the shop. The shop should be separated from the garage preferably by a series of sliding doors so that a car may be run into any part of it with maximum convenience.

If you find it necessary to have the shop on the second floor it would be better to put it at the front, as it would be nearer the offices, and connection with the stockroom might be made by dumbwaiter.

The accessory department has been placed in a separate room. You will find that this is the better plan. However, if you would rather have the two departments together it is merely a question of eliminating the wall between the accessory store and showroom.

The space you have designated for the washrack might be used for housing your machine tools or for a stock or tool room. There seems to be no advantage in having this space for a washrack, and to do so would complicate your design considerably, because it is difficult to place an entrance at this point without wasting space.

It seems well to point out here that one of the great defects we have found with garages, both built and contemplated, is that the owner puts in too many entrances, not just as many as he needs. Quite frequently in small garages there are two front doors, one for exit and one for entrance. This is permissible under certain circumstances, but in other cases it merely spoils the interior layout. In short, an extra door is objectionable unless it is necessary to attract trade or unless it simplifies or economizes on the design of the interior.

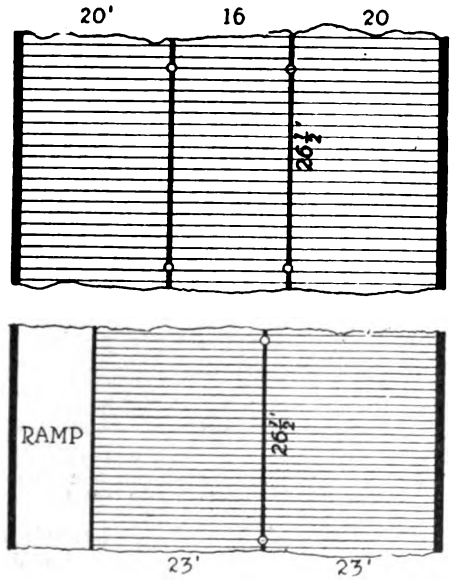

Fig. 1—Upper—Plan of floor joists for layout shown in Fig. 5. The light lines are joists and the medium ones steel beams. Lower—Design of floor joists for Fig. 4. Dimensions are given in the text

Your plot is ideal for the construction of a ramp instead of an elevator, as Fig. 5 plainly shows. You can store almost as many cars—forty instead of forty-one. While the ramp takes up considerably more space than the elevator, you have this space to spare, since your building is wider than necessary.

The ramp has several distinct advantages over the elevator. It costs nothing to keep up, while the elevator will cost several hundred dollars per year, including interest on investment, depreciation and repairs. It is much quicker to drive a car up and down the ramp than to carry it up or down the elevator, and there is no waiting.

The posts are indicated on both plans.

The floor has been designed to carry a uniform load of 140 lb. per square foot. The usual figure employed in designing floors is 120 lb., but 140 was selected so that the floor would be strong enough for practically all requirements. A loaded 5-ton truck may be driven with safety on this floor, and unloaded trucks up to 10 tons' capacity may be accommodated.

There are two rows of three posts each, Fig. 1, spaced 26½ ft. apart, lengthwise. These two rows are 20 ft. from the walls. The posts are connected lengthwise by 20-in. I-beams weighing 100 lb. per foot. The 16-ft. span is supported by 2 x 12-in. joists, 10 in. center to center, and the 20-ft. spans have 3 x 16-in. joists, 18 in. center to center.

The floor construction is different in Fig. 2. The steel work and joists are heavier; and although this will mean somewhat increased cost of construction, it has the advantage that only three posts are used instead of six. This is possible because the floor span is only 46 ft. instead of 56, as in the other. The posts are spaced at equal distances from the center of the open space, and are connected by 24-in. I-beams weighing 105 lb. per foot. The floor is supported on 3 x 18-

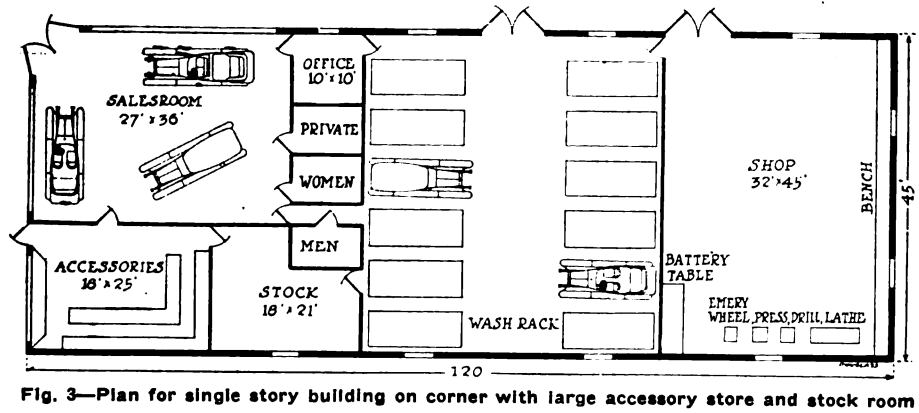

Fig. 3—Plan for single story building on corner with large accessory store and stock room

Digitized by Google

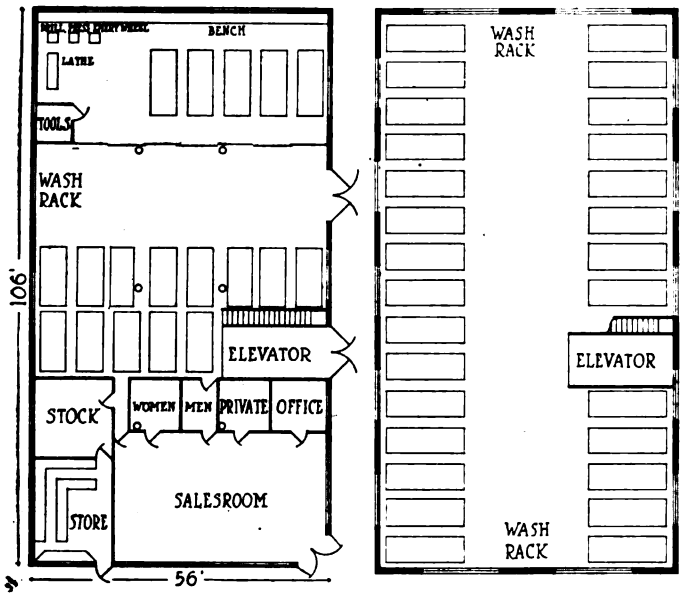

Fig. 4—Plan of two-story complete dealer plant with access to the second floor by elevator. Note how slightly the posts interfere. A small toolroom is shown in this plan

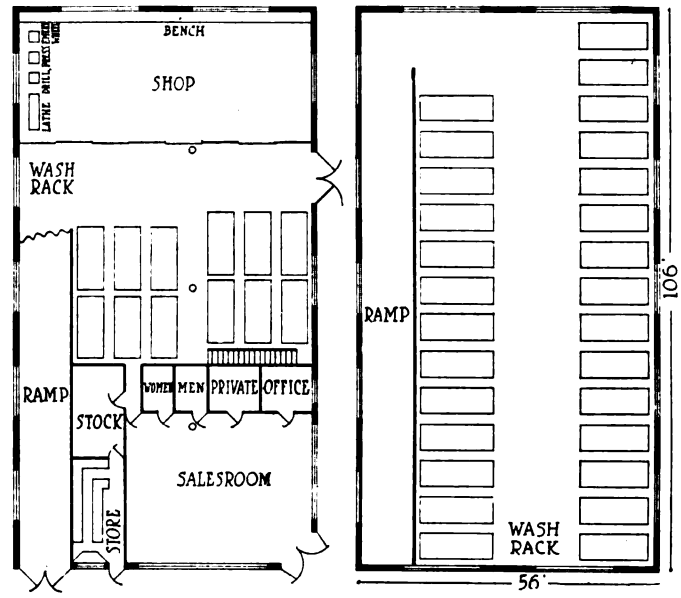

Fig. 5—Plan slightly modified to accommodate the ramp. Its adoption would only reduce the storage capacity by one car, and would leave the other departments unaltered

in. joists placed 1 ft. apart. The posts may be 8½-in. steel columns filled with concrete, the steel being ¼ in. thick. This is with a 13-ft. ceiling.

The same size posts are also used for the construction plans illustrated in Fig. 4.

CORNER BUILDING FOR SMALL TOWN

Editor Motor World:

We contemplate building on a corner lot, 50 ft. on main street by 100 ft. deep, as per inclosed sketch. Please give us plans for garage and accessory business, with repairshop in rear.—El Paso Auto Sales Co., El Paso, Tex.

You will note, Fig. 6, that we have made the accessory store and showroom separate. The accessory store when combined with the showroom always detracts from the latter, as the noise of customers in it prevents prospects from giving their full attention to the salesman.

You should have plate-glass windows in the front and side of your showroom, and also at the front of the accessory store, so that both rooms are fully visible from the street.

The shop should have shelves and cabinets for housing the small tools. Other tools are stored in the small toolroom.

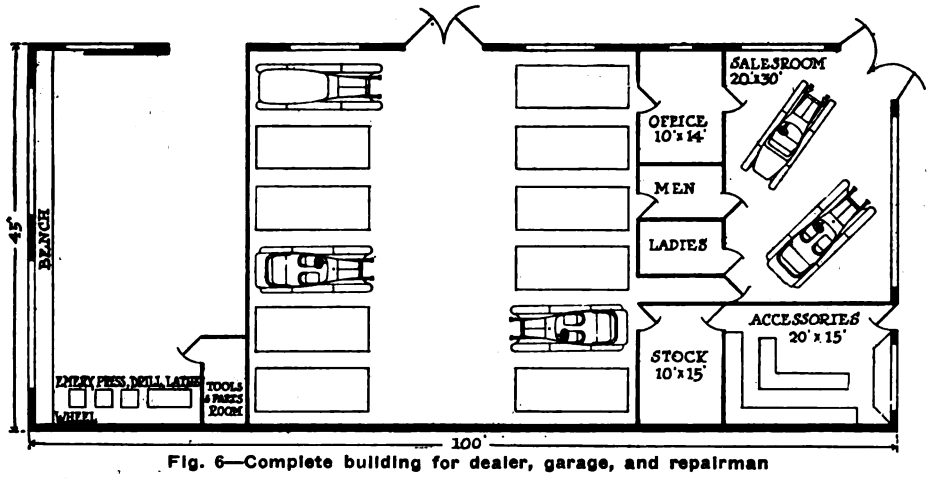

Fig. 6—Complete building for dealer, garage, and repairman

Fig. 7—Corner view of building. The accessory store window is much wider than it looks in perspective; actually it is 7 ft.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 740) PROTECTING AIR HOSE

Compressed air at every pillar in a garage is a convenience, though it is not always easy to provide for the safety of the tubing. If the pillars are hollow, the tubing can be made to rise out of the way by weighting it, as shown. The counterweight descends into the center of the pillar.—Keystone Motor Co., Lewistown, Pa.

(No. 741) GRINDER MOUNTING

A small grinder can be mounted on a box bracket on the wall. The box beneath the grinder provides a convenient place for small tools, spare wheels, buff wheels, etc.—Northampton County Buick Co., Easton, Pa.

(No. 742) HINGED STAIRWAY

Where a small hanging gallery has been put in a garage, a convenient means of reaching it is a hanging stairway. This is hinged at the upper end and when not in use can be pulled up out of the way by means of a block and tackle, fastened to the roof beams.—Keystone Garage, Allentown, Pa.

(No. 743) GASOLINE HOSE SUPPORT

At best a gasoline hose is comparatively short-lived. The fuel attacks it on the inside and it is thrown and knocked around, kinked and bent so that the outside does not stand up as it should. A remedy is to provide a hose rest, as shown. The groove of the rest is curved. The advantage of this simple device is that it is easier to throw the hose up into the groove, where it will be supported properly and protected against injury, than it would be to wind it around the top of the pump or throw it on the floor, almost.—Van's Garage, Poughkeepsie.

(No. 744) CAR-LIFTING DEVICE

A double hook placed over the frame, as shown, is extremely handy in supporting the car while a wheel is removed. By using two of these brackets both wheels or the axle may be taken out with ease. The brackets extend front out of the way, so that the mechanic has full freedom in working on the car. They may be used just as well at the rear as at the front.—Locomobile Co. of America (branch), Philadelphia.

WHEN YOU ARE STUCK

When you are perplexed with a difficult problem; when you are seeking the quickest way to do a job, go through the back pages of this department and undoubtedly you will find what you want.

Take part of the time thus saved and write us about the best Short Cuts you have in your shop. Every shop has some. Show your gratitude by sending yours in. The sketches may be as rough as you like, and the choice of English does not matter.

(No. 745) CONVENIENT DRILLING CHUCK

When the space is constricted it is often difficult to use an ordinary breast or pneumatic drill, and in some cases it is impossible unless considerable time is spent in disassembling the parts. A way to save this time is to build a drilling device consisting of two bevel gears mounted in a substantial steel box, one gear being driven by a flexible shaft and the other driving the chuck.—A. J. Hettrich, Foss-Hughes Co. (Pierce-Arrow), Philadelphia.

(No. 746) TIRE RACK

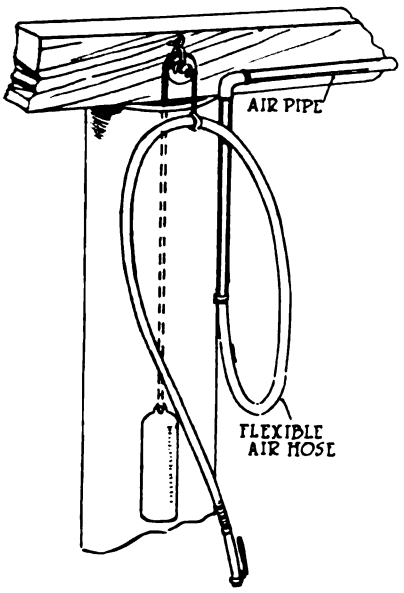
A convenient tire rack which attaches to the ceiling can be made of ordinary iron pipe and fittings. The main member is made of 2-in. pipe, into which are screwed the nipples to hold the projecting members. The projecting members should be about 3 ft. long and should be on 3-ft. centers to allow room for the largest sizes of tires.—Palmer Garage, Easton, Pa.

(No. 747) PORTABLE GARAGE LAMP

This lamp was made primarily to be used in washing automobiles at night, but has also proved to be of much value in night work of any nature. The vertical support and cross-braces are made of wrought-iron pipe, and the base is made of ¾-in. L's welded onto the upright member. The reflectors are made of sheet metal, the inside being enameled white and the outside green, as was the balance of the lamp. The floor end of the angles were flattened and carried castors. These, combined with a long extension cord, allowed the lamp to be moved to any desired position.—Hodskin Garage, Canton, N. Y.

(No. 748) KNIFE FOR SWITCH TEST

To test a switch in order to ascertain whether it is short-circuited or whether one or both of the wires have become detached, press a knife blade through the insulation of both wires leading to the switch. This will not harm the insulation enough to cause trouble.—Berks Garage & Auto Co., Reading, Pa.



(No. 749) TORCH STAND

An excellent adjustable stand for a torch can be made of a discarded flywheel for a base and a ⅝-in. round rod. The rod is driven into the hole in the center of the flywheel, which, if too large, can be filled up with melted lead. The other member can be bent as shown and the weight of the torch will hold it securely in place.—Berks Garage & Auto Co., Reading, Pa.

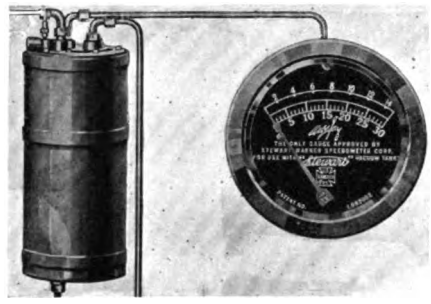
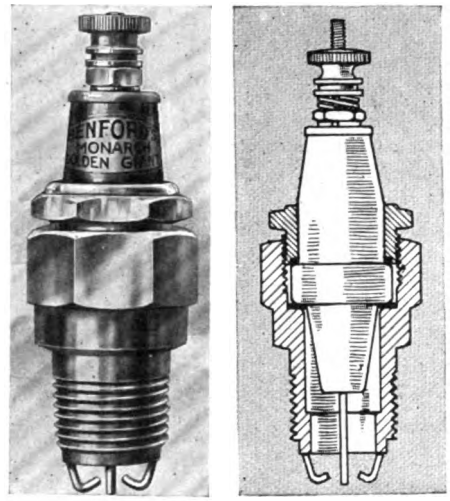
Accessories & Supplies

GOLDEN GIANT SPARK PLUG



Benford Mfg. Co., Mt. Vernon, N. Y. PRICE, $1.

The most striking exterior feature of the plug is that the shell is durably plated with 24-karat gold. A special insulation styled blue adamant is used in connection with copper-asbestos gaskets made by a special process, and a strongly built shell. The bushing is nickel. Electrodes are of pure nickel. The manufacturer guarantees each plug unconditionally, the guarantee stating that the plug may be returned to the factory at any time if found unsatisfactory and it will be repaired or replaced free of charge. The plugs are packed in individual tin cartons and are made in all styles.



J-A-Y VACUUM GAGE

Webb Jay Corp., Karpen Building, Chicago.

This gage not only shows whether the Stewart vacuum system is operating or not, but also furnishes a means for measuring the fuel consumption. The gage is flush-mounted on the instrument board and connects with the top of the vacuum tank by a small pipe. It is simply a vacuum gage and registers the actual suction pressure or vacuum produced by the motor on the upper chamber while this chamber is being filled with fuel. After it is filled, however, the suction is removed and the pressure brought to atmosphere and the gage hand jumps to atmospheric pressure, which is zero. This cycle is repeated over and over. When the upper tank is emptying into the lower, the hand stands at zero, and when the upper tank is being filled the hand registers the suction of the motor. Thus the hand shows at all times just what is happening in the tank. It is a simple matter to compute the fuel consumption by watching the hand swing back and forth, as each complete movement indicates a consumption of 1/40 of a gallon. It is an extremely simple matter to install this device, it being merely a question of mounting the gage in the cowl board and attaching the pipe to a threaded connection on the tank which has been provided just for this purpose.

J-A-Y Vacuum gage shows action of vacuum tank

Exterior and section of Golden Giant

NONPAREIL TRAILERS

Nonpareil Mfg. Co., Cochranton, Pa. PRICES: Model A, $65; B, $80, and C, $100.

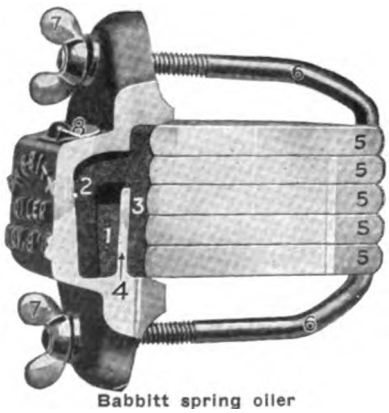
All three models have broad, low express bodies with flare boards, high hickory wheels, Timken bearings and solid tires. The body on the 1000-lb. model A is 6 ft. long, 46 in. wide, 10 in. deep and has 7-in. flare boards, which are removable; weight, 360 lb. The model B has a capacity of 1500 lb., a body 8 ft. by 46 in., and weighs 430 lb. The model C capacity is 1 ton, the body is 8 ft. long, 46 in. wide and 8 in. deep, with sides and ends removable; weight, 465 lb.

PERMA-TITE TIRE PATCH

Motor Supplies Mfg. Co., 21 Fifth Street, N. E., Minneapolis. PRICE, $1.75; dealers 33 1/3 per cent.

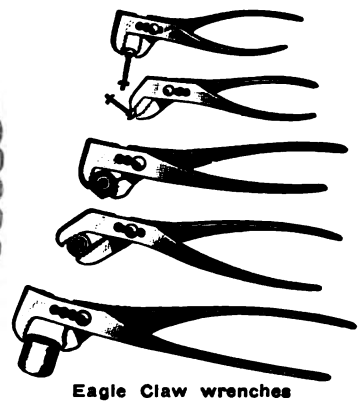
A tube and tire patching outfit for all sizes of holes is made. The patch is applied cold, it simply being necessary to use a thin coat of the cement and then put it in place. It is said that permanent vulcanization takes place eventually, due to the heat and air pressure of the moving tire.

EAGLE CLAW WRENCH



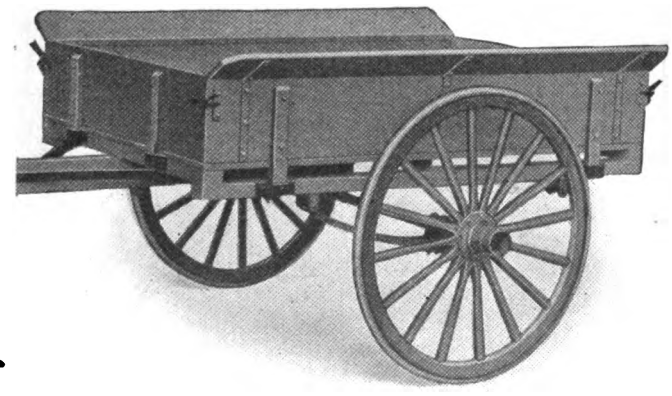
Mechanical Specialties Co., People's Gas Building, Chicago. PRICES: 7-in., $7.20 per dozen; up to 13 in., $15 per dozen.

Several styles of Eagle Claw wrenches are made and are designed to handle all sizes and shapes of work. The different sizes are adjustable from zero to 2 in.



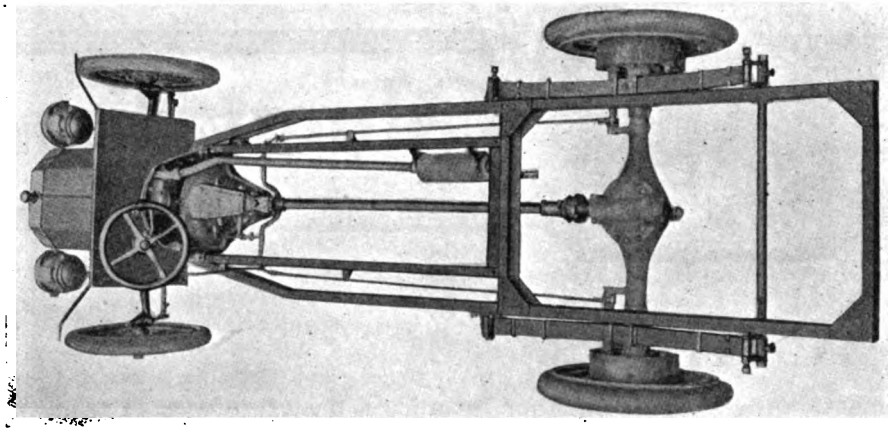
BABBITT SPRING OILER

Babbitt Spring Oiler Co., Penn Building, Cleveland. PRICE, $4.50 to $12 per set.



A spring lubricator consisting of a felt wick housed in a metal casing and clamped to the side of the spring. Oil is supplied once a week.

Babbitt spring oiler



Eagle Claw wrenches

Model A Nonpareil trailer

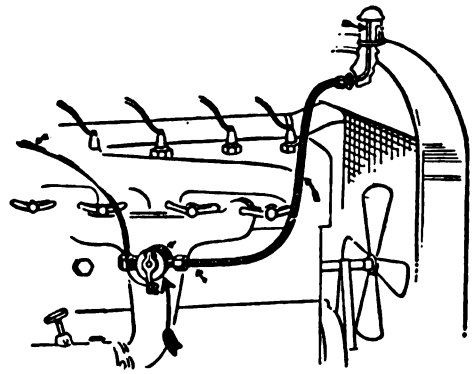
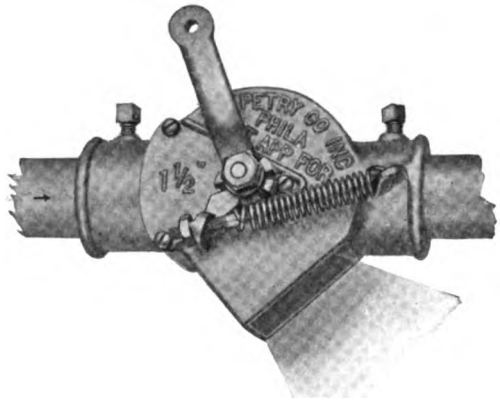
Ames-ton worm-driven truck attachment for Fords

AMES-TON TRUCK FOR FORDS



Ames Motor Car Co., Owensboro, Ky. PRICE, $395.

Worm-drive is the particular feature of the Ames-ton attachment for converting a Ford into a 1-ton truck. A heavy channel frame to support the truck body forms an extension on the Ford frame. The weight of the truck is carried on half-elliptic springs and 3-in. expanding brakes are fitted. The wheelbase is 120 in., tires 32 x 3½, and rear wheels are second growth hickory with 2-in. spokes. Tread is 56 in. and the loading space, back of the driver's seat, 8½ ft. It weighs 1100 lb., which, added to the weight of the Ford chassis, brings the unit up to 2000 lb. The gear ratio is 6.2 to 1. The price is complete with all fittings and the change may be made in a few hours, it is said.



A-W CONVERTIBLE TOP

The Adams-Williams Mfg. Corp., 1790 Broadway, New York.

An all-weather convertible top which affords all the conveniences and advantages of a one-man touring and the fully inclosed glass limousine. It differs from conventional types in that it affords the automobilist of moderate means a top which is adapted to spring, summer, fall and winter, without the expense of maintaining two distinct types of bodies. It is light, increasing the weight of the car only 30 lb. One of the distinctive features is that with the glass panels removed the top cannot be distinguished from the regular one-man top. The panels are of French plate glass set in steel frames having lugs fitted into recesses in the molding. The structure is rigidly retained by an ingeniously concealed spring that is operated by the fingers. Movement or weaving of the top cannot be communicated to the glass because of a patented construction of the top proper. When the panels are not in use they are stored in a compact leather case, generally located in back of the front seat. The door panels are practically a part of the doors and open with them and incline inward, so that when the doors are closed they are perfectly tight. It is possible to slam the doors without injury to the panels, which are accessible without disturbing the occupants of the tonneau. The A-W top provides a partially or wholly inclosed body and the change from open touring to fully glass inclosed can be made in 2 min. When all of the panels are in place the interior of the car is rain-, snow-, dust- and wind-proof, and the construction is guaranteed against rattling, squeaking or vibratory noises. A feature of the design is that a separate and distinct type is made for each standard model car and the lines harmonize perfectly with the body of the car. There is no varnish to require careful washing.

Vapo Humidifier supplies moisture to the carbureter

Petry cut-out

INSTANT BACK CURTAIN LIGHT

Auto Patent Equipment Co., 216 Post Square, Cincinnati. PRICE, $2.50.

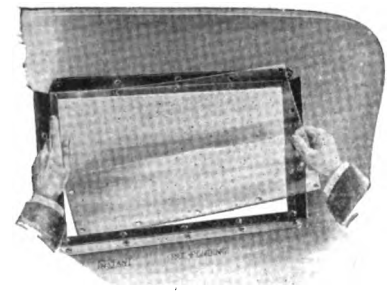
This accessory consists of a frame designed to fit the back curtains of 70 per cent of all cars. The frame has flexible edges to which the removable celluloid light is attached by snap fasteners.

LIGHTNING CLEANSER

Lightning Cleanser Mfg. Co., Perin Building, Cincinnati. PRICE, $1.50 per ½ gal.

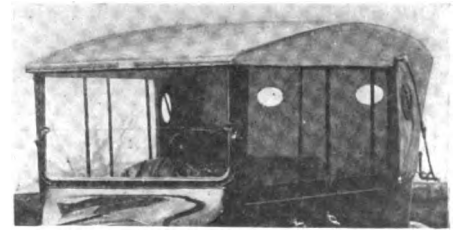
The cleanser is an oily liquid which is said to loosen mud, oil, grease and dust and may be used in place of soap and water in cleaning the car. When it dries it forms a thin, hard coat of a wax-like substance on the surface, preserving the finish from the elements, it is claimed. The cleanser is applied with a cloth, sponge or waste, after which the body is wiped dry and polished.

PETRY CUT-OUT



N. A. Petry Co., Inc., Philadelphia. PRICES: 1¼ to 1⅝ in., $3; 1⅞ to 2⅛ in., $3.50; 2⅜ to 3 in., $4.

This cut-out is a damper type, one position of the damper deflecting the exhaust gases down into the open and the other position allowing them to pass through to the muffler. The valve may be readily removed for cleaning and the tension of the closing spring may be varied to suit the requirements.



VAPO HUMIDIFIER

Auto Gas Saver Co., 29 South La Salle Street, Chicago. PRICE, $5.

This device supplies warm, moist vapor to the manifold, the exact amount being controlled from the dash. It consists of a valve at the manifold from which runs a pipe to the filler spout of the radiator, at which point the vapor is procured. It is said to provide a better mixture, and consequently improves the power and smoothness of operation of the motor.

Instant back curtain light

A-W convertible top

No Trades

OF late there seems an apparent movement on the part of many dealers to eliminate the trading of used cars when making new sales, and in this way to make a long step toward the solution of their own used-car problem. It is admitted that if all dealers refused to make trades the used car as a problem would no longer be the *bête noir* of the dealer, but not all dealers who can plainly see the advantages of such a practice have the courage to take this step.

Generally, it will be found that in nearly every city there will be one or two dealers who have an iron-bound policy to take no cars in trade—who would sooner lose a sale—and often do—than accept a used car in part payment for a new one. And, just as generally, it will be found that these dealers are the most successful.

There is one dealer in a fairly large Pennsylvania city who sells Dodge, Buick and Packard cars. During the past 9 months he has consistently refused to make trades when selling Dodge cars. On Buicks he will make a trade when forced to do so, and on Packards he has always traded and says he probably always will.

But beginning the next fiscal year for the Buick factory this dealer is going to refuse to trade when selling Buicks. And his reason for this is that his books show him a greater net profit from the sale of Dodge cars than he realized from the sale of Buicks, although he sold many more Buicks than Dodges.

In another instance a dealer refuses to trade in used cars, but agrees to take a used car for a purchaser of a new car and sell it for him for a commission of 5 per cent. Why, reasons this dealer, should I give a used car space and devote my time, or the time of my salesmen, to its sale without remuneration? He has found that he has lost only a very few sales by this method.

One thing which appears bound to have an important bearing on the used-car problem is the growing practice of selling cars on time payments. A dealer in another Pennsylvania city states that fully 50 per cent of his sales are made on the time-payment plan. In a total of fifty-two sales, but nine included the trading in of used cars. In other words, the time-payment plan had brought in forty-three brand new car owners with no cars to trade. This, of itself, is sufficient inducement to this dealer to warrant him concentrating his efforts on sales made on this basis. It wipes out his used-car problem.

Where will the used cars go if a "No Trades" slogan becomes general? Assuredly they will go to the used-car dealers. These dealers are specialists in their line. The used-car business is a big business. But it is a business apart from the business of selling new cars. Many dealers in new cars are successful in spite of the fact that they trade used cars. But it can be said almost without fear of contradiction that ALL dealers who refuse to trade used cars are successful.

$39—Ten Years—$100,000

THE other day at the ad men's convention in Philadelphia was a man with a note-book. Every now and then he put down something.

Said he to the man next to him: "One thing I'm trying to do is improve my English."

Said the other man: "I often read with a dictionary at my side."

The first man put this down in his note book.

He has been putting things down in his note book for ten years. Ten years ago he had $39. To-day his assets are close to $100,000. He has done it all by picking up ideas.

He was asked how he got his start on this idea-garnering career. He said: "Myself and my brothers were always on the lookout for new ideas. One day we picked up a trade paper. It was a revelation to us. It was full of ideas.

"We have been reading that paper and many other papers ever since. They are a wonderful field for us in our business development. They show us the best things other men have done, and whenever we see a good idea we use it."

There are good papers in many trades, just as there are good papers in the motor car trade—and there are ideas everywhere. If each dealer in any trade would apply the ideas he can pick out of his trade paper alone he would go farther and faster on the road of business development. But the one essential is APPLICATION OF IDEAS.

BOOST ELECTRIC CARS

Editor Motor World:

There was recently an article in Motor World on electric cars that I thought was as fine and as practical an article as I have ever read. It seems to me that if the people interested in electrics were to take this matter up locally with the different electric companies something could be done to improve the situation. Certainly such a thing as boosting stations around San Francisco would be a wonderful thing for the electric owner.

San Francisco is so hilly that by the time an electric is 20 miles outside of San Francisco 50 per cent of its juice is gone; otherwise it could probably travel 100 miles in most any direction with level roads. So you can see what a wonderful thing a boosting station would be located here and there on our State highways. You know we have wonderful roads. Touring in California is one delightful trip from start to finish.—ARTHUR D'ETTEL, Secretary Garage Owners' Protective Association of San Francisco.

THAT ASSOCIATION EDITORIAL

Editor Motor World:

The editorial on page 21 of the Motor World of June 14 is red hot and A1 in every respect.

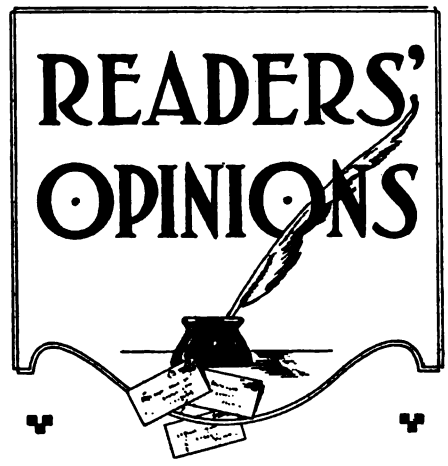
I hereby nominate the man that wrote it as a candidate for the Hall of Fame.

Please follow up with a law compelling every garageman to read it and then sit down and think about it for 30 min.

F. A. BEAN.

Grosse Pointe, Mich., June 17, 1916.
(Paye P. O.)

STANDARDIZE BULB DATA



Editor Motor World:

We noted your very excellent article in the May 24 issue in regard to automobile lamps. We certainly appreciate the appearance of articles of this kind, which tend to clear up points in regard to automobile lamps, for which there has been considerable confusion in the trade.

I note that in your table of proper lamps for 1916 cars you refer to the lamp bases as Ediswan. This term is obsolete among all of the larger lamp manufacturers and we have been trying for some time to standardize the word Bayonet in describing this type of base.

Carrying out the idea of your May 24 article a little further, I have prepared a write-up dealing with the standardization of automobile lamps and their demand. Possibly you can find room for this in an early issue of your publication.—National Lamp Works, General Electric Co., Publicity Department, W. E. Underwood.

Cleveland, June 12.

Simplifying the Lamp Business

The demand for automobile lamp bulbs 5 years ago was practically nothing, as electrically lighted cars at that time were a novelty. Now such lighting is universal and the demand for the present year is estimated at over 30,000,000 lamp bulbs in this country alone.

Naturally, such rapid growth has outstripped the slower process of standardization of lamps and lamp terms among lamp manufacturers and among the trade.

However, great progress toward standardization has been made in the last 2 years. Car manufacturers who have been equipping their cars with special lamps are now using lamps of standard ratings and sizes, because standard lamps may not only be purchased more economically for initial installations, but may also be more easily and cheaply purchased by the car owner when lamp renewals are necessary. In addition, bulb manufacturers have succeeded in reducing the variety of sizes of lamps regularly made. This movement towards a limited assortment of standard bulbs on the part of car and lamp manufacturers has greatly simplified the lamp renewal business for the garageman and supply house.

It is now possible to supply the proper lamps for 90 per cent of all cars from a selected stock of 100 lamps, and two of the most progressive lamp manufacturers are marketing such a stock packed in a display container with a list of proper lamps for all popular cars.

Now that the demand can be met with such a limited stock, there is no question as to the large profit which any garage may make on lamp bulbs.

Although the number of sizes and types of lamps now in general use has been reduced to a comparatively few standard sizes and the reducing process is still going on, there is need for a better understanding among garagemen and car owners of the main points about lamps and terms descriptive of lamps.

The various kinds of lamp bases have been a source of trouble from the start. Originally, lamps were made with any one of seven or eight different types of bases. Some car makers specified one style of base and some another, as fancy dictated. Present day cars are wired with either the single-wire system or double-wire system, requiring respectively single or double contact bayonet base lamps. In the single-wire system one terminal of the battery or generator is connected to the frame of the car and from the other terminal wires are run to the lamps, only one wire entering each lamp socket. The shell of the socket is connected to the frame, thus completing the circuit when the lamp is lighted. For this system of wiring, lamps with single contact bayonet bases are used.

The double-wire system is equally as popular as the single-wire system among car makers. For this method of car wiring two wires are run to each lamp socket and the proper lamp base for cars wired in this way is the double-contact bayonet base.

These two types of bases were formerly known as double- and single-contact Ediswan bases. This term is obsolete and it will avoid confustion if garagemen will always refer to these bases as bayonet, rather than Ediswan.

Lamps having candelabra screw bases are required for a few gasoline cars and for most electrics.

Another important point which requires care on the part of the garageman is that of lamp voltage rating. Three voltage ratings have been standardized, 6-8 volts for three-cell storage battery-generator lighting systems, 12-16 volts for six-cell systems, and 18-24 volts for nine-cell systems. It is necessary, of course, to make certain that the voltage rating of the lamp is adapted to the lighting system of the particular car for which it is sold.

The first demand for lamps called for a host of different bulb sizes and shapes. This has been boiled down so that the present demand is almost entirely for round bulbs of four different sizes.

Because of the very considerable simplification which has taken place in the demand for lamps, it may be readily seen that the garageman may now supply practically all calls from a limited stock of lamp bulbs and each of these bulbs will be suitable for a large number of different makes of cars.

Chalmers Dealers Gather at Plant

DETROIT, June 28—More than fifty sub-dealers of the Chalmers organization, operating under the Michigan distributer, the L. J. Robinson Co., were in the city this week for a 2-day convention to view the 1917 Chalmers cars and to formulate plans for a furtherance of business for the coming season. Talks were given by President Chalmers, Vice-president C. A. Pfeffer, Vice-president of the selling division Paul Smith, L. J. Robinson and Harry Newman of Chicago. A big drive-away of new models closed the meeting and took many of the new cars away from Detroit.

Milwaukee Lecture Series Stopped

MILWAUKEE, June 28—The Milwaukee Automobile Dealers, Inc., has interrupted the series of business and efficiency lectures instituted in April, due to the hot weather, and will complete the course beginning in October. The lectures are designed to promote service, education, economy and efficiency, and are for the benefit of the sales, office and service forces of the thirty-seven dealers comprising the M. A. D. The lectures are fourteen in number and are given by Prof. R. C. Griswold of the Sheldon School. Every phase of the business is thoroughly discussed from an academic standpoint in simple, straightforward language.

The RETAIL NEWS

NORTHWEST

J. O. Nordin, Minneapolis, Minn., is building a concrete garage at 3112 Washington Avenue North.

The Stimson Automobile Co., Minneapolis, 1202 Hennepin Avenue, is now handling the Monroe.

The J. H. Shields Co., Minneapolis, has opened a distributing office for the Vim truck at 1108 Harmon Place.

The Whitcomb-Littlewood Auto Co., Minneapolis, a new firm, is Minnesota representative of the H. A. L. car, at 30 Eighth Street N.

Russell Sage, Bird Island, Minn., has opened a repairshop with Boardman & Son.

The Bush Garage, Red Wing, Minn., has taken the Cadillac agency.

F. E. Wade, Fairmont, Minn., has rented the F. L. McCadden Garage.

The Yellowstone Garage, Billings, Mont., 2300 Montana Avenue, has been opened by William Frank and E. H. Preston.

A. H. Johnson, LaMoure, N. D., has bought an interest in the Ernst Bros. business.

Roy Duholm, Austin, Minn., has opened a repairshop on the second floor of the Gransee Garage which has been leased by Clarence Rosenthal.

L. J. Case, Aberdeen, S. D., has removed his business to 419 S. Main Street.

The St. Paul Chalmers Co., St. Paul, has taken over the St. Paul representation of the Chalmers from the Northwestern Chalmers Co. It will move to 408 Main Avenue, and H. F. Hine will be sales manager.

The Kvenvold & Hoffman Garage, Hartland, Minn., has opened.

Emil Gregor, Waterville, Minn., has opened a garage.

Nelson Bros., Wheaton, Minn., have opened a garage in the Hokanson Building.

C. C. Kisor, Morristown, Minn., has taken the Elcar agency.

Albin Braaten, Oklee, Minn., has bought the A. J. Lillo Garage.

The Jacobs Garage, Wabash, Minn., has been opened.

W. C. Orr, Dillon, Mont., has opened a garage opposite the city hall.

Edward Gruber, Townsend, Mont., will erect a garage, 50 x 90 ft.

H. D. Mack, Dickey, N. D., has taken the Ford and Crow agencies.

The Batavia Motor Car Company, Batavia, Ia., is building a new garage 50 x 90, on Main Street.

Ray Buchanan, Liscomb, Ia., has purchased an interest in the Liscomb Garage and will devote his time to the business.

MOUNTAIN

The Western Auto Repair & Service Co., Denver, has closed its garage at 1431 Cleveland Place.

A. O. Stout, Buckingham, Col., has secured the Pullman agency for Logan and Sedgwick Counties.

The Steamboat Mercantile Co., Steamboat Springs, Col., has taken the Velie agency for Routt and Moffat Counties.

The C-B Auto & Service Co., Denver, a new $5000 concern organized by W. C. Borah and C. A. and E. N. Harman, who are respectively president, vice-president and secretary of the firm, has opened a used car and rental business at 1439 Cleveland Place.

W. Aldridge, Denver, general manager and one of the organizers of the Highway Auto Sales Co., 1435 Cleveland Place, Crow-Elkhart and Argo distributer in Colorado, has sold his interest and left the motor car business.

The Vim Truck Sales Co., Denver, is the name of a new Colorado distributing agency for the Vim truck opened at 801-807 Broadway by Charles F. Cole, formerly Pathfinder distributer in Colorado.

The Auto Equipment, Denver, celebrated its seventh anniversary with a banquet for its employees in the Metropole Hotel last week. This wholesale supply house at 1554-1556 Broadway now has a territory of fourteen states, and reports on business outside of the Denver district were made by L. E. Robinson, manager of the Colorado Springs branch, and J. R. Alexander, traveling representative. President S. T. McCollum, Treasurer S. E. Howe, Jr., and Publicity Manager A. Paul Porter conducted a lively program of business betterment talks. The concern has recently enlarged its display facilities.

The Gould-Esser Co., Denver, a machinery concern at 1613 Blake Street, has secured the Colorado distributing agency for the Troy trailer.

The Mulnix & Rarie Auto Sales Co., Denver, the new name under which the firm of Mulnix & Rarie is operating in new quarters at 35 East Colfax Avenue, has taken the Roame and Halliday distributing agencies for Colorado and Wyoming in addition to the Grant and Pathfinder agencies it has held for the same territory.

COAST

The Pacific Kissel Kar Co. has opened distributing headquarters for the Kissel in Seattle, at 806 East Pike Street. W. C. McKay has been named distributer in the State of Washington. Branches are now operated by this company in San Diego, Pasadena, Los Angeles and San Francisco and Portland, Ore., and with the addition of a branch and service station in Seattle will have one of the best and largest organizations on the Pacific Coast.

R. K. Roberts, Seattle, formerly with the Oakland Motor Car Co. in San Francisco, will shortly enter the distributing field and handle the Oakland line under the firm name of the North Pacific Oakland Co. Associated with Roberts will be E. M. Mark.

Vick Bros., Salem, Ore., have secured the Ford agency for Lane County and opened a garage and salesroom in Eugene.

The Wall Shipp Co., Salem, Ore. has put in a line of supplies and secured the distributing agency for the Stewart-Warner products.

D. L. McPhee, G. K. Cassidy and C. M. Herald, Portland, Ore., have incorporated the American Tire & Rubber Co. of Portland, Ore., and opened salesrooms at Broadway and Oak Street. The company will do a general tire business and specialize in United States and Knight tires at wholesale and retail.

The Simplex Rubber Co. of California, Los Angeles, has opened a salesroom and service station at 1113 West Pico Street with A. C. Thompson in charge. The concern will handle solid tires for trucks exclusively. It directly represents the Simplex Rubber Co. of America, Ossining, N. Y.

The Colfax Tire Shop, Colfax, Wash., has been incorporated by B. P. Hargrave, R. M. Dimmick, Claude Swegle, J. J. Kimm, R. E. Perry. Capital, $2,000.

A. J. Field & Co., Davenport, Wash., has been made Chalmers dealer.

The 500 Taxicab Co., Spokane, Wash., has been organized by William C. Nichols, Frank L. Chase. Capital, $20,000.

The Chewelah Auto Co., Chewelah, Wash., has been made Chalmers dealer.

The H. & B. Repair and Accessory Co., North Yakima, Wash., has been organized by Walter Hesse and Harry G. Brown.

The Francis Motor Car Exchange, Portland, Ore., has been organized to handle used Ford cars and parts.

Verner and Copeland, Bakersfield, Cal., have been appointed Kern County distributers of the Saxon.

The Chandler Motor Car Co. of California, Los Angeles, is no more. The firm name of the southern California Chandler distributer has been changed to Earl V. Armstrong, Inc. All legal provisions governing such a change have been complied with and alterations made in the company's articles of incorporation.

MIDDLE WEST

The Motor & Electric Co., Menominee, Mich., has been organized by James Merrick, who will make a specialty of Maxwell and Studebaker service.

John Schwide, East Hamlin, Mich., has opened a new garage in the Hunt Building.

Murvin Sluyter, Alma, Mich., has opened a garage at 217 West Superior Street.

Fred Thompson, Belding, Mich., has taken the agency for the Chevrolet.

Ben W. Haehnle, Jackson, Mich., has secured the agency for the Standard truck.

The Oswald Motor Car Co., Grand Rapids, Mich., distributer of the Dort, Baker and R. & L. electrics and Shattuck convertible trailer, has moved its salesroom and service station from 66 Sheldon Avenue to 131 Michigan Street, N. W., formerly occupied by the Peckham Auto Sales Co. The new location is only temporary, as a new building is contemplated.

Hinz & Truxell, Lansing, Mich., distributers of the Chevrolet and Hudson, have opened a new garage on Washtenaw Street.

Isaac Koski, Marquette, Mich., has purchased the interest of his partner, William Hemmila, in their garage on Division Street.

F. W. Fitz, Lamb, Mich., recently lost his garage by fire, the loss being between $8,000 and $10,000.

C. E. Pugsley and Frank Meyers, Dowagiac, Mich., have secured the Oakland agency from W. A. Stolley and in the future will conduct a copartnership. They will erect a new garage, 40 x 50, on North Front Street.

The Chandler Auto Sales Co., Flint, Mich., has opened a new salesroom and service station at 913-915 South Saginaw Street, which was formerly occupied by the Flint Garage.

George Newville, Muskegon, Mich., who conducts a salesroom at 265 Pine Street, has been appointed distributer of the Allen.

The Horning & Moore Auto Sales Co., 529 West Genesee Avenue, Saginaw, Mich., has been appointed distributer of the Denby motor truck in Saginaw County.

Frank Fisher, Platteville, Wis., is having plans prepared for a two-story garage and repairshop, 40 x 110, of brick, concrete and hollow tile.

James Morgan, Rhinelander, Wis., will erect a new garage. It will be two stories and basement, 60 x 140, fireproof, and cost about $12,000.

The Frint Motor Car Co., 211 Wisconsin Street, Milwaukee, State distributer of the Oldsmobile and Monroe, has established a retail department in connection with its wholesale business. The new department is in charge of A. F. Eckstein, until recently with the Jonas Automobile Co., Cadillac distributer.

C. M. Thorning, Milwaukee, proprietor of the Blenheim Garage, 144 Twenty-sixth Street, has taken the Wisconsin State distribution of the Sun.

Digitized by Google

The Belleview Garage Co., Milwaukee, recently organized, is awarding contracts for a new garage and repairshop at Downer Avenue and Mineral Spring Road, East Milwaukee. It will be of brick and steel, 70x 160, one story and basement, and cost $12,000. Richard Mokros is general manager.

Henry Beushausen, Reedsburg, Wis., has opened a tire and vulcanizing shop on the third floor of the Townsend-Metcalf Garage, Reedsburg.

George C. and L. J. Laing, Sheboygan, Wis., operating the Laing Vulcanizing have purchased the property and buildings which they have occupied for several years.

SOUTH

G. R. Crutcher, Louisville, Ky., distributer of the McFarlan, has opened an office and salesroom at 206 East Broadway.

The Peoples Motor Co., Louisville, Ky., has acquired the agency for the Inter-State, and established headquarters at 951 South Third Street.

The Winklemann-Schade Motors Co., Louisville, Ky., has organized and opened a temporary office and salesroom at 949 South Third Street, as Maxwell distributers. W. F. Winklemann, head of the company, was formerly sales manager of the Southern Motors Co.

The Louisville Tire Co., Louisville, Ky., distributer of the Empire, has opened an office and salesroom at 407 East Broadway.

EAST

The Keystone Motor Car Co., Harrisburg, has started the erection of a two-story, brick, fireproof salesroom, repairshop and garage on South Eleventh Street, to cost $25,000. The new building will be 100 x 118, with storage space for 150 cars.

Ness Brothers & Company, York, Pa., engaged in the rim, spoke and wheel manufacturing business, have added a line of automobile accessories.

The Gorson Automobile Exchange, 238-40 North Broad Street, Philadelphia, purchased the building at Broad and Melon Streets, and will build a four-story building containing four stories on the site. The purchase price was $70,000.

J. R. Pettit, Philadelphia, is having a one-story brick and concrete garage built at 6234-36-38 Market Street, costing $8000. The building is 75 x 100.

The Buick Motor Co., 235-37 North Broad Street, Philadelphia, has leased the 6-story concrete building now being built at the northwest corner of Broad and Poplar Streets, which will be used as a wholesale and retail branch. The present quarters will be vacated about September 1. The new building has a frontage of 65 feet on Broad Street, and a depth of 160 feet on Popla. Street.

C. A. Fair, Mulberry Street, Harrisburg, for years engaged in the wagon business, has gone into the manufacture of delivery and commercial car bodies.

The Anderson Motor Co., Inc., York, Pa., will occupy its new three-story brick, fireproof garage, King and Queen Streets, September 1. The garage will have 30,000 square feet.

The Keystone Hardware Co., York Pa., Murray E. and W. Reeser Ness, proprietors, has taken on a line of automobile accessories. Included are the agencies for Miller and Marathon tires.

The Hudson Sales Co., Harrisburg, I. W. Dill, proprietor, is erecting a modern two-story fireproof service station and salesrooms, 60 x 22, on the site of its old salesrooms on Mulberry Street.

Eugene J. Ellis, Rochester, N. Y., formerly assistant truck sales manager of the Packard Motor Car Co., Detroit, has taken over the firm of E. J. Ellis & So. and will handle Packard cars and trucks.

H. Schroeder, Harrisburg, vice-president of the Overland-Harrisburg Co., has leased the Eliott Building, 128-130 West Market Street, York, Pa., for sales service and showrooms for the Overland and Willys-Knight.

The Smith Motor Car Co., Wilmington, Del., has been formed to utilize a large garage erected at Ninth and French Streets —just completed. The firm comprises G. B. Smith, Newark, N. J., and R. L. Smith, West Chester, Pa. They will handle the Allen, Hupmobile and Standard.

A. F. and W. L. Fader, Wilmington, Del., who have been in the automobile business in Newark, Del., for some time, have taken the Wilmington agency for the Oakland and have opened headquarters in the new Topkis Building.

William H. Ryan, Wilmington, Del., has taken the agency for the Paterson.

The Bunker-Bancroft Co., Springfield, Mass., has taken the agency for the Apperson.

Peckham Bros., Providence, R. I., have bought a large lot on which they will erect a new building.

The Eisner-Lenk Co., Boston, Mass., has moved to 1096 Boylston Street.

Ralph Lyons, Princeton, Me., has opened a garage on Main Street.

The Old Colony Garage, Boston, has just been opened in the business district.

The Crocker Garage Co., Falmouth, Mass.. has been purchased by Arthur G. Cushman, a former employee.

A. C. Zacher, West Medford, Mass., has opened a tire repairshop.

C. J. & J. O. Hollis, Weymouth, Mass., are erecting a new garage.

Frank Turner, Brookline, Mass., is erecting a two-story garage.

J. Willard Cobb, Greenfield, Mass., has taken the Cadillac agency.

The Draper Bros., Milton, N. H., have opened a new garage.

The Ryan & Ryan Garage, Webster, Mass., has been leased by Emil Roemer.

Dydak Piekos, Holyoke, Mass., is erecting a garage, 120 x 50, to cost $12,500.

John A. Clark and **Angus D. Martin**, Quincy, Mass., owners of the M. C. M. Garage, have dissolved partnership. Clark has become sole owner.

Alexander B. Campbell, Worcester, Mass., is having a three-story brick building on Burnside Court remodeled into a garage at a cost of $20,000.

The Richmond Garage & Motor Co., South Boston, Mass., has filed a petition with the Supreme Court to go out of business and close up its affairs.

SOUTHWEST

B. C. Scott and **Carl Jaeger**, Clarksville, Mo., have purchased a building and are remodeling it for a garage.

The Kimball & DeLay Auto Co., Parsons, Kan., have enlarged their showrooms and shops and built an office addition.

Abraham Warrick, Hutchinson, Kan., whose shop was burned three weeks ago, has opened in a new location.

J. H. Parvin, Hutchinson, Kan., agent for the Gray tractor, has opened in a new location, 24 Sherman Street West, following the fire three weeks ago.

J. C. Dickinson, Odessa, Mo., formerly of Kansas City, has purchased a half interest in the garage of J. W. Colvin.

C. W. Smith, Lawrence, Kan., is closing out his accessories, to devote his time to the Ford agency.

W. E. Knabe, Milan, Mo., has recently opened a garage and repairshop.

Will McBride, West Plains, Mo., will soon occupy his new garage and repairshop in the Fitzgerald Building; he is agent for the Maxwell and Saxon.

John Downs, Bellflower, Mo., recently made manager of the Southern Hotel, is erecting a garage in connection with a blacksmith shop, which will also have a stable in connection.

T. N. Rigby, Albany, Mo., has bought the property occupied by the Darlington Garage, Darlington, Mo., from C. C. Bush. Bush is a dealer in cars.

A. R. Cogswell, Kirwin, Kan., is erecting a cement garage.

Charles Adamson, Elk City, Kan., has rented the building formerly occupied by the Loether Bros. Garage, and will operate a storage garage.

J. M. Baker and E. N. Schriber, El Dorado, Kan., have added to their floor space. An addition gives 50 x 60 extra space, and a storeroom 17 x 28 will be built. The company, The El Dorado Garage, now has 6,000 feet of live storage space, the shops 2,000 feet, and the dead storage in the basement 5,000 feet.

The Merchants Truck Co., St. Louis, has been incorporated at $5,000, with these incorporators and members of the board: John A. Yung, Theodore Mueller, H. T. Steele, H. B. Willower, Vincent McShane, all of St. Louis.

Eller Bros., Gaylord, Kans., have recently opened their newly equipped repairshop in their Main Street Garage.

William Liddle, Holden, Mo., has let the contract for an addition, 30x48, for a repair department.

A. A. Sexton, Kennett, Mo., is building a brick garage.

Labbe Bros., Axtell, Kan., dealers in Velie and Reo at Axtell and Vermillion, are having a brick garage erected in Vermillion for their use.

Martin Bros., Ottawa, Kan., has secured the agency for the Chalmers.

B. C. Lindsey, Winchester, Kan., formerly of Altamont, has bought an interest in a garage and automobile agency.

The Farris-Stephens Auto Supply Co., Joplin, Mo., suffered damage of $5,000 by fire.

G. A. Millar, Wichita, Kan., has entered the business of making automobile bodies, and will soon enter a two-story brick factory.

Campbell & Marts, Marceline, Mo., blacksmiths, are erecting a garage annex, cement floors.

Benjamin Markley, Cherokee, Kan., has purchased the equipment of the Spencer & Lindsey Garage, and will soon open it for business.

The Dodge Automobile Agency, Springfield, Mo., will occupy about September 15 a new two-story brick and terra cotta building, work on which has just started. Display rooms and offices will be on the first floor, repair department on the second, storage in the basement. Electric elevators will serve. Motor cars may enter and leave by the rear.

James Hall & Son, Fairview, Ok., Overland dealer, has added accessories.

Clem Beckham, Burrton, Kan., will occupy for storage purposes a building being erected adjoining his garage.

V. T. Altes, Unionville, Mo., will soon move his livery barn and erect a brick or concrete garage.

The City Motor Car Co., Whitewater, Kan., Eilert & Viles, proprietors, has opened a garage and repairshop.

H. Hamlin, California, Mo., is now occupying an addition to his garage.

Fred Fitch, Pittsburg, Kan., has let the contract for the erection of a garage 50x170.

Frakes & Hiatt, Rushville, Mo., are planning to buy, rent or build a new garage.

Teater & Delap, Blairstown, Mo., are now occupying their new garage and repairshop; they also deal in accessories.

Digitized by Google

Grother & Son, Sweet Springs, Mo., have secured the Buick agency; John McGuire was formerly distributer here.

W. R. Archer, of Stone & Archer, dealers in automobile accessories in Dodge City, Kan., visited Kingsley, Kan., recently to make arrangements to open a store in that city.

H. O. Turley and **H. M. Turley**, La Plata, Mo., have sold their interest in the Model Garage & Machine Shop to P. C. Sloan.

Joseph G. Akins & Son, Humansville, Mo., have opened a garage, carrying accessories.

G. C. Sparks, Kiowa, Kan., is building a garage close to the Elmore Hotel, which he owns, for the use of his guests.

The White Way Garage, Waterville, Kan., successor to the Merchants Auto Co., has opened up in the Thomas Building.

The Huffine Motor Co., Frederick, Okla., will move to the Palace Hotel Building, this month, where it will put in large stock of accessories and Buicks.

Oster & Merten, Kingsley, Kan., have bought the Sims Garage and will handle the Reo and Case.

Frank Grove, Conway Springs, Kan., has leased the Thorne garage at Norwich, and has already taken charge.

The Dodge Automobile Agency, Springfield, Mo., is to have a new brick and terra cotta building; work has already been begun. A modern elevator will also be installed.

Fred Fitch, Pittsburg, Kan., is having a new garage building, 50x170, erected for his own use.

Fred Chancellor, Merriden, Mo., has secured the agency for the Overland.

McDonald & Burnham, New Bloomfield, Mo., have opened a repairshop.

F. R. Plummer & Son, Coats, Kan., are building a brick and tile garage.

The Adams Auto & Supply Co., Chillicothe, Mo., has constructed a new garage with modern equipment.

Harry Miller, Chillicothe, Mo., has just completed a new garage in which he will open an automobile sales business.

Will Foster and Oscar Fields, Morley, Mo., will erect a new garage on the site of the Old Red Front livery stable.

The Hargrave Garage, Goodland, Kan., burned down recently with the loss of the building and three new Inter-State cars owned by a patron. Hargraves, the owner, has started rebuilding the shop.

The Wilhite Brothers, Garden City, Mo., are having a new garage built of concrete to house the Dodge agency which they are taking.

E. O. McCain, Oskaloosa, Kan., has opened a garage, taking the agency for the Overland.

Walter Kuhlmann, California, Mo., has taken over the agency for the Haynes.

Mannie Trimble, Mexico, Mo., recently bought the J. Sullivan vulcanizing business.

C. H. Briggs, Goodland, Kan., is building a garage across the street from the Commercial Hotel, which he owns.

H. B. Bell, Dodge City, Kan., is building an addition to his garage, 50x75 ft., two stories.

The Centralia Taxi Co., Centralia, Mo has been purchased by Charles A. Thummel from A. H. Owings.

W. R. Schooling, Sturgeon, Mo., has purchased the General Garage, formerly owned by C. A. Burkey, and has placed his son, Ray Schooling, in charge.

R. O. Graham and R. E. Troxel, Jameson, Mo., have opened a garage and will operate a repairshop in connection.

Rainey Goodman, Belle, Mo., has sold his garage to Walter Glieck, and is going to St. Louis to open another.

Warren Martin and **J. M. Jones**, Ardmore, Okla., have taken over the Reo agency.

O. W. Hiatt, Kansas City, Mo., for nine years Buick dealer, is establishing the Hiatt Buick Corporation, and will get headquarters further uptown, in the retail automobile trade center. Heretofore the retail has been conducted in the same building with the wholesale. The growth of both the wholesale and the retail have made necessary this separation.

The Topeka Buick Co., Topeka, Kan., is erecting a building with a snow-white front and modern equipment, which it will occupy soon. O. W. Hiatt of Kansas City, and M. D. Wood constitute the company. Wood will manage it.

The Ramsey Auto Co., Kansas City, Mo., has been organized with J. A. Ramsey, formerly with the Commerce Truck Co., as manager, to handle the Detroiter.

The Velie Motor Car Co., Kansas City, Mo., has leased for 10 years a tract at Sixteenth and McGee Streets; a salesroom will be erected at once.

R. O. Farmer, Anthony, Kan., has traded a farm for a garage in Nickerson.

Loren Turk, Ash Grove, Mo., has taken the agency for the Maxwell.

George P. Kliewer, Inman, Kan., recently leased the repair department of his garage to Charles Rutledge.

The Haskett-Mace Motor Co., Springfield, Mo., opened for business May 29, with a stock of tires and accessories.

George Wells, Grant City, Mo., has sold his garage to Erna Banium and Arthur Turner.

The George C. Hale Co., Kansas City, Mo., has finally received the contract for 20 pieces of motor driven fire apparatus, the ordinance having been signed by the mayor.

J. C. Granere, Clyde, Kan., has moved his repairshop from Calderhead to Agenda.

H. M. Dickerson and William Lazalier, Poplar Bluff, Mo., are the owners of a new garage to be opened in a new building under the name of the Automobile Repairing Club.

S. H. Browne & Son, Vandalia, Mo., recently purchased a garage in that city.

Warren Scott, Bonner Springs, Kan., has sold his share in the Golden Belt Garage to Armour Scott, his brother.

Edward Davis, Moundridge, Kan., has moved his equipment into a new garage which he built some time ago. Edward Goering, recently from South Dakota, has installed an electric charging station in the garage.

Arnhold's Garage, Jefferson City, Mo., was opened to the public the middle of June. This firm, in addition to garage service, has the agency for the Hudson and Pullman.

The Capital Garage, Jefferson City, Mo., has taken the agency for the Dort.

Charles Adamson, Elk City, Kan., has opened a garage in the building formerly occupied by Loether Bros. Garage.

N. F. Jenkins, Wymore, Neb., is erecting a concrete garage.

W. E. Knabe, Milan, Mo., recently opened a new garage.

Hagar Bros., Laddonia, Mo., have bought the garage of Chiem & Hudson.

P. C. Redman, Abilene, Kan., recently bought a building adjoining his present garage for the purpose of opening a salesroom.

J. O. Smith, Smith Center, Kan., who has the agency for the Ford, has built an addition to his garage.

L. W. Booth, Guymon, Okla., will occupy a building now under construction.

E. L. Brewer, Independence, Kan., will use the North Side Planing Mill building for a garage and repairshop.

Simmons & Simmons, Belleville, Kan., are closing out a stock of variety goods to make room for a vulcanizing business.

The Marion-Handley Sales Co., Kansas City, Mo., has been organized to handle the product of the company indicated in eastern Kansas and western Missouri. The Marion had previously been represented here. L. C. Cadenhead, formerly of Ottawa, Kan., recently with the Franklin Company, is president and manager, and C. F. Gehde, formerly in the bond business in Austin, Tex., is secretary-treasurer. They have opened in the Coca Cola Building, receiving cars June 25.

Russell H. Clark & Co., Kansas City, Mo., body and top builders, is building outing and commercial trailers, the specialty being the Russ Outing Trailer convertible, by removing the wire spring bed, into a commercial trailer. The firm is also stocking commercial bodies for touring cars; it is furnishing new commercial cars complete, or providing the used cars to be made into commercial cars.

The Slavens Auto Co., Kansas City, Mo., is now handling used cars; this fall the U. S. Motor Parts Co., recently established by Slavens, will equip the quarters with shops and handle parts.

Sheldon R. Parsons, Kansas City, Mo., has established the Parsons Motor Co., for handling the Tonford unit one-ton truck of the Detroit Truck Co. in Kansas and Jackson County, Mo. Parsons will equip a shop and salesroom shortly at 1804 Grand Avenue.

The Phoenix Auto Supply Co., St. Louis, is exhibiting a new equipment outfit for a Ford. It costs $264 and was designed by John F. Shuford, general manager of the Phoenix company, and it is called the Shu-Ford. This is how it is listed: Heinze-Springfield starting and lighting system, $75; Bosch magneto, $50; Lynite pistons, $30; Livingston radiator, $45; crown fenders, $16; linoleum covered runningboards, $6; Warner seat covers, $22; demountable wheels, $10; Sears-Cross speed indicator, $10.

The Commercial Auto Body Co., St. Louis, has been incorporated at $50,000 by Hugh F. Cartwright, M. E. Cartwright and X. F. Wilfey. Cartwright has been conducting a factory at Sixteenth and Pine Streets and during the last year turned out 10,000 bodies. The capacity will be enlarged.

George F. Farasey, with the Kelly-Springfield Tire Co., at Boston and Cleveland, has taken charge of the St. Louis branch for the same company, succeeding C. R. Higgason.

D. A. Livingston, St. Louis, a salesman, has organized the Supreme Motor Co., which will begin business early in August. The new company has the agency for the Simplex Crane chassis. The company will handle probably two lower priced lines but has not determined upon these nor has it decided definitely upon the location of showrooms.

E. E. Denniston, St. Louis, has taken charge of the wholesale department of the Overland Automobile Co. of St. Louis. Denniston comes from Buffalo, N. Y., where he distributed the Stevens-Duryea and later conducted a truck body building plant. Here he succeeds H. A. DeWitt, who resigned as sales manager of the wholesale department of the Overland company, to become Overland distributer in Little Rock, Ark.

St. Louis—New agencies and changes in existing sales arrangements during the past week in St. Louis are:

The Newell Motor Car Co. will handle the Detroiter. The Newell company now is distributer of the Haynes, Sun, Dort, and Detroiter. The Elcar Motor Sales Co. has been designated as the distributing agency for the Elcar. The Fred Campbell Auto Supply Co. has been made exclusive sales agent for the White Star Refining Co. of Detroit. The John Berry Automobile Co. has become agent for the Dearborn one-ton truck attachment.

Studebaker Employes at Home in Any Branch

Standardized System Permits Man From One Branch to Locate Any Part in Another Branch in Two Minutes—Special Racks and Stands Facilitate Work—Cash Sales 300 a Day

$60,000 worth of parts in stock; $1,500 worth sent out every day; 300 cash sales made over the counter daily; 6,000 different things on hand; and——

Nothing in stock that is not actually needed; stock status ascertainable at any minute by glancing at a card; practically all shipments made within a day of receipt of order; record of every cash sale completed when sale is completed; and every one of the 6,000 parts in stock getatable within 2 minutes at the outside.

Squeezed into a couple of sentences, that is what has been accomplished by

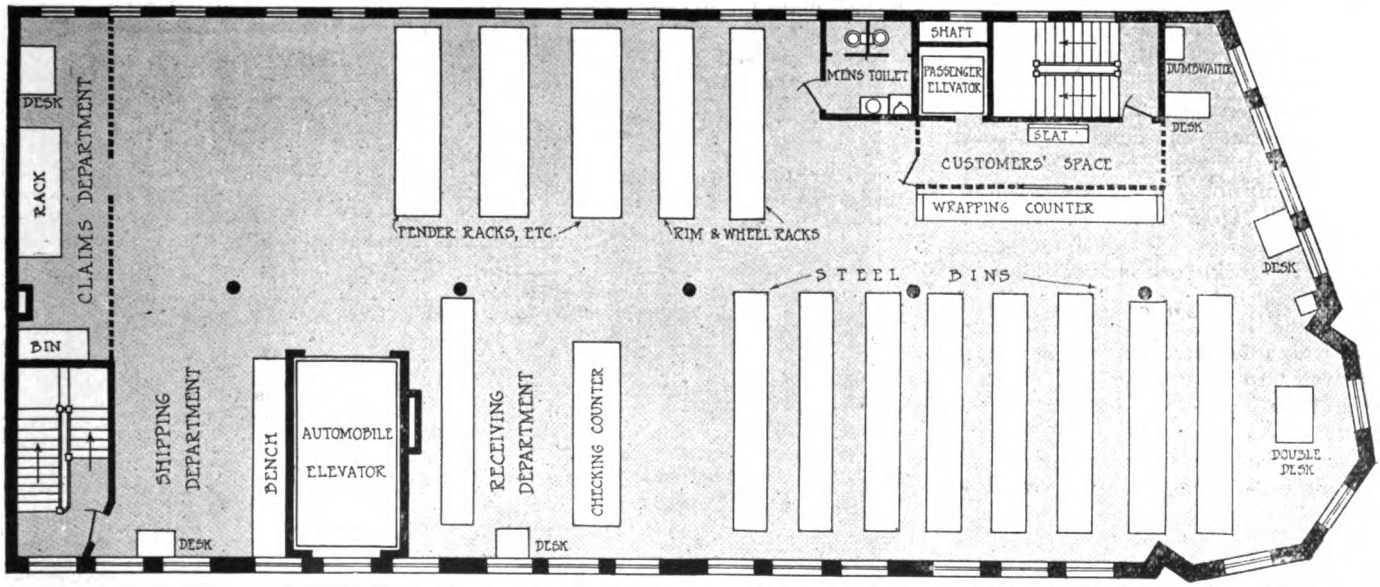

Fig. 2—The floor plan is laid out to promote efficiency with the stock of parts arranged so that those in most demand are most easily reached. The stock department occupies a whole floor

Digitized by Google

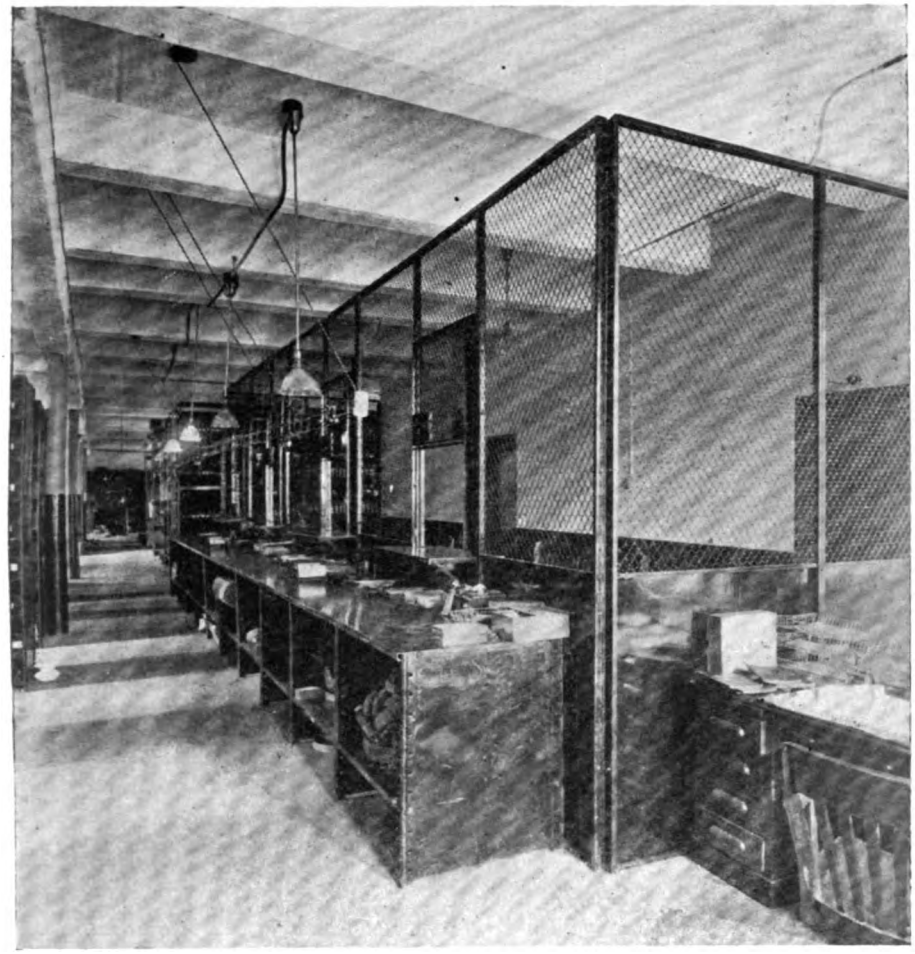

Fig. 3—Customers are separated from the stockroom by a steel partition; cash sales are made over a steel counter beneath which are stored some of the more bulky parts

the intelligent application of a simple system in the stock and claims department of the New York branch of the Studebaker Corp.

Concentrated system—simplified system—is the watchword. And, it may be added, there is nothing local about the system either of the stock department or of the rest of the establishment. All the Studebaker branches have been standardized along the same lines, and any employe, from the biggest to the littlest, can be transferred from any branch to any other branch and continue his own line of work without loss of time and without confusion. There are no loose ends to pick up and no new tricks to be acquired.

The New York stock includes all parts for all Studebaker cars from and including the 1909 E. M. F. up to date. A single card system makes it a simple matter to locate any part, from a frame to a cotter pin, in less than 2 minutes and at the same time shows the number on hand, number on order, number sent out—in fact, it is a complete perpetual inventory on one set of cards.

Underlying the whole system is the method of storing parts and identifying the various racks and bins. This part of the plant, as well as the counters and wire partitions, was manufactured and installed by the Lyon Metallic Co. and is built of steel throughout.

The bulk of the parts is stored in 9 units of shelving. See Fig. 1. Each unit is 21 feet long, 7 feet high and 3 feet wide, and contains two sets of shelves and bins back to back. Half of the unit is called a section and each section is numbered, the numbers running consecutively; 1 and 2 are the back-to-back sections of unit No. 1; and 3 and 4 are the corresponding sections of unit No. 2.

On the end of each unit is painted, at the top, the unit number in red; lower down, in white, are the section numbers and below them the numbers of the models of cars for which the parts are intended. Each section is divided vertically into seven "stalls," a stall running the whole height of the unit, and each stall is divided into compartments, which may be bins, shelves or drawers. In many cases the lower partitions are omitted and the compartments made longer to hold longer parts.

The stalls in each section are lettered A, B, C, D, E, F and G. The compartments—bins, shelves or drawers—are numbered consecutively. Lastly, each

Salesman

Fig. 6—When cash sales are made, they are entered on a form of this kind which is made out in triplicate

compartment carries a card bearing the designating number of the part it contains.

John Driverman comes in and asks for an exhaust valve spring for his 1913 Studebaker. The stock man looks in a section of the card index devoted to that particular model and finds the part is No. C123 and is in unit 3, section 5, stall E, bin 11. In practice, there are many times when the man does not have to hunt up the number; he knows from experience just where to go, and only rarely is it necessary to look for anything except the actual number of the part, because, in the first place, the man knows in what sections he will find the parts for a particular model, and in the second place, the parts numbers are arranged to run consecutively on the bins.

Incidentally, it has been found that a great deal of space can be saved by substituting drawers for bins or shelves for small parts. Many screws, bolts and other small parts occupy so little space that an adequate stock will nowhere nearly fill a bin. So they are being placed in drawers, each drawer being divided into three compartments. By this arrangement one compartment does the work of three. The change from bins to drawers is being made as convenience permits and will allow for a great deal of expansion without the installation of more units.

Not even the tops of the units are wasted, for on them are stored tanks, mufflers, windshields and hoods, each on the unit for the model to which it belongs. No elaborate spotting system is required, as they can be identified at a glance.

Rims, wheels, fenders, runningboards, springs and such lengthy parts as torsion rods, brace rods and propeller shafts are placed in racks. These are of open frame construction; Fig. 4 gives a good idea of the installation. For come of the heavier stock, such as springs, which are very weighty, the branch built its own racks, making them of wrought iron pipe put together with ordinary pipe fittings. These are enormously strong, though not as easily demounted for transportation as the Lyon units. However, as Manager Dilger says, the branch expects to stay where it is for quite a while, so this does not greatly matter.

Cylinders, rear axles and starters are carried in another home-made rack, which is of wood and is the last in the row. These parts are located by the same system as the others, but of course are of such a character as to be very readily found.

One unit of the shelving type is designed especially for such things as rubber mats, crankshafts, axle shafts and camshafts; there are no vertical divisions in the shelves between the stall divisions, so that the necessary length is available.

At the end of the floor and separated by a heavy steel wire partition, the door of which is kept locked, is the claim department. Here are received all the parts from the territory on which claims are made for defective material or workmanship. This is a separate department and has its individual storage system and its own little staff—manager and assistant.

All "claim parts" are sent direct from the receiving department to the claim department, where they are kept until finally disposed of. Parts on which defect claims are allowed are put in a junk bin which is divided into three compartments for brass, iron and aluminum. Parts on which claims are not allowed are placed in bins and tagged with the name of the dealer who sent them; the bins are lettered and the parts are classified according to the initial letter of the sender's name—Jones' stuff goes in bin J; Smith's goes in bin S, and so on.

Settlements are made only on material manufactured by the Studebaker company. What is called "vendor stuff"—magnetos, lamps, starting and lighting equipment, manufactured by outside concerns—is all sent to the Studebaker factory for adjustment. The factory advises the branch of the decision and the branch advises the dealer.

Opposite the passenger elevator entrance—the stock room is on the fourth story and occupies the entire floor—there is a counter behind a steel wire

partition in which is the usual opening for passing out parts. The counter is a Lyon product and is of very heavy steel. The space under it is used for the storage of some of the bulky parts for which there is little call, such as gearcases and crankcases. The counter is a busy place, for the sales made through the hole in the partition sometimes run up to 350 in a day. The counter is shown in Fig. 3.

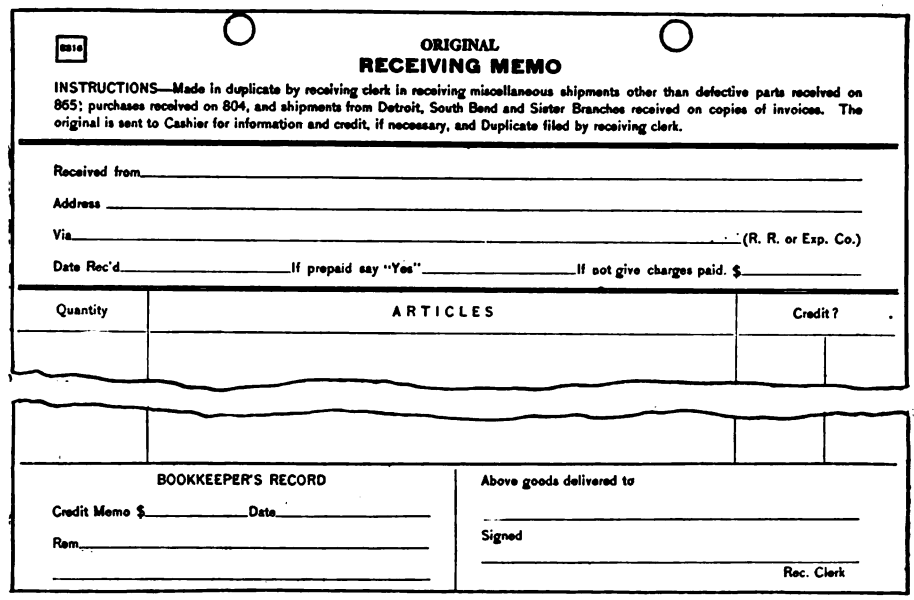
On one side of the freight elevator enclosure near the opposite end of the room and close to the door, is the packing and shipping department, where all parts are crated, labeled and the final preparations made for sending them out. Of the two men on this job one is kept busy practically all the time crating and boxing. The other man, who does the clerical work connected with the shipping, also attends to tracing stray or delayed shipments.

On the opposite side of the elevator enclosure is the checking counter, with a heavy metal top, on which all goods are checked as they come in. Here also outgoing parts are checked. As shipments are received and checked the parts are placed on hand trucks and distributed to the various receptacles; this is done regularly once a day. Once a day also the parts to go out are "picked" in similar trucks and brought to the shipping department. Small parts are "picked" into buckets.

The repairshop is on the floor above the stock department, and all parts required there are sent up from stock. Little time is lost in doing this, for there is a good-sized dumbwaiter running between the two floors and an electric bell and push-button on each floor.

When the foreman of the repairshop wants anything he makes a requisition, puts it on the dumbwaiter, lowers it to the stock floor and rings the bell. A stock room man takes the requisition off, puts the required stuff on the dummy and rings his bell, when the repairshop pulls it up. Thus no time is lost running up and down and no one need stand around waiting; he can go about his work until he hears the bell ring.

The same principle is involved in the handling of cash. A trolley system runs from the sales counter to the cashier's office below. When a sale is made the cash and slip (Fig. 6) are placed in the carrier and shot down to the cashier, who takes the money, makes the change is any is required, receipts the bill and shoots it back to the sales window.



Though there is a considerable amount of correspondence in the stock department, it is not considered advisable to have women stenographers on the floor. So two dictagraphs are installed. Letters are dictated to the machines, the cylinders sent downstairs to be transcribed, and the letters returned for signature. An exception is made in the case of the claim department, which, however, is separated from stock room activities by a considerable distance.

Considering the volume of business handled and the perfect working of the whole system, the forms used are very few. At the bottom of the system is the Parts Stock Card (Fig. 5) which comes close to being the whole bookkeeping system in itself.

The Parts Stock Card measures 5 x 8 inches. It serves to index the part and indicate its location; gives cost and sales prices; records both incoming and outgoing stock, and gives all details necessary to the maintenance of a perpetual inventory. Not only are the parts actually on hand and those sent out recorded, but the stuff on order and in transit is shown.

At the top of the card there is a space for the name of the part; to the right spaces for the cost and selling prices; and further to the right of the top of the card spaces for the section, stall and bin and for the number of the part. Spaces are provided for maximum and minimum number of parts, but these are not used. The number of parts carried is not arbitrarily fixed. An inventory is taken every six months and the number of parts carried is based on the last inventory. Thus the stock is increased or cut down according to actual demand, and over- and under-stocking are avoided. "Shelf" in the location index is read "Stall," to suit the divisions of the storage units.

The body of the card is divided into four vertical panels. The first on the left is headed "On Order," and there are sub-heads over columns for date, order number, routing (freight or express) and

Fig. 9—This is the form that is made out when goods are shipped, and like the others contains specific instructions for the use of the various copies

Digitized by Google

quantity. The second panel is headed "Received" and the columns are subheaded for date, invoice, number, quantity ordered and total received. The third is headed "Delivered" and subheaded for date, order number, total delivered and balance on hand. The fourth panel is simply a continuation of the third, with the same heading and subheadings, the reason being that the parts are sent out in smaller and more numerous shipments than they are received in. The reverse of the card is a continuation of the obverse, providing for additional entries in all the columns.

By comparing the parts received with the parts ordered it is easy to tell if requisitions on the factory have been filled completely or partly, and by comparing the total received with the total delivered the number on hand is immediately available. The "Received" panel is posted from the home office and branch house invoices and the "Delivered" panel from the cash sale slips, the shop requisitions and sales orders on the factory.

The Sales Order (Fig. 9) is used if, for any reason such as temporary shortage, it is desired to have parts shipped direct from the factory to the dealer. This is a paper blank 8½ x 11 with spaces for name and address of consignee, routing, quantity, list number, item number, name of article, date shipped, price, extension and total. This is made up from the customer's written order (which is on another form) and is in triplicate, the original for filing, shipping and charging; the duplicate for registering and following up, and the triplicate goes to the customer with the parts.

Cash sales made over the counter are entered on a form (Fig. 6) 6½ x 8½, on a Niagara Triplicator, which makes two carbon copies on plain sheets of different colors. The original, which is the only printed form, bears a serial number and is ruled for customer's name, date, quantity, parts number and letter, description, price and extension; it is used for posting to the stock cards. One of the carbon copies goes to the customer with his goods and the other to the cashier.

Goods received are listed on a Receiving Memo (Fig. 8), which is made out in duplicate; the original is sent to the cashier for information and for credit, if necessary, and the duplicate is filed in the receiving department.

Dealers sending parts to the Claims Department for adjustment list the articles on a special form (Fig. 7) 8½ x 11, which is made out in quadruplicate. All are in different colors—yellow, orange, pink and gray. The original and duplicate are sent to the branch with the parts; the third copy is packed with the parts and the fourth kept by the dealer as a record.

If Your Pump Doesn't Measure Correctly

United States Bureau of Standards Says Most of Them Don't and Tells Why

GASOLINE pumps in service show a tendency toward undermeasurement, according to F. J. Schlink, assistant physicist of the United States Bureau of Standards. Schlink presented a paper before the Eleventh Annual Conference on Weights and Measures, which was held May 23, and in the paper he outlined the principal causes for the failure of such pumps to measure accurately and gave some excellent suggestions for the maintenance of pumps of various types. He said in part:

Results of the tests in the field indicate that pumps in service show a decided tendency toward undermeasurement, this being due to the fact that nearly all of the defects of construction or installation tend to produce errors in this one direction. These include leaks of air and liquid, retention of liquid by the hose, vapor formation consequent upon excessive suction head, failure to complete the full stroke, and slippage of liquid past valves and piston.

Why Pumps Undermeasure

The principal causes of short delivery of pumps of the piston type are leaking of foot valves, and formation of vapor or air space under the piston, resulting from excessive virtual suction lift or leaky piping, or piping containing traps tending toward the periodical retention of vapor. It appears that a total vertical suction lift greater than 7 ft. may be excessive with the ordinary commercial (not "blended" or "casing-head") gasolines. "Casing-head" or "blended" gasoline should not be lifted any appreciable vertical distance on the suction side in those types of pumps in which the piston and cylinder form the measuring element, on account of the vaporization difficulty already mentioned. Special installations, in which the pump is located at or near the level of the supply tank, should be employed for the last-mentioned grades of gasoline.

Another source of error which should be guarded against in design and installation of piston measuring pumps is the inertia of the moving liquid column.

Avoid Long Hoses

The use of long filling hoses and of hoses so arranged that they cannot be readily drained results in cases of short delivery to individual purchasers; this should be obviated by so relating the length of hose and the height of hose connections that the hose can always be readily drained to a definite level. A measuring pump should not be installed inside a building with the hose connection outside, unless so arranged that the manner of operation of the pump is clearly visible to the purchaser. The writer also questions the advisability of permitting the use of a shut-off cock on the outer or delivery end of the hose, as its use may readily operate to prevent the regular drainage of the hose into the customer's tanks.

It is recommended that the design of piston type measuring pumps should tend toward types which cannot be operated through less than full strokes without that incompleteness of the cycle being clearly indicated to the customer. This certainty of stroke completion is readily obtainable in simple designs, which, so far as the writer knows, have not yet been offered for use.

In order to prevent the short deliveries consequent upon operating the piston pumps at less than full stroke, they might well carry a clearly legible placard or notice, reading, "THIS PUMP TO DELIVER —— GAL. FOR EACH FULL STROKE."

Pumps which provide for the return of undelivered liquid to the storage tank should be equipped with some manner of device which will prevent this return taking place at the same time that liquid is being delivered to the purchaser, as such diversion of a portion of the customer's purchase constitutes an easy means to fraud.

How to Test Pumps

In testing pumps, the hose should be removed if this is feasible, and the test delivery made from the pipe outlet, unless a suitable can-filling outlet is provided. Test should be made with a standard measure of suitable capacity and of the conical type, used in combination with a cylindrical graduate reading to cubic inches, or by a measure of special form, similar to that designed by Theo. Seraphin of Philadelphia, which comprises a zero graduation for the correct discharge and additional graduations for deliveries in excess and deficiency, so arranged as to cover the normal range found in the field work. Two speeds at least, one faster and one slower than normal operation, should be used in the test in order to determine whether or not the action of the pump is substantially independent of the speed of operation.

Separator Law Is Appealed

NEW YORK, July 3—The recent decision of the Appellate Division of the Supreme Court upholding the legality of the oil separator ordinance has been appealed by the automobile interests, consisting of the Automobile Dealers' Association, the New York Garage Association, the Brooklyn Motor Vehicle Dealers' Association and the Brooklyn Garage Owners' Board of Trade.

In accordance with the stipulation entered into between the automobile interests and the Corporation Counsel's office, this appeal will act as a stay, preventing the enforcement of the oil separator ordinance until the Court of Appeals has finally determined the question. This decision will probably be handed down some time during the coming winter, and in the meantime the enforcement of the oil separator ordinance will be held in abeyance.

NEW YORK AND CHICAGO SHOW DATES JAN. 6 AND JAN. 27

NEW YORK, June 30—The National Automobile Chamber of Commerce has announced the 1917 show dates. The New York show will open at the Grand Central Palace, Jan. 6 to 13, inclusive; the Chicago date is Jan. 27 to Feb. 3, inclusive.

Here's a Rational Service Warranty

Thorpe Makes a Plea For Service without Extravagance

By J. C. Thorpe

Editor Motor World:

You will find inclosed a discussion of a Rational Service Warranty which I will be very glad to have you publish in Motor World at your early convenience if the article appears to have merit.

The last issue has just reached my desk and I note the discussion of the same subject which has come from the National Automobile Chamber of Commerce. It occurs to me that additional discussions of this subject are very desirable and that they may arouse a greater interest for standardized service than the dealers have indicated in the past.—National Automobile Trade Association, by J. C. Thorpe.

Chicago, June 29.

This word of seven letters, "s-e-r-v-i-c-e," has been the pet slogan, understood or implied, of every merchant in every line of industry for some years. It has been rolled like a choice morsel under the tongue of automobile factory management, accessory manufacturer, automobile distributer and dealer, garageman, crossroad repairman and salesman alike. Despite the apparent familiarity with the magic word, it may be asserted with reasonable surety that it has successfully withstood accurate definition. In the mind of the automobile buyer it has meant anything from a cursory "once over" by the dealer's service expert accompanied by a copious supply of so-called expert advice, to a semi-annual complete overhauling during the life of the car without expense to the owner.

Quite innocently it has become, in many instances, the vehicle of the most pronounced fallacy existing in the relations of buyer and seller, namely, the possibility of getting or giving something for nothing. Service has been paraded in most alluring dress before the mind of the prospective purchaser by unscrupulous salesmen, to the extent of creating an impression of expenseless ownership that forever rankles in the soul of the motor car owner.

Service is truly a great word, with marked significance relating to the success of every merchandising enterprise. "Satisfying service for reasonable compensation" always develops a good will between buyer and seller that makes the selling enterprise impregnable to the assault of the most adverse business conditions. It is upon this broad, but fundamental, principle that public confidence, an essential of merchandising success, must be developed. A reputation for fair and honest dealing; for rendering satisfying service and exacting fair compensation for it, may mean much for additional patronage and the continual increase of "volume of business," the goal of every ambitious and far-seeing merchant. It should never be interested in the light of "something for nothing," as just so far as this idea persists in business management just so far may its disintegrating influence be traced in the failure of the enterprise, for its ultimate failure is certain.

As it relates to the retail automobile business, the cost of service, whatever it may be understood or misunderstood to be, should enter very definitely into every dealer's annual budget as an estimated expense. It is thus chargeable against gross income—and immediately becomes one of the items of purchase for the patrons of the dealer. Service thus becomes an essential feature of "value received," and after all, it is a question worthy of consideration whether the ability to "keep a car sold" is not of equal importance from the standpoint of business management and earned profits as "selling the car." If so, then the expense for service must appear as clearly upon the cost keeping record as the sales expense.

The following "Proposed Standard Service Warranty" is the result of continued study within the Automobile Trade Association of Champaign County, Illinois, supplemented by discussions carried on by letter and in person with many outside interests. The discussion which it aroused within this organization presents evidence of the wide variance of opinion existing among earnest and carefully progressive business men:

Proposed Standard Service Warranty

I. Service is defined under the terms of this "Service Warranty" as "The Co-operation of the Dealer with the Owner," whether he be the original purchaser or not, in such a manner that the Owner will secure permanent use of his investment at the lowest possible cost.

(Note: Service loses its identity with the appearance of "Unfairness" on the part of either the Dealer or the Owner. If the Owner, either through forethought or ignorance, or through a misunderstanding of the Dealer's Service obligations—asks for, and through the Dealer's zeal to maintain good-will, secures concessions incompatible with fair business procedure, a fictitious value is immediately placed upon such Dealer's Service. Such an unreal value cannot be maintained and apparently nourishes another phase of price cutting that is ruinous. Primarily the Dealer is the arbiter of service limitations, but no great amount of discussion need ever arise respecting what is fair and unfair.)

II. The automobile covered by this Service Warranty is subject to the guarantee of the manufacturer in accordance with the Standard Warranty promulgated by the National Automobile Chamber of Commerce and is not guaranteed by the Dealer.

(This plain statement of responsibility involving faulty workmanship or material is deemed essential for the purpose of eliminating discussions with owners that often become unpleasant and disastrous to business. It emphasizes the importance of factory integrity as a material asset in the owner's investment. It also serves to clear up opinions relating to the position of the dealer in a transaction where his moral responsibility may be taken undue advantage of. Confidence of the purchaser in the Dealer's integrity is essential, but as relates to the motor car itself the integrity of the factory is of greater importance.)

III. The manufacturer offers the following warranty, adopted by the National Automobile Chamber of Commerce, to the purchasers of automobiles: "We (the manufacturer) warrant each new motor vehicle manufactured by us to be free from defects in material and workmanship under normal use and service, our obligation under this warranty being limited to making good at our factory any part or parts thereof which shall, within ninety (90) days after delivery of such vehicle to the original purchaser, be returned to us with transportation charges prepaid, and which our examination shall disclose to our satisfaction to have been thus defective; this warranty being expressly in lieu of all other warranties expressed or implied, and of all other obligations or liabilities on our part, and we neither assume nor authorize any other person to assume for us any other liability in connection with the sale of our vehicles.

This warranty shall not apply to any vehicle which shall have been repaired or altered outside of our factory in any way so as, in our judgment, to affect its stability or reliability, nor which has been subject to misuse, negligence or accident.

We make no warranty whatever in respect to tires, rims, ignition apparatus, horns or other signaling devices, starting devices, generators, batteries, speedometers or other trade accessories, inasmuch as they are usually warranted separately by their respective manufacturers.

IV. The Dealer, through his Service Department and for the Owner, will handle all claims for adjustment arising under the terms of the Standard Warranty of the National Automobile Chamber of Commerce and will exert his best efforts in securing prompt and satisfactory settlement. It is understood that the Owner will abide by the decision of the manufacturer respecting "no charge" replacements, and make settlement at current prices for any parts or accessories furnished by the Dealer under an Adjustment Claim, that are not credited by the Manufacturer.

V. The Dealer agrees to assist the Owner in learning to drive and care for his car.

VI. The Dealer agrees to make all the necessary adjustments for the proper operation of the car, without cost to the Owner, for a period of ninety days from the date of sale; provided repairs or adjustments have not been made outside the Service Department of the Dealer or without his knowledge.

VII. Subsequent to the ninety days warranty described above, inspections of the car will be made at the request of the Owner at times mutually agreeable to the Owner and Dealer, following which a detailed report of the condition of the car will be given the owner. Such adjustments as may be deemed necessary for the proper operation of the car will then be made at the request of the Owner, in a careful and workmanlike manner by the Service Department of the Dealer, and for the labor and materials necessary therefor the Owner shall pay the current prices, plus carrying charges.

VIII. The Dealer will maintain such a stock of parts as will be required to fully and promptly meet the normal requirements of the Service Warranty and will employ competent mechanics on duty at all reasonable hours to give accurate attention to the needs of the Owner.

IX. The Dealer invites fair and business-like co-operation from the Owner in maintaining the integrity of this Service Warranty, which is hereby made a part of the Sales Contract for the purchase of a .....automobile on this date .....1916.

Issued by.....

.....

Member National Automobile Trade Association.

Accepted by.....

Purchaser-Owner.

(Note.—The permanency of the Legitimate Dealer's business is based upon ability to render satisfactory service to the car owner. No person or firm is recognized as a Legitimate Dealer who does not provide suitable facilities for properly pursuing the interests of his patrons with respect to the care and operation of the automobiles sold to them, in accordance with a reasonable local service warranty, and in full accord with the warranty of the manufacturer, who does not maintain and operate a properly equipped service station, carry a suitable supply of parts, and employ efficient mechanics, who are capable of giving expert advice and accurate mechanical service.)

It is hoped by the writer that this presentation of a subject of most vital importance may arouse discussion that will bring the motor car interests to a better understanding of SERVICE.—J. C. Thorpe, National Automobile Trade Association.

Nebraska Has a Car to Every 18 People

And Dealers See a Good Year's Business Ahead—Railroad Strike Threatening

OMAHA, NEB., June 29.—Every third family in the State of Nebraska owns an automobile, according to a report issued by Secretary of State Charles Pool.

Strictly speaking, this is not correct. But so far as numbers go, it is true, for there is a car in Nebraska for every eighteen inhabitants. Iowa, next door, has one to every eighteen people.

There are now registered with the Secretary of State 76,815 automobiles, which does not include 3016 motorcycles. Automobile registries during May totaled 5650, and conservative estimates indicate that by the end of September there will be in this State one car for every 2.7 families.

Omaha dealers are happy men these days, for prosperity is upon them. And Omaha distributers declare that this spirit is reflected over the State at large. Crops have seldom been in better condition, confidence in the outcome of the national political situation appears steady, the strike situation which threatened Omaha for a short time has been brought to a happy ending, and every indication is for a banner year.

It must be confessed, however, that the possibility of a railroad strike is being watched with close attention by the dealers and distributers. They know perfectly well how serious this would affect their business, particularly on account of the distance from the factory centers. But they are entertaining every hope.

Oils and accessories, say the supply men, are sharing in the heavy volume of business in due proportion, and the dealers are stocking up heavily for the coming season.

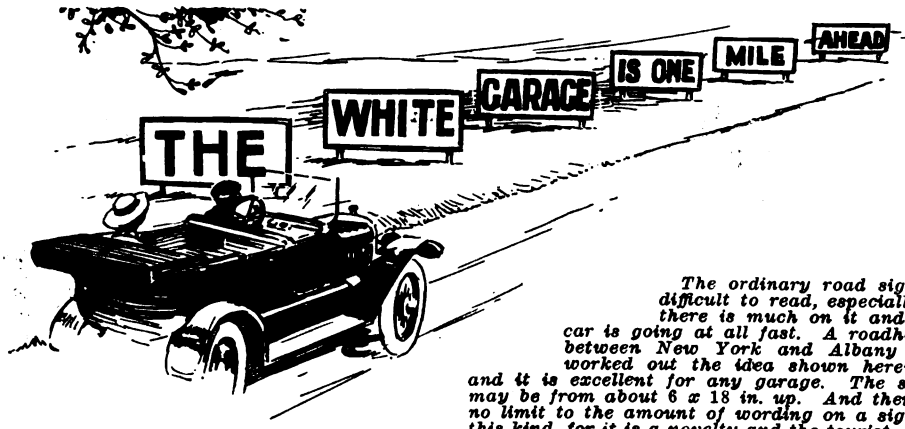
Glare Mix-up in Kansas City

KANSAS CITY, MO., June 29.—The ordinance passed recently, signed by the mayor, requiring ground glass on automobile headlights, has technically been put into force, but is temporarily held in abeyance because of extensive objections.

The first objection came from several members of the Automobile Club, which had backed the measure, and dealers in accessories have made formal representation to the council committees of their knowledge of facts concerning its operation.

The ordinance requires, apparently, that the entire surface of the lens be ground. Many cases are pointed out in which a slight jar has resulted in the breaking of such ground lenses, and it has been stated that the heat from the lights may cause the lenses to break even without jarring. There are many complaints that the ground lenses do not allow enough light to be cast on the road for safe driving.

It is possible that the ordinance may be amended so that the character of the lenses allowed in other States will be permitted in Kansas City. Technically, nearly every motorist who enters Kansas City now is violating the law, because few have lenses of which the entire surface is ground.



Stole 3 Gallons of Oil

OMAHA, June 29.—With the price of gasoline still hovering around the 23-cent mark and no relief in sight, significance of a more or less humorous nature is attached to incidents in connection with traffic in that precious fluid.

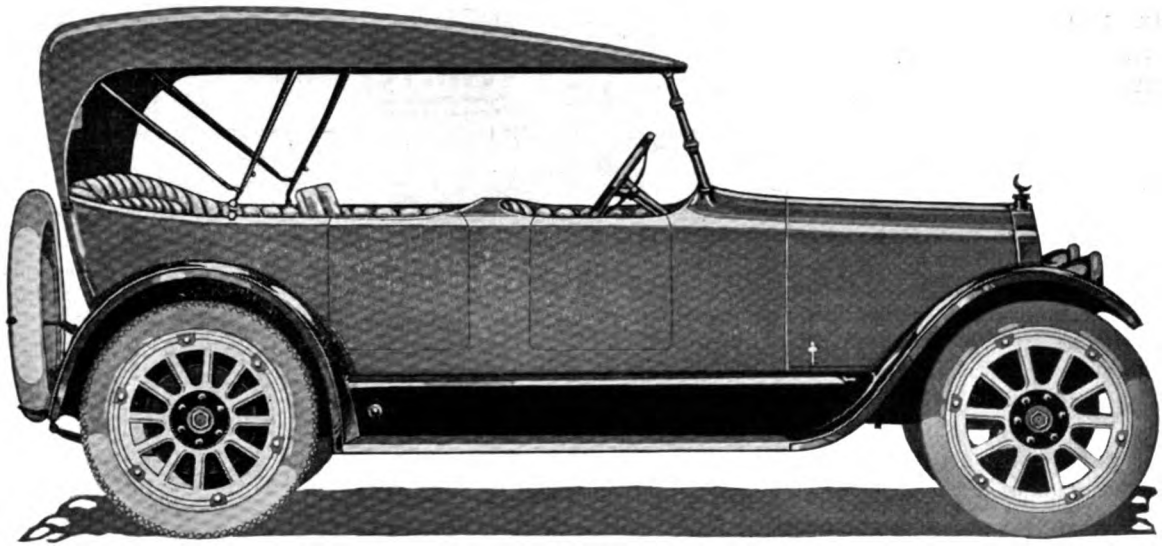
"Must have been some poor, desperate banker," was one remark lately when it was discovered that during the night some one had broken into the Standard Oil filling station at Forty-fifth and Grant Streets, broken the lock on the gasoline pump and stolen 3 gal. of oil, molesting nothing else. As a matter of fact, this act was attributed to the gang of motor car thieves which has been operating as busily in Omaha as in other cities over the country for a good while past.

The latest development in the line of "humorous" incidents is the filing of complaints by the city weight and measure inspector against two prominent oil companies, charging that their pumps fail to give legal measure. This case has not yet been heard.

A Sign That Is Easy to Read

The ordinary road sign is difficult to read, especially if there is much on it and the car is going at all fast. A roadhouse between New York and Albany has worked out the idea shown herewith and it is excellent for any garage. The signs may be from about 6 x 18 in. up. And there is no limit to the amount of wording on a sign of this kind, for it is a novelty and the tourist, once he discovers it, will be interested in reading it because of its novelty. Each sign may be affixed to a single post, instead of two, as here shown.

Bidwell, of International Fame, is Arrested



WASHINGTON, D. C., June 24—Following a hearing before W. H. Lamar, solicitor general of the Post Office Department, Alfred C. Bidwell, president of the International Automobile League, Inc., of Buffalo, was arrested by federal authorities. The hearing was upon an application by Richard H. Lee of Cleveland, chairman of the legislative committee of the American Automobile Association, for a fraud order, refusing the league and the International Automobile, Tire & Rubber Co. of California a further right to use the mails on the ground that they were making promises they could not keep. It is claimed that many thousand persons joined the league on a promise they would obtain automobile supplies at reduced or wholesale prices, the annual assessment being $10. Bidwell furnished bond in the sum of $5,000 for his appearance before United States Commissioner Taylor here on July 18. It is stated that a fraud order was issued against the league and that counsel for Bidwell has until July 18 to file a brief in the case. A warrant alleging violations of sections of the penal code respecting the use of the mails was sworn out and Bidwell's arrest followed.

P. D. Q. Spark Plug Coming

DETROIT, June 29 — The Wolverine Spark Plug Co., capital $100,000, has located at 45 Fort Street, East, in the Boydell Building. Equipment is now being installed to manufacture in large quantities a new spark plug called the P. D. Q. The officers and directors of the company are: President, C. H. Braselton; vice-president, A. Kugeman; secretary and treasurer, P. S. Linton; also F. R. Pence and William Bohleber, directors.

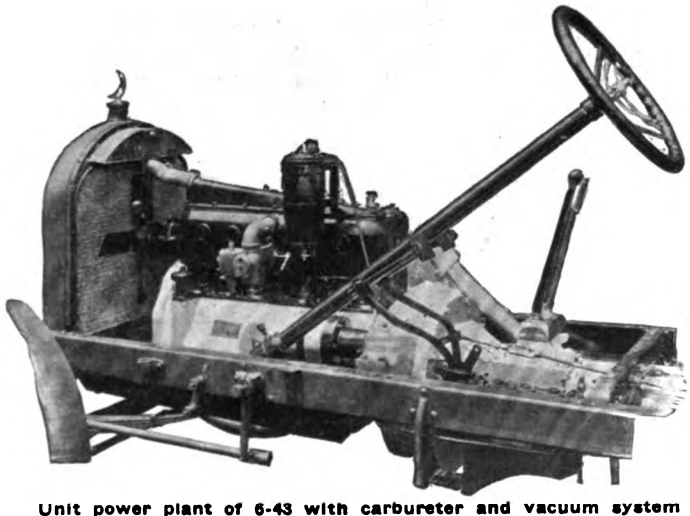
Two Moon Sixes Continued for 1917—Prices Raised

New 6-66 Moon with seven-passenger body. The lines are unbroken from the tip of the radiator to the back seat

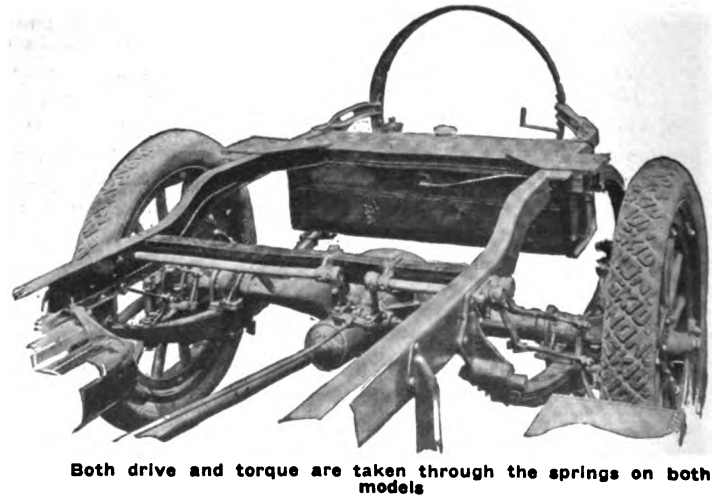
FOLLOWING its plans to adhere strictly to the construction of high-grade six-cylinder cars, the Moon Motor Car Co., St. Louis, will continue its two 1916 chassis. The model 6-40 is continued, with but few changes in the model 6-66, and the later car, known as the 6-30 in the 1916 production, will be continued as the model 6-43. The price of each has been increased. The larger car, which was listed last year at $1,475, now sells for $1,575, and the small six has been increased in price from $1,195 to $1,250.

The most noticeable change in both chassis is in the electrical system, a two-unit outfit being used in place of the single starting and generator equipment. The new Delco-Moon two-unit system embodies an automatic spark advance and a new switch with an ammeter in connection.



The bodies have also been refined and the 6-66 touring now has the tonneau cowl. The tops of the bodies have been tumbled in creating a marked streamline effect. Acting upon the great demand for four-passenger roadsters, the larger six is offered with an unusually attractive body of this type at the same price as the touring. A light six can be had in a three-passenger roadster at the same price as the five-passenger touring car.

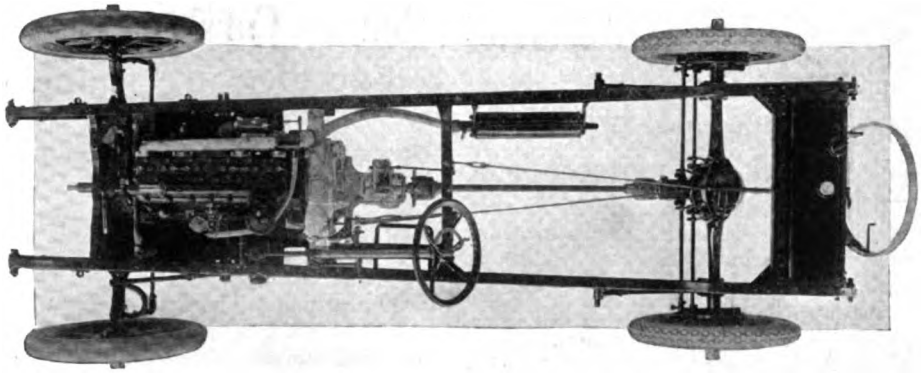
Both models are mechanically similar, the difference being principally in the size of the parts. Continental motors are used of 3¼ x 5¼ and 3¼ x 4½ cylinder dimensions fitted with Delco cranking, lighting and ignition units and the Stewart vacuum feed system. The clutch is disk in unit with the motor, the gearset a three-speed, and drive by hollow shaft to a floating axle. Timken axles are used front and rear.



The adoption of the double unit Delco system is accompanied by the use of a Bendix system of drive on the starting motor, which is now bolted to the left side of the crankcase. The generator is still located on the right side of the motor and is driven from the water pump shaft. On the right side also is the exhaust manifold, which has attached a flexible tube instead of the non-flexible type commonly used for carrying off gases. The oiling system in both motors is the same combination splash and force feed as used in other large Continental power plants.

The drive from the motor is conducted to the axle through the Hotchkiss principle, double universals and a floating axle being used. Moon engineers have carefully worked out the framing design to take care of the Hotchkiss drive. The frame has a deep strangle in front to enable a short turning radius and is constructed in the rear to form an integral support for the gasoline tank and tire irons.

Although accessibility has been a big factor in the design of the chassis



Unit power plant of 6-43 with carbureter and vacuum system mounted high

Both drive and torque are taken through the springs on both models

Digitized by Google

Plan view of 6-66 chassis showing the extreme neatness of construction

throughout, the same careful attention has been given the design of the bodies and the kind and location of the equipment. The touring car tonneaus are unusually large and wide tonneau doors and concealed hinges and locks. Both front doors open wide, permitting the driver to enter from either side. Upholstery is done in genuine leather, stuffed with curled hair. A slanting windshield has been incorporated to add to the speedy lines of the cars, and a Stewart tire pump and Warner speedometer driven from a gear which constitutes the flange on the front universal are standard equipment on both models.

Tire sizes have been increased in the big six. The 6-66 is equipped with 35 x 4½ in place of 34 x 4 tires and the 6-43 carries 34 x 4, the same as last year. The wheelbase of the larger car is 125 in. and of the 6-43 118 in.

Price of Used Cars Governed by Demand

Intrinsic Value of Old Machine May Be High but Great Number on the Market May Keep Selling Price Down

"How can a man trade in his old car in part payment for a new one when the garages are crowded with used cars waiting for buyers?"

The question was asked of a central Illinois dealer in a small town, who replied bluntly:

"He may not be able to do it if he insists upon getting a fair price for his old car."

The mere fact that there is a surplus of used cars does not seem to cause as much concern as the necessity for fixing prices that will keep the cars moving, and in order to sell at prices that will attract buyers the dealer must offer the owner an amount so low that he hesitates to name it in many cases. But he is bound by the laws of merchandising and he cannot offer more for the car than he can get for it.

Too many dealers have made the mistake of allowing too much for used cars in order to put through sales of new cars, and they realize the error when they see their profits vanishing because of the low prices they are forced to accept for the cars traded in.

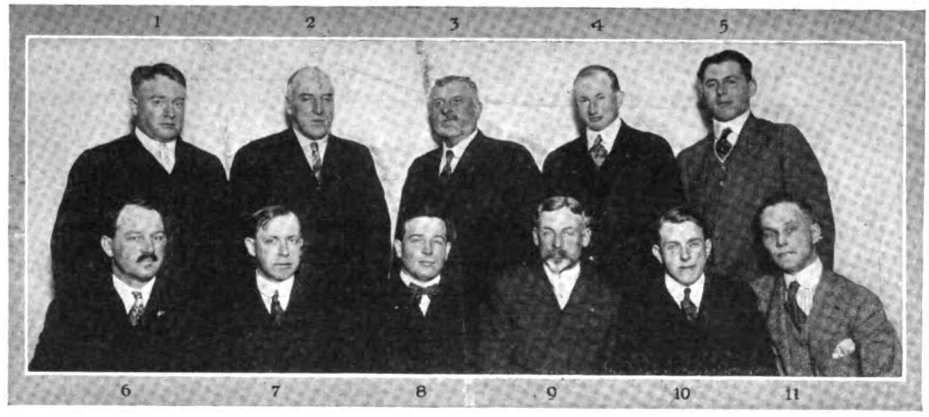
The remedy for this state of affairs is to keep the used cars off the market, according to the same central Illinois dealer.

"The owner does not have to part with his old car if he does not want to," he asserted. "He can use it for 3 to 4 years longer. He cannot get much for it at the end of that time, it is true, but even then it is not necessary to sell, as a rule. A well-built car, with reasonable care and proper overhauling, ought to last 12 years—in fact, cars will last a great deal longer than most people care to keep them.

"As a financial proposition there is no good reason why a man should take a depreciation of 70 per cent after 2 years' use when he can have 4 or 5 years more at a depreciation cost of 85 or 90 per cent.

"In the larger cities there is considerably less trouble in connection with the sale of used cars than in the smaller places; the business appears to be better organized. A man from the country will pay more for a used car in a large city than he will pay for the same car in a small town. The prices in the big towns range about the same for the same cars and sales are made by salesmanship. Small-town dealers are prone to ignore each other except in the matter of knocking. There is no co-operation; every dealer sets prices to suit himself and many take considerable pains to belittle other dealers and their wares. The result is that a would-be buyer is confused after making the rounds of the dealers. In a large town his mind is clarified by making the rounds, for he is shown that there is more or less of a standard of price."

San Francisco Elects Officers



SAN FRANCISCO, July 3—The Garage Owners' Protective Association of San Francisco has elected these officers for the coming year:

President, J. B. Kelly, Kelly Ball Bearing Co.; vice-president, D. S. Cohn, Grand Pacific Garage Co.; secretary and treasurer, A. D'Ettel.

Executive Board—William P. Crowley, Auto Service Co., chairman; S. Anderson, Acme Garage; A. R. Walther, Boulevard Garage.

Membership Committee—C. A. Lyons, Class A Garage; M. Michels, Presidio Heights Garage; Henry Schroeder, California Garage.

Grievance Committee—M. Francis, St. Francis Garage; C. Lubbe, St. George Garage; Mr. Keene, Harding & Keene Garage.

ADVISORY COMMITTEE AUTOMOBILE INDUSTRIES ASSOCIATION OF ALAMEDA COUNTY, CAL.

1, E. F. Peckham, Motor Supply Co., Berkeley; 2, John Doyer, Doyer's Garage, Oakland; 3, George Rodehaver, Rodehaver's Garage, Berkeley; 4, B. W. Hammond, Pac Kissel-Kar, Oakland; 5, Charles Everson, Ford motor cars, Oakland; 6, Charles Hebrank, Osen-Hunter Auto Co., Oakland; 7, E. A. Berg, Berg Auto Supply Co., Oakland; 8, Frank Fageol, Fageol Motor Car Co., Oakland; 9, C. A. Muller, U. S. Tire distributor of Alameda County; 10, Herbert S. Smith, Sec. and Bus. Mgr., Oakland; 11, E. T. Tuller, Mgr. Cole Motor Car Co., Oakland.

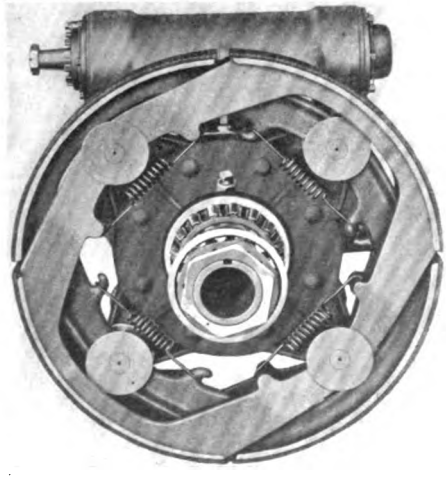
5-Ton Worm-drive Axle Brought Out By Timken



Has Pressed Steel Housing and Timken-David Brown Worm—Unit Is Full-Floating

The Timken-Detroit Axle Co., Detroit, has brought out a 5-ton worm-driven axle unit that has long been in the process of development. This new axle has a pressed-steel housing of great strength, and is equipped with the Timken-David Brown worm gearing with Timken roller bearings. The worm is mounted over the wheel, and throughout the construction is typically Timken. That a large factor of safety has been used is evidenced from the fact that the axle is capable of carrying on the rear tires a weight of 15,000 lb.

The load-sustaining portion is continuous from spring seat to spring seat and is a pressing 6-in. square at either end under the spring seats, and enlarges to a spherical shape in the center to provide clearance for worm gear and differential. The square section at the ends has been used in order to give a firm seat for the spring saddles and added strength where it is needed. The center is open at the top for the attachment of the carrier flange which holds the worm shaft and its bearings, the worm gear, differential and bearings being in one complete unit. The ends of the housing are flanged to a large diameter and the brake spider is riveted to this flange substantially.

The load sustaining portion is continuous from spring seat to spring seat and is a pressing 6-in. square under spring seats, thus giving a firm seat for the spring saddles

The axle is designed as a full-floating unit, and the wheel bearings are mounted on chrome-nickel steel tubes which extend inwardly toward the worm almost to the differential bearings, thus making a sturdy mounting for the shafts, the bearing supports being filler pieces welded and riveted to the housing, and the tubes forced into these filler pieces under great pressure. Thus the axle has a truss or bridge construction, which is the strongest type.

Brakes are 24 in. in diameter and 4 in. wide, and are of the internal duplex form. Substantial flanges on the drums provide against distortion.

Boston Dealers Win "Junk" License Fight

BOSTON, June 29.—Boston dealers handling new cars and also used cars need not take out licenses as dealers in junk. Through a decision of Judge Burke in the Municipal Court this question was decided in favor of the dealers. After Judge Burke heard all sides of the case he decided that motor dealers are in a legitimate business, and not in the second-hand business under the intent of the law. He said that where an automobile dealer did business in new cars first and as his larger business, and where the taking of used cars in part payment was an incidental, the police could not compel him to take out any license. He said that where the men were dealers in used cars solely, such men should take out the license.

The regular dealers made the fight, because under the law, as interpreted strictly, when they took in a car they would have to first report it to the police, giving its full description, and then they would have to hold it for 30 days before selling or otherwise disposing of it. As there are a number of concerns that do nothing but sell used cars, they will have to take out a license or continue the fight. It is probable that the used-car men will fight the case if the police try to make them take out any licenses, and so the issue will be carried to the higher courts.

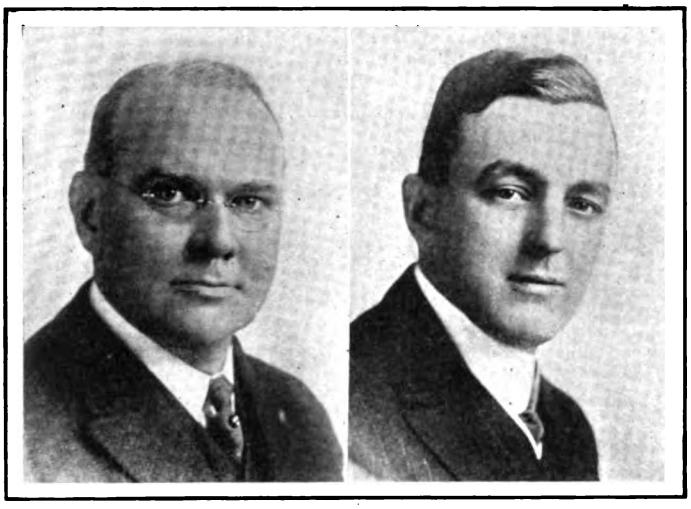
Dealers Cars Are Taboo For Pleasure Riding

Augusta Chief of Police Says He Will Arrest Dealers Using Demonstrating Cars Themselves

AUGUSTA, ME., June 29.—Motor dealers throughout Maine are somewhat anxious as to what is in store for them, following a communication from Secretary of State John E. Bunker to Chief of Police Stone of Biddeford a few days ago. Bunker stated to the chief of police that he had received information to the effect that Biddeford automobile dealers were using their cars with their dealers' registration numbers for pleasure riding and livery work. This was contrary to the law, Chief Stone was told.

The dealers are not worried about the livery part of the letter, for few of them do that, but on Sundays and other days they feel that they have a right to use their cars to go out for a ride or take their families for a little recreation if they have the time. They wonder just what will happen in case Chief Stone does not make any arrests.

In that case Secretary of State Bunker has the upper hand, for he can suspend the garage license of the dealers and put them out of business. And if he does it in one instance he will have to do it all over the State. In that event every dealer will have to either register one car as his own personal pleasure machine for use on other than business purposes, or stop his riding except when giving demonstrations.



The dealers consider this as unfair, as they feel that when the law was passed the Legislature had no intention of placing such restrictions upon them. It puts the police officials throughout the State in a quandary, for they cannot tell when a man is riding for pleasure or giving a demonstration, particularly on a week day. That the dealers will attempt to have the law changed or a different interpretation made is evident; for though the law is similar to the one in many other States, the Maine dealers have never heard of any such decision being made elsewhere.

Jacksonville Dealers Cruise

JACKSONVILLE, FLA., June 29—The Jacksonville Automobile Dealers' Association, which was formed about 3 months ago, already has about fifty members enrolled and is entering on an active campaign of co-operation. On June 25 a steamer was chartered and the members cruised on the St. John River. The association has been successful in standardizing prices on work and supplies.

THEY SOLD THEIR DEALER BUSINESS FOR $1,000,000

J. W. Leavitt A. D. Plughoff

Overland Pays Million for Leavitt Business

Takes Over Pacific Coast Firm in Business 25 Years—Two New Coast Branches

SAN FRANCISCO, June 28—Nearly $1,000,000 has been paid for a motor car dealer's business. That dealer is J. W. Leavitt & Co., Overland and Willys-Knight distributer on the Pacific Coast, and the business has been taken over by the Willys-Overland Co., Toledo. Hereafter the business will be operated as a factory branch and the entire Leavitt organization will remain intact except that J. W. Leavitt will retire. The change took effect on July 1.

A. D. Plughoff, formerly vice-president and general manager of the Leavitt company, will be the managing director of the branch, which will be styled Willys-Overland of California and will head the newly created Washington and Oregon branch, which will be styled Overland-Pacific, Inc.

Others who will be active in the management of the branch are A. R. Theisen, who has been treasurer of the Leavitt company and manager of the San Francisco branch, will be treasurer of Overland-Pacific with headquarters at Seattle. A. W. Barber, formerly branch manager in San Francisco for the Stevens-Duryea Co. and who for the past year has been Philadelphia zone manager for the Overland Co., will be San Francisco branch manager.

J. W. Leavitt & Co. had been in business on the Pacific Coast for nearly a quarter of a century and had built up a business in motor cars that is second to none in the world. The firm was started in 1893 as Leavitt & Bill and sold bicycles. Motor cars were taken on in 1902 and in 1906 the firm name was changed to J. W. Leavitt & Co.

In 1909 the Leavitt company had only a small store in San Francisco. Three times during the past seven years it has been necessary to enlarge the company's San Francisco quarters and in that time branches have been opened in nine Pacific Coast cities, these being Spokane, Seattle, Portland, Sacramento, Oakland, Fresno, Los Angeles, Pasadena and San Diego.

Last year, Pacific Coast purchasers bought more than 9000 cars from the Leavitt company, bringing the aggregate business up to the $7,000,000 mark.

The principal purpose of the Overland company in taking over the Leavitt business is to extend the long arm of Overland service direct from factory to owner.

Studebaker Dealers Gather

DETROIT, July 1.—Practically every eastern Studebaker dealer in the territory of the New York, Boston, Philadelphia and Norfolk, Va., branches attended the series of conventions held at these branches last week and part of the week before. The conventions were conducted by L. J. Ollier, vice-president and director of sales of the Studebaker Corp.; R. T. Hodgkins, general sales manager; H. A. Biggs of Frank Seaman, Inc., advertising counsel, and C. F. O'Meara, efficiency expert.

Realizing that it would work a hardship on dealers to ask them to visit the factory at this time of the year, the factory officials came from Detroit to tell them of the company's plans for the year.

Commercial preparedness was the keynote of the gatherings at the eastern cities. A warning was sounded to dealers against any tendency to treat the immediate future as a period of "easy sailing" simply because the demand for automobiles at this time exceeds anything experienced in the past. It was pointed out that increased production will demand increased selling activity.

Announcement was made to the dealers by Vice-president Ollier that the Studebaker Corp. plans a production of 100,000 cars beginning July 1. Sales for the past twelve months have been double those in any similar period, and practically another doubling of sales for the coming twelve months over the period just closing is provided to take care of the greater output. Information was given to the dealers regarding the factory's plans for selling the increased production of cars.

Jeffery Four Up $95; Has New Type Body

Roll Edge Body to Match the Six Is Brought Out—Few Mechanical Alterations

KENOSHA, July 1.—Jeffery's 1916 four is continued for the coming year with no changes in the chassis, a price increase of $95, the new car selling for $1,095, and a new body which gives the car the trade name of the roll-edge four. A new cellular radiator is the only other change.

The roll-edge four comes upon the demand of Jeffery dealers who have been insistent since the six was announced last January with a roll-edge body, that the four be furnished them in the same style, according to the announcement of the factory.

A particularly noteworthy feature of this new Jeffery body is its unbroken lines from the radiator to the rear seat and between fenders. The roll-edge on the top of the body blends into the hood without any break whatever from the straight line effect making the car look exceptionally long and clean.

The divided front seat feature which was a part of the 1916 body design is continued without change.

In general the new four has a 3¾ x 5¼ in. block motor, disk clutch, three-speed gearset, and semi-floating axle. The wheelbase is 116 in. and the tires 34 x 4. Practically every part of the car is Jeffery built.

The new bodies are finished in Savoy green with a fine gold stripe, fenders and running gear black, and the wheels green with a gold line. Upholstery is in black leather with deep double-deck springs. Auxiliary seats which disappear in the back of the front seats are standard equipment on all models.

Newman Is Chicago Chalmers Distributer

MILWAUKEE, July 1.—Announcement was made to-day that Harry Newman, Inc., since Dec. 1, 1915, distributer of Chalmers cars in Wisconsin, northern Michigan and southeastern Minnesota, with headquarters at 701 Grand Avenue, Milwaukee, has been appointed Chicago distributer and will establish stores in Chicago and Springfield, Ill., in addition to that at Milwaukee. The new territory, which will be served from the Chicago store, Michigan Avenue and Twenty-fifth Street, includes Illinois, north and western Indiana, eastern Iowa, bordering on the Mississippi River, and northeastern Missouri. It is stated that the Newman company has contracted with the Chalmers Motor Co. for more than 5000 cars for the fiscal year ending July 1, 1917.

Day and Warner in General Motors Directorate.

NEW YORK, July 3.—Following a policy of having the various units of its organization as representative as possible on the board of directors, the General Motors Company, at a meeting on June 27, elected W. L. Day, general manager of the General Motors Truck Co., and Fred W. Warner, general manager of the Oakland Motor Car Co., both at Pontiac, Mich., to the board of directors.

These elections fill vacancies occasioned by the resignations on June 1 of three members of the banking interests that had aided in tiding the organization over its period of depression some years ago. Those resigning at the time of the election of W. C. Durant to the presidency to succeed C. W. Nash were Albert Strauss of J. & W. Seligman & Co., and J. J. Storrow of Lee, Higginson & Co., both of New York, and Emery W. Clark, head of the First and Old Detroit National Bank of Detroit, to fill one of these vacancies on the board.

W. C. Leland, vice-president and general manager of the Cadillac Motor Car Co., was elected at the June 1 meeting and Day and Warner have now completed the directorate.

Both Day and Warner are old farm implement men who, like many others in the industry, graduated to the automobile business after long years of experience in the other line. Day came to the truck unit in 1912, leaving the Mitchell Lewis Motor Co., where he was general manager. Before his connection with the latter concern he had been for 27 years general manager of the Parlin & Orrdendorff Plow Co., at Kansas City. Warner two years ago took up the Oakland management, coming from Chicago, where he had managed the Buick branch. Prior to his connection with Buick he had long been connected with the John Deere Plow Co., also at Kansas City.

Elgin Takes Over New Era

JOLIET, ILL., June 29—Important changes are announced in the New Era Engineering Co., which produces the New Era automobile. The company has been taken over by the Elgin Motor Car Corp. of Chicago. F. J. Alvin retires as president and general manager, and has been succeeded by W. J. Burdick, who has been connected with the company for some time.

Delling to Leave Mercer

NEW YORK, July 1—It is stated on good authority that Eric H. Delling, at present chief engineer and designer at the Mercer Automobile Co., Trenton, N. J., expects to sever his connections with that company and devote his time to the development of a new car which will probably bear his name. While nothing definite could be learned about the matter it is believed a company is forming to carry out Delling's ideas.

St. Louis Tractor Demonstration

ST. LOUIS, June 24—The St. Louis Tractor Farming Association, organized to give the National Farming Demonstrations here July 31 to Aug. 4, announces that 100 firms have signed exhibition agreements for the demonstration and that a 2000-acre tract of wheat land has been obtained for the tractor contests. Secretary of Agriculture David F. Houston will be present.

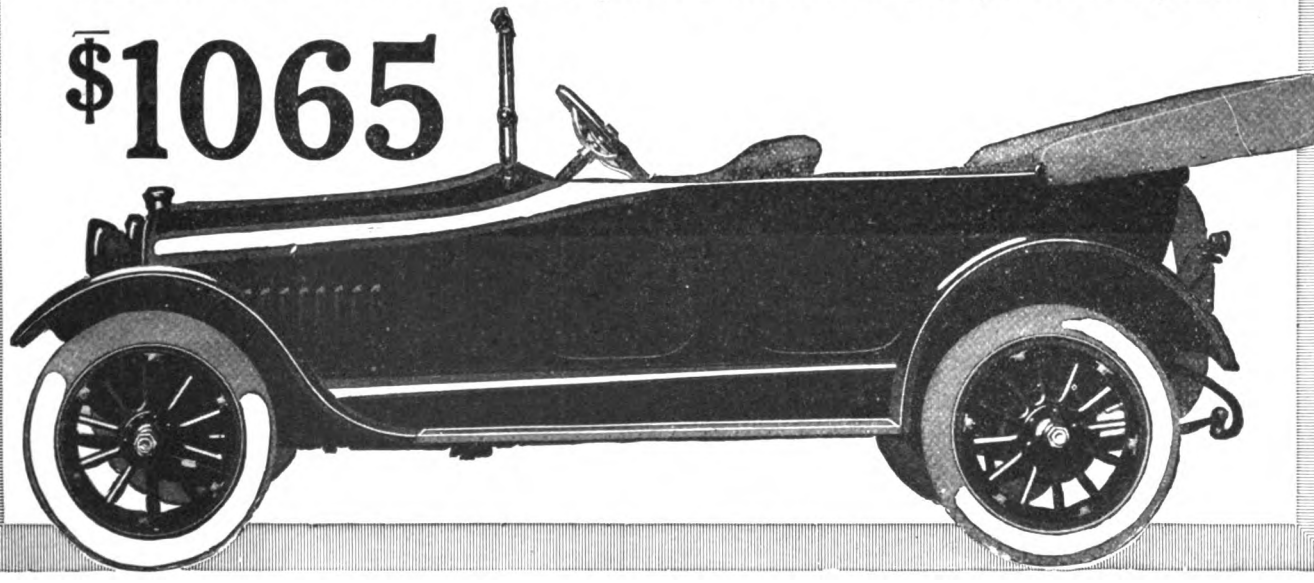
Big Things Are in Store for Dealers Who Represent

Velie

The "Biltwel" Line

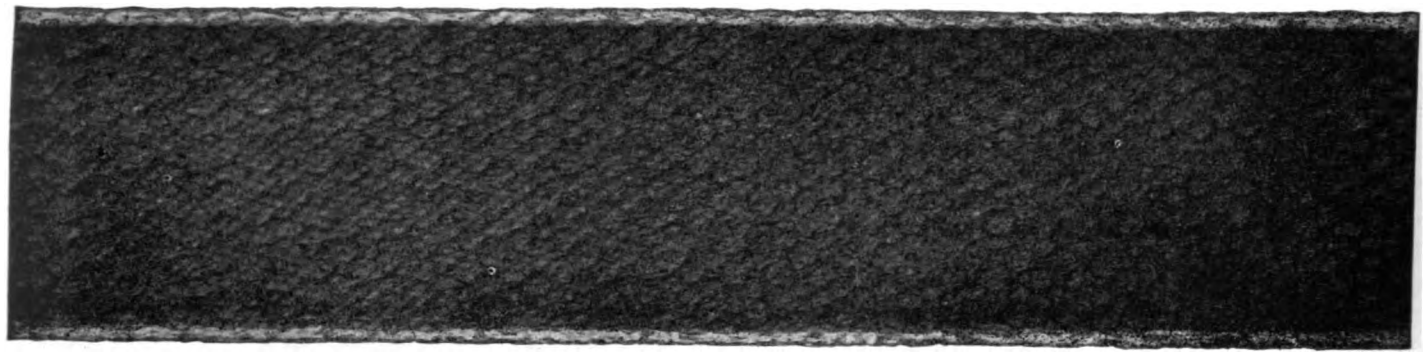
Watch the motor publications as well as the great national mediums for Velie news of unusual importance at a near date.

The demand for Velie Biltwel Sixes, tripling the output of a mile of Velie factory, has resulted in plans which mean big business for dealers capable of handling the opportunity.



If this means you, we suggest that you get in touch with us for details now. In the meantime Velie dealers can advise prospects that they will not have an opportunity to buy Velie Biltwel Six at a less figure than its low price today. We cannot promise that there will be no advance. The present season has proved very clearly that the Velie Biltwel Six quality classes it with cars costing hundreds more.

For workmanship—design—mirror finish—deep-tufted genuine leather and curled hair upholstery—refinements—equipments, it is unsurpassed at any price.



Model 22, Touring Car, $1065; with Sedan Top, $1240. Velie Coupe, $1750. Velie Roadster, $1045. Wire wheels on any model, $70 extra.

Velie Motor Vehicle Co., 115 Velie Place, Moline, Ill.

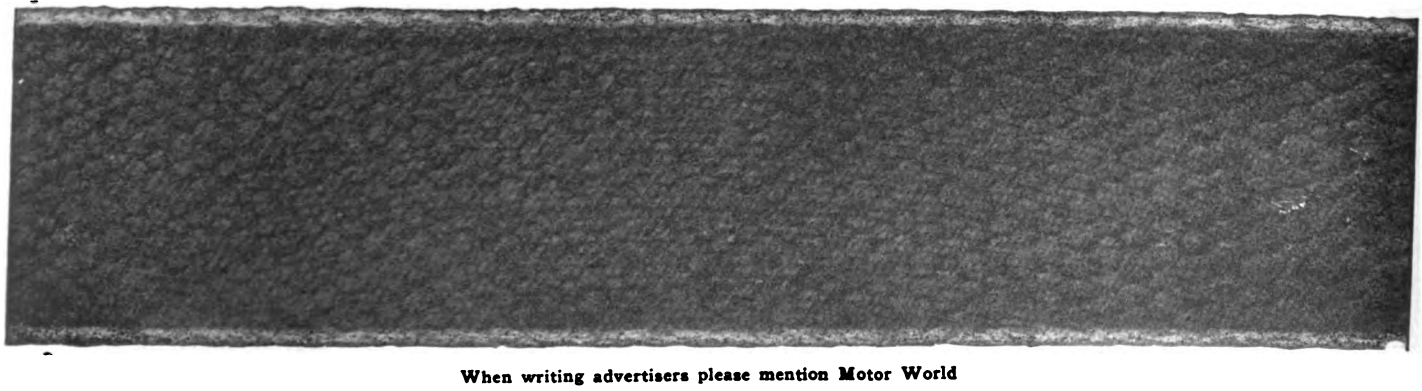
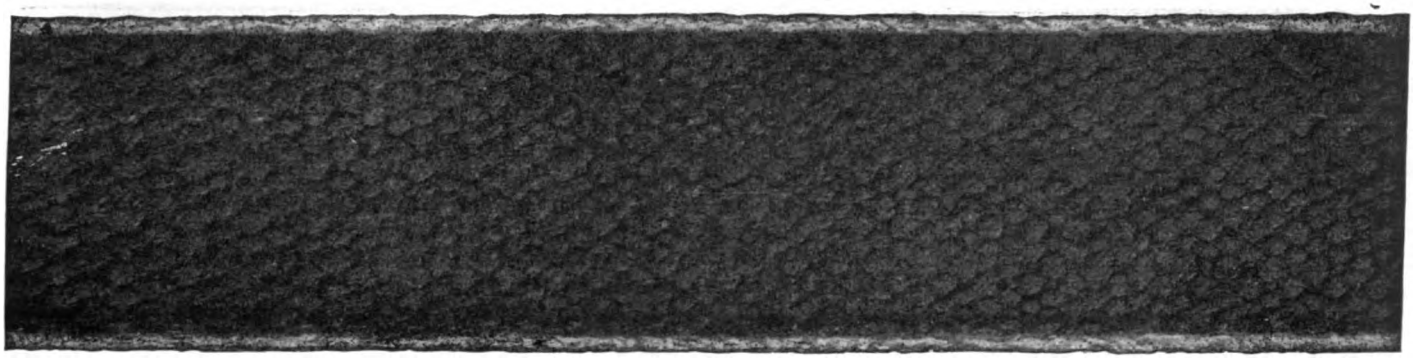
P + P + P = ?



Why are Raybestos and Raybestos **WEAR** now advocated by over 10,000 garages?

The answer is: Profit+Price +Performance=More Sales.



The Profit on Raybestos is a fair, living Profit. The dealer is in business primarily for profit. To his profit on the ***first*** sale of Raybestos he knows he will add the profit of a ***second*** and ***third*** sale to the same motorist.

The Price of Raybestos is fair. The dealer is out to handle that article which offers the most service at a given price. Hence Raybestos. Experienced motorists know that Raybestos offers most at its price.

The Performance of Raybestos—its downright **WEAR**—is a matter of common knowledge.

Digitized by Google

Raybestos **WEAR** is today the big seller of Raybestos Brake Lining.

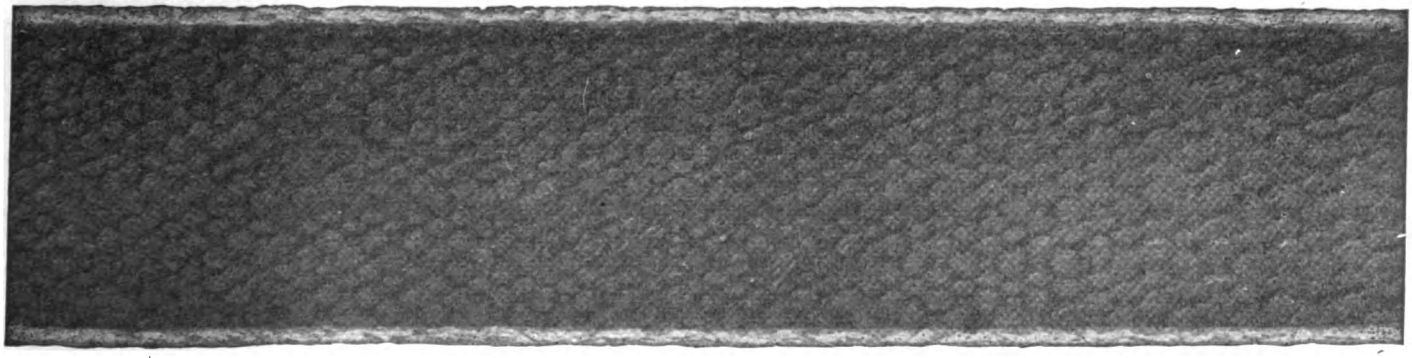
Motorists realize that "safety" talk about brake lining is 90% poppycock.

For—What brake lining is "safe" if brakes are out of adjustment?

And—What brake lining is continuously "safe" if not a hard, solid unit—like Raybestos—and impregnated through and through with the secret Raybestos compound?

So Raybestos is immediately accepted by well-informed motorists. No time wasted in argument on your part of inquiry on the customer's.

Raybestos Price+Raybestos Profit+Raybestos **WEAR**=a combination found nowhere else.



You can actually add to your good reputation by recommending ***genuine*** Raybestos Brake Lining.

The Royal Equipment Company **Bridgeport, Conn.**

Maxwell NEW PRICE $595

INCREASED PRODUCTION AND STANDARDIZED MANUFACTURING PERMIT REMARKABLY LOW PRICE

THE prices of Maxwell Cars are again reduced—$595 for the touring car and $580 for the roadster—effective July 1, 1916.

Only the price is changed—not the car.

Greatly increased production reduces our manufacturing cost per car.

Standardized manufacturing—only one Maxwell chassis—makes possible further production economy.

By reducing the price we also reduce the selling expense.

Thus the Maxwell owner gets the most *actual intrinsic value* for his expenditure.

Bear in mind that the Maxwell is the World's Champion Endurance Car. Its genuine through-and-through merit has been established beyond question or doubt.

The Maxwell has lowered many records for gasoline and oil consumption. It is everywhere recognized as one of the most economical cars to maintain.

These facts, considered along with the remarkably low price now quoted, make *Maxwell the one big automobile value of all time.*

This announcement will be read by hundreds of automobile dealers as well as prospective retail buyers. To those dealers who wish to know if there is any open territory, we will say that Maxwell sales contracts for 1916-17 are being signed now by our traveling salesmen. There will be some changes—particularly in the allotment of territory. Therefore, interested dealers, wherever located, should write us now.

WHAT THE MAXWELL PRICE INCLUDES

Long-stroke, high speed, four-cylinder motor; *20* to *25* miles to the gallon of gasoline (average).

Irreversible steering gear; automatic motor lubrication by splash and pump; 500 to 1,000 miles to gallon of oil.

Thermo-syphon cooling.

A running-in-oil clutch, so smooth as to make the driving of a novice as free from gear-clashing as that of a seasoned driver.

Tall, narrow, racing-type radiator, Maxwell-made.

Maxwell-made axles—I-beam front and semi-floating rear; heat-treated alloyed steel.

Gasoline tank in cowl; short, accessible gas line to carburetor.

Maxwell-made stream-line body, well finished in every detail. Deep, comfortable upholstery.

30 x 3½ tires all around, non-skid on rear; average life from *8,000* to *10,000* miles. Demountable rims.

Tire carrier at rear, with extra rim.

Substantial, Maxwell-made crowned fenders and linoleum-covered running boards.

Electric starter, electric lights, electric horn.

High-Tension Magneto, an independent source of ignition.

One-Man top with quick-adjustable, storm proof curtains.

Rain-vision, adjustable, ventilating windshield.

High-grade speedometer.

The Maxwell Touring Car is a *full five-passenger car.* Every Maxwell model seats comfortably the number of passengers which it is rated to carry.

Compare these Maxwell features with those of cars selling at higher prices.

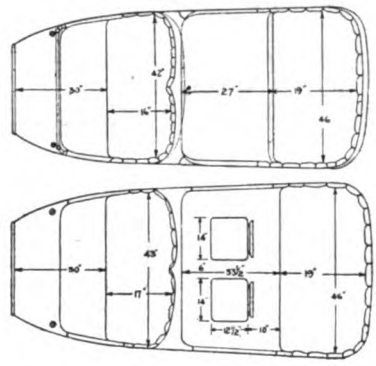
ST. LOUIS, MO. U.S.A.

The New 1917 Models

Last spring we adopted the double-cowled body on the Moon Six-44. So quickly did it find favor with both dealers and owners, that we have selected this design for the new 1917 models—the Six-66 and the Six-43. In addition to this feature, the 1917 body design (Delauney-Belleville type) exhibits still further refinement. Speed and power are expressed by its long, straight lines—and this impression is heightened by the smart, slanting windshield.

(We venture a prediction: So well has this design been received by the public that we believe by the end of 1917 every car of any moment will have followed our lead in the adoption of this double-cowled body.)

Moon 1917 models will challenge attention and admiration in any company and under any conditions.



But we have not stopped with the improvement of the body design. You will see in this further list of the principal 1917 features many other reasons for Moon desirableness.

Digitized by Google

Six-43
Actual Brake Horsepower

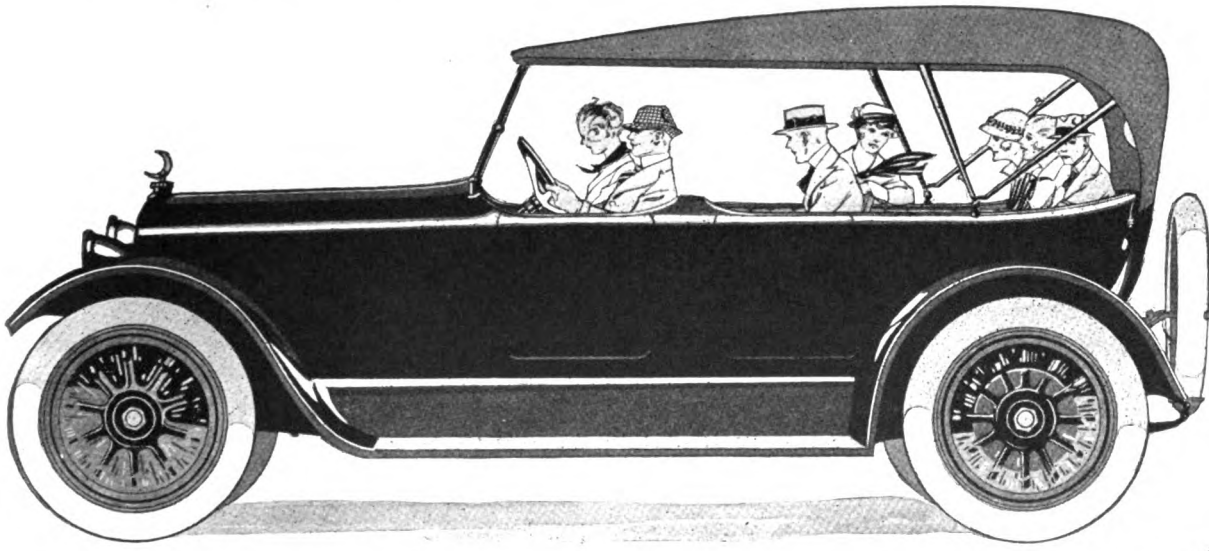
AND

Six-66
Actual Brake Horsepower

MOTOR—New Continental-Moon high-speed efficiency type, developing, in the Six-66, full 66 horsepower (actual brake test). The Six-43 develops 43 horsepower (actual brake test). In each case tremendous power in proportion to its weight.

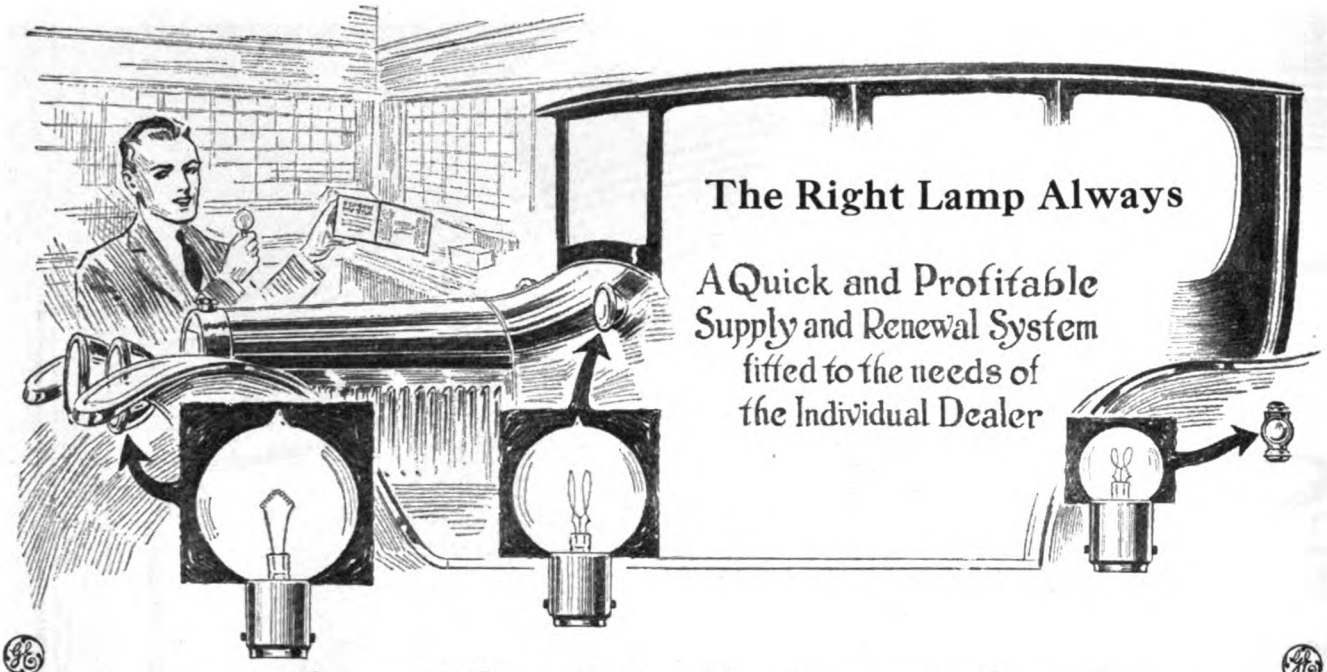
STARTING, ETC.—New two-unit Delco-Moon starting, lighting and ignition system. Bendix automatic drive in connection with starting motor.

UPHOLSTERY—Genuine tan Spanish leather, adding both to the beauty and the comfort of the car.



BODY—Delauney-Belleville type, with double cowl and slanting windshield. Big and roomy (Moon cars have always been noted for their roominess in both front and rear compartments). The seats are especially designed to *fit and rest the body.* The Six-43 body is not quite so long as the Six-66, as space is not needed for the extra seats.

REAR AXLE—Of course the spiral gear *noiseless* rear axle.



WHEELBASE—On the Six-66, 125 inches; and on the Six-43, 118 inches. It will be readily seen from this that these are *big sixes*—as big or bigger than many other sixes selling $500 to $600 more.

PRICE—Six-66, seven passenger, fully equipped, $1575; Six-43, five passenger, fully equipped, $1250.

This distinctively American emblem will mark a new luxury car. The name will soon be nationally known

A New Luxury Car

For 1917~ with a choice of Custom Style Bodies.

PEOPLE who know, realize that in the motor car of the future, the determining factor is to be the body.

A standard chassis of finished mechanical excellence, fitted to suit the buyer, with a choice of distinctive and comfortable custom style bodies, is both practical and fashionable.

Those in whom good taste is inherent, value a motor car for its distinctive appearance, quality of detail, body comfort, and performance.

In this advanced style class, a new luxury car will shortly assume a positive leadership.

It is the first American car in which body lines, finish, and body arrangement in their relation to the mental and body comfort of the passengers is given first consideration.

It is a light, perfectly balanced automobile with wonderful acceleration, and with unusual flexibility of applied power.

The chassis includes all of the finest universally approved mechanical units chosen after the joint endorsement of the greatest American automobile engineers.

The touring bodies are straight as an arrow from motometer tip to top cover, fashionably long and low.

Digitized by Google

The racy roadster and four passenger sporting models are low and rakish, yet the seats are cleverly arranged for real comfort.

The enclosed types include Sedan, Limousine, and Coupe, and are fitted with bodies of the permanent top style—exclusively 1917 vogue.

To inspire the owner's pride and save depreciation, twenty painting operations, a detailed finish, hand-buffed leather, and custom style mahogany cabinet work are provided, encouraging the owner to keep his car year after year.

There is more room for the driver; more room in the rear seat and a distinct innovation in seat cushions is introduced for the first time. The effect is almost pneumatic.

The passenger will feel that he is sitting down in the car instead of on top of it. The rear seat is actually wide enough for three people.

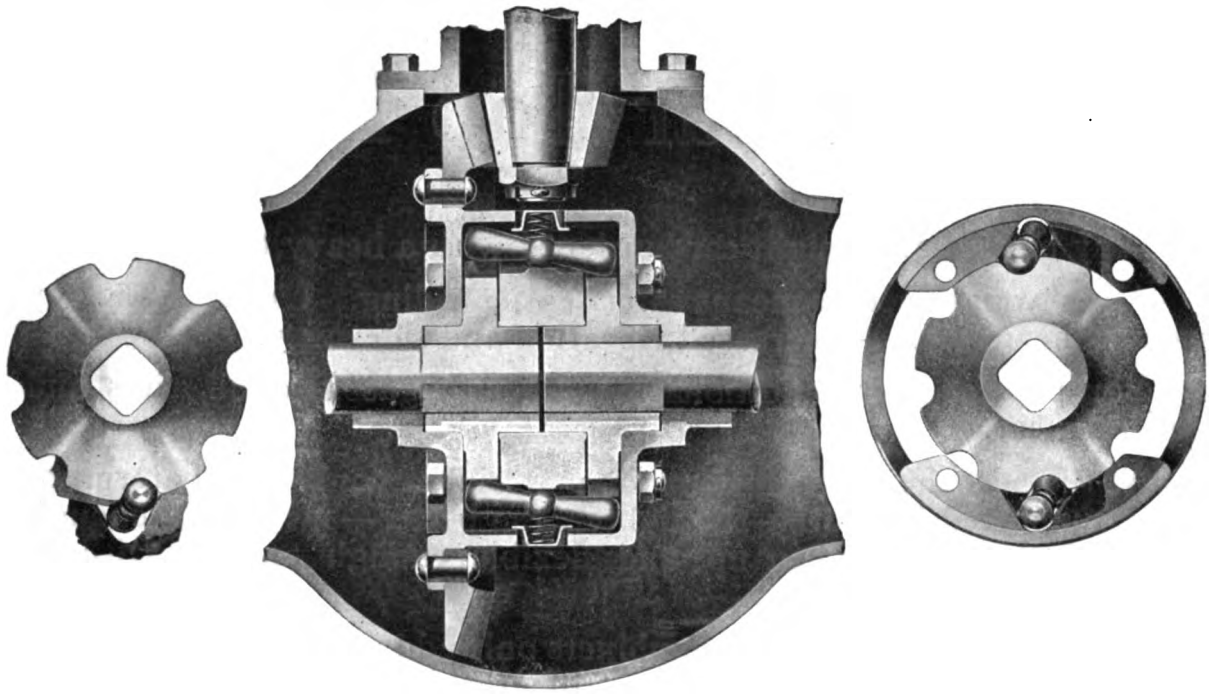
It is a body in which there is not a cramp or a squeeze for driver or passengers; a body of real riding comfort.

A single chassis designed and built with extreme accuracy, to be produced in limited numbers under the most rigid inspection system, maintaining the highest standard of quality and efficiency by using the one best unit available for each purpose.

On special order, the standard chassis may be fitted with custom made bodies by the world's leading makers.

Only 100 well established dealers will be authorized to sell this car.

Delivery schedules will be provided for these in accordance with daily production.



Further interesting details next week.

Dealers and individuals desiring advance information may address

THE NEW PROCESS DIFFERENTIAL

compensates perfectly in turning, and on straightaway locks to drive both rear wheels **positively** and **equally** on a **practically undivided axle.**

This equalized driving power, impossible with an ordinary differential, keeps the car from swerving at high speed or on slippery road, keeps one wheel from spinning while the other is embedded in sand, mud or snow, and therefore assures safe and sure passage on roads where a gear-differential-equipped car would skid or stall.

Obviously then, the equalized power distribution also makes steering easier, makes the car hold to the road better, protects tires from disastrous grinding and tearing, and by holding down the wheel travel to the fewest revolutions for given distance, reduces power waste and steadies engine speed.

Automobile and Axle Builders:

These strong selling arguments commend New-Process-Differential-equipped cars to favorable consideration and the motoring public will quickly grasp the possibilities from this improved construction.

You can equip with New Process Differential without changing your present axle housing or bearing layout, and you can be sure that the few simple strong parts will last better than the corresponding elements of a geared differential.

The cost is no more than for the less efficient type, and we stand ready to offer every reasonable assurance as to efficiency and long life.

Our twenty years of successful manufacturing, $1,500,000 invested in plants and equipment, and well established reputation for progressiveness and fair dealing, further make this device worthy of careful consideration.

Blue prints, costs, etc., submitted on application.

Is Your Car Top Heavy?

Why buy a light weight car burdened with a heavy top?

A low weight center means safer, easier riding. Unnecessary top weight means waste—increased vibration and side sway.

You pay for every additional pound with gasolene, oil, tires and general wear.

At the best the most efficient top material can only be a waterproof layer supported by cloth—the lighter, the better—but strong enough to stand the strain when up, and flexible enough to fold without cracking.

Extra layers of cloth and combiners only add weight, diminish flexibility and increase the possibilities of cracking in folding. Mohair tops absorb pounds of water during a storm and accumulate dust when dry.

DU PONT FABRIKOID
RAYNTITE
REG. U. S. PAT. OFF.

Single Texture Top Material

is ideal for the modern one-man top. It is made of a single thickness of light, strong cloth coated with a flexible, waterproof compound that sheds water like a duck's back. It can be easily washed, always looks well and because it is chemically inert will not oxidize nor disintegrate. **Guaranteed one year** against leaking but built to last the life of your car. Any top maker can replace your old dusty or leaky top with Rayntite.

Du Pont Fabrikoid Raynite will duplicate the remarkable success of Du Pont Fabrikoid Motor Quality—The Standardized Automobile Upholstery—used on 60% of 1916's entire output.

Write for samples and booklets and latest list of cars equipped with this modern top material.

Some Body For Fords

This Is Some Body

This Ames-built Cloverleaf 3-passenger Roadster Body is the "somebody" body that puts your Ford into the "somebody" class. It is class itself. Note its graceful, beautiful lines, novel design, its classiness from end to end. Compare it with that body you now have on your Ford or with any body on any other car. Would give your Ford that thousand-dollar look, wouldn't it? Everything throughout thoroughly up to the minute—top, upholstering, workmanship, material, style—all ready to mount on your Model "T" Chassis. Interchangeable; anybody can put it on. Crated complete for shipment.

Give Your Engine a Chance

It's a cinch you won't get all the engine has to give—or get the full life of the engine unless it's properly lubricated. And you can believe it or not, but buying oil indiscriminately from barrels, pumps, etc., don't get you the oil that will lubricate properly. Make sure what you are getting—buy by name—from packages marked plainly

Tiolene

"The Oil That's Clean"

The price is high—but we have found (and you have probably found the same thing) —you always have to pay a good price for a good thing—an article that's right—an article that lives up to a standard—and that particular article in this case is Tiolene—"The Oil That's Clean."

Don't try to fool yourself—It don't pay in the end. Better order a drum from your dealer today.

AT PALM BEACH IN A WHITE FORTY

BOSCH

MAGNETO IGNITION COSTS MORE BUT BOSCH-EQUIPT MOTOR CARS DON'T

THAT'S an important statement, Mr. Dealer and Mr. Owner. It means just this—that the extra care, the use of the best materials Bosch can buy, the employment of only expert workmen, make possible the production of an ignition system second to none in its service-giving qualities, and, quite naturally, a trifle higher in its selling price.

But the maker of a Bosch-Equipt Motor Car is willing to absorb that extra cost and charge it up to "+ SERVICE," that is, a little more efficiency and reliability than you expect, but only as much as you are entitled to.

There is no reason why your motor car should not be equipt with the best ignition system obtainable—it costs you no more and you are better served at a point which is most vital to your engine and to your comfort.

Be Satisfied The motor car you buy or sell can be Bosch-Equipt — insist. Specify Bosch

NATIONAL

Evening. Family and guests ready for a ride. You touch the switch. Some lights respond—*the most important one doesn't!* What's to be done? Alone, you might take a chance on dodging the officers. As it is, the guests must wait while you tramp a dozen blocks to get new lamps.

MR. DEALER! Autoists don't argue whether they need the National MAZDA Auto Lamp Kit. They know they need it. They want it—must have it. Every driver buys it and *glad of the chance.*

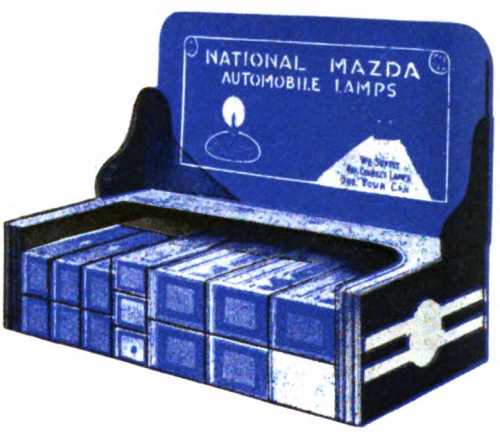
You sell six lamps instead of one! You make a six-fold profit! With less stock to buy, store, and keep track of, you sell more, make more!

If you're now selling auto lamps, here's the way to multiply your profit—and if you're *not* now getting this profitable business, this is the way to get into the auto lamp business, *with the least investment of time and money.*

Digitized by Google

MAZDA AUTO LAMPS

Complete for Any Car



The National MAZDA Auto Lamp Kit contains a complete set of six lamps—head, side, rear and instrument lights—for any car. Includes a pair of the new, much-sought-after MAZDA C Headlights!

Eight Lamp Kit assortments fill the requirements of nearly all the cars.

The new "National Guide to Proper Lamps" tells every LAMP needed on every American made car for 1916, '15, '14, '13, and the "National Guide to Auto Lamp Kits" shows at a glance which KIT supplies the proper lamps for any car. Either Guide sent free on request.

The Auto Lamp Cabinet

Here's a Cabinet of 100 National MAZDA Auto Lamps, so elected that they care for the wants of 90% of American made cars! Maximum assortment—minimum stock. The Cabinet itself is a salesman. On counter, in window, it's a persistent auto lamp advertiser. For selling individual lamps and for refilling the kits, you need this 100-lamp Cabinet.

The Flashlight Lamp Case

Contains 100 lamps for flashlights and electric hand lanterns. Display the case on counter, in window, and get this easy lamp renewal business! It comes without effort and is easy to fill, for a simple index system helps you to produce instantly the proper lamp for any regularly manufactured flashlight or single-cell hand lantern.

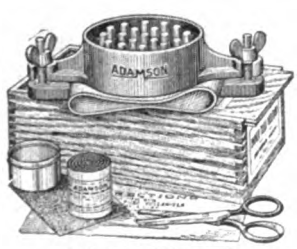
THE START

Every Car Owner Must Have a Vulcanizer

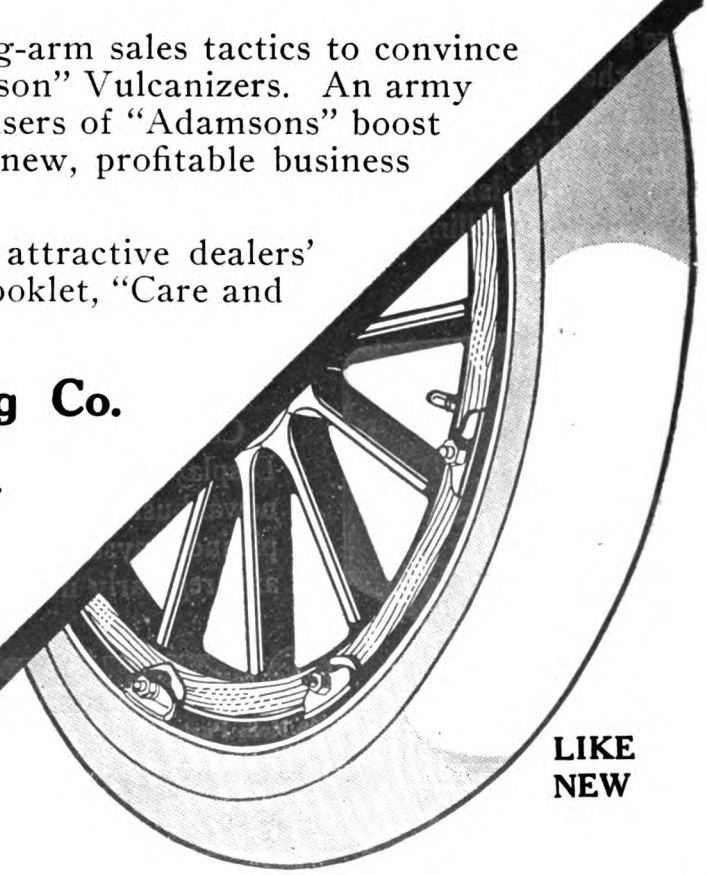
Higher prices for tires this year make it more imperative than ever that tires be kept in good repair till the last bit of mileage has been taken out.



Right now—just at the start of the selling season, why not give "Adamson" Vulcanizers a good place, put them out where your customers can see them and know you sell this best-known and most successful of all Vulcanizers.

ADAMSON VULCANIZERS

You don't have to use any strong-arm sales tactics to convince anyone of the merits of "Adamson" Vulcanizers. An army of more than a million satisfied users of "Adamsons" boost for them and continually send new, profitable business to you.



If you haven't written for our attractive dealers' proposition and copies of free booklet, "Care and Repair of Tires," do it today.

Mid-Year Model

Mitchell SIX

$1325 F. o. b. Racine
With 127-inch Wheelbase

Mitchell Prestige

One result of our advertising, up to this writing, is a trebled demand for the Mitchell. Even with this 45-acre plant we are running 24 hours a day.

Another is conspicuously new prestige. A new class of buyers are coming for Mitchells. The car is coming to be recognized as a masterpiece of fine engineering.

A New Career

The Mitchell car is 13 years old. The Mid-Year Mitchell is our 17th model. But the car is just starting to enter the limelight as an efficiency production. It is now for the first time enormously advertised. So it this year enters a new career.

But we want you to know what solid foundations have been laid for this coming era.

A Bate-Built Plant

We have here now a model plant, all designed by John W. Bate. Every machine has been selected by this famous efficiency expert.

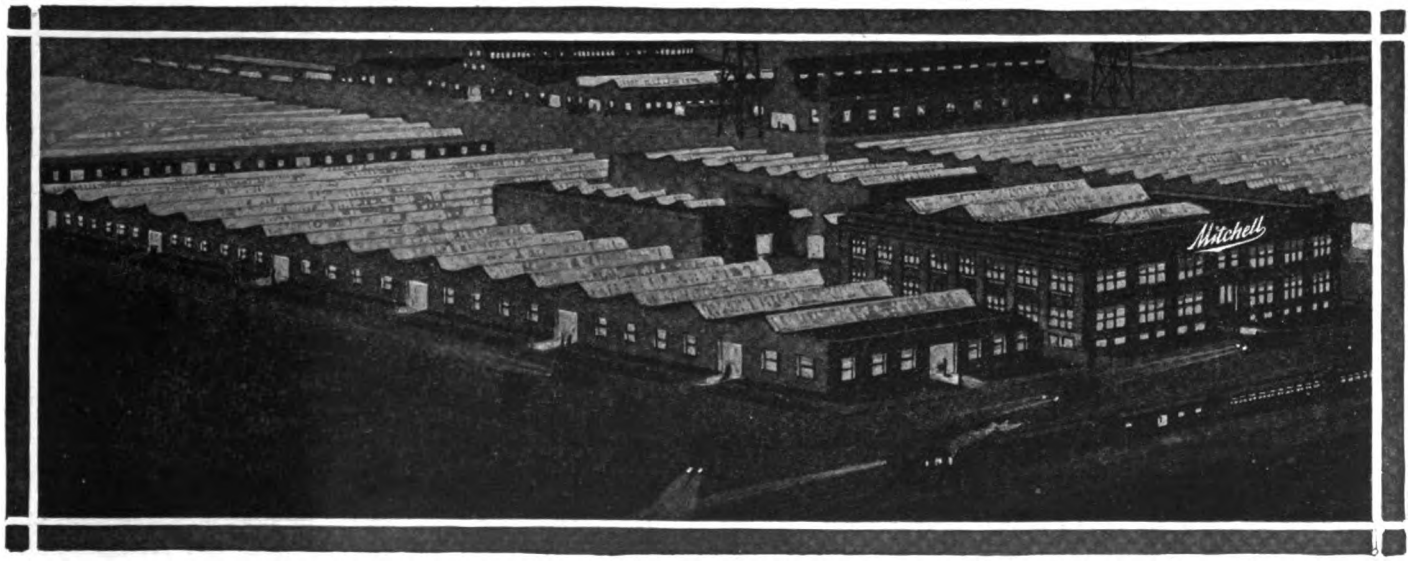
It represents an investment of $5,000,000. It has a capacity for 25,000 cars per year. And that capacity can be easily expanded.

We believe that no other plant in the country could build a car like the Mitchell at anywhere near our cost. We know that Mr. Bate, in the past six years, has reduced factory costs 50 per cent.

700 Improvements

Mr. Bate and his staff have also worked out 700 improvements in the car itself. They have attained utter simplicity. They have made a car that is almost trouble-proof. They have made it a safe car, extra staunch, despite a remarkable lightness.

They have displaced countless castings with drop forgings, and with parts stamped from toughened steel. They employ a wealth of Chrome-Vanadium steel.



For ease of driving they use a ball-bearing steering gear. For ease of riding they use Bate cantilever springs. Not one of those springs has ever yet been broken.

30-Year Service

As one result, we are able to advertise that one Mitchell car has run 218,732 miles. Six Mitchell cars have averaged 164,372 miles each—or over 30 years of ordinary service.

As another result, we are able to supply every Mitchell dealer with a list of great engineers—men of nation-wide fame—who selected the Mitchell as their personal car.

A ONE-HALF VIEW OF THE MAMMOTH MITCHELL EFFICIENCY PLANT

257 Cars in One

Mitchell SIX

26 Extra Features

Mitchell Attractions

In the Mid-Year Mitchell we combine more attractions than any other car can show.

In design and equipment it brings out 73 new conceptions. It embodies all the best features exhibited at the January Shows. It combines in one car all the popular new touches we found in 257 Show models.

26 Wanted Extras

In addition, this Mid-Year Mitchell has 26 extras, each of which forms an attraction. Each is a feature which men want. Each is something which most other makers omit.

These include a power tire pump, a new-type control, an extra-cost carburetor, reversible headlights, an engine primer at the driver's hand. They include a light in the tonneau, a locked compartment, springs which need no shock absorbers.

There are 26 of those extras, very few of which are found in any other car.

New Comforts

In a demonstration one will find this the easiest riding car ever known. That is due to the Bate cantilever springs.

One will find this the easiest car to drive. That is due to oversize steering gear, fitted with ball bearings, and to the cane control.

One will find it a wonderful performer. No car can out-match it. And owners will report a long mileage per gallon.

A Solid Alliance

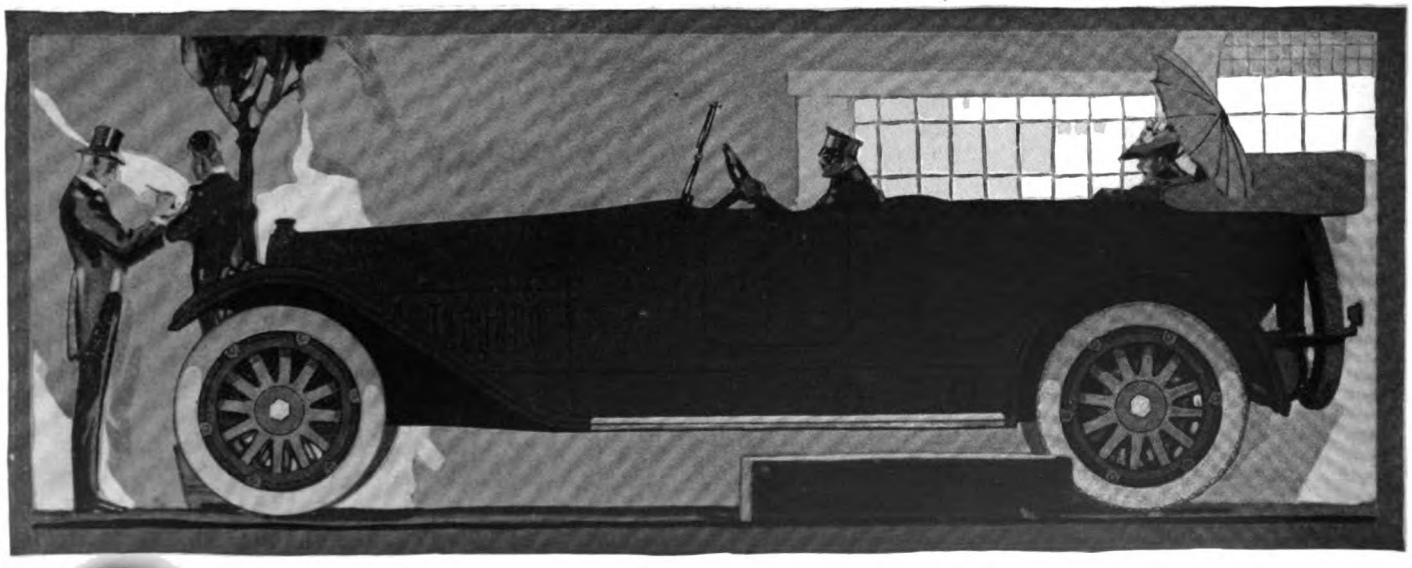
There are many sections where dealers may yet obtain a Mitchell franchise. And they will find it a solid alliance.

We have the factory and we have the car to meet all the coming conditions. We have the age, the experience, the managerial ability.

We have the advertising—$500,000 this season—to let all men know the facts. And the men who know them are bound to respect us.

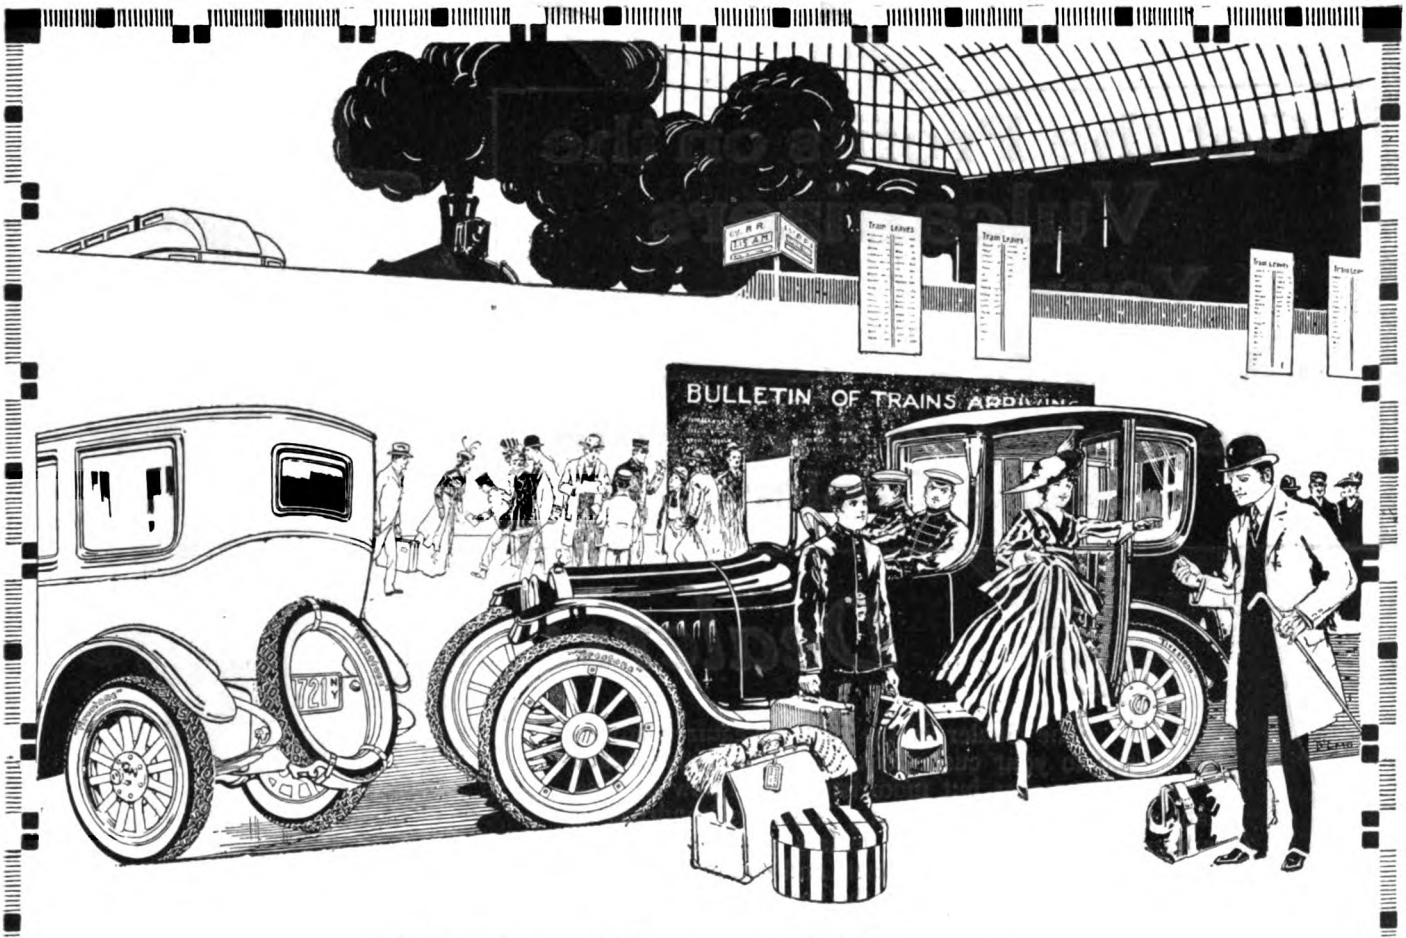
We believe that no other car in this class offers a like opportunity.

$1325 F. o. b. Racine



For 5-Passenger Touring Car or 3-Passenger Roadster

7-Passenger Touring Body, $35 Extra



High-speed economical Six—48 horsepower—127-inch wheelbase. Complete equipment, including 26 extra features.

In territories still open we invite prospective dealers to investigate the facts. We are very particular. We want and deserve men of the highest grade. But to such men we have something to offer which will surely arouse their enthusiasm.

Get the Profits on the Vulcanizers Your Customers Are Going to Buy from Some Dealer

Dealers:

The Shaler is the only vulcanizer advertised to your customers. You may have heard of other makes but motorists don't know a thing about them. Our advertising is selling hundreds of vulcanizers every day—for dealers who carry them in stock. There is good profit in the vulcanizer itself and you make as big a profit on the repair material necessary as you do on the patches and gums you are selling.

Your customers are going to give these profits to some dealer. Why not you? Remember, no car is equipped with a vulcanizer, so the motorist must BUY one somewhere.

SHALER Vulcanizers

They are designed to be carried in the tool box for making emergency tube repairs that are permanent. In addition they mend small casing cuts, which if neglected would let in dirt and water to rot the fabric and cause blowouts. Your reputation for selling good tires will be increased with every customer who cares for his tires with a Shaler.

Every Shaler you sell helps you sell more, because the user tells his friends about the successful results it gives him.

Shaler vulcanizers retail from $2.00 up. There are models for every need, heated by gasoline, alcohol, steam or electricity.

We also make vulcanizing plants for repair shop use.

McFARLAN SIX

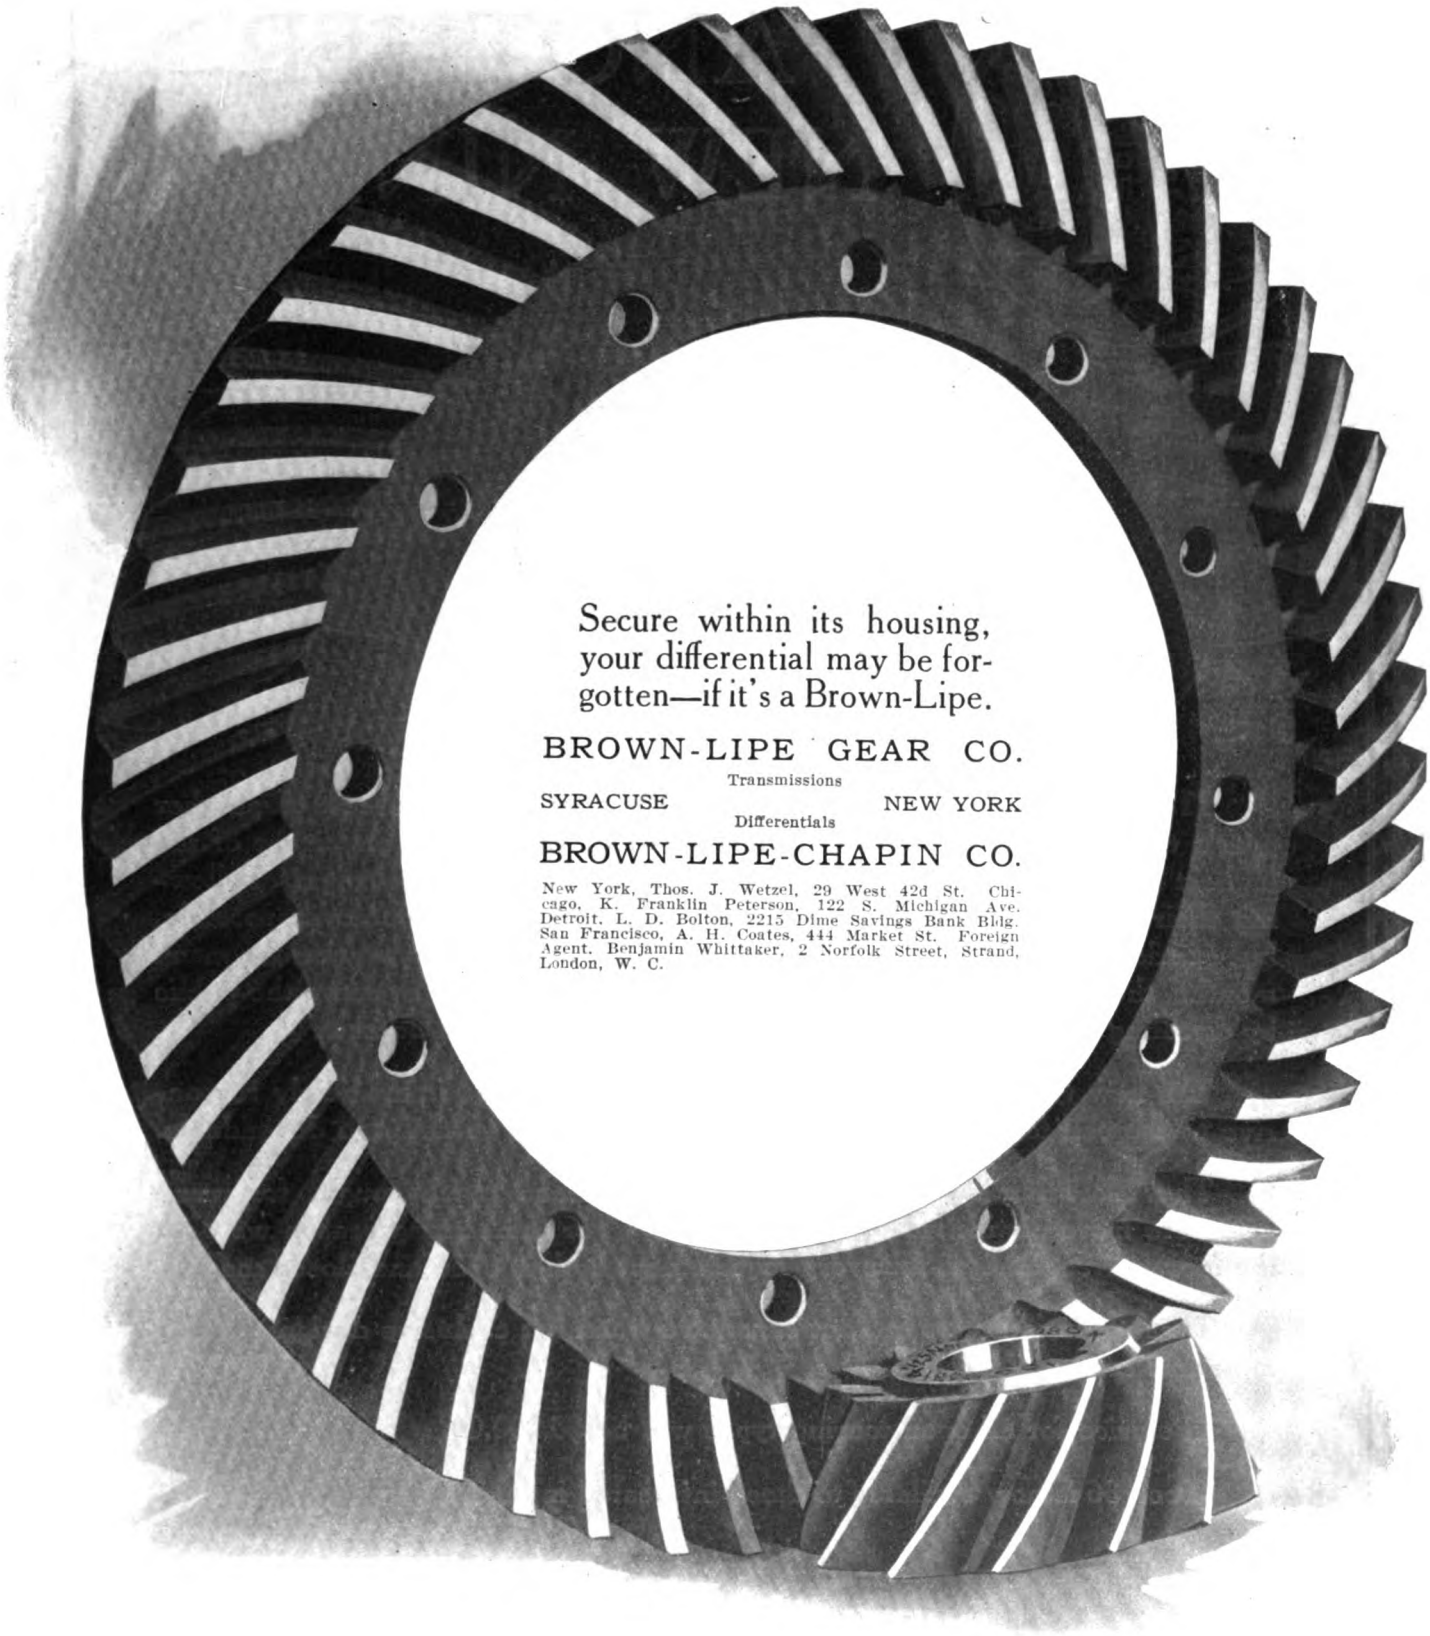
ANOTHER NEW NINETY

THE McFARLAN MOTOR COMPANY offer you the result of another year's tireless effort to produce a high-powered, six-cylinder motor car of the highest efficiency, greatest dependability and the most correct design. Following their rigid policy of improving motor car construction wherever possible, but of adopting no change that has not been under close observation for many months, the McFarlan engineers have felt that they could best serve the public by directing all their thought, care, skill and energy to one chassis.

The new type cars are unusually low in appearance, immediately responsive to the call for speed or power. They are silent, restful and dependable.

The McFarlan body designs which have been much sought for many years are more distinctive than ever before. For the coming season we offer the most correct designs for every requirement both in open and closed models.

These luxurious cars are not expensive when the exclusive design and fine materials are considered.



The price for all open touring types will be $3,200.00.

(Book 36 is now available to those interested in luxurious cars.)

The Mark of Superior Motor Car Service

What About Vibration?

When you ask about Hupmobile vibration, you are probably thinking again of some multi-cylinder car of higher price.

You have heard that some of them are notably steady under certain conditions.

And they are.

But so is the Hupmobile, under *all* conditions—at any road speed.

Take the Hupmobile when it is going at 50 miles an hour.

We doubt very much—we put it politely, you see—if it registers more vibration than many and many a motor at 25 miles.

Does that sound like rather "tall" talk?

It is, we will grant you—but fortunately it is capable of demonstration.

Our dealers freely invite prospects to ride in the Hupmobile at fifty miles an hour, and then try some other cars at half that speed.

They do not say what will happen in the other case.

They leave the whole question for the prospect to settle on the score of performance.

The result of this, and other phases of the Hupmobile's wonderful performance, is that Hupmobile dealers are not feeling multi-cylinder competition. It is the other way about, as a rule.

If you would like to be in such a fortunate position, get in touch with us with reference to your territory.

When there's no chance to pump as you use

In tight corners, with no elbow room—that's where the J-M Fire Extinguisher proves itself. You can operate it as a pump where there is room, but it has this ***additional*** and ***exclusive*** advantage over all other hand type extinguishers—the contents can be discharged by air pressure, created by a few quick strokes with nozzle closed. Opening the nozzle releases a powerful steady stream, deadly to all incipient fires, whether of gasoline, grease, oil, kerosene, or electrical origin. The J-M Fire Extinguisher is the only one-quart type with this invaluable ***two-way*** operation.

Inspected, tested, and labelled by the Underwriter's Laboratories, Inc., and listed as an approved fire appliance by the National Board of Fire Underwriters.

Entitles car owners to a 15% reduction in auto fire insurance.

J-M Fire Extinguisher Liquid for recharging is sold in cans at $1.00. This is the only liquid recommended and guaranteed for use in the J-M Fire Extinguisher.

—gives the merchant this 1-ton truck.

WE KNOW YOU DEALERS

—can sell it fast because it stands alone in Service as well as Price—so we do not ask you to contract for a quantity—just get a demonstrator, let your customers see it, and do the biggest light truck business in your community.

That's what others are actually doing NOW! Look at the PRICE! Study the make-up of the

RAYFORD
COMMERCIAL CHASSIS

and be convinced of its logical, unequalled appeal to the truck buyer.

Then fill out and mail attached coupon asking for our Unique Dealer Proposition. It will surprise and please you.

The Rayford Method

leaves the Ford chassis absolutely untouched except that sprockets are attached to Ford rear hubs displacing Ford rear wheels which are placed on front to utilize the ½-inch larger tires.

The Ravford load-carrying solid rear axle carries 90% of the dead load, and scale tests show that front axle carries no more weight than it did on the Ford touring car.

Our standard gear ratio is 2 to 1 (in addition to 3.63 to 1 of Ford), reducing speed to 20 miles per hour, and increasing tractive power of Ford motor to easily pull over a ton dead load in high gear on any hill which an unconverted Ford can take.

Guaranteed for 50% overload—body extended 10 ft. back of front seat—attached in 2 hours—fits any model T Ford.

TITUSVILLE, PA.

WARREN, PA.

PHILADELPHIA, PA.

THE Crew Levick Company, the oldest and one of the major refiners and distributors of petroleum products of the world have completed plans for marketing a most comprehensive line of automobile lubricants and specialties.

Most of the products that will constitute this line are not new, but their distribution, which has heretofore been confined to an exclusive patronage in a limited section of the country will be extended nationally.

This extension of territory has been made necessary by a constantly widening circle of demand growing from the reputation for high quality enjoyed by Crew Levick products for over half a century.

"The Light That Failed"

Many dealers and garage owners throughout the United States have suffered defeat in business, because they did not adopt some adequate accounting system to direct them into profitable channels, and take them from the broad and too easily traveled path of loss—at the end of which was failure.

How much did you make in June?

Maybe you think so—but do you know?

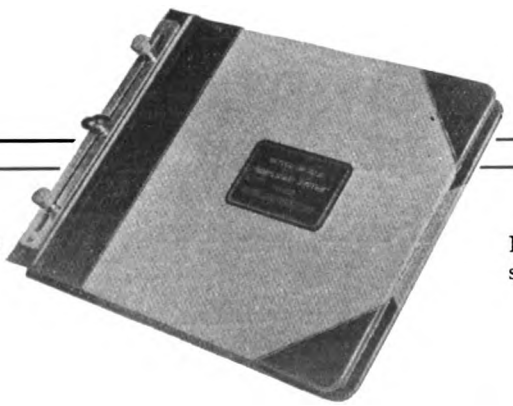
How much will you make in 1916?

Does your repairshop gain or lose?

How much do you make when you charge a customer for an hour of labor?

How do your May and June collections compare?

If you don't know these things you are not on the road to business success. You should have an accurate and timely record of all parts of your business. You should have a simplified and easy to operate accounting system that will light up the dark corners of your business—that will make your business road safe to travel.



Motor World has devised such a system. It costs $12 complete. Everything in one book. We advise you to get SOME kind, whether it is Motor World's or some other. But if you want this one (which is designed by experts who have made a careful study of the various problems of YOUR business) send $12—check or money order—and plan to get started on the right track August 1st.

Booklet with a complete illustrated description of the system (price $1.00) will be sent complimentary with each system. Send your order at once. Address:

The Motor World Publishing Co.

System Department

239 West 39th Street New York City

This is the only book required—size 11 x 14 inches—canvas, leather corners.

Includes 100 income sheets—100 expense sheets—500 customers' sheets.

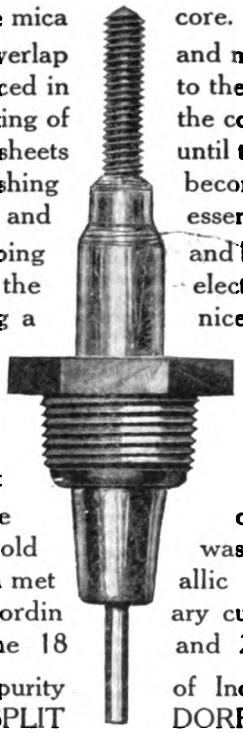
Look for the name SPLITDORF on the Green Jacket, which is hexagonal in shape. Refuse imitations or "just as good" substitutes. The SPLITDORF Trade Mark appears on every SPLITDORF PLUG, and the Trade Mark carries the SPLITDORF GUARANTEE



Digitized by Google

The laterally wound mica core is the dominating feature of SPLITDORF SPARK PLUGS from the actual usage standpoint. The distinguishing green jacket, while adding a finish to the plug, really serves as a protection to the mica core — and it is the mica core insulation that places SPLITDORF PLUGS in their position of supremacy.

Automatic machinery accounts for the conversion of sections of solid round steel into finished shells, and likewise the bushings and spindles, but the human equation enters more strongly into the most interesting and important process of wrapping and completing the mica core.

The sheets must overlap and must be built up preparatory to being forced in to the bushing. Machinery takes care of the setting of the core in the bushing and compressing the mica sheets until the mica between the spindle and the bushing becomes as solid as though it were one sheet and essentially homogeneous.

Trimming and shaping and boring for the electrode and riveting home the electrode, are all precise operations, demanding a nicety of exactitude only possible with the most complicated automatic machinery, but the lateral packing of the mica cores in SPLITDORF Spark Plugs is a feature that gives them their pre-eminence in the hardest usage.

The Laterally Wrapped Mica Core

There is no chance of oil seeping through, as in the case of the old washer process, and even were it possible for a metallic substance to get between the layers, no ordinary current could possibly puncture through the 18 and 20 layers used.

Flexibility and purity of India ruby mica are great points in SPLITDORF Plug construction. Skilled operators scale it to sheets of marvellous thinness — the process is long and costly, but the results achieved in manufacture and usage warrant the outlay.

It is never necessary to throw a SPLITDORF Plug away — the whole core and bushing can be easily removed. The whole plug, as a matter of fact, is simplicity itself in the taking apart for inspection, renewal or cleaning.

There are no acute angles in the shell, and this enables it to be easily and thoroughly scoured. A little gasoline and a piece of coarse cloth will invariably remove all carbon and renew the mica core.

Look for the name SPLITDORF on the Green Jacket, which is hexagonal in shape. Refuse imitations or "just as good" substitutes. The SPLITDORF Trade Mark appears on every SPLITDORF PLUG, and the Trade Mark carries the SPLITDORF GUARANTEE

Little Giant Spiral Fluted Taper Reamer Sets

The Spiral Fluted is the Only Smooth-Cutting Reamer

We have discontinued manufacturing straight-fluted reamers, because of the superiority of the spiral flute.

The left hand spiral flute gives a shearing cut, reducing the strain on the cutting edge. The reamer has a double support in the hole, which steadies it in action regardless of faults or defects in the metal.

Our Reamer Sets Are Complete with Bit Brace or Straight Shanks.

These sets contain all the sizes generally used in automobile repair work.

No. 705—5 sizes.
No. 709—9 sizes.

Spiral Fluted Taper Reamer Sets for Automobile Kits

Put up in substantial leather rolls, or wooden cases. Send today for our bulletin, "Tools for the Automobile," showing automobile tap and die sets and other indispensable tools for the garage and repair shops.

We are the largest manufacturers of screw-cutting tools and solve screw-cutting problems for automobile manufacturers.

A Mighty Big-Little Line

Nowadays when betterment is the order of the day, and the old adages are obsolete, it can't be truthfully claimed an article of so much importance as "Platinum" Spark Points cannot be improved upon. The fellow who so claims is a skeptic or back number.

If *all* jobbers and dealers *knew*

What some jobbers and dealers *know*—from two years' experience, about all would be cashing in on the New Era Indestructible Sparking Points (contacts), besides serving their customers better, and would know *why* we can positively guarantee to replace at *any time ever* returned for any reason.

Why it is more feasible for *every* garage and repairman to carry at least *ten of our three sizes.*

They can the very same day fit *every* make vibrator spring or screw and most magnetos—instead of perhaps having *some* kind of vibrator springs and not the right make—thus causing two or three days' hang up of owner's car.

The dealer makes *more* profit for his quicker service to customer.

The jobber can quickly supply in small linen envelopes, of ten of each three sizes, and *all* will be *better* satisfied.

Platinum and precious metals are now so expensive that most contact points have only a *thin* shell or surface of the real stuff and *soon* wears through.

The New Era Indestructible Sparking Points are the same clear through, and if ever worn or filed down until through good service we will replace any returned. *Not even all platinum* dare do this.

Is it not worth while to credit what other jobbers, manufacturers and garagemen say of their experience and *try them thoroughly?*

Take two minutes to read the convincing letters on border.

Why not help stop too frequent ignition troubles by selling New Era Indestructible Sparking contacts?

If your jobber hasn't them catalogued, order of us and give their name.

Beware of anything "just as good" or not in little "New Era" linen envelopes.

Better order trial package ten of three sizes, discount double what is given on platinum, etc.

NEW ERA SPRING & SPECIALTY CO.

Stock No. 3 ..... $0.75
Size No. 9 Ga. wire 3/64" deep

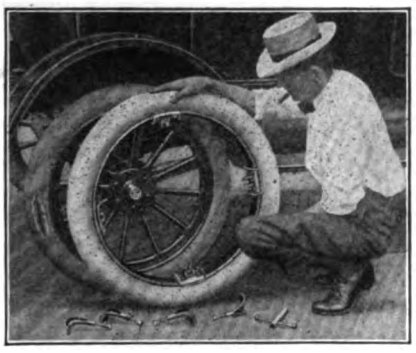
Read the Following They Speak for Themselves

Kansas City, Mo.

Gentlemen:—Replying to yours of October 25th, will say that our experience with the New Era Indestructible Sparking Points on what we have sold has been very good as we have had no complaints and of course have not had to replace any of them.

Yours truly,
MOTOR & MACHINISTS SUPPLY CO.
J. W. Barnhisel.

Toledo, Ohio, Jan. 22.



Gentlemen:—The Sparking Points you gave me to try out last October were put in a vibrator and attached to a motor which has been running steadily in the factory a sufficient length of time to cover 3,000 miles. I have not made one adjustment of the points and they are not pitted in the least. This demonstration of durability and efficiency satisfied me absolutely that the points are all you claim, and we are using them regularly.

Yours truly, S. J. CHUBUCK,
Assistant Supt. The Consolidated Mfg. Co.

Hillsdale, Mich., Dec. 17.

Gentlemen:—Yours of the 12th just received. Would say in reply that the points are giving excellent service and I am more than pleased with them. We are using them on our rectifier, and they are giving the best of satisfaction. We run them almost continually. About the only time that they are shut off is when we change the storage battery that we are charging. The points that we put on magneto and Ford Coils are doing just as good work. Could not do any better.

Yours respectfully, JUDSON LEWIS GARAGE.

METHOD OF MOUNTING

TWIN-RIM

PATENTED FEB., 1916

A Demountable Rim for FORD CARS

AND ALL OTHER 30"x3½" OR 30"x3" CLINCHER RIMS

A NEW INSPIRATION TO

"Holbrook", New York
"Kimball", Chicago
"New Haven", New Haven
"Thompson", Pittsburg
and others in the building of

CLOSED BODIES

The bodies we have designed for the Marmon 34 chassis represent the best that we have in us—in fact we feel that the advanced design of the chassis itself, being so admirably suited to closed-body construction, was an extraordinary inspiration that enabled us to do unusual work in this particular instance.

NEW HAVEN CARRIAGE CO.

Treasurer

When the floorboard of a closed car may be placed only twenty-five and one-half inches from the ground and the height of the roof therefore need not be more than eighty-one inches, the body designer is particularly fortunate, for the usual limitations in design are thus at once eliminated and the designer is not forced to use his craftsmanship to bring out lines so that they *seem* to be long and low—but can use in his design lines that actually *are* long and low. That makes a great difference.

The Marmon 34 chassis is particularly adaptable to the most excellent closed body work.

THE HOLBROOK COMPANY

President

We want to call your attention to the special Limousines in Berlin, Cab-side, and Town patterns which we are now building for your new 34 model.

Your engineers have fortunately supplied us with a chassis basis that insures splendid proportions and low, simple lines—thereby meeting the demands of those who appreciate the best in Motor Coach work.

C. P. KIMBALL & CO.

President

The fact that no sills are required to obtain structural strength in attaching a closed body to the Marmon 34 chassis is partly responsible for the very distinctive, long, low-hung effect achieved in the bodies that we have designed for this chassis.

A closed car only eighty and one-half inches in height in which the usual inside headroom is possible is certainly very desirable.

The Marmon chassis is the ideal type for closed body construction.

E. J. THOMPSON CO.

President

Digitized by Google

MARMON 34

Now A Permanent Closed Body Department

THE Nordyke & Marmon Company announces to the public and to the trade the permanent establishment of a closed body department in which limousine, landaulet, town car, and sedan bodies by such famous custom coach builders as Holbrook & Co. of New York, Kimball & Company of Chicago, New Haven Carriage Co. of New Haven, Conn., E. J. Thompson Co. of Pittsburg and others, will regularly be produced from now on.

Formerly Marmon chassis were furnished with closed bodies only on special order. We will, of course, continue to supply special bodies built to order, but the demand for such work, we believe, will practically be eliminated in view of the character, distinction, and exclusive style obtainable in the new designs by the above named well-known custom coach builders. Marmon representatives will gladly furnish further details or you may obtain them by writing to the factory.

Note: We will reproduce in this publication next month, pictures of the Marmon 34 fitted with the new bodies

The Standard Spark Plug of America

Automobile Advancement Defies All Speed Laws

Pessimists who said "it can't be done" are pushed aside by optimists who are actually "doing it." The AC—the one Standard Spark Plug of America — is an accomplished fact. The Champion Ignition Company, of Flint, Michigan, has made it so.

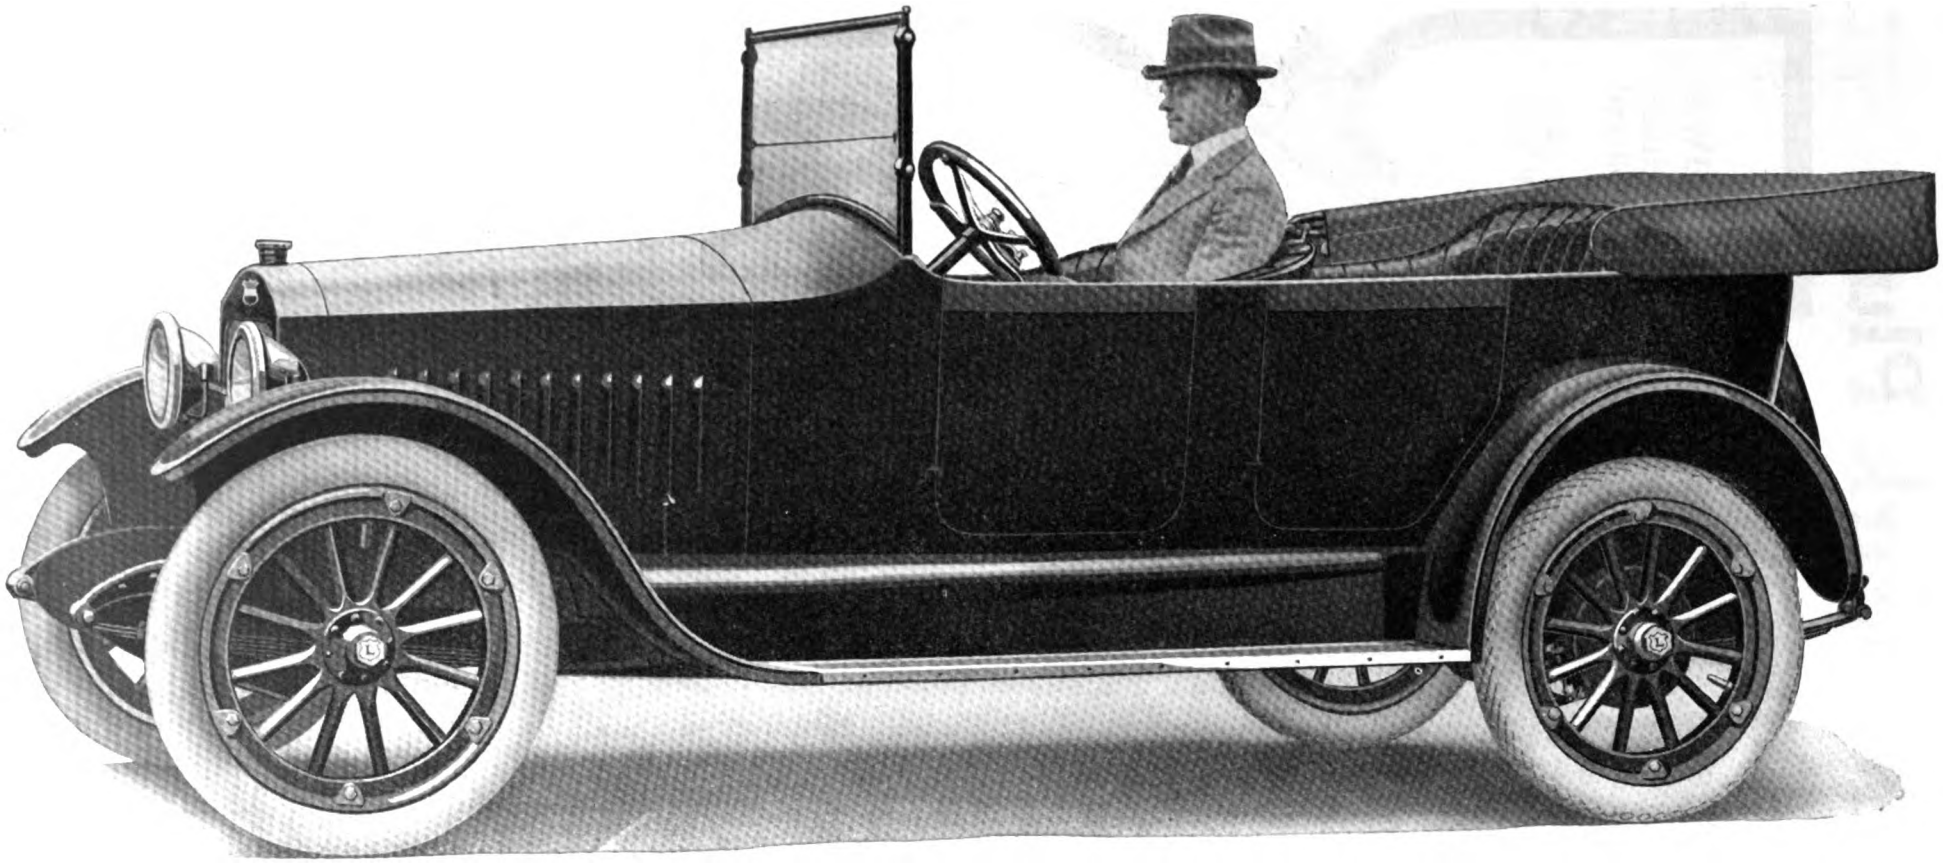
You may buy plugs which cost but little—you may buy plugs which are really good plugs. But the combining of maximum efficiency at minimum cost in a single plug is such a task that today there is only one single make of plug wherein the feat is actually accomplished. That—

AC Spark Plugs

The fact that AC Spark Plugs are regular equipment in 60 leading American cars marks them at once as the standard—the ones recognized, tested, best of their kind—assuring maximum performance at minimum expense for the motor or which they are used.

60

Builders of Automobiles virtually stake their prestige upon the absolute dependability of performance of AC Plugs.



Packard	Hupmobile	Buick	Oakland	National		
Pierce-Arrow	Chandler	Dodge Brothers	Oldsmobile	Velie		
Cadillac	Haynes		Stearns-Knight	Jackson		
Marmon	Chevrolet	Reo	Saxon	Apperson

THE LIBERTY SIX

-- $1095 --

A CAR YOU WILL WANT TO SELL

By concentration of serious engineering on the OWNERS' COMFORT, we have accomplished in the Liberty the unusual in a motor car.

When writing advertisers please mention Motor World

Digitized by Google

DOMINANT LIBERTY FEATURES

You will not find all of them in any other car

Brakes A pull with one finger operates an alert powerful emergency brake worthy of the name, and brings the car to a firm stop. Smooth acting and powerful foot-operated service brake. Both adjustable in an instant.

Cluch Soft but never slips; a 200-pound clutch spring, so perfectly balanced that your finger will operate it. A brand new idea of extreme ease in operation and positive engagement, wished for but not before attained.

Gear Shifting Without fear of contradiction, we believe the Liberty has the easiest and most silent gear shift. An instant and silent change at any car speed with no clashing of gears.

Steering A feather touch lightness that makes a day's driving a pleasure—no violent pulling at the steering wheel ever necessary.

Performance The Liberty will excel in any comparative road test for acceleration and power at any speed. Improved design that delivers a feeling of superiority to the driver.

Driver's Comfort A new weather-proof Liberty windshield with rubber strips all around keeps out any rain or wind. A roomy front compartment, well ventilated, wide seat and every control in easy reach and easy acting, brings the driver home without a feeling of being "beaten out."

Cradled Springs The Liberty car rides easy and goes straight over any road. The cradled comfort of Liberty spring suspension creates a new ideal of **straight line driving.** Try it!

Oil Cups Grease cups eliminated—all spring shackle bolts and steering spindles are fitted with oil cup lubricators, insuring unfailing velvety spring action and easy steering.

Because of its compelling attraction to motor-wise buyers, the LIBERTY will sell in your territory. It will not conflict with any car you are now selling, as there is no car like it.

SPECIFICATIONS

Wheelbase, 115 inches. Liberty-Continental six-cylinder motor, 3⅛ x 4½. Thermo-syphon cooling system. Special type Liberty-Timken axles with spiral bevel and driving gears. 14 gallon gasoline tank at rear with 3 gallon reserve tank incorporated. Delco starting, lighting and ignition system. Single dry plate clutch. Frame section, 5 inches. Steering, worm and full gear, irreversible. Tires, 32 x 4. Front seat 42 inches wide, rear seat 47 inches wide—genuine leather upholstering. **Touring car weight with water, oil, gasoline and spare tire—2550 pounds.** Prices—Five passenger touring car, $1,095; four passenger close coupled car, $1,095.

Exclusive types of demountable tops for open cars together with closed car bodies of distinctive styles for particular buyers. Give dealers a splendid all-year-round line.

Price and discounts are right

When in Detroit, call and see the Liberty—see it being finished and shipped. Ride in it. Phone us and we will send a car to bring you to the factory.

We propose to select good dealers—and stick by them.

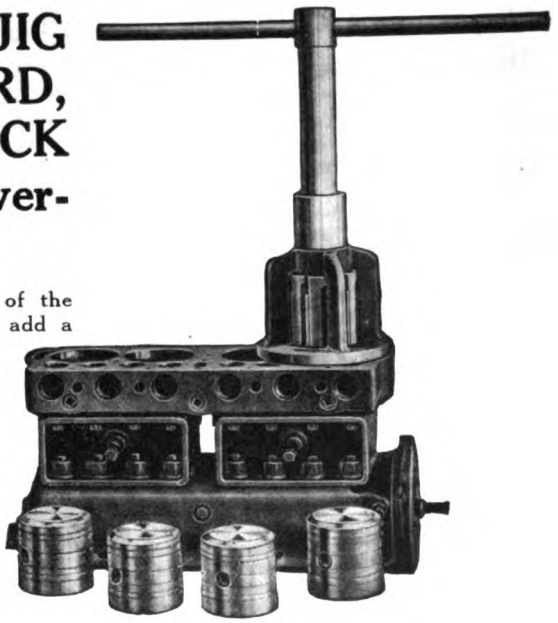
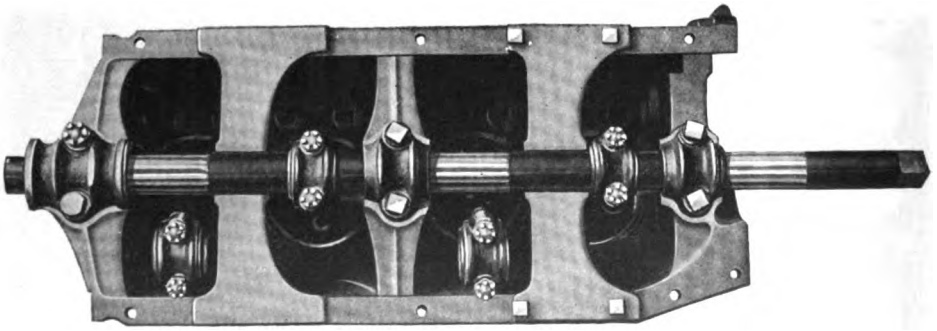
REAMER

For FORD



Connecting Rod and Main Bearing

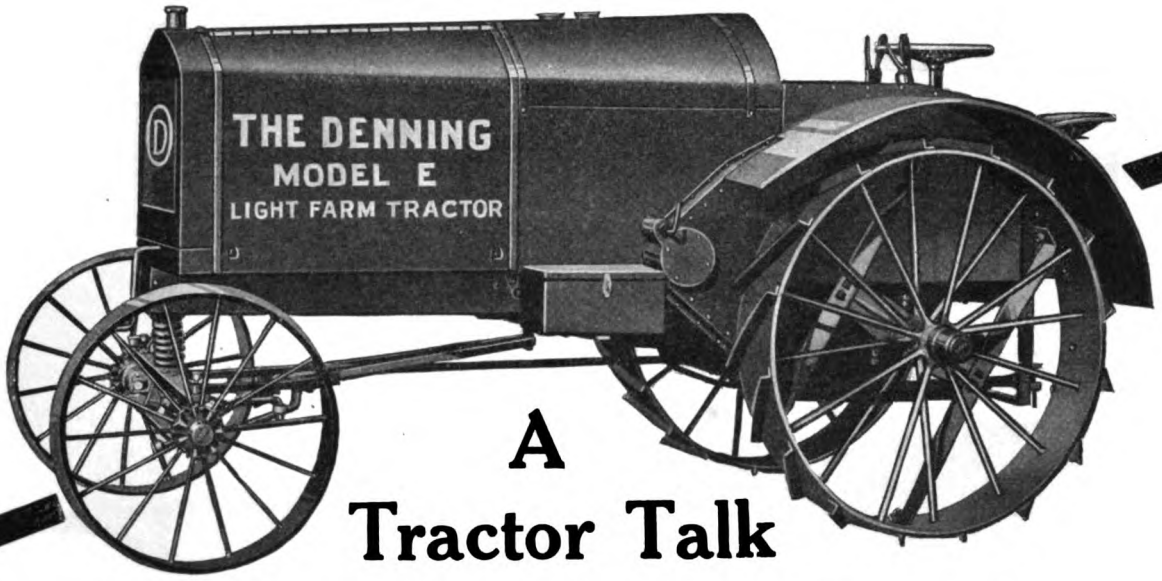


Two adjustable guides to line bearings perfectly true are furnished with each tool.

REAMER and JIG for reboring FORD, METZ, and BUICK cylinders 1-32" over-size.

A tool that will widen the field of the repairman, insure big profits and add a large number of satisfied customers.

The engine is the vital part of an automobile and reboring 1-32 of an inch with this Reamer and fitting new pistons and rings makes the motor run better than when new.



This tool does away with the tedious method of scraping the bearings by hand, and with it can be done much more accurate work. Connecting rods are made to line perfectly with the cylinders

A Tractor Talk To a Tractable Dealer

We shall begin our "Talk" by assuming that you know the value of a line that fits in so well with your other line—the automobile—and that both interest the same class of customers—viz., the farmers.

The farmer has quit driving horses for pleasure and he is rapidly coming to see that it doesn't pay to drive them for business, either.

The tractor does more work at less cost—less stable room and less feed.

Your customers are in a receptive mood. It is up to you to gird up your loins and go after this paying business.

The tractor to place before him is known from one end of this country to the other as

THE DURABLE DENNING

A Light Farm Tractor

The selling features of this machine are almost too numerous to mention, but in advance of our catalog which we will send you if you will signify in the usual manner, we shall name a few—

The Durable Denning's

The motor is the famous Waukesha, 4 cylinder, long stroke, special tractor type—guaranteed to produce 10 h.p. at the draw-bar—more than sufficient to make two 14-inch plows cut a 28-inch furrow through any land fit to cultivate; 18 h.p. at the belt—great over-capacity, perfect balance between power of high speed motor, weight of tractor and the duty it is called upon to perform. Will deliver maximum power on two gallons of gasolene per tractor hour. Average farm work 1½ gallons per tractor hour.

Power Plant

A feature that never fails to interest intending buyers is the Denning plan of running *all gears in oil* and all bearings in dust-tight casings. No more "sand cut" gears. They are all in oil, safe from mud, sand and dust. This one Denning feature should add to the life of the machine four fold. The equipment includes all high grade units. Bennett Carburetor for kerosene, gasolene or both. Perfex Radiator. New Departure Ball Bearings. Lavine Irreversible steering gear. (Patent applied for.) Tractor weighs 3800 lbs.

The Durable Denning will do the work of many horses. Its scope of service is broad.

Every sale is a repeat. One sells two—or ten, depending on how much you work your follow-up. No reason why you should limit your sales. Our literature will help you. It's ready to do so. We are carrying on a continuous advertising campaign in big farm papers—creating interest.

Today—now—would be the best time to send for our interesting proposition to dealers.

We are going to take it for granted that you are a charter member of the Live Wire Club—and that your motto will be "D.D." (Don't Delay).

"DeLuxe" Bodies—

STANDARD FINISH—BEAVER BROWN.

"DeLuxe" Touring Body for Fords—$260 f. o. b. Detroit

The Touch of Distinction

Never in the history of Ford accessories has such an instantaneous success been scored as has been won by the distinction of "De Luxe" Bodies.

The country is clamoring for "De Luxe" Bodies. They make the Ford car "class up" in appearance with the highest priced cars.

They have special features that all owners want. No body as fine and as convenient as this has ever been designed for Fords.

Either or both of the "DeLuxe" front seats, which are divided as in the highest priced cars, may be removed at will. Either of these seats may also be revolved to face the rear, if you wish to hold a comfortable conversation while stopping. This also permits setting a table in the car so that you may enjoy a pleasant meal at picnics, fairs, games, etc.

But perhaps the most important feature of the "DeLuxe" front seat construction lies in the fact that the *seats are adjustable forward and back.* One great trouble with the ordinary small car body is that it has too little leg-room for many people.

"DeLuxe" front seats may be moved back eight inches, or any part of eight inches, thus providing proper and ample leg-room for all drivers. All of these adjustments are easily and quickly made by the simple operation of two nuts.

Read these specifications carefully and see how complete "De Luxe" bodies are.

BODY—Pressed steel.
ONE MAN TOP—Black mohair. Top fastens to windshield.
WINDSHIELD—Black enamel. Nickel trimmed, with double glass, both adjustable.
RADIATOR—Slightly pointed, with zig-zag tube and finn.
HOOD—Black enamel. Ventilators in each side, with handles and fasteners.
CROWN FENDERS—Enameled, nine inches wide with seven-inch crown.
STARTING CRANK—Forging long enough to clear radiator.
FRONT SPLASH PLATE—Gives handsome finish to front end of car, covering axle, shackle bolts, etc., under radiator.
DUST SHIELDS—Enameled to match fenders and carry out streamline effect perfectly.
RUNNING BOARD HANGERS—Provide for lowering the running boards.
LAMP BRACKET EXTENSIONS—Fit into the original sockets and raise lamps three inches.
FOOT ACCELERATOR—For controlling throttle with foot.
TIRE HOLDERS SUPPORTING IRONS—These irons are attached to body for supporting tire holder.
Single tire holder for 3 1-2" tire, included in touring body price. Double tire holder for 3 and 3 1-2 or 2 and 3 1-2", $3.50 extra.
STANDARD FINISH—Beaver Brown, with black fenders. An extra charge of $10 for other than the standard finish. Fenders are done in extra colors for $10 a set.
CHANGES EASILY MADE—Does not require an expert mechanic. All parts made to fit, and all bolts and nuts are in place when the parts leave our factory.
STEWART VACUUM GASOLINE SYSTEM—Ford tank used. We provide enameled steel tank to cover it. Only on touring body.
EXTRA—Four wire wheels, demountable rims, one extra rim, $35 extra.
Roadster Specifications same as touring except as to gas tank, tire holders and color

"DeLuxe" Roadster Body for Fords—$197.50 f. o. b. Detroit

The Prestige of Class

Doesn't this beautiful "DeLuxe" equipped Ford Roadster appeal to you?

And has it ever occurred to you that heretofore there has not been a single car on the market to meet the demand for a *light, powerful,* inexpensive roadster with a *distinctive, commodious, up-to-the-minute body?*

Here it is at last!

Thousands of FORD owners will welcome this opportunity to put their cars in a class with the more exclusive roadsters. They are perfectly satisfied with the efficiency of the Ford chassis. But they want something a little different in appearance.

It is a fact that the costlier cars sell largely on appearance. Keen competition has forced the makers to pay particular attention to this factor. In the Ford market, lack of competition has made unnecessary the development of the body design.

The DeLuxe Roadster Body makes your Ford compare favorably with any car on the road, regardless of price. It was designed by a famous body expert and is built by men experienced in custom body work. Nothing has been spared to make it the neatest roadster that can be produced.

Get a DeLuxe Body and transform your FORD car into an entirely new model.

DEALERS: Write for our proposition. These bodies are making money for live dealers and there is a big opportunity here for you. Get in on it at once.

They all Use Worm Drive

Why?

Certainly not because of its price, for its initial cost is higher than any other type of drive.

Not because it was the easy thing to do, for it necessitated changing from another type.

No! The plain, undisguised fact of the matter is that these manufacturers—the very cream of the trade, as you can see by looking over the list—changed to Worm Drive because it is the most efficient under any and all circumstances—and for no other reason in the world.

SHELDON

How quickly they changed, once having seen the light, is illustrated by the fact that, in 1913 only 1% of American trucks were worm driven, while in 1916 over half of the cars actually produced used the worm drive.

Now, is it reasonable to suppose that all these manufacturers—comprising the most successful in the industry—are wrong?

The Sheldon Axle and Spring Company

Wilkes-Barre **Pennsylvania**

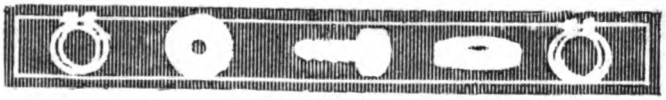
STEVENS & CO. NEW YORK



Pumps and Pump Connections

For 15 years we have been making tire pumps that have given universal satisfaction to car owners and garagemen. Jobbers and dealers have found it to their advantage to see STEVENS on pumps and pump connections before tying up with any other manufacturer—for

The STEVENS line is *complete* in every detail.

Our Ideal pump connection is standard with a number of pump manufacturers and jobbers. Esco hose bands, pump hose, cup leathers, pump packing sets, unions, couplings, etc., assure dealers of a supply of guaranteed parts for all standard makes of pumps.

Stevens Compound Pump No. 99

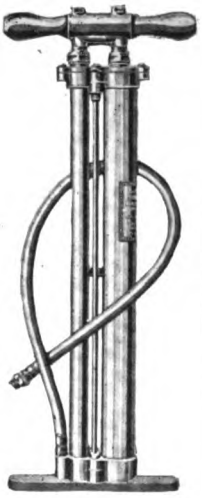
(here shown) is the ideal pump for a garage. It is a genuine compound pump, of highest quality, with brass cylinder, bases and ground valves, best hose and No. 2 Acorn Connection, and will pump to 180 pounds pressure or more.

Acorn Pump Connection

Will fit any valve, as a perfectly air-tight connection is made instantly by pushing it on over the valve.

Holdfast Pump Connection

The most successful connection on the market—can be instantly attached or removed—its sturdy construction makes for long service. The ideal connection for garagemen or car owners.



Acorn Pump Connection Rubbers

These are absolutely the most durable rubbers you can buy. BY TEST they give 10 times the service of ordinary rubbers, and incidentally save owners and garagemen many hours in the labor of replacement. They are so much better because we use RED RUBBER CORES, vulcanized by a spccial process that makes them everlastingly tough. *You cannot afford to sell any others.*

The Carver Pump

Compound double-acting. Gives same result as *two* compound pumps operating together. Decreases both time and effort needed to inflate tire. As effective as a larger pump—as easy to operate as a smaller one.

Service is the great commercial law as it is the great social law. Only insofar as a business serves its clients does it finally prosper. True, there are mushroom business growths that seem to thrive otherwise—but like mushrooms they are quickly gone and leave no trace. Louis Schmab

Haywood's

Nationally Advertised

Tire Repair and Vulcanizing Service

In these days of high tire prices, the tire repair business is getting bigger and better than ever, as motorists learn the method of true tire economy. Why not cash in on this opportunity? Put in a Haywood Tire Repair Plant. Link up with a nationally advertised tire repair service. Six years of Haywood's advertising has standardized the Haywood method.

The Sign of the Man and Machine

—is the connecting link between the tire repair man and the automobile owner. It chains the established trade of hundreds of customers to your business. It connects your shop with a national tire repair service—a standardized service—a service that motorists know absolutely to be economical, practical and efficient.

The Haywood System

—is scientific—a true system of conservation of tires—a system that saves motorists thousands of dollars on tire bills. It means repairs that are lasting—vulcanizing that holds—repairs that are solid as the original tire itself, insurance to motorists of no regrets on the road.

Haywood's Tire Repairing and Vulcanizing Plants

The Haywood Plants are complete, all in one unit—are easily operated—no experience necessary. Here is your opportunity to make big money—to add hundreds of dollars in profits a year to your business. Occupies only a small part of your shop—can stand right out in the open where your customers can see it—a constant reminder to keep their tires repaired. Your shop equipped with a Haywood Plant is the motorist's logical haven for tire repairing. It completes your service—a service that customers like—a service that brings and holds business at big net profits.

Write for New Catalog

Use a letter, or post card or simply send the coupon below. This brings the big book of facts—tells all about tires and how to repair them—shows outfits in use—gives proof of successes—shows how we co-operate with plenty of advertising and plenty of help—how you link up with a national service. Book gives complete details. Write today. Don't delay.

It's Easy to Sell
The Startford Mechanical Starter For Ford Cars
Because It's Ford Car Size

Everything about the STARTFORD Starter for Ford cars is in proportion to the size of the car and its value. The strength of the STARTFORD is in proportion to the strength required to turn over the Ford motor. Its simplicity and efficiency are in proportion to the simplicity and efficiency of Ford car mechanism. And finally its price—**only $14**—is commensurate with the original investment in the car itself.

SOLD ON ONE WEEK'S TRIAL

The best point in favor of quick and wide sales is a STARTFORD trial. Easy to get owners to put it on "for a week." Easier to get them to keep it on once they know its tremendous value. Sells hands down in competition with high-priced complicated starters. The only mechanical starter near its price that motor-wise owners consider.

Neat, easy to operate, simple and efficient. **Priming device included.** No bearings running to oil or collect dust. **Absolutely backfire-proof.**

Mail the coupon today for full details and liberal dealers' discounts. Take advantage of the easiest sales by being first.

The "Berkshire One-Piece" Spark Plug

PITTSFIELD TRADE MARK

A combination of all the good points a porcelain plug can possess. The result of long experience in designing and manufacturing spark plugs by skilled workmen, it embodies perfection of design, supreme quality and excellent service. The porcelain, imported Kaolin of a quality superior to any other clay obtainable, is proof against heat or cold. After-pressure expels carbon from porcelain and points, thus making it a *self-cleaning plug.* The steel shell and porcelain form one compact unit, exceptionally rugged and gas-tight, thus *eliminating necessity for check nut.*

The "Jewell" Mica Spark Plug

for strength and durability, cannot be excelled. It is, under working conditions, *indestructible.* It consists of heavy pure-mica tube covering electrode over which mica washers are assembled under heavy compression. If you prefer a Mica Plug, your logical selection is the "Jewell." *Specially suited to high speed engines and racing cars.* Single-point or double-point types.

THE

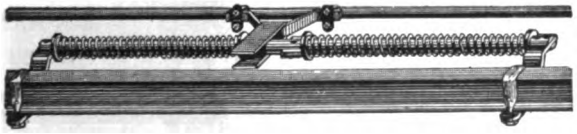
ACME

Ford Steering Controller

PRICE COMPLETE, $3.50

The ACME STEERING CONTROLLER is a simple and substantial Accessory, of practical value to all Ford Car Owners.

By the pressure of two coil springs acting upon the tie rod, the car automatically tends to a straight course, regardless of holes and obstructions, thereby relieving the strain of driving.



The ACME STEERING CONTROLLER is the only practical steering device for Ford Cars on the market. As proof of this, not 1 per cent of those sold to date have been returned. However, the Manufacturers stand ready to take back and make refund to the dealer for any machine returned.

It is easily seen from the description what the device will do, and the Ford Car Owner readily buys because of its simplicity and apparent effectiveness.

Have the device in stock and be in line for sales.

Be the first dealer to introduce the ACME STEERING DEVICE in your territory, and gain this advertising advantage.

Write to your jobber or to us for the discount to dealers.

A Safe, Certain, Bright Light at Slow Speeds for FORDS

The VAN SICKLEN Concentrator assures such a light at slowest engine speed, when you need it most.

At 5 m. p. h., 10 m. p. h. or 15 m. p. h. with a VAN SICKLEN Concentrator you always have sufficient light for every driving purpose. $2.00—the price of the Concentrator—is a very small price to pay for so necessary a convenience.

$2

VAN SICKLEN AUTOMATIC **HEAD LIGHT CONCENTRATOR** FOR FORD CARS

The VAN SICKLEN Concentrator at all speeds below 15 m.p.h. automatically disconnects the right headlight, shunting double current into the left headlight. At 10 m.p.h., for instance, the left headlight burns as brightly as it ordinarily would at 20 m.p.h. Above 15 m.p.h. the regular Ford 2-lamp system automatically re-asserts itself.

Price, $2.00 complete, ready to put right on. Easily installed. Full instructions with each order. Installed under hood on dash. Guaranteed not to injure magneto or bulb. Neat, compact, handsome.

Note simple installation

Obtainable from most good dealers or sent prepaid direct upon receipt of price.

Dealers: Some desirable territory still open. Over 600,000 prospects. 40,000 sold in last two months. Wire or write.

HORN and FAN Combined

MOTOR DRIVEN

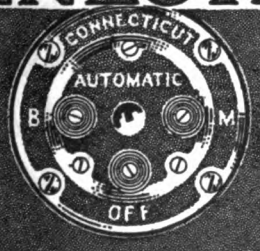
$5

Oakes

Gets the Roads

No gears, motor, batteries or wires to give trouble. Gives warning signal by merely pushing the button at driver's seat. Increases efficiency of fan and motor. Keeps radiator cool. Never fails to sound. Long life. Is easily interchangeable with fan on any Ford in a minute's time. Most reliable and safest horn. Write for dealer's proposition.

Also Oakes Kranklock 50c. and $1.00



The OAKES COMPANY
***Dept. A* Indianapolis**

Beartone for FORD

Sounds Thru Radiator

AUTOMATIC · IGNITION CONNECTICUT

Gives the most effective spark at every speed for four, six or eight cylinder motors.

Delivers hottest spark at low speeds and a better spark than the magneto at high speed.

Business Opportunities

I Establish Cut Rate Tire Agencies

There should be one in every locality. High cost of tires worries the auto owners.

One of the best paying lines of business

Nice, clean stock; no credit, no risk. Should net at least $600 monthly from now on and steadily increase. You can undersell your competitor 50 per cent and still give splendid value. Experience unnecessary. About $500 cash required to handle. Investment well secured. No traveling or canvassing, but a business of extraordinary merit suitable for any industrious man who means business.

Tires cost you in one or more makes

30 x 3.....$5.28
30 x 3½.....6.80

Other sizes in proportion. Immense Stock; Prompt Shipment. If you are tied up in the general garage or automobile agency business, not necessary to reply. But if you are free to enter into a money making business and are free to devote your entire time to it, answer immediately. Desirable open territory. For full particulars address

E. JANES,

Do You Own a Michigan

When you order repair parts deal directly with the Michigan Motor Car Parts Company.

We allow no dealers to keep a stock of Michigan parts.

This is the parent Company and we urge you to deal directly with us so that we can positively protect you against getting misfit parts, poor material and paying exorbitant prices.

It is to our interests as well as to yours to keep your car in good condition for years to come.

Will you help us to accomplish this by ordering only from this company direct?

AUTO PARTS & ACCESSORIES CO.

1931 Broadway New York

Imperial Owners Take Note

Buying repair parts from unreliable sources is dangerous. You can't be sure of correct fit, good workmanship or material.

The Imperial Automobile Parts Company is the same organization that built your car.

Buy your repair parts only from this company and you will be safe.

Then you will get parts which will be absolutely right and that will keep your car in fine condition.

And they will cost you an extremely reasonable price.

Imperial Automobile Parts Company

Notice to KRIT Owners

We strongly advise all Krit owners to buy repair parts only from this company.

Naturally the company which made your car has your interests at heart. Deal directly with us so that you can be sure of the very lowest prices and at the same time know positively that the parts you purchase were made for your particular car.

We are maintaining a large, highly organized service department for the exclusive benefit of Krit owners.

FREE CONSULTATION

Then there is also our technical consultation department conducted by a prominent engineer who for years has made a special study of the Krit car.

This department will take any difficulties you may have been having with your car—analyze them thoroughly and give you the remedy. This consultation service is absolutely free to Krit owners.

ORDER DIRECT FROM PARENT COMPANY

To correct any false impressions that may have been given by several misleading advertisements, which have recently appeared, *we do not keep a stock of repair parts with any dealers or supply houses.*

Consequently, the only way we can protect you against disappointments, either in service or materials, is to have you address all your communications regarding repair service directly to us. We positively promise that all letters will be answered and all parts shipped the same day your letter is received.

We advise all Krit owners by all means to avail themselves of the help of these departments.

This will distinctly benefit both you and ourselves. It will enable us to keep your Krit car in perfect running condition for years to come.

(Signed)

KRIT MOTOR CAR COMPANY

Detroit, Michigan

Owners of Stoddard-Dayton, Courier Car, Columbia, Brush, Courier Clermont, Samson—"35" Motor Cars and Alden-Samson Trucks

Attention—

If you wish to get the very best, longest and most economical service out of your cars you will do well to pay careful attention to this notice.

The Standard Motor Parts Company of Newcastle, Indiana, have purchased outright and taken over all the parts, machinery, dies and repair and service business for the cars listed above.

We are **not** keeping a stock of repair parts anywhere in the country with the exception of at the factory. Any statements contrary to this are misleading.

The only way that you can make sure of securing absolutely correct repair parts at the lowest possible price is to deal directly with this company.

In doing so you are in reality dealing with the same organization that built your car.

Order direct or through your garage man.

Signed

Standard Motor Parts Company, Newcastle, Ind.

MOTOR BARGAINS
Don't try to buy parts for that old motor. We can sell you one to replace at much less money than you would pay for the parts to put it in running condition.

Used motors thoroughly overhauled put in perfect condition by the manufacturer as follows:

35 H.P. with carb. and base for mag	$ 95.00
50 H.P. with carb. and base for mag	95.00
35 H.P., new, with carburetor and base for magneto	120.00
30 H.P., new, without carburetor and base for magneto	115.00
35 H.P., new, with U. S. starting and lighting outfit, carburetor and Connecticut distributor	180.00

RADIATORS
We manufacture **genuine square tube Honeycomb radiators.** This type we guarantee will give more cooling surface than any radiator made. Prices on application.

Write for advance spring catalogue on carburetors, horns, tops, bearings, steering gears, magnetos, coils, and other parts and accessories.

Oakland

eights sixes fours

Motoring luxury at sensible cost—for car and upkeep

Oakland "Six" at $795 has brought the supreme satisfactions of motoring within the reach of modest pocketbooks.

Time was—and not long ago—when men paid $2500 or more to secure the 6-cylinder power and smoothness, the streamline beauty, the full electric equipment, and even a *few* of the refinements which Oakland "Six" now offers.

And you can afford to *maintain* an Oakland "Six." Tire wear is light—the "Six" weighs but 2100 pounds. Gasoline bills are small—owners make 20 to 25 miles per gallon. Repair costs are low—depreciation is little. It is indeed a sensible "Six."

Oakland "Eight" $1585. A car for those who want the maximum in pull and speed, in passenger capacity and size. Its long French type yacht-line body with double cowl effect, its slanting windshield, its V-type radiator—all give it an exclusive style and distinction.

Oakland "Four" $1050. Generous size, ample power, and amazing simplicity make this a splendid value for those who prefer a "Four."

Ten cents a copy
Two dollars a year

Champion
"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"
Dependable Spark Plugs

THE *official estimate* of the AUTOMOBILE CHAMBER OF COMMERCE on automobile production this year is—

One million four hundred thousand cars.

Of these, over a million will be Fords, Overlands, Studebakers and Maxwells, equipped with Champion Dependable Spark Plugs.

The manufacturers of *over one hundred other cars* will equip this year *exclusively* with Champions.

Their production will exceed 120,000 cars.

So of all the automobiles produced this year it is apparent that more than four out of five will be dependably equipped—with Champions.

Successful dealers are making their spark plug stock exclusively Champion. Our extensive advertising keeps Champions moving. They will not collect dust on your shelves.

They'll All Be Coming for It!

Hartford BUMP ABSORBER
—more than a Bumper

To be announced to the public at once. An absolutely new car protection—with all the reliability, reputation and assurance of Hartford behind it. Nothing else to compete with it. Every car not equipped with a "bumper" can be sold a Hartford Bump Absorber, for the Hartford appeals at once to the owner who could never quite appreciate the mere "bumper." Every car already equipped with a "bumper" can be sold a Hartford Bump Absorber, for the owner who saw the need for a "bumper" can see the absolute necessity of the Hartford Bump Absorber.

Big Advertising Campaign Coming

"More Than a Bumper"

The Hartford Bump Absorber does all that a mere "bumper" is supposed to do, and then it does more—it not only protects the car with the strength of finely tempered steel, but in its powerful double-loop, double-leaf spring construction it absorbs and nullifies the bump and shock of collision. It is not a mere "bumper" with a spring-action added—it is a real bump absorber.

Probably even before this magazine reaches you the first announcements in big, powerful advertisements will have reached the public. In addition to this advertising of our own, we furnish dealers with effective, forceful, sales-making advertising help—a "silent salesman" with miniature model, counter hand-outs, etc. Send the coupon today for complete details of this new, fast-selling proposition. Don't wait while some other dealer gets the cream of the sales—send the coupon now.

TRADE MARK REG.

This Building in Albion, Michigan Was Erected on Overland Profits

Here is a new building erected by the Albion, Michigan, dealer on profits from Overland and Willys-Knight cars sold in just twelve townships.

It contains 15,000 square feet of floor space and over $5,000 worth of machinery and equipment—all paid for July 1st—and paid for out of Overland profits.

The Albion dealer up to June 1st this year had sold 125 cars.

—An indication of the possibilities that are open to *any* Overland dealer.

That One Poor Job

(*Read the story on page* 21)

"The evil that men do lives after them; the good is oft interred with their bones." One slip-up, one poor job, will follow you around like a mangy cur

Digitized by Google

Is it easier to sell cars on time than for cash? Have time payments increased sales? Has the so-called factory plan had an effect? Are time payments a new thing in the motor car trade?

A Half Hundred Dealers from Widely Separated Towns of the United States Express Opinions on

Time Payments

They State That It May or May Not Help a Sale to Offer Time Payment. They Say Time Selling Is Not Essentially New in the Motor Car Trade. And Many of Them Have Not Been Affected by the New Factory Plan

SAYS the Prospect: "I don't think I'll buy now. I haven't the money." Says the Dealer: "That's easily taken care of. We have a deferred-payment arrangement whereby you can take the car home with you and pay for it later."

Will this help the dealer sell the car? Will it or won't it?

THE range of answers by a half hun- leading dealers on this point is interesting. Some say Yes, some No, and some say Sometimes. In considering the time-payment plan, the plan referred to here is that which recently attained prominence because of its widespread advertising and which is commonly known as the "factory plan." Some are factory-promoted and some are not, but they are known by that name.

With the advent of the recent time-sale agitation, caused by the upspringing of time-payment companies, there has arisen a belief that an important change was being effected in the trade and that dealers generally were finding a possible new method for the conduct of business.

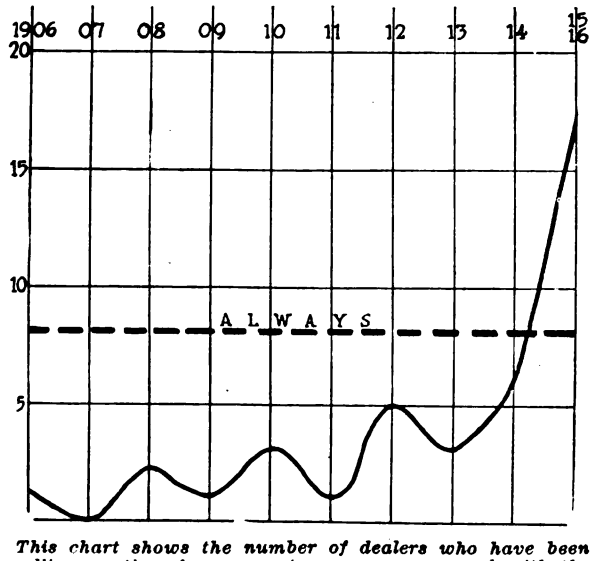
In order to ascertain the status of the time-sale proposition, Motor World sent inquiries to several hundred dealers in the $700-$1,500 car class. These dealers are distributed over the whole United States and are in both large and small towns.

Their answers indicate that:

1. *The deferred-payment offer sometimes, but not always, helps sell cars.*
2. *Time selling is not a new factor in the motor car business, although the so-called factory plans are more or less new.*
3. *The majority of dealers sell cars on time, many always have, and the average percentage of time sales is 37 per cent of the dealer's business.*

Is It Easier to Sell on Time?

A surprising feature of the data is the number which states that an offer of time payment does not necessarily help the sale. One dealer said it was far easier to sell this way; out of forty-four nine came out with a flat No; twelve said Sometimes, and twenty-three said Yes.



The location of the dealer and the price and type of car he sells are influential factors in determining the value of time payments in his business. The dealers who furnish this data also develop an interesting point in stating the classes of prospects who are influenced by time sales. The scale runs all the way from laborers to bankers. The salaried class generally is specified as being appealed to by the time plan, and while some dealers state that men with money are not influenced other dealers explain that their sales are to some of the wealthiest people in their territory.

A study of the data given does not reveal any one class as the big buyer of $700-$1,500 cars on the deferred-payment plan, although the salaried class without doubt has the preference. Two dealers in widely separated towns classify instalment buyers as "those who cannot afford to own a car."

The younger element, the young fellows who want a car but haven't the ready cash, are also good buyers on this basis, and in their case the deferred-payment method is influential in swinging the sale. One dealer does not advertise his plan, because he prefers to hold it until the end as an added inducement to the buyer.

In those sections where the farmer element is the heavy buying class, time payments have always been more in vogue than in other sections, because of previous existing conditions; the farmer in a lean year—or for several of them—is carried on the books of the grocer and implement dealer and others, and when the good year comes he pays up. This has made time buying a common practice. Also, many of the car dealers are old implement dealers and follow the practise they pursued in the implement business. The farmer, having bought his implements on time, expects to be able to get his motor car the same way, and doubtless the same factor will enter into the rapidly coming tractor business.

As to the second point, whether time sales are a new factor in the trade, the table that appears herewith lists more than fifty dealers, of whom some have sold cars on notes for 10 years. A few never have sold on time, but the others date the beginning of their instal-

This chart shows the number of dealers who have been selling on time from year to year as compared with the number that has always sold on time. The data are taken from the table on the opposite page

Digitized by Google

ment—or note—business back for a considerable period.

One common expression of opinion is that it is better to keep the notes in the home town of the dealer and make the transaction local rather than to deal with a distant out-of-town corporation with which neither the dealer nor the customer is acquainted.

The reasons given for this vary. One dealer asserts that he wants to keep the business in his home town. Another states that he does not approve of the new time-payment systems. Another says it is a matter for the judgment of the individual dealer and that he prefers to handle the whole transaction himself. On the whole, those dealers who already have developed a note-sale business of their own prefer to stick to their old methods rather than make a change.

In cars of small price the time-sale plan may be more prevalent. And with some small dealers who are new in the business and who have not been adequately financed, the factory plans may perhaps be received more extensively.

Among the dealers there are some who are much in favor of the new factory plans. In cases where a dealer has not worked up a time plan of his own and where competing dealers have been taking sales from him which he might have sold if he would take a note or two, the new plan may prove his salvation. The Memphis-Overland Co. states not only that the factory time plan helps sales, but that all classes are reached by the plan, the banker buying on time because he can use his money elsewhere at better rates and the salaried employee paying in instalments because that best suits his mode of income.

The third point, the number selling on time, is merely statistical and the curve on an accompanying chart best brings out the situation. Out of thirty-nine answers, the years when the dealers began time selling are computed, and while the curve jumps up and down a trifle because of the scant data in certain years, a distinct upward trend is apparent. If this means anything it means that more dealers are selling on time each year and that the practice is spreading.

Note the line across the center of this same chart, indicating the proportion that has always sold on time, ever since entering the business. So far as this is indicative of any condition, it points out that the effect of the new time-payment propaganda on the trade is small when compared with the time business that has always been done.

There are a number of dealers who never have and probably never will sell on time, because, they aver, it cuts into the cash trade and is undesirable. They maintain that the dealer needs cash business more than he does business regardless of this phase, and they maintain that time selling is detrimental.

The table that accompanies this story shows a majority of the dealers as stating that the factory time plans have not increased their business. Where deferred payments have increased sales and where the factory method is used, the credit goes to this plan, to be sure, but many of the negative responses concerning the factory plan are due to the fact that the time plans used are those initiated by the dealers themselves.

In addition to the factors considered in this story others will be taken up later in Motor World. Many elements enter into the business, including the percentage of failures to pay and the procedure followed by dealers in those cases, also whether such sales result in a gain or loss.

There are thousands of dealers whom Motor World cannot reach in its investigation of the time-payment question and all readers are invited to express opinions on any phase of this important question.

Experience of 56 Dealers with Time Payments

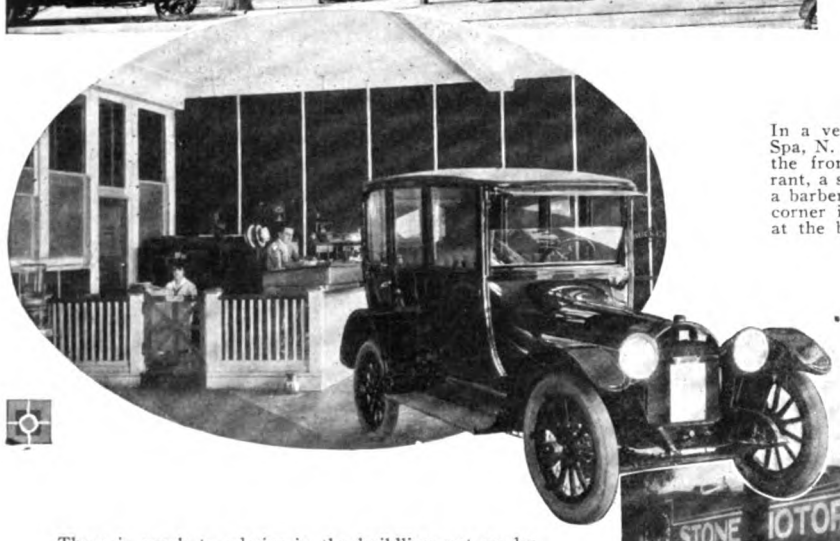
Salesmanship

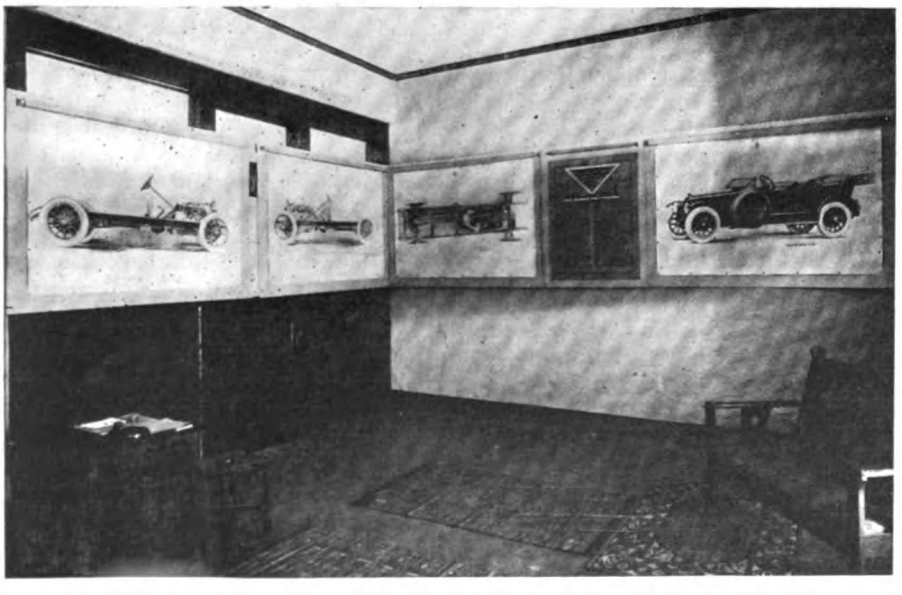
MANY of the best minds in the country are gathered this week in Detroit to attend the first World's Salesmanship Convention. Motor World has two editorial representatives "covering" this convention for Motor World readers. The complete story will appear next week.—Editor.

Digitized by Google



Here and There in the Garage And Dealer Field

A clever show window was designed by M. W. Morris, manager of the Broadway Tire Store, Tacoma, Wash., formerly the Hercules Tire Sales Agency, which distributes Hercules and Michelin tires. A car one-third life size was constructed of cardboard and installed in a window trimmed with lattice work and pillars of crepe paper. Evergreen boughs and holly gave a wintry air. The window is 4 x 8



In a very attractive garage building at Ballston Spa, N. Y., the most valuable part of the ground—the frontage—is occupied by stores. A restaurant, a shoe shining parlor, an accessory store and a barber shop are on the street front, and the fine corner is occupied by an office. The space left, at the back, is just as good for garage purposes and costs less

There is much to admire in the buildling put up by the M. D. Stone Motor Co., Inc., Richmond, Va., which handles Buick and Mercer, and these interior and exterior views tell a good deal of the why. The exterior is plain. So is the interior; but that does not mean that it is unattractive. The salesroom has an office of the wide-open type; you can see at a glance who is in and who isn't. The building also contains a service station, stock and waiting rooms and wash rack, and measures 100 x 260

Wasting time by sitting around and waiting is no part of the plan of Wm. Steinhardt, of the Crockett Automobile Co., San Antonio, Tex., which distributes Hudson cars. Early in the season, when cars had not yet come in, a regular little art exhibit was arranged. A number of fine photographs of the new models were enlarged to a large size and arranged on the walls, art-gallery fashion. The interested prospects liked them and they kept things moving

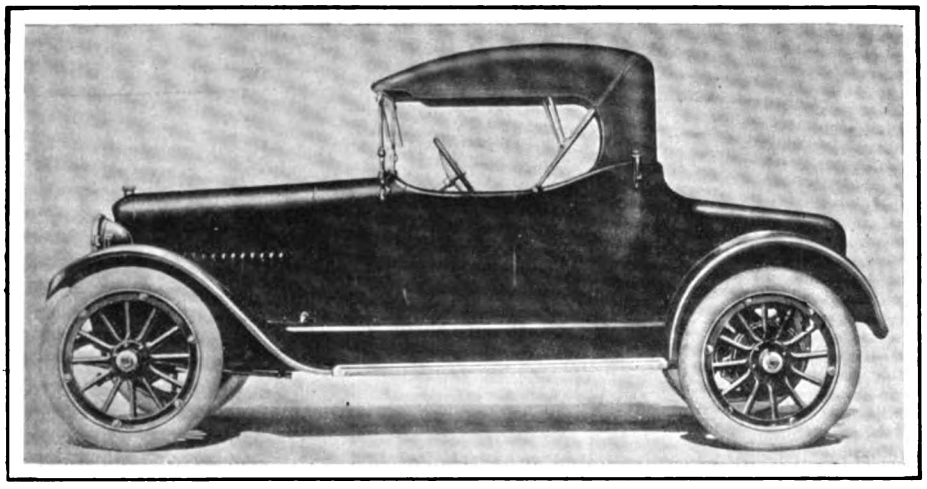
MOTOR WORLD
at the
National Tractor Demonstrations

WHAT do the National Tractor Demonstrations mean to the dealer, the garageman and the repair-shop operator?

Motor World will answer this question in a series of articles, the first of which will appear following the demonstration to be held in Dallas, Texas, July 17 to 21.

Pursuing its policy of keeping its dealer, garagemen, repairmen, supply men and jobber subscriber-readers fully abreast of the latest news of merchandising and maintenance, Motor World will send Stanley P. McMinn, representing the editorial department, to these demonstrations.

He will tell Motor World readers exactly what these demonstrations mean to them as an aid in merchandising tractors and as a help in solving maintenance and service problems. He will tell exactly how the demonstrations are run and will analyze the results obtained from a merchandising and maintenance point of view.



In addition, he will talk with tractor dealers, tractor distributers, tractor owners and tractor manufacturers and discuss their merchandising and service problems with them.

In short, he will turn the searchlight on every detail of the tractor business. He will boil down the experience of hundreds of men selling and using and caring for tractors and present the results in a series of articles which will be helpful and constructive to the men who are now, or may later become, interested in selling and maintaining power machinery for the farm.

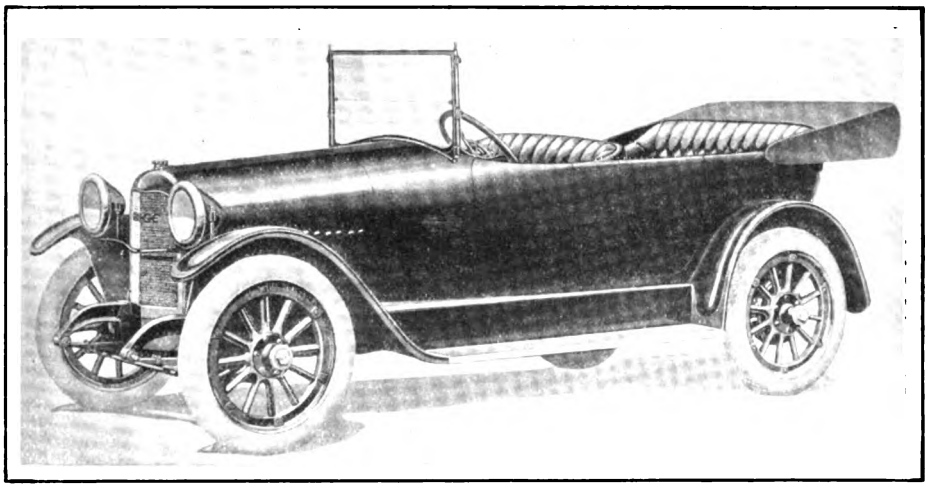
Where Demonstrations Will Be Held

Dallas, Tex	July 17-21
Hutchinson, Kan	July 24-28
St. Louis, Mo	July 31-Aug. 4
Fremont, Neb	Aug. 7-11
Cedar Rapids, Iowa	Aug. 14-18
Bloomington, Ill	Aug. 21-26
Indianapolis, Ind	Aug. 28-Sept. 1
Madison, Wis	Sept. 4-8

Digitized by Google

A smooth exterior always has been a distinguishing feature of the cars in the Paige-Detroit line. At the left is shown the 6-46 Meadowbrook roadster model. Neither this, nor the Fleetwood model 6-38, which is shown below, has been greatly changed. The Meadowbrook is $1,375 and the Fleetwood $1,090

Paige-Detroit Improved and Prices Raised



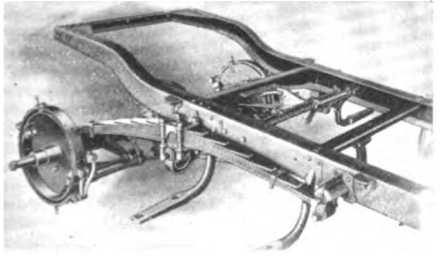
Few Mechanical Alterations

THE Paige-Detroit Motor Car Co., Detroit, is continuing, with refinements, a new series of its Fairfield model 6-46. In addition, the smaller six-cylinder car, styled 6-38, is continued without change.

A change has been made in the prices, the Fleatwood being now $1,090 for the five-passenger car and the roadster. This is the smaller model, known as the 6-38, which, when first announced, was $1,050. The Fairfield sells for $1,375 in seven-passenger and roadster bodies. This is also a slight increase, as the previous model sold for $1,295.

The changes in the 6-46 are principally a few body changes and one mechanical change. The body changes are a sloping windshield instead of the vertical type formerly employed; a new form of upholstering in which the leather is arranged in piping, giving a long tufted effect; better springs are also used in the upholstery, and these tend to make the car easier riding. Leather door flaps have been added, and in addition there have been some improvements in the equipment in the form of a Boyce Moto-meter, a straight or vertical tire carrier in place of the slanting one on the previous car, and a mahogany instrument board. A feature is made of the oversize tire equipment on this car and the color has been changed to Brewster green with ivory white wheels and black bonnet.

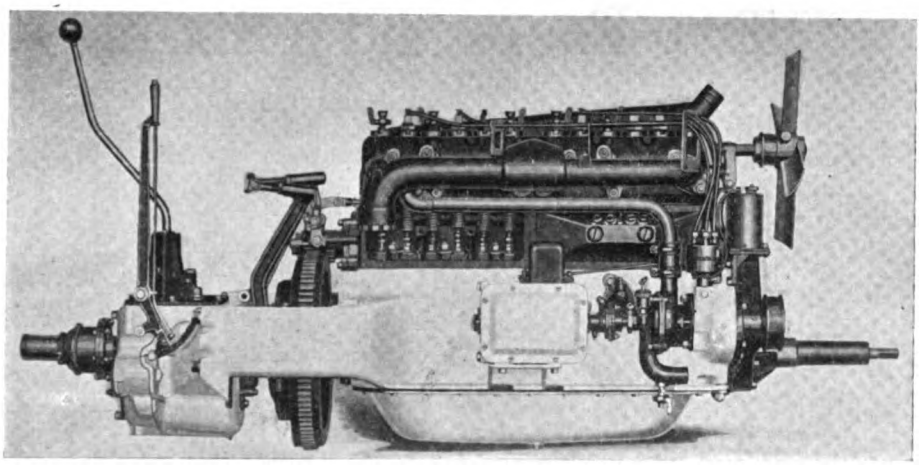
The only mechanical change is the addition of a Stewart single-cylinder tire pump, which is mounted on the gearbox and is driven from the reverse idler pinion. The pump gear is easily thrown into mesh by a lever projecting through the floor board.



The Paige 6-46 chassis carries the Fairfield touring body and the Meadowbrook roadster. It is the larger of the two sixes and is mounted on a 124-in. wheelbase with a standard tread of 56 in. The motor is a block-cast 3½ x 5¼-in. unit power plant. The cylinder casting is of gray iron and the crankcase is aluminum. The lower half of the crankcase which incorporates the oil pan is pressed steel. The valves are on the right and are composite, having nickel steel heads welded to 0.20-0.30 carbon steel stems. The entire valve mechanism is inclosed by aluminum cover plates and the working parts are submerged in oil.

The crankshaft is an alloy steel drop-forging, heat-treated and ground. Every shaft is balanced individually for both running and static balance. The shaft diameter is 2¼ in. and three bearings are used. The camshaft is also a carbon steel drop-forging, having the cams integral, with the wearing surfaces hardened and ground. The crankshaft main bearings have the following dimensions: Front, 2 3/16 in. diameter, 3 5/32 in. length; center, 2 7/32 in. by 2½ in.; rear, 2¼ in. by 3 9/32 in. The camshaft bearings measure: Front, 2 17/64 in. diameter by 1 11/16 in. length; center, 2¼ in. by 1⅛ in., and rear, 2 7/32 in. by 1¾ in.

Drop-forged, heat-treated, I-beam 0.35 carbon steel connecting-rods are used. The wristpin bearing has a diameter of



TWO PAIGE MODELS

Price—	6-46	6-38

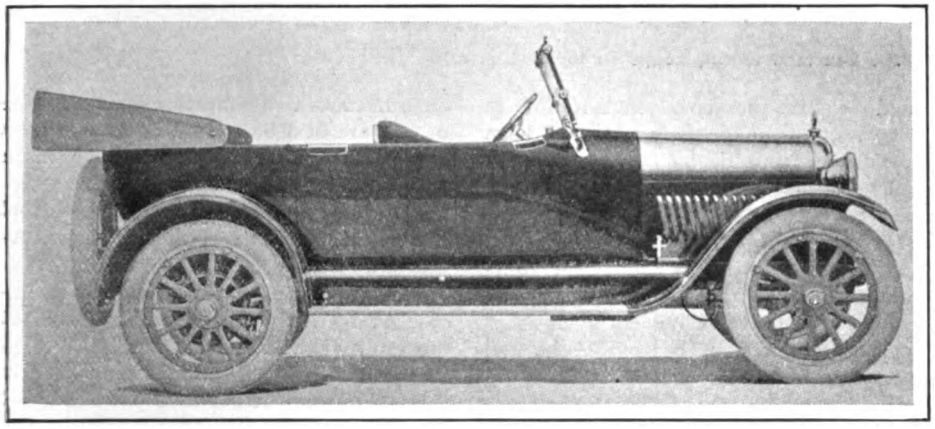
Wheelbase	124	117
Type rear axle	Three-quarter floating	



In the 6-46 models the rear cantilever springs are mounted over the axle

Digitized by Google

The 6-46 motor is substantially the same as in previous models and is characterized by logical and accessible positioning of the various accessories. Note the aeroplane type of fan. The 6-46 touring model shown below now has a sloping windshield and the upholstery is arranged in piping; a Boyce Moto-Meter has been added, and also a new tire carrier

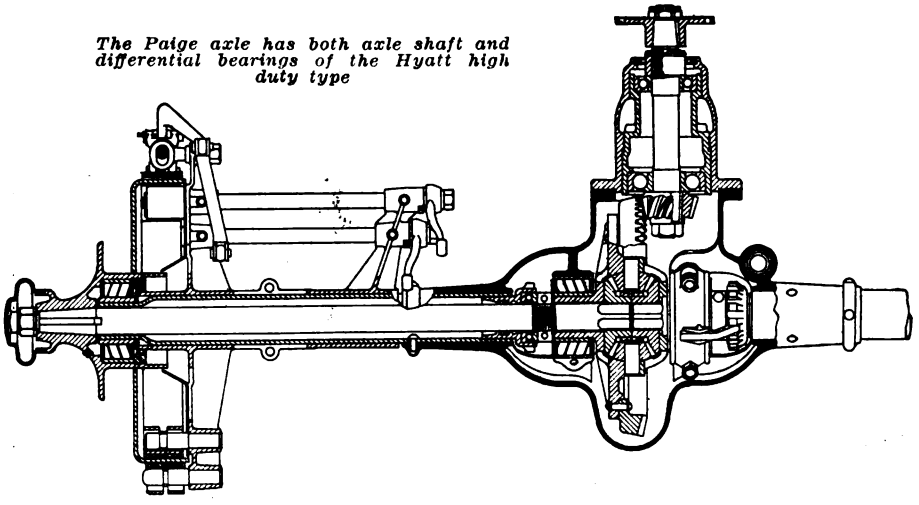
1 3/32 in. and a length of 1½ in. and the lower connecting-rod bearing has a 2-in. diameter and a 2 3/16 in. length. These rods, together with the pistons and the entire reciprocating assembly are balanced in sets.

In carrying out the valve design particular attention has been paid to securing good volumetric efficiency at high speed. The diameter of the valve-head is 1 11/16 in. and the opening of the port in the clear is 1 17/32 in. The valve-lift is 5/16 in. The design of the valve is conventional, with 45 deg. seat, and the stem diameter is ⅜ in. The valve timing is also conventional, having the inlet opening at 10 deg. after top dead center with inlet closing at 28 deg. after bottom dead center. The exhaust valve opens 40 deg. before bottom center and closes 2½ deg. after top center.

Lubrication is by a combined pressure and splash system. Oil is carried in the lower half of the crankcase, which has a capacity of 8 qt. A plunger pump operated from the camshaft forces the oil directly to each of the main bearings, and to the helical timing gears. Oil is forced through these leads in much greater quantity than is consumed by the main bearings, and the resulting overflow is allowed to pass into a series of splash troughs which are arranged one below each crank throw.

Cooling is by centrifugal pump, which forces water to a zig-zag cellular radiator having a capacity of 7½ gal. Cooling is assisted by a ball bearing four-bladed aeroplane-type fan, which is hung from a casting directly on the front of the motor.

The gasoline feed system is by gravity. The tank is located beneath the cowl and has a capacity of 14.7 gal. The carbureter is a Rayfield, supplied with both hot waterjacket and hot-air intake pipe.



Electrically the car is Gray & Davis as far as starting and lighting is concerned, while ignition is furnished by a Remy high-tension distributor and Willard six-volt storage battery. The starting and lighting system is a two-unit design with a series motor, meshing with the flywheel ring gear by means of a Bendix drive and a shunt generator on the right side of the engine, driven directly off the water pump shaft through a flexible coupling. The automatic cutout, which is a magnetic design, is mounted directly on the top of the generator.

Power is transmitted through a multiple disk clutch fitted with cork inserts. The entire clutch is inclosed within the flywheel and runs in oil. The drive is carried back through a three-speed gear box, mounted in an aluminum case which is a unit with the crankcase. The gears in the gear box are of chrome nickel steel, hardened and ground. The shafts are carried on both annular and Hyatt roller bearings. The main shaft is mounted on two annular ball bearings, while the countershaft is carried on two Hyatt high-duty roller bearings. Lubrication for the gear box is taken care of by transmission oil and the capacity of the gear box is 2 qt.

From the gear box the drive is taken through a Spicer universal joint to the axle. This is a floating type, having both the axle shafts and differential on Hyatt high-duty roller bearings. The torque on this model is taken through a torque arm. The rear axle is geared 4.357 to 1, having a 14-tooth pinion and a 61-tooth ring gear. This gives a reduction on low speed of 14.157 to 1, on second of 7.189 to 1, and reverse 18.876 to 1. Two sets of brakes are used, working

(*Continued on page* 42)

The Paige axle has both axle shaft and differential bearings of the Hyatt high duty type

Two Fours and a Six in Overland Line

Touring Models at $635, $795, and $925 ——Closed Cars, too

All Models Have Cantilever Springs and Leather Joints

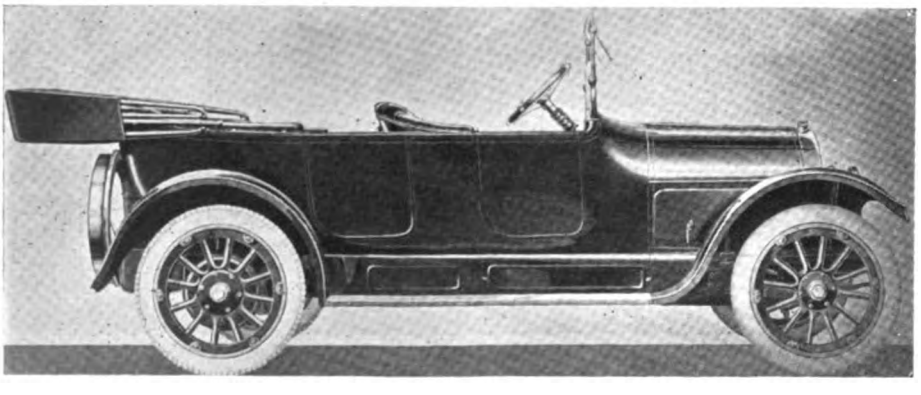
The Overland touring coupe on the 85-4 chassis

THE Willys-Overland Co., Toledo, is now marketing a low-price four-cylinder car styled 75-B at $620 as a roadster and $635 as a touring model, and the series 85 four at $795 and a six at $925. The latter series is the latest development and will not be started regularly through production until toward the end of July.

Model 85 takes the place of the previous model 83, and although similar in many respects incorporates several refinements. One of the features is in the increased use of pressed steel to take the place of heavier castings. An example is in the axle housing. Another important alteration is in the spring suspension, which is now cantilever. The gasoline tank has been moved to the rear and a new form of rigid tire support has been added. On the six-cylinder car spiral bevel gears are used for the axle, and on the four-cylinder model the axle gears have straight teeth. The use of a leather universal joint is another innovation.

Probably the biggest feature of the model 85 is the particular attention which has been paid to riding comfort. In relation to price, both cars are quite long, the wheelbase of the four being 112 in. and of the six 116 in. Both have large, comfortable bodies, with ample seating room for five persons. In addition to these improvements the seats have been built lower and deeper, with a slight backward tilt, and the seat cushions are built on deep coil springs.

In the four-cylinder car the power plant is the development of the four-cylinder motor which has now been used on over 300,000 Overland cars. It is of block design, with a bore of 3¼ in. and a stroke of 4½ in. The cylinders are gray iron castings and the pistons are also of cast iron. The piston length is 4 in. and the number of rings are two on this model. Connecting-rods are 8½ in. and are of drop-forged I-beam section. The crankshaft is carried on five main bearings and has a diameter of 1½ in. The motor is thermo-syphon cooled, and one of the features is the large water-jacket space.



Overlands at a Glance

Price	75-B	85-4	85-6
Touring	$635	$795	$925
Roadster	620	....	....
Coupe	...	1,045	1,175
Sedan	...	1,195	1,325
Color, Brewster Green Ivory striped.			
Number of cylinders..	4	4	6
Shape, L head.			
How cast, Block.			
Bore	3⅜	4⅛	3¼
Stroke	5	4½	3½
S. A. E. horsepower..	18.23	27.23	25.35
Ignition, battery.			
Starting, Lighting, Auto-Lite.			
Clutch, cone.			
Wheelbase	104	112	116
Tires	31 x 4	32 x 4	32 x 4
Type rear axle, floating.			

The capacity of the radiator is increased by fitting an auxiliary tank at the top and the radiating surface is also augmented by corrugations in the thin vertical tubes. A shell of pressed steel acts as a protective housing and this is made of a single piece of steel having no joints. The shell is supported in swivel seats.

Splash-feed lubrication is used. The splash is operated on the constant level system, in which the oil is continuously drained. A small gear oil pump in the crankcase end provides a steady flow of lubricant and also sends the oil through a revolving sight feed. The oil passes through the sight feed and returns to a lead which runs the length of the crankcase, supplying each of the troughs with a quantity of lubricant and keeping them constantly full. The overflow from the trough escapes back to the well in the crankcase, after which it is strained before again being circulated. There is also a float gage on the crankcase which indicates the amount of oil in the reservoir, and the breather tube is widened at the top to act as a filler.

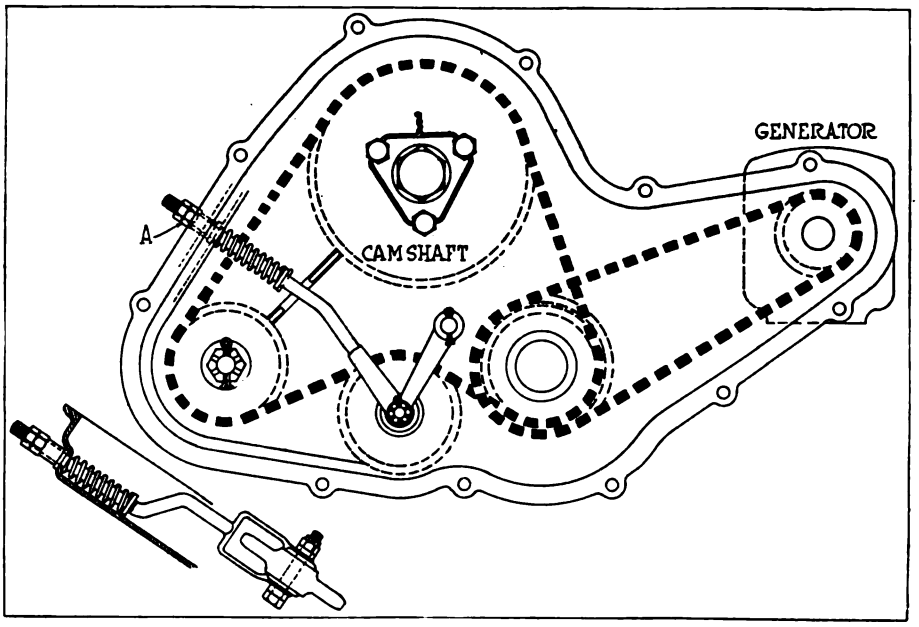
Other than in the power plant the six-cylinder car is exactly the same as the four, except that the longer motor necessitates a longer hood and consequently a slightly longer wheelbase, the exact difference being 4 in. All this difference in length is made up at the front end of the car, necessitating a longer frame on the six than on the four. The six-cylinder motor is also a block design and is characterized by an extremely clean exterior. It has a bore of 3¼ in. and a stroke of 3½ in. It develops from 35 to 40 hp., according to the manufacturer's figures. The cylinder heads are remov-

Overland 85-4 touring model which lists at $795

Digitized by Google

able and are cast in one piece. Throughout, the motor is of conventional L-head design, with both the intake and exhaust manifold on the right, together with all the auxiliary apparatus, such as the water pump, ignition distributor, generator, starting motor, etc. The only parts mounted on the left side are the carbureter, oil filler and oil level gage.

A departure for the Overland company is in the abandonment of magneto ignition and the use of a battery distributor system in its place. The ignition current comes from the storage battery. A feature of the ignition system is the switch, which incorporates a thermostatic throw-off arrangement, by means of which is is impossible to drain the battery through neglect to open the switch. The current passing through the switch causes the temperature to rise in the thermostat, allowing it to bend and close an electric circuit, permitting the current to flow through a coil somewhat like a buzzer. This buzzer arrangement hammers the switch button until it is opened, thus breaking the ignition circuit.



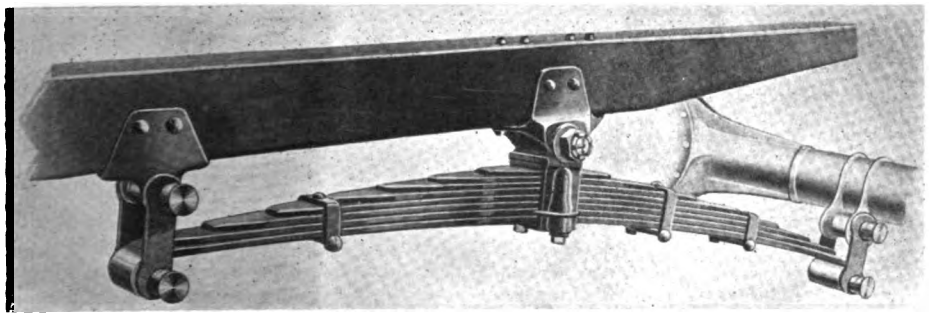
The clutch is a spring insert leather face cone with three tension springs. There is only one universal, since the gear box is mounted in a unit with the axle. This gear box provides three forward speeds and is made up of double heat-treated stub tooth nickel steel gears. The gear box shafts are carried on both roller and annular ball bearings. The axle is floating. There are four differential gears and the shafts are removable. The differential is carried on adjustable taper roller bearings and the wheels are on annular ball bearings.

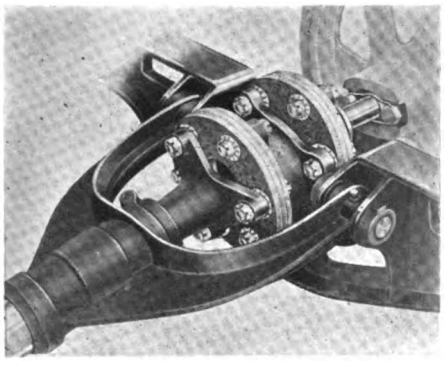
Service brakes are contracting type, 13⅜ x 2¼ in., and emergency are expanding, 13 x 2¼ in. Both sets operate on the rear wheel drums and are lined with asbestos fabric on woven brass wire core. The springs are semi-elliptic front, 36 x 1¾ in., and cantilever rear, 48 x 2¼ in. The wheels are artillery type of twelve spokes, and the tires 32 x 4 in., fitted with straight side tires, non-skid in the rear. On the touring sedan, mounted on the 85 chassis, the tires are 33 x 4½ in. Demountable rims are used throughout.

In the body work the up-to-date conception of streamline design has been carried out through the entire line. The touring body is built with one-piece cowl and high-backed seats. The doors are hinged in front and are U-shaped, fitted with disappearing hinges and provided with large pockets. The tool compartment is located under the front seat. The fenders are heavy, shaped steel, crowned. The finish is Brewster green with ivory striping. The fittings are nickel and polished aluminum, and the fenders and other trimmings are black enamel.

The price of $925 for the six-cylinder and $795 for the four-cylinder touring car includes full equipment, with Auto-Lite two-unit, six-volt electric lighting and starting system; dimmers and ammeter. There is also a speedometer and an oil pressure gage, with complete tool equipment and an extra demountable rim. The top is one-man mohair and the curtains are fastened from inside. The windshield is built in and incorporates both the rain-vision and ventilating features. On this same chassis there is a touring sedan at $1,195 in four-cylinder, and $1,325 as a six, and a touring coupe at $1,045 and $1,175.

The model 75-B is a new series which has taken the place of the previous small four-cylinder car. It is characterized particularly by a larger motor, which is claimed to develop 31½ hp. at 1950 r.p.m., and to have a speed range of from 2½ to 53 m.p.h. on high. Another feature is that it is equipped with 4-in. tires. It has cantilever suspension, two-unit six-volt lighting and starting and complete equipment. The body is new and is fitted with a one-pieced cowl which slopes back in a graceful curve.





The silent chain drive for camshaft and generator is provided with an easily adjustable take-up which can be adjusted from outside at A

All four-cylinders are cast in a block, having a bore of 3⅜ in. and a stroke of 5 in. The only auxiliary drive is that of the ignition distributor, which is now used in place of a magneto and which is mounted on the right side of the engine, back of the timing gear case. The valve mechanism drive is by silent chain and this drive also takes care of the distributor. The intake manifold is cored in the cylinder casting.

Lubrication is by constant level splash, the oil being circulated by a small pump which constantly maintains a supply of lubricant in the troughs beneath each connecting-rod.

The clutch is the Overland type similar

This is the type of rear cantilever spring used on the Overland model 75 chassis; it is shackeled beneath the axle. Right, the new leather universal joint

Digitized by Google

to that described for the model 85. It has the three engaging springs with the auxiliary springs beneath the surface of the leather cone facing. The gearset is on the axle and is similar in design to that of the larger model with three speeds and with nickel steel gears carried on shafts that are mounted on roller and annular ball bearings. The axle is floating and the differential is made up of four bevel gears. The axle shafts are removable and the bearing equipment is annular ball.

Two sets of brakes are used, the service being contracting, 12⅜ x 1¾ in., and the emergency 12 x 1¾ in. The springs are semi-elliptic, 36 x 1¾ in., with cantilever rear, 42 x 2 in. The tires are 31 x 4 in., mounted on artillery type twelve-spoke wheels with demountable rims. The bodies are streamline, provided with Fabrikoid upholstery, front-hinged U-doors, large pockets in doors, and with tool compartment beneath the rear seat; heavy sheet steel crown fenders are fitted, and the finish is black with nickel and polished aluminum trimmings. The equpment includes Auto-Lite starting and lighting, ammeter, one-man mohair top, inside fastening curtains, electric horn, combination taillight and license bracket, hinged robe rail, foot rest, tire carrier and extra demountable rim.

Far-Side Stop for Fifth Avenue Buses

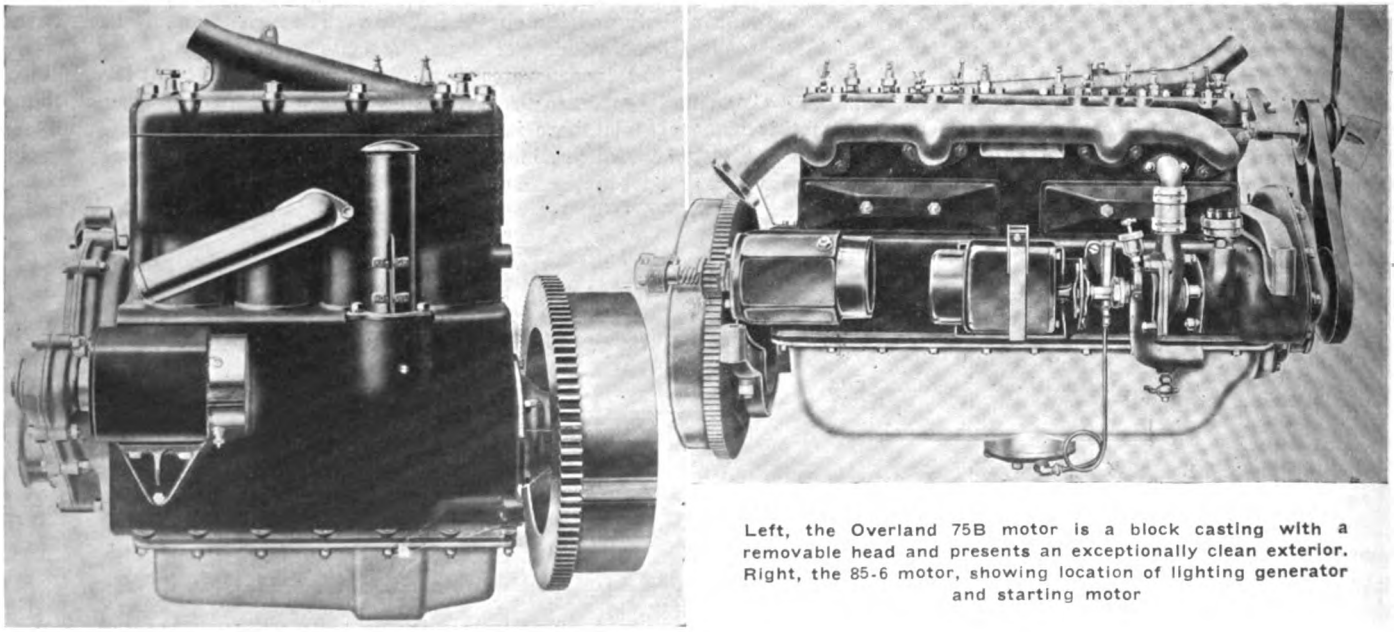
NEW YORK, July 10—Far-side stops will be hereafter made by the Fifth Avenue buses instead of the near side, as has been done for the past 15 months. According to the company, the near-side stop, which worked well with trolley cars, was a pitfall for the unwary so far as the buses are concerned. Many serious accidents were narrowly averted, it was said, as, seeing a bus drawn up beside the curb on the near side, pedestrians hastened to cross the street, believing all traffic in that direction had been held up.

Keeps All the Cars in the Shop Before Him All the Time

SYRACUSE, N. Y., July 10—Following out the modern idea of garage efficiency, Charles G. Hanna, Chalmers distributer, has just put into effect a new daily work sheet. Hanna has gotten up the accompanying form, which he has tacked up before him every day in his office. On the form are placed pins representing each car in whatever department it may be when business opens in the morning. All his used cars are accounted for on the sheet.

Thus, if he has a Ford in the paint department, he sticks a pin in that space. The foreman of each department is instructed to visit the office at least once every day and account for the cars in his department. If that Ford has been painted, the foreman comes in and has the pin placed in the ready column, where it stays until sold. As soon as it is sold the salesman places the pin in his column.

Hanna can tell at a glance where every car is in his garage. He says it works like a game with his employees and has created a lot of good competition. Every day or two foremen will come to him and register a kick that a pin is charged against them when the car should be in some other department.



For instance, if a car has been put into the paint shop without being quite finished, the paint man will kick that he is charged with the car and the car will be sent back to the repair department. Hanna credits the various departments with the speed with which they are able to move the pins out of their column.

If a pin remains in one column several days, Hanna knows something is the matter and immediately calls the foreman to account for the delay.

Hanna has a big repair business in this city and the new system has solved his personal troubles in keeping track of cars sent to his shop.

Car	Former Owner	Shop	Paint	Dirty	Ready	CARS SOLD			
						J. H.	P. W.	I. S.	A. L.
Ford	T. Sterns		*						
Overland					*				
Haynes	B. Wells						*		
Chalmers	S. House				*				
Chalmers	T. Otto				*				
Chalmers	W. Brown			*					
Chalmers	H. Murphy	*							
Chalmers	J. Cobb	*							
Studebaker	F. Jones				*				
Grant	A. Pratt				*				

The stars on this chart represent pins. Each pin represents a car, and as a car moves from one department to another the pin is moved. Hanna makes out a new sheet every day and requires up-to-the-minute information at all times from his organization

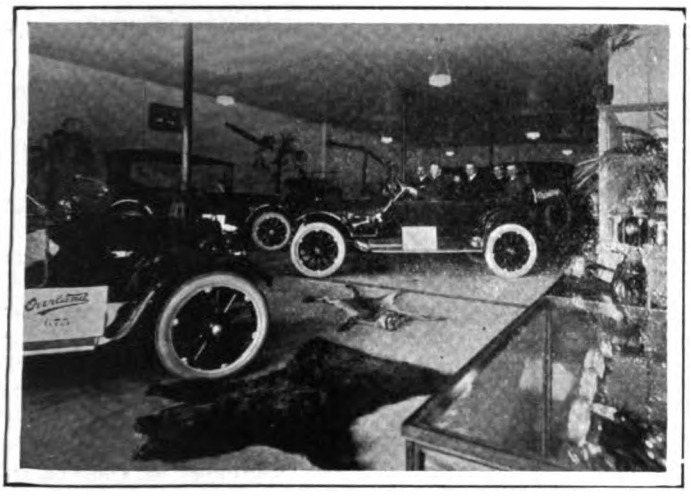
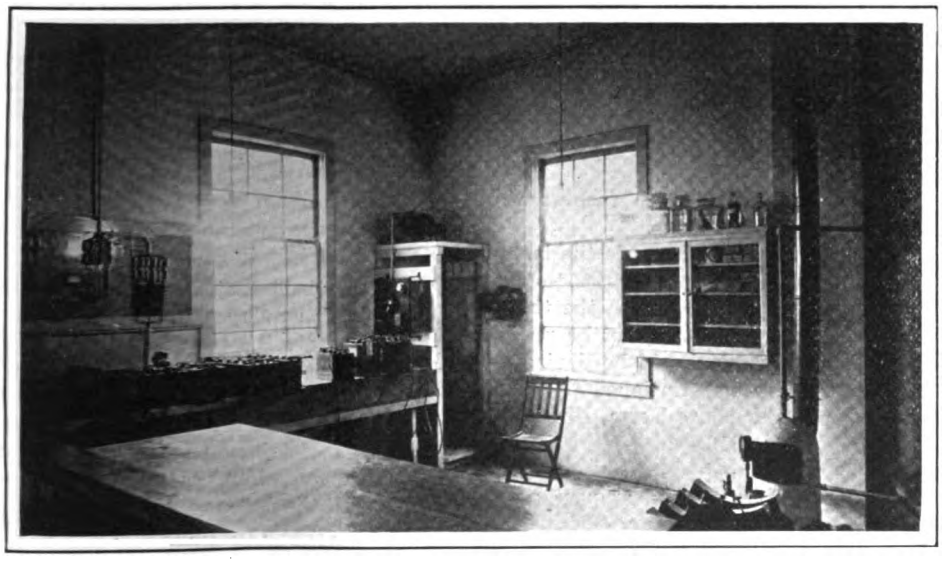
Daniels Has Dressed Up



He's in Manistee, Mich.

TO open his new place of business to the public, William Daniels, of the National Garage & Sales Co., Manistee, Mich., held a show and reception, which is shown in one of the views on this page. At this time the visitors were shown the cars, the building, the service facilities and the members of the organization. The final night of the show the visitors danced in the salesroom between the cars.

Between 2500 and 3000 visitors were in during the week and many sales have since resulted. Daniels states that his business has practically been built upon Motor World suggestions, and he calls attention to his accessory store at one side of the salesroom. He has a good display window in front.



Front of building of the National Garage & Sales Co.

The opening show

The accessory department

Battery and vulcanizing room

The building is 115 x 60, and another building, used for storage only, is 100 x 60. In Motor World's Garage and Equipment number, April 26, was shown the rest room. There is also a men's rest room; hot and cold running water is provided. There is a turntable, automatic warning signals and other modern appliances.

Manistee has a population of 13,000 and is in a county of 27,000. It is one of the principal cities of northern Michigan. Daniels handles the Buick, Chevrolet, Overland and White.

Ohioans Can Tour Canada Free

COLUMBUS, OHIO, July 10—The Ohio Automobile Trade Association, after working more than a year, has secured reciprocity with the Province of Ontario, Canada, in the interchange of licenses. Hereafter Ohio licenses will be recognized in Ontario for a period of 21 days. Minister of Public Works MacDiarmid of Ontario has sent word that all formalities have been complied with and hereafter American tourists will not have to pay the $25 necessary to traverse Ontario.

ANGLES OF THE LAW

By Geo. F. Kaiser

CONTRACTS MUST IMPOSE EQUAL CONDITIONS

ANOTHER interesting case dealing with an agency contract has been decided, this time in the District Court of Appeals, First District California.

The suit was started to recover $1,000, which had been deposited by a dealer under a car agency contract.

It appeared that the dealer had entered into the contract with the company and that the contract provided that he should purchase fifty motor cars between the date of the agreement, Feb. 20, 1914, and Jan. 1, 1915, at San Francisco, list prices, and a percentage or discount of $40 on each car so sold was to be allowed to him on the list price.

The company reserved the right to change the list prices of the cars at any time by giving at least 2 weeks' notice of the proposed change. The dealer agreed to open an establishment for the sale of the cars at Fresno, keep a demonstrator for exhibition purposes, and resell the cars to such customers as he could procure under the conditions named in the contract.

In case of cancellation of the contract before its expiration, or in the event that its terms should not be fully complied with by the dealer, the deposit was to be retained by the company. The company also reserved the right to cancel the contract upon 15 days' notice and upon returning the deposit.

The court held that the contract was not void either because it reserved the right to the company to cancel upon 15 days' notice, or because it reserved to the company the right to change the price at which the machines were to be sold, subject to the variations in the market, it appearing that the agent's commission was not to be changed.

It was held that in order for the company to retain a deposit of this kind as liquidated damages for a breach of the contract, it must show that it would be impractical or extremely difficult to fix the actual damages.—Thomas vs. Nathan, 157 Pacific, 823 (California).

MUST PAY DEFICIENCY

A person giving a chattel mortgage must pay any deficiency if the sale of the mortgaged chattels do not bring enough to pay the mortgage debt, according to a recent New York decision.

Suit was started to foreclose a chattel mortgage which had been given to secure the payment of seven promissory notes, four of which were unpaid.

The court held that as the mortgagor had given notes for the entire original debt and the chattel mortgage was given over as security for the payment of the notes, the mortgagor would have to make good any amount which remained unpaid after the mortgaged chattels were sold, even though the mortgage did not specifically provide that this should be the case.—Cottone vs. Spivach, 159 N. Y. S. 241 (New York).

CANNOT RECOVER ON DEFECTIVE PATENTED ARTICLE

WHERE patented motor car wheels are expressly warranted for 1 year, the purchaser is not precluded by waiver or otherwise from availing himself of that defense when he is sued for the purchase price.

Two patented wheels were sold under a verbal agreement. The sale was confirmed by a subsequent letter, in which it was stated that the wheels were sold subject to a trial for 30 days immediately following delivery, and they were also guaranteed for 1 year without restriction.

After the wheels were used a few days one had to be removed because of defects and was returned for repairs. During the next 6 months other repairs were made from time to time. The 30-day trial period was later extended to 90 days, and before the end of that time the purchaser offered to return the wheels.

The seller then sued to recover the agreed price of the wheels.

The court held that because the buyer had given repeated opportunities to furnish a wheel to conform with the terms of the contract, he should not be prejudiced and judgment should be denied to the seller.—Sipe vs. National Co., Supreme Court, Appellate Term, First Department, June, 1916.

CANNOT RETURN CAR AFTER ONE MONTH'S USE

WHEN a person buying a motor car makes no tender or offer to return it for more than a month after learning that it is not in running order as warranted, other than to express a willingness to return it, he cannot recover the amount he has paid on the theory that the contract has been rescinded.

Suit was brought against a man who had purchased an automobile on some promissory notes which he had given as part of the purchase price of the car. The buyer set up that he was entitled to damages for breach of warranty.

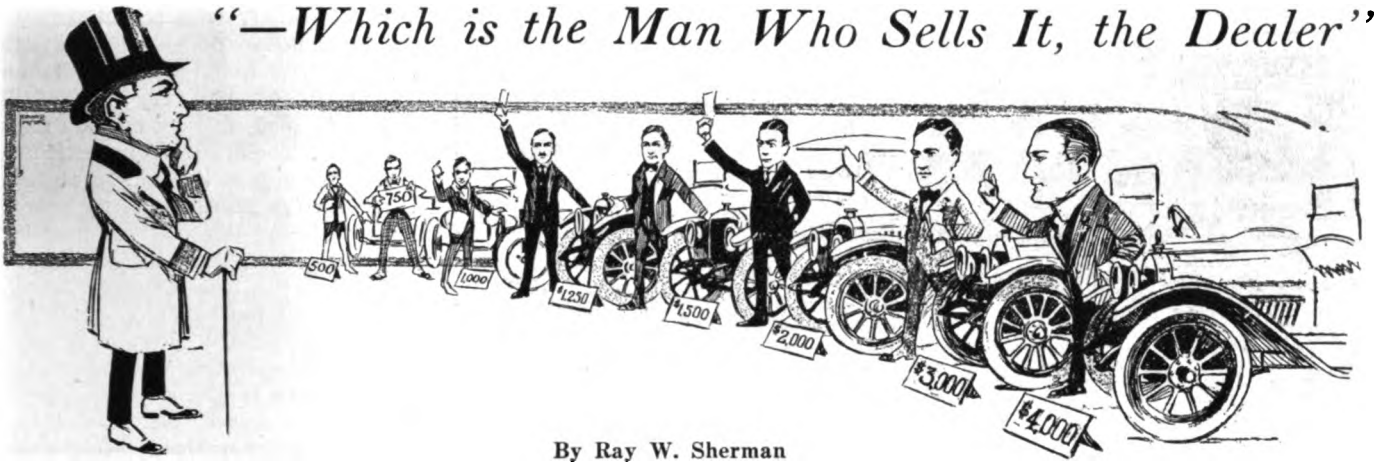
It appeared that although it had been represented that the car was all right; that it was in perfect running order; that it had been thoroughly overhauled; that there were no defects in it, and that there was nothing wrong with it, that it actually was out of repair; was not in perfect running order and had not been thoroughly overhauled at the time of the sale.

The buyer claimed that he had rescinded the contract and was entitled to get back the money he had paid for the car.

The court held that as all the buyer had done was to write a letter stating he would not accept the car, which was then at a garage, he could not claim that he had rescinded the contract and get back the purchase money, as in order to do that he should have notified the other party within a reasonable time and should have returned or have offered to return the automobile in substantially as good a condition as it was when transferred to him.—Skillings vs. Collins, 112 N. E. 938.

OIL IN SEWER; EMPLOYEE KILLED; DEALER PAYS

A peculiar case, in which an oil company, a garageman and an employee of the latter were concerned, has just been decided in the Supreme Judicial Court of Massachusetts.



Suit was started by the workman's administrator against the oil company and judgment against it was recovered.

The court held that negligence of the oil company's employee in allowing gasoline to flow into the cellar of the garage while attempting to fill a gasoline tank, and thereafter sweeping it into a pit in the cellar, might be a concurrent approximate cause of injury to an employee of the garageman when water was allowed to mix with the escaped gasoline.

The fact that the garageman's negligence in letting water into the escaped gasoline brought about the injury did not lessen the responsibility of the oil company, according to the decision, and it therefore had to stand liable for the damages caused by the death of the employee brought about by an explosion.—Leahy vs. Oil Co., 112 N. E. (Massachusetts).

"—Which is the Man Who Sells It, the Dealer"

By Ray W. Sherman

"REILLY, I'm all mixed up!"

An old-time friend of C. J. Reilly, the Sennett dealer in Callawassa, plopped himself into a chair in the dealer's office with an air of all-worn-out-ness.

"What now?" smiled Reilly, turning around in his chair to face the bewildered.

"Reilly," continued the old-time friend, "I've been trying to buy a car. I actually made up my mind to buy and set out to make the purchase, but I've been told so much by so many different salesmen that I'm darned if I know anything about any of them. I thought I knew it all when I started."

"And the more you hear the less you know."

The More the Less

"That's about the situation," continued the Old Friend. "Naturally, I want to make the best possible purchase. I want to get the most I can for my money. That's why I started this looking around. I thought that if I looked around a little I could eliminate all but a few cars and then eliminate all but one, but there are about a dozen that seem to be all right and there isn't much difference in price. I've studied and worried and thought, and I don't seem to be anywhere near a solution of my problem."

"What do you want me to do; sell you a Sennett?" asked Reilly.

"Darned if I know, Reilly. I hadn't intended paying quite as much as that, but what I did want you to tell me was your opinion as to which of a dozen or so cars is the best."

The Never-Answered Question

Reilly leaned back and smiled. "That old question, that never yet solved problem," laughed the dealer. "If I could answer your question with one word and that word the name of a car, I could make a lot of money——"

"But you can't!"

"I can't. You hit it right; I can't. It can't be answered that way. I've been asked that question many times and have always had to answer the same way I answer you: 'There ain't no such animal.' There is no supremely one best car, when it is considered from the standpoint of the buyer. There are so many factors to be taken into consideration that no one car is universally the best. There are certain towns where some one car may be best, but there is no car that is the best in every town."

"Why not?" demanded the Old Friend.

All Are Good

"So far as cars are concerned every car that amounts to anything is a good buy," asserted the dealer. "There is no one that is rightly termed the best. There are different constructions and different prices, but when you consider what you get for your money there is little difference in the dollar-for-dollar value. You don't get stung in any of them. If you pay more you get more; if you pay less you get less.

"Of course, there are 'lemons.' There are cars that are made by unsafe manufacturers and there is not over-value in the cars themselves. This manufacturer element enters as much into a car as anything else, so if you are tempted to buy a car that looks to be exceedingly cheap, look twice at the company behind it.

"And then comes the one, big, dominant factor in car value——"

"Which is——"

The Dealer Makes the Car

"Which is the man who sells it, the dealer. You should not overlook the dealer when you buy your car. You may find a good car, a good price and a good manufacturer, but if the dealer is no good the car is quite likely to be the same, because it is the groom that makes the horse.

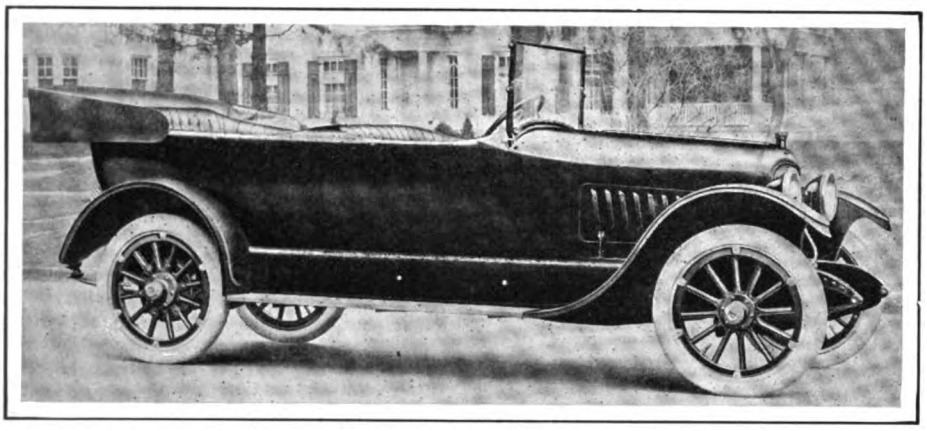
"When you get right down to cases, what do you buy? You certainly are not buying steel and leather and rubber. If you were you could go down to a raw goods store and get that stuff. And you're not buying a car because you want a car. If you were you could have one made of papier mache and set it up in your front parlor. The thing you really are buying and the thing you really want is car service, car satisfaction.

"You Don't Want a Car"

"You don't want a car; you want to ride. You don't want a high-speed motor; you want to travel rapidly. The car and its motor help give you what you want and that's why you buy the car, and because you must buy the car to get what you want too many people place too much stress on the mechanics of a car and its first price. And in many, many cases they regret it later.

"Now, what gives you car satisfaction? You must first have a pretty good car at a reasonable price, or else you are likely to believe all through your ownership that you were stung when you bought. In addition to the good car at a good price you must deal with a good dealer in order to get car service and satisfaction. If you get a good car but buy it from a dealer who is not equipped and is not responsible, you can't get car satisfaction. If you can't get car satisfaction, you didn't get your money's worth, no matter how little you paid for your car. A car that won't run when you want it to run isn't worth a nickel from a car satisfaction standpoint.

"Better a Rotten Car——"



"Personally, I would rather buy a rotten car from a good dealer than a good car from a rotten dealer. The measure of car satisfaction would be greater in proportion.

"And that's why there is no best car built. Pay $4,000 and you generally get $4,000 worth of car. Pay $500 and you generally get $500 worth of car. But buy a car from a good dealer at several hundred dollars more than you would pay to a poor dealer and you get a lot more for your money.

"There is no best car, because a car of itself is nothing. You must not lose sight of the fact that you want car satisfaction, not a car."

"How much is a Sennett?" asked the Old Friend.

The new Ross eight has ultra modern lines blended in a manner to give a rakish appearance without sacrificing good looks

Double Cowl Body on Ross Eight

But No Change in Price, which Remains $1350—Chassis is Unaltered

THE Ross eight-cylinder car for 1917 appears in a new dress that is in accord with latest body fashions in every particular. The vehicle is practically the same mechanically as it was when first brought out by the Ross Automobile Co. over a year ago, but there have been some important revisions of its lines. The price remains unchanged at $1,350.

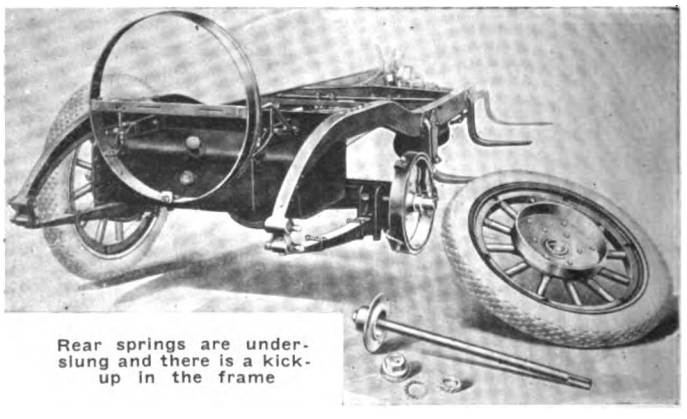
The modern double-cowl effect has been worked out at the back of the front seat, and the hood slopes into the cowl without a break, the radiator shell also sloping to the hood in very pleasing manner. Doors are wide and fit snugly and there is enough rake to the steering column to assist in giving a racy appearance so often sought by designers.

Stripped of its new body, the new chassis presents a most substantial appearance, with a tapered frame of deep section, sturdy drive members and long and wide springs. In unit with the motor are the clutch and gearset, and the driveshaft is inclosed within a torsion tube. The specifications include a multiple-disk clutch, floating rear axle, semi-elliptic springs all around, rear gasoline tank with Stewart vacuum feed, Zenith carbureter, Ward-Leonard two-unit starting and lighting system, and 34 x 4 tires.

No alteration has been made in the standard Herschell-Spillman motor. The cylinder dimensions give a displacement of 331.8 cu. in., but the motor is capable of delivering upwards of 75 hp. on the block. Valves are made reasonably accessible by the disposition of the parts that of necessity have to be in the V between the cylinder blocks, the carbureter being so mounted that it is little in the way, and the exhaust manifolds being well above the valve compartments. Although the ignition distributor is mounted vertically at the extreme rear of the cylinders, it is really not in the V, and so the carbureter is practically the only obstruction.

Ross Eight Specifications

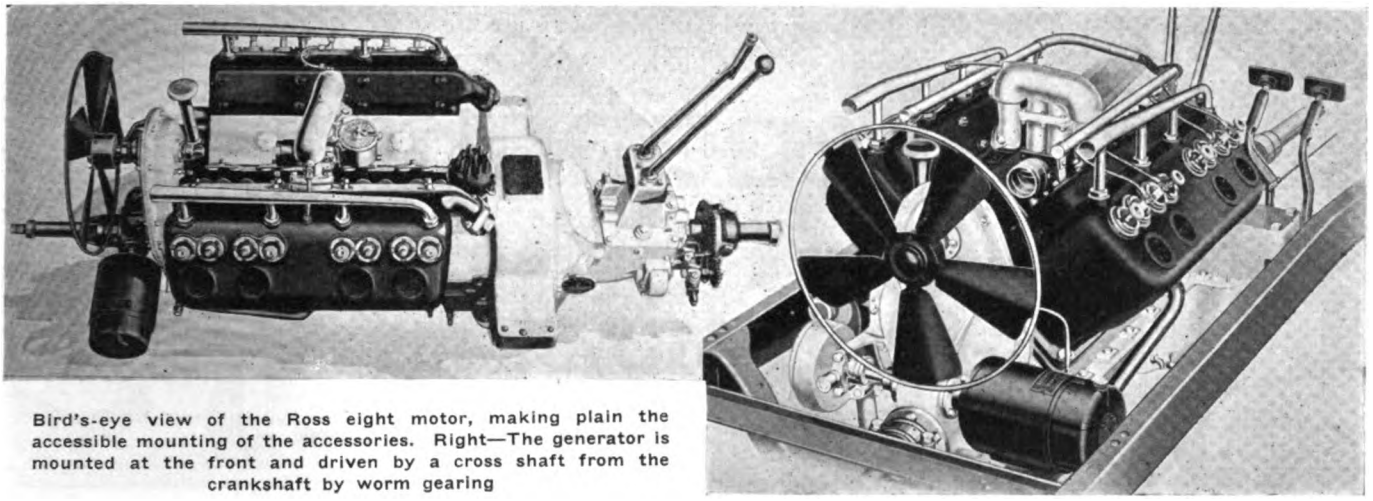
Price—Touring	$1,350
Color	Blue
Make of motor	Herschell-Spillman
Number of cylinders	Eight
Shape	L-head
How cast	Blocks of four
Bore	3¼
Stroke	5
S. A. E. Horsepower	33.84
Carbureter	Zenith
Starting-lighting	Ward-Leonard
Clutch	Borg & Beck dry plate
Gearset	Grant Lees, 3-speed
Wheelbase	130-in.
Front tires	34 x 4
Rear tires	34 x 4 non-skid
Make of axles	American
Type rear axle	Floating
Equipment:	One-man top, motor-driven horn, demountable rims, Stewart speedometer, ammeter, usual equipment of tools, tire repair kit, jack.



Conventional practice holds throughout the internal construction of the motor, there being a sturdy crankshaft, directly above which is mounted the single camshaft that actuates both sets of valves through rockers that are hinged to the top of the crankcase. At the front there is a cross shaft that is connected to the crankshaft by a worm gear, and on its right end this shaft drives the double water pump, while the left end connects to the generator armature. This cross shaft drive is inclosed by the plate that houses the spiral gears driving the camshaft and the fan shaft above this latter. Thus a very compact front end is obtained with not even an exposed fan drive. The drive of the vertical ignition distributor is through bevel connection with the camshaft at its rear end.

On the right side of the engine is the starting motor, this connecting automatically with the flywheel teeth by means of the Bendix drive unit. As the flywheel is inclosed, there is practically no exposed operating mechanism.

Lubrication is given special attention. There is no splash, distribution to the various bearing surfaces being entirely by pressure maintained by a regulating valve between a minimum of 10 lb. per square inch and a maximum of 40 lb. per square inch. The gear pump is located in the crankcase well on the bottom of a vertical shaft which takes its drive through spiral gear connection with the camshaft. Oil is delivered through a longitudinal tunnel running the length of the crankcase, and from this by individual branches to the three main bearings of the crankshaft and the three camshaft bearings. The crank webs are drilled and the oil is thus led by centrifugal force to the lower rod bearings, from which it is piped through steel tubes to the wristpin bearings, these tubes attached to the rods. An overflow valve allows the excess over the requirements of these bearing surfaces to be delivered to the front gears, keeping the gear assembly submerged well above the cross shaft.



In connection with the clutch mechanism, the pedal is adjustable for position, due to the use of a flange drilled with several holes and attaching to a flange on the pedal in a number of different positions wherever any set of holes in the two flanges will register.

A Grant-Lees gearset is also incorporated with the engine, this being a very compact unit, affording the usual three speeds and reverse. The gears and shafts in this unit are constructed of chrome-nickel steel, and the gears have wide faces with stubby teeth for strength. Just back of the gearcase is the speedometer drive gearing, and then a uni-

Rear springs are underslung and there is a kick-up in the frame

Bird's-eye view of the Ross eight motor, making plain the accessible mounting of the accessories. Right—The generator is mounted at the front and driven by a cross shaft from the crankshaft by worm gearing

versal joint, after which the propeller shaft enters a torsion tube that is in unit with the rear axle. The front end of the tube is supported in and slides in an arm that hinges to the bottom of the gearbox.

Both axles are made by the American Gear Co. and follow standard lines. The rear unit has a pressed-steel housing that is webbed outside at top and bottom as a strengthening factor, and the springs are underslung from it. The gear ratio is slightly lower than 4 to 1.

In the rear suspension three-quarter elliptic springs have a length of 57 in., and, due to the generous bend down of the rear of the frame, are normally nearly flat, even though they do pass below the axle. This allows them to work efficiently to dampen road shocks and to promote easy riding.

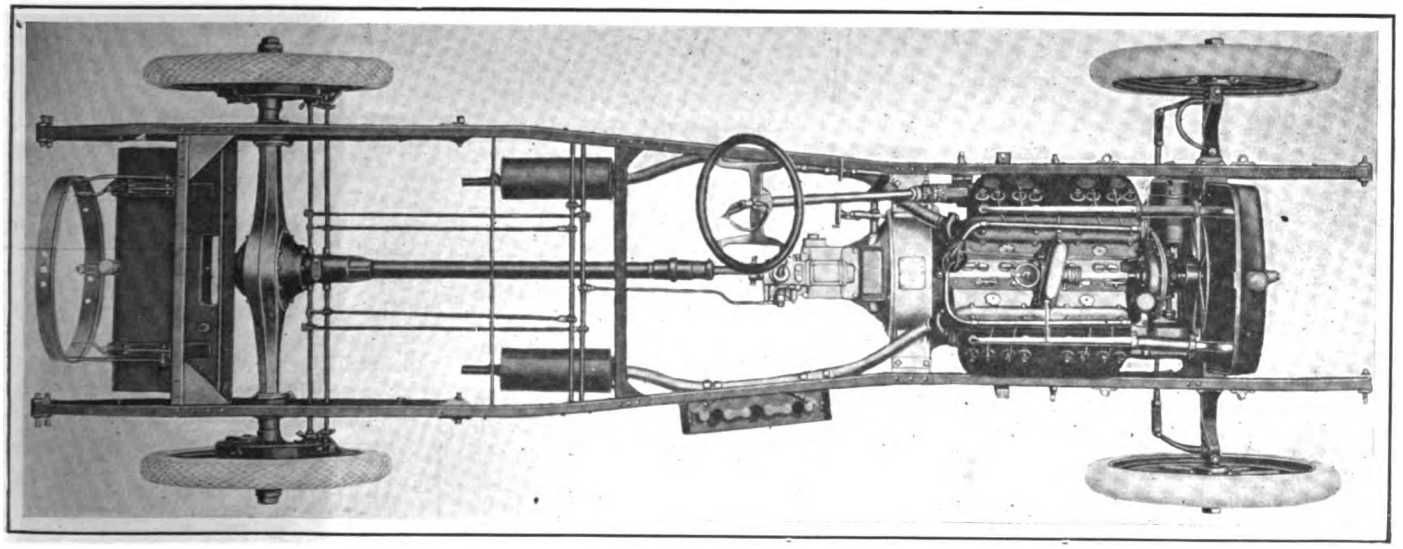
Hung from the rear cross member of the frame is a large gasoline tank, so positioned that it is practically balanced on its mounting, preventing any bending strains being set up. A large size vacuum feed tank is mounted on the front of the dash to bring the fuel forward from the reservoir. On the right side of the frame and just to the rear of the motor, the U. S. L. storage battery is carried. This is concealed by the running board apron, and is conveniently reached through a door in the latter.

Kansas Feels Prosperity Wave

KANSAS CITY, July 8—Branch houses, agencies and dealers of Kansas City and the territory report large gains for June and for the first six months of 1916, the advances ranging from 25 to 50 per cent and even larger. The heavy rains and floods for most of June prevented work in the country, so that the advantage was largely obtained from city business.

The Bond Motor Co., handling Oldsmobile and Saxon, report a gain every month this year. On July 1, five Saxons were received, and five customers were waiting for them.

H. H. Pierce, assistant manager of the Greenlease Motor Car Co., Cadillac dealer, had 50 per cent increase in June, the gain being mostly in the city.



The Acton-Parke Auto Co. has had an increase every month in Maxwell sales, June being its largest month. The company was on June 30 sixteen cars short of 100 for the month; the organization got busy and at 11.30 that evening the sixteenth car for the day, the 100th for the month, was driven out of the door.

The weather was like summer the last week of June; conditions for wheat harvesting are excellent, with good prospects in both corn and wheat, and in a few weeks the trade with the country will begin to flow.

The Ford Motor Co. has had a 75 per cent increase in business, including June of this year, though the output was somewhat less in June than in May. June, however, showed a 70 per cent increase over the same month last year.

A Correction

In the Motor World Guide for June 28 the Kisselkar Hundred Point six was listed as a four instead of a six, and was credited with a Remy starter, whereas this unit is made by the Kissel company. The starter on the 6-42 is also made by the company and not by Westinghouse. Remy lighting equipment, however, is used on the former model and Westinghouse on the latter.

The chassis presents a substantial appearance, with a tapered frame of deep section, sturdy drive members and long and wide springs

Accounting and Business Systems

ACCOUNTING BORROWED CAPITAL

Editor Motor World:

We have installed your system of accounts and have for the past month used it. However, there are a few points we do not fully understand, and one is: We have been in business for about 3 years and have been using another system. When we began our business we borrowed a sum of money to equip ourselves with the necessary stock, etc.

Now, in this system, if we debit ourselves with, say, $10,000 notes payable it will show that our business has—that is, our cash—increased that amount, and we know it has not; at the same time, where will it go? And do you list all the liabilities in the income and expense records; that is, all the old bills payable—the ones that were on hand when we opened up these books?

The system is complete in every way for the first month's business, but I have some little difficulty in working out the different items that have been carried over from the old system of books.

If you will please inform me at once on these points I will appreciate it very much. I am in a great hurry to close the month's business.—Independent Auto Co., Topeka, Kan.

Answer—We believe your only trouble is in properly compiling your assets and liabilities at the time you opened the new Motor World system. We assume when you originally commenced business you borrowed $10,000 and used this money to buy stock, supplies, etc. If the notes are still unpaid you would have a liability of the amount of your notes outstanding. To offset this amount you would have assets of supplies, machinery, etc., of perhaps a greater amount. The difference would be your profit for the period of operation of your business.

We suggest that you refer to Table No. 2, page 30, of the System booklet; then make a schedule of your assets and liabilities as of June 1, if this is the date you started our system. None of the above will appear on Forms 1 or 2; it will simply mean the status of your business on June 1. This will be shown on Table No. 2 above referred to, under the heading "What We Started With."

If you wish, these assets and liabilities could be carried on the back of your book or on a separate account outside of the system. Then at the end of each month Forms No. 1 and No. 2 would change, your assets and liabilities showing what you had left at the end of the month's operations. The $10,000 and what you had prior to opening the system go into the monthly tables (No. 2), and not on Form 1 or 2.

DIVIDING ACCOUNTS

QUESTION—Please send me, subject to examination and return, a set of Motor World business accounting books.

We use a set of books, but it is a little limited as to what you can tell at the end of a period.

Inclosed you will find a sample of a day's business.

We use only credit and debit slips, not numbered, for all cash taken in or paid out, or charges for anything.

Now, on the Motor World System cannot all charges be totaled under customers' accounts, all accounts paid be totaled and all cash taken in be totaled in their respective departments?

As I understand it, in the Motor World System you require an entry for every sale, charge or amount paid out.—D. W. Roderick, Wells Garage, Wells, Minn.

ANSWER—We believe the Motor World System will operate with a little more satisfaction as to ultimate details than you secure from what you are now using.

We suggest that you study the system booklet very carefully before going ahead, because if you do not there will be quite a few things come up that you will have to ask about. In any event, we want you to ask every question that comes to your mind, because we have assumed the job of making these systems operate with satisfaction and to do this must give this service.

All charges to customers can be totaled at any time; so can all cash taken in and all cash sales, although you can readily see that since the money for cash sales and the money from charge sales all goes in the cash received column, you would have to separate the items when you total at night and divide the two. This you can readily do, however, because your cash sales will be accompanied by slips or report orders.

Unless these items are small and occur with great frequency, especially at the beginning, you ought to make a separate entry for each sale or charge, but if you are selling gasoline five times an hour and have that many sales slips, you can enter a handful of them in a bunch, although it is better not to let too many of them pile up until you become familiar with the operation of the system.

KEEPING STOCK CARDS

QUESTION—Please give us an idea as to how to keep an inventory card index on accessories? It is a h—l of a job to put down each thing as it comes in and as it is sold, but I do not see any other way. Thanks very much.—H. Tovey, Fayetteville, Ark.

ANSWER—As goods are purchased and received, the price should be noted on the goods themselves, or on their containers; that is, the cost price. Then, as each sale is made, and we are presuming that you use some form of sale ticket, the cost price is placed on the same ticket that shows the sale price. A code of some kind is used, in order not to let the customer know the cost of the goods; the bookkeeper at the end of each day computes the value of the goods sold on that day and makes his entries accordingly.

In order to find the number of the various parts sold, we suggest that you use a large sheet of ruled paper, heading the various columns with the names of those parts or accessories that are sold most frequently, then run through the sale tickets of that day, placing in each column the various parts and accessories as shown by the headings.

It is true that this is a lot of work, but the value of the information that you get should be worth the time and trouble you spend in arriving at the same. We are forwarding you a 6 x 4 inventory card. We also have these 3 x 5.

Time Payments

THERE is a man in a certain city who is trying hard to walk with rectitude up the pathway of business integrity. So far as any one knows he never has made a wrong move since he has been in that town, and still the man does not stand on a par with the other men of that city.

Why?

Simple answer: Years ago this man lived in a city several hundred miles from where he now lives. He was young in those days and wanted to make a short-cut to fame and fortune. He made several short-cuts, and one of them was so short that it cut the whiskers off the law and the young man made a short-cut out of town.

From that day the man realized the folly of trying to build a future life or a future business on poor or dishonest work. He set out to live and work right, but that slip he made follows him around all the time like the dog in the picture on page 5 this week. The man once owned and befriended the dog and now the dog won't leave.

IT has been said that the "evil that men do lives after them; the good is oft interred with their bones." And it is true. One bad act, move or word is remembered above many good ones. Why? One reason is that the bad deeds are the unusual. If you saw Old Bill Stover asleep with a jag on every day in the shade beside Hennessey's saloon you wouldn't comment on it, but if you saw Old Bill Stover going down Main Street all dolled up like a judge the news would spread like wild-fire. And that occasion would hang to Old Bill just the same as one slumber in the shade with a jag on would stick to you. The dog of reputation would follow you both around.

REPUTATION is like a range of mountains. It consists of everything you have done and those things which are unusual are the mountain peaks which stand out above all the others. The peaks may be good or bad, but they are the unusual, the extreme instances. The dealer who almost wrecked his business to make good on a "lemon" car filled his reputation with peaks of good; the dealer who slipped a few things over on his customers filled his reputation with peaks of bad. He adopted a number of little curs of mangey aspect that will follow him for years no matter how hard he tries to beat them off with future good service.

This cleaning off a reputation by reform is the only possible method, but it is VERY HARD. It is better by far to keep the slate clean.

That One Poor Job

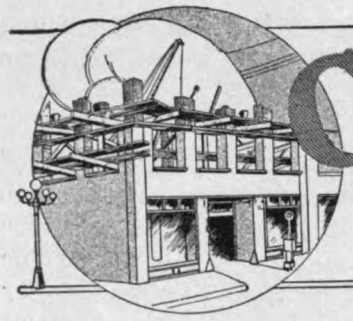
THERE is, for instance, a capable young man who did very good work in a certain business, but he had failings, among which was a tendency to be bull-headed. Despite his good work he lost several positions and finally had to start over again in a different business where he wasn't known. He has long since changed his tactics and could do good work in his original profession if that it were not that this cur of previous bull-headedness keeps following him around and won't be shaken off. Some day the young man may be able to get rid of the dog but it will take time and lots of hard work.

There are hundreds of dealers, garagemen, repairmen, supplymen, salesmen, chauffeurs, mechanics, stenographers, street car conductors, bankers, white wings, congressmen and everything else who are followed by a little dog of misstep. At some time or other—may be several times—they have done something not at all to their credit, and that one thing is remembered by all those with whom they have dealings.

MAYBE the superintendent of the service station let a job go out in poor condition. Maybe the car owner had a lot of trouble over the deal. And maybe that car owner isn't telling everybody about the sort of treatment he received.

Perhaps a clerk in the store or a salesman offended a customer, or a prospective customer. That customer pans the store every chance he gets. He works a world of harm.

And supposing that a stenographer came to work some morning and made a serious error. Is it remembered or isn't it? The boss may say he has forgotten it—but has he?



ATTENTION to these little details is essential to a really successful business. A business may slam through rough-shod and get away with it for years, but the business that endures and grows and thrives is right from top to bottom. It sends out no bad jobs, it makes few slips, it makes discourtesy a crime. The customer is always right.

So many hard-headed business men, who are able and know it, pooh-pooh at these details of business. They call them "rot" or "bunk." They consider them effeminate or trifling. They do not realize that the 100-per-cent business structure has all the big stones of its wall mortared in with little grains of sand and the mortar pointed.

Because this business man IS a business man he wouldn't buy a 90-per-cent house. Why, then, should he run a 90-per-cent business?

He wouldn't invite a mangey cur to follow him around town because it would detract from his respectability. Why then should he create curs of misstep, of "poor job," of discourteous sales work, of unethical business? For this latter imaginary animal will dog his footstep through eternity.

Scientific Construction

GARAGES REPAIRSHOPS SHOWROOMS

CONVERTING THREE-STORY BUILDING INTO GARAGE

Editor Motor World:

We have three-story building to convert into a garage 67 x 150 ft., with an alley entrance to rear. The door is in the middle. The front is divided into four doors. We expect to excavate enough in the rear for furnace and coal. We want two showrooms in front with entrance to garage between them. Ramp to go upstairs to second and third floors. How would you arrange this building principally for public garage.—Acme Garage & Auto Co., Baltimore, Md.

The plan is shown in Fig. 1. The entrance to the ramp was put at the rear so that the full frontage might be used for showroom. However, if it is desirable to have the ramp entrance at the front the change is a simple matter, as it merely means narrowing the two showrooms enough to allow the entrance to be put in, and then the second and third floor plan are turned around, the front going at the back and the back at the front.

DOUBLING GARAGE SPACE

Editor Motor World:

We occupy corner lot, present building is 50 x 80, and are building an addition 50 x 80, fronting on main street. We intend to use old building for storage, with new building for shop, office, showroom and stockroom. We handle the Studebaker and Paige cars and intend to have complete line of accessories. Any suggestions will be welcome.—Floyd Cram, Cram Bros. Garage, Colfax, Wash.

Fig. 5 shows a plan which we believe you will find satisfactory. You have not stated where the entrance to the garage back of your showroom should be. Consequently we have had to assume that it is at the side, opening into the old garage building, as shown.

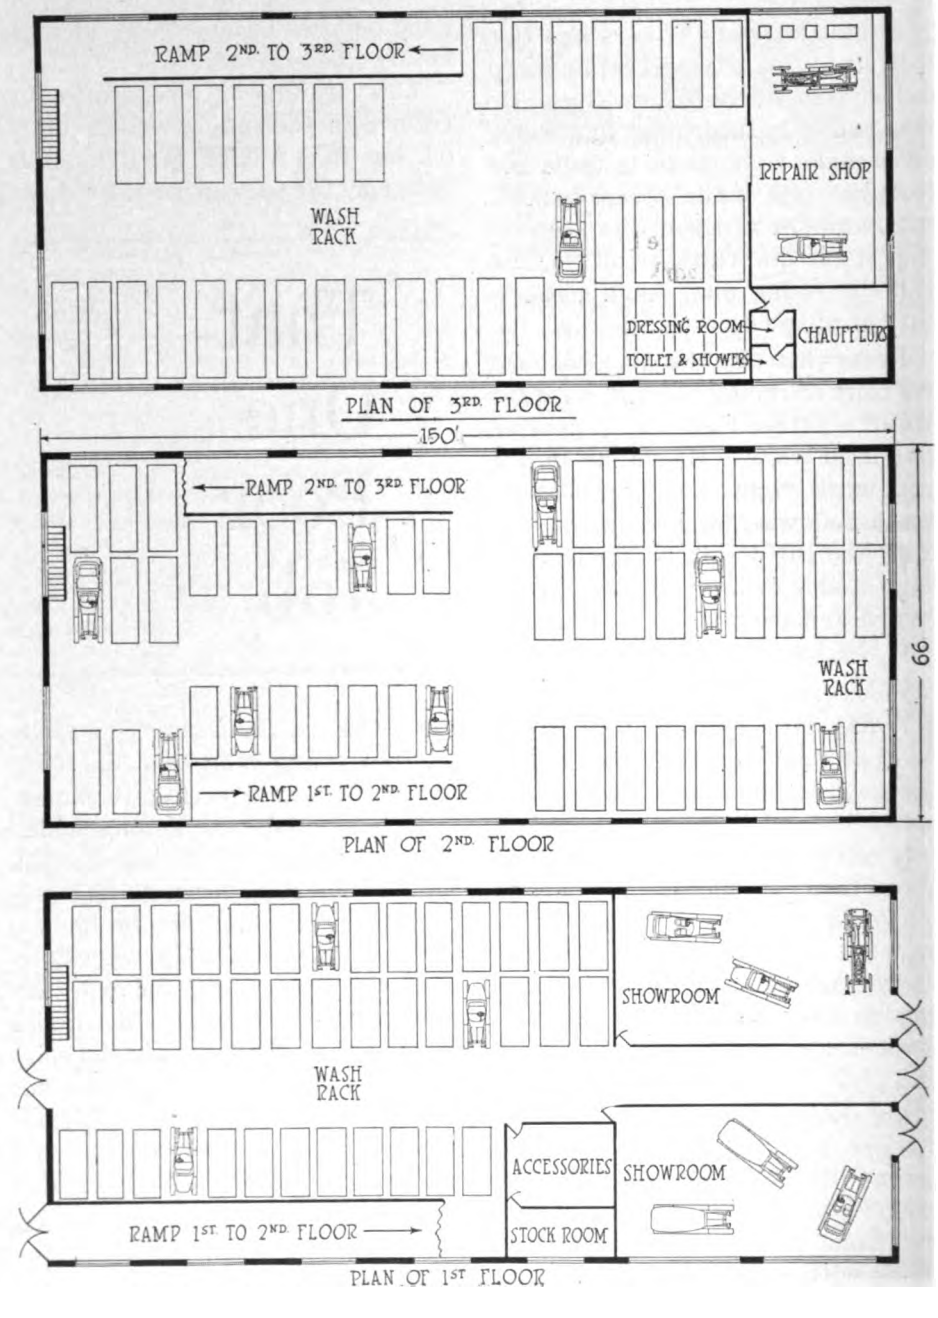
The showroom is large enough for four cars and the entrance is provided with double doors, so that the cars may be brought in from the street rather than from the rear of the building.

Private and general offices have been provided. The former may also be used as a room for closing prospects.

You mention that you will carry accessories, but do not state that you will have an accessory store. We have provided one, however, because it is just as important to have a store for the sale of accessories as for the sale of cars. Every other merchant in your town sells his goods by displaying them in a store. If he finds it good policy, you certainly should.

The accessory stockroom is placed directly back of the store and may also be used as a repair parts stockroom, as it is convenient to the shop, which is located in the old building.

It seems a pity not to use the corner location for your showroom and accessory store, as it is much more advisable than an inside one. Your street frontage must be considered as valuable advertis-



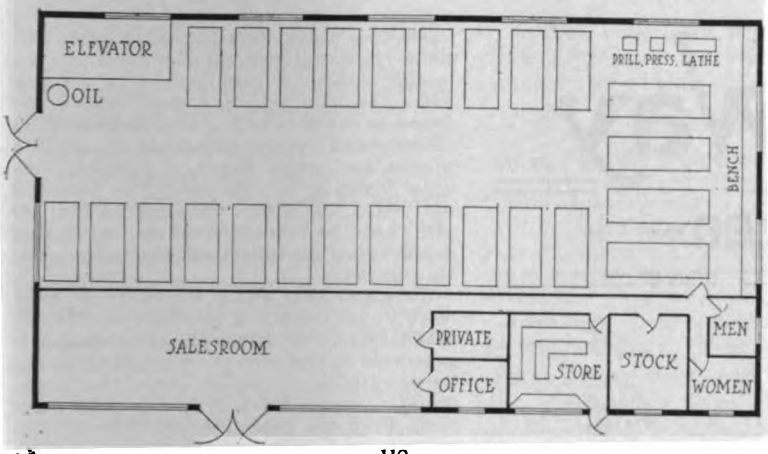


Fig. 1—Three-story building with two showrooms and a shop

Digitized by Google

ing space and you should use as much of it as possible.

Fig. 2—Peculiar layout of building with large frontage

Therefore, the fact that you are making no use whatever of the frontage on the side street for the

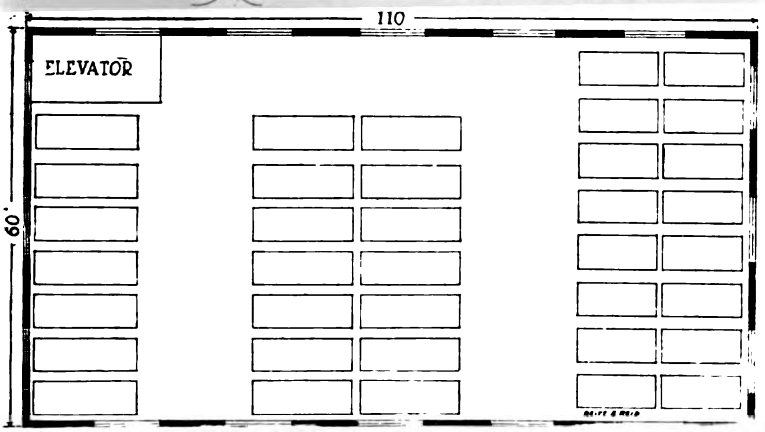

Fig. 3 — Crosswise arrangement of cars for basement

display of your wares is a waste. Unless the cost is prohibitive, we should strongly advise the use of the corner building for showroom and accessory store, as shown

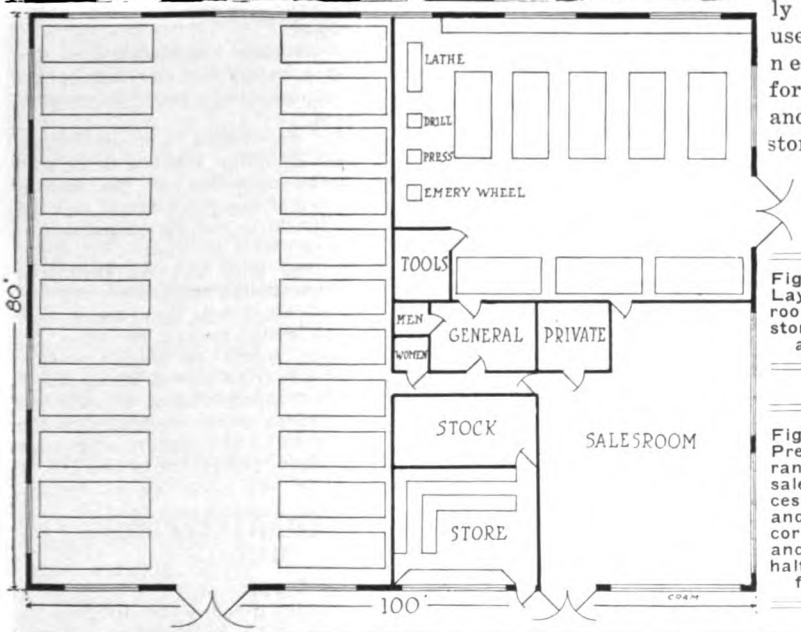

Fig. 4—Right—Layout of salesroom, accessory store and shop at the rear

Fig. 5 — Left — Preferable arrangement with salesroom, accessory store and shop in the corner building, and the other half exclusively for storage

in Fig. 2. The repairshop is also placed in this part of the building and the new addition is used entirely for the storage of cars. This is a much more attractive layout.

A separate stockroom is shown in this plan for carrying tools and repair parts.

NARROW SHOWROOM ON LARGE FRONTAGE

Editor Motor World:

Will you kindly give us plans for a modern garage building with arrangements for utilizing space to best advantage, the size of the building to be 60 x 110 ft., facing 110 ft. on one of the principal streets of the city? This frontage will be of plate glass the entire length. We could then arrange for entrance to garage from the other street, which runs through to an alley; that is, the front will face 110 ft. on the main street and one end on a cross-street and one end on an alley.

It is intended to use 20 x 110 ft. for showroom, accessory department and office. There will be a basement to the building, with washrack and storage room for cars and supplies. The building is to be modern and convenient for tourists and to contain a repairshop with some modern machinery.—A Subscriber.

Your plot is so shallow (60 ft.) that we should advise you to select another

Do It This Way

···QUERIES ANSWERED···

CHAMOIS GASOLINE STRAINERS USUALLY SAFE

Editor Motor World:

What is your opinion in regard to the inclosed article taken from a Mobile, Ala., paper? I have been straining the gasoline I used through a chamois for several years, and would like to know if it really is dangerous. Perhaps others of your readers would like to read what you think about it, too.—Harry K. Onken, John Onken & Brothers, Chapin, Ill.

The following article, which was published in a recent issue of the Timken Magazine, was the subject of considerable comment among engineers of many of the largest automobile factories in this country. So widespread did the discussion become that the New York police department made tests to ascertain whether an explosion could be caused in the manner described. The tests proved conclusively that the article was correct. The article follows:

"Garagemen, Beware! Motorists, Attention—There is death in the chamois strainer. Whenever you filter gasoline through chamois you are playing hide and seek with one of the deadliest combinations known to man—electricity and gasoline. . . .

"Do not put gasoline through chamois skin. But, if you will insist on taking chances, be sure that you have a 'ground' on it by seeing that the funnel touches the opening of the tank. Be doubly sure that you take this precaution."

The consensus of opinion seems to be that straining gasoline through chamois under ordinary circumstances will not cause a fire, and this is borne out by the fact that in the years you have been handling gasoline you have never had an accident. This question has been thoroughly investigated by the Nordyke & Marmon and Moline automobile companies. The Nordyke & Marmon Co. says:

Eminent authorities seem to agree that there is nothing whatever in the report that passing gasoline through a chamois generates an electrical charge.

In this connection the report from Arthur L. Foley, head professor of physics at Indiana University, is of interest. Professor Foley writes as follows in answer to the Nordyke & Marmon Co.'s inquiry:

No Current from Chamois

"Pouring gasoline through a funnel with chamois strainer does not of itself produce a charge, and it makes no difference whether the funnel is supported by a person or by the gas tank. The article is in error in saying that the funnel is grounded when in the tank and insulated when in the hand. If there is insulation in either case it is more likely when the funnel is in the tank, as the car stands on rubber while the man usually does not.

"As a matter of fact, there would be very rare cases indeed when both were not grounded for potentials sufficient to produce a spark. But on a day when the atmosphere is very dry, as it is usually on a cold, clear day, a man may become charged by scuffling about on a clean, dry floor, or his clothing may become electrified by friction, as noticed sometimes when combing the hair.

"Under such circumstances pouring gasoline through a funnel, whether or not there is any chamois in it, gives rise to induced charges that are quite too complicated to undertake to explain in a few words. Such charges might fire the gas. Indeed, the original friction charge might do so under certain circumstances."

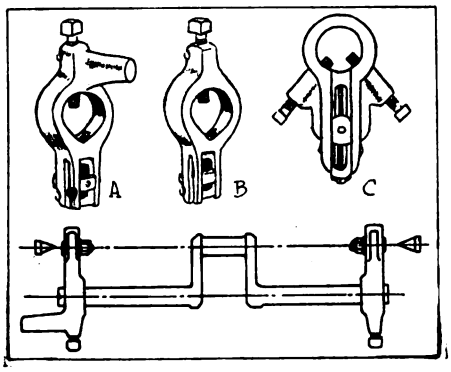

Fig. 1—Dogs for centering crankspring in lathe

In January the Moline Automobile Co., East Moline, Ill., manufacturer of the Moline Knight engines and automobiles, had two fires caused by the ignition of gasoline when being drawn from one of their filling stations. The Moline Automobile Co.'s supply tank is located at some distance from filling stations. The gasoline is pumped through a 1½-in. iron pipe by means of an electrically-operated pump controlled at each of the filling stations. The two fires both occurred at the service department's station and within about a week of each other. This filling station is at the end of a long pipe line which leads through a duct beside an asbestos-covered steam pipe. It had been noticed that the gasoline, especially that first to be drawn in the morning, was very warm and, therefore, gasified readily. In both of these fires it was noted that the gasoline ignited when the can had about 4 gal. of gasoline in it and before the control switch for pump was pulled.

Switch Spark Eliminated

As the control switch for the electric motor was situated near the drawing faucet, it was first assumed that possibly the explosion and fire occurred by the fumes catching from a spark due to bad switch connection. Therefore, immediate steps were taken to remove the gasoline pipe from the steam duct so that the gasoline would not be heated.

In about another week there was a similar fire although not so much damage, due to the presence of mind of the operator to shut off the gasoline. This time the explosion occurred after about 3½ gal. of gasoline was drawn. The man drawing the gasoline distinctly heard the snap and the explosion.

Investigation showed that the former theory of the fire was in error. It is believed that the fire was caused by static electricity jumping from the funnel of the can to the faucet. A 5-gal. can with a funnel but no chamois skin was used. The funnel rested in the neck of can and came in direct contact with the can. The can rested on a wooden box, which formed a complete electrical insulator for the can. The height of the funnel was about the same as the faucet. Thus by movement of the can the air gap between the funnel and the faucet could be changed.

We found that static electricity is generated by the flowing of gasoline into the can. When there was sufficient static electricity generated in the surface of the can, making its potential great enough above that of the faucet, it would break down the air gap and jump from the funnel to the faucet. This would set fire to the gasoline.

Experiments showed that a spark could be drawn from the can after it was partly filled with gasoline, providing it was left undisturbed on the wooden box. This spark could either be drawn by a wire direct connected to the piping system and therefore grounded, or even through a man's hand who was standing on the floor as he approached with his hand the surface of the can to about the distance of ¾ in. This spark is similar to one secured under certain atmospheric conditions by scuffling along a heavy carpet and touching some other person or conducting article.

Hang Can on Faucet

The reason for not having trouble at the other filling station is thought to be due to the fact that the cans are either hung on the faucet by the handle or rest on some metal-grounded support.

The Moline company has installed at this filling station a metal rest instead of the wooden box. This metal is perfectly grounded to all piping.

The Moline Automobile Co., therefore, wishes to warn all filling stations to be sure that the charge collecting on the can is properly disposed of and not allowed to build up. The can should be resting on some conducting metal properly grounded. If metal pipe is used, then pipe and can should be metallically connected in some way.

It is also to be noted that under this theory the can while resting on some insulating material might be filled and carried by someone wearing gloves, which would keep the can still insulated and would allow the can to discharge static electricity to car tank or other metal and possibly, when this spark is discharged, to set fire to the can of gasoline.

WELDING CHARACTERISTICS OF METAL

Editor Motor World:

Will you kindly discuss the differences in method of welding of the various common metals?—E. M. J., Pawtucket, R. I.

The characteristics of cast-iron, wrought-iron, steel, aluminum, copper, brass and bronze and fully discussed in "Welding," by Richard N. Hart. He says:

"Cast-iron welds readily. But a casting is very liable to crack either when heating or cooling. Careful preheating is necessary, and after the weld is made the piece should be covered with asbestos paper and slowly allowed to cool out of reach of drafts. The melt bar is high-silicon cast-iron, low in sulphur and phosphorus. It is necessary to use a flux or scaling powder made of salt, borax, or similar chemical, to take up the iron oxid formed in the flame and

Digitized by Google

allow the metal to run freely. Cast-iron runs freely at the weld, and for that reason vertical welding is difficult and underneath welding impossible.

"Wrought-iron does not melt to a fluid, but becomes pasty, and the metal at the weld may have to be assisted by the melt bar. If the wrought-iron is not low in silicon it becomes cast-iron when it cools, and even pure iron which has been melted loses its structure. This can be regained to some extent by hammering as it cools.

"Steel, as its carbon content increases, becomes increasingly hard to weld, losing its essential properties because its carbon has changed form. High carbon steel welds can only be restored to their original properties by after-treatment annealing. There are many tricks in the welding and heat-treatment of special steels, and the welding of steel to iron, steel to copper, and welding tool steel, which need not be taken up here.

"Aluminum is sensitive to oxygen to a fault, and so it is a good thing to have a slight excess of acetylene in the flame. The work to be welded is preheated, after the fracture or edges to be welded are made clean and raw. The metal does not run readily, but becomes soft and may be joined by the puddling action of an iron stirring rod. The great heat conductivity of this metal, its tendency to oxidize quickly, and its low melting point, make it a difficult metal to weld. Nevertheless, it is welded successfully by good operators. The difference in toughness and ductility between cast and rolled aluminum is very great; some of this toughness can be restored by hammering the weld when hot. But the operator must bear in mind that this metal when reasonable pure is hot-short between 600 deg. and 655 deg. C., and may crumble or fracture under the hammer within this range.

"Brass is welded with a slightly larger flame than for iron, and the cone of the flame is kept away from the work. Borax is used as a flux to prevent the metal from burning after it melts. Like wrought-iron, rolled brass becomes cast metal when welded and is not so tough. Bronze calls for similar treatment.

"Copper requires a large, low-temperature flame, and its toughness can be restored by hammering after it is welded."

DOGS FOR CRANKPIN TURNING

Editor Motor World:

Will you kindly tell us how we may turn the crankpin bearings in a lathe? What sort of a fixture is the best to use? —Reader.

Fig. 1 shows a combination lathe dog for this purpose. The model shown at C is for heavy work, such as crankshafts, and is adjustable from 2 to 8 in. It is provided with a screw feed center and gage. Models A and B are similar in principle but are for lighter service.

The work is clamped in two of the dogs and then the centers are adjusted until the crankpin is centered.

TOTAL REGISTRATION IS 2,423,788

Editor Motor World:

Can you advise us as to whether there are any published statistics showing the total registration of automobiles by States?—Hood Tire Co., Inc., Watertown, Mass.

Car and truck registrations as of Jan. 1, 1916, are:

New York...	212,844	Virginia	21,357
Illinois	182,290	N. Carolina..	21,160
Ohio	179,767	Kentucky ...	19,500
California ..	163,801	Maine	18,600
Pennsylvania	150,729	Rhode Island	16,362
Iowa	139,808	Montana ...	14,520
Michigan ...	114,845	S. Carolina..	14,500
Indiana	96,915	Alabama	13,798
Minnesota ..	91,829	W. Virginia.	13,256
Texas	90,000	Florida	13,123
Mass.	89,133	Mississippi .	11,500

Georgia	24,059	Total 2,423,788	
Oregon	23,758		

CARBURETER TESTING

In testing a carbureter to see whether the float valve leaks or not the method depends on whether it is used with pressure or gravity feed. If the latter, it is merely necessary to attach the carbureter to a pipe running to a small tank full of fuel a foot or so above it. This apparatus will not answer, however, when pressure feed is employed, because the valve might appear tight, yet when subjected to pressure would leak. Consequently it is necessary to apply pressure equal to that found in actual operation. The testing apparatus may consist of a small tank or can supplied with a filler opening, a pressure gage, and a hand air pump to bring the pressure up to that desired.

PAINT SPRAYER

An ordinary gas blow torch may be used as a paint sprayer, the paint taking the place of the gas and being drawn up through the gas tube as shown. It is particularly suitable for putting on the lead coat.—Autocar Sales and Service Co., Philadelphia.

Hot-Air Stove

An exhaust pipe stove for the carbureter may be made out of a piece of an old stove pipe by cutting out a disk and bending it into an oval-shaped cone which is strapped onto the exhaust pipe. The small end is drawn out on the horn of the anvil so that the flexible pipe may be attached.—George W. Lownsley, Palmyra, Mo.

SCIENTIFIC CONSTRUCTION

(*Continued from page* 23)

location, unless this one may be obtained at a comparatively low price or is desirable for some other reason which we cannot appreciate from this distance. A smaller frontage and a greater depth would do you just about as well, and, other things being equal, should cost less. However, if this lot is worth no more than one of similar area with smaller frontage and greater depth, then is it probably a good buy.

Fig. 1 shows the first-floor layout. A 20-ft. strip along the front of the building is used for showroom, accessory store, stockroom, offices, etc., and the remainder of the area is for garage and repairshop. The garage is only 40 ft. wide, which is narrow except for the very smallest cars, yet it is impossible to make it any wider without encroaching too greatly upon the strip across the front of the building.

One basement plan is shown in Fig. 2. It accommodates thirty-seven cars and has the elevator in the far corner from the side street. Fig. 3, on the other hand, will house from forty-one to forty-four cars; in this plan the elevator must be put on the front side, which probably would be an advantage anyhow, as it is preferable to have the entrance from the main street. If the elevator were placed in this position each one of the rooms in the strip would be made a little narrower. A foot or so may be taken off of the showroom, the offices, the accessory store, the stockroom, etc.

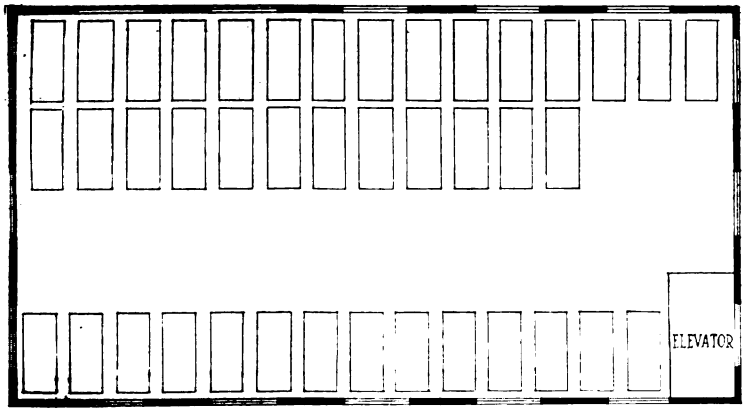

Fig. 2—More cars can be stored with this layout than in the plan shown in Fig. 3, page 23

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 750) WINDSHIELD REPAIR

Upper halves of windshields do not always stay put, especially when worn; there is a tendency for the upper section to fall over. In the construction shown the position of this part is determined by a pair of disks at each end. These are held in contact by stiff coil springs, and additional friction is obtained by having a series of raised points on one disk and cupped ones registering with these on the other. Sometimes the springs may be adjusted; but if not, or if this is not sufficient, a leather washer placed as shown will do the trick.—S. P. M.

(No. 751) EMERGENCY INSULATION

Tire tape is not the only means of temporarily repairing wires with broken-down insulation. It is surely the most convenient; but if none is at hand, cord may be tightly bound around the defective section as shown, or even strips of paper may be used. In the latter case there is danger of current leakage until the mucilage dries; for this reason, and because of its insulating properties, tire cement is preferable.—H. F. B.

(No. 752) RAIN-VISION WINDSHIELD

Rain-vision windshields are common on closed cars but unusual on open ones. It is a simple matter, however, to add this feature. The upper section of a windshield is mounted on the front of the top, two specially made brackets being used to hold it in place. It catches the rain and the regular windshield protects the driver from the wind.—W. B. Snyder.

(No. 753) TAP WRENCH

The tapping of small holes is facilitated by the use of a tap wrench, which consists of a hexagonal nut mounted on a short rod and having square holes in each of the faces. Each of these holes is made to fit a different sized tap, there being six holes.

(No. 754) EMERGENCY VALVE REMOVER

Myriads of valve removers have been designed, some simple and some complicated, but the simplest of all is merely an S wrench. The jaws at one end form the yoke which slips around the end of the valve stem. The wrench is supported by a stout wire which is attached to any convenient point on the cylinder.

(No. 755) NUT AND BOLT HOLDER

Considerable time may be saved when nuts and bolts of a given size and from a certain part of the car may be kept together. This is readily done by construction of the holder shown. In the center are several stiff pieces of wire, over each one of which washers and nuts of any particular size may be dropped. Thus all the nuts and washers holding the two halves of the crankcase, for example, would be carried on one of these wires. Bolts are dropped into the slots around the sides of the holder. The four slots are all different in width, so that bolts of various sizes may be accommodated. This is better than a series of compartments in a box, because the different nuts are always in sight.

(No. 756) ADJUSTABLE LIGHT

Instead of having the drop light attached to a flexible cord, it will often be found of greater advantage to use the universal bracket shown. Particularly will this be true when it is necessary to illuminate parts that cannot easily be reached by the former. The universal bracket may be made out of bar stock or pipe, and consists of an upright standard from which projects a long arm which has a joint which allows it to be moved in any direction. At the end of this arm there is a similar short one attached by a similar joint.

(No. 757) STUD REMOVER

Studs, especially those difficult to move, may be taken out with the aid of a split nut and a C clamp. The nut is screwed over the stud, and then the clamp is screwed down on it until the nut grips the stud firmly.

(No. 758) SIMPLE MOTOR STAND

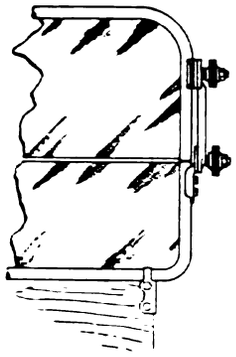
A substantial motor stand that is easily adjustable can be made of 2 x 4s, as shown. The base should be made of a single heavy block of wood, if possible, in order to give the necessary rigidity. The adjustable feature is the bar which spans the two side members. This can be forged of ½-in. round iron and will be plenty strong enough for almost any size motor.—Overland Garage, Harrisburg, Pa.

(No. 759) WRENCH HANDLES

Wrench handles in odd sizes and shapes are often required in order to do the work in minimum time. Sometimes a very short handle is necessary to clear a closely projecting part, sometimes a long one for a nut which must be attacked from a distance because of cramped quarters; then there are various types with curved handles to meet the peculiarities of design of certain cars. Sometimes a wrench with thin jaws is required, and again, one with thick jaws. All these types may be combined in one by having several jaws and handles, the two being threaded into each other.

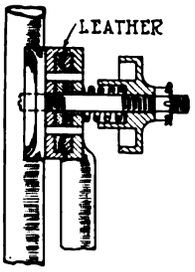
(No. 760) ELEVATOR GATE

A satisfactory elevator gate can be made of two planks about ¾ in. thick and of the proper length. These are bolted to shorter lengths at each end by means of a single bolt through the center as shown. A counterweight is then attached, with the rope running through a pulley hung to the ceiling, and an additional rope provided for raising the gate. The gate folds into small space when raised.—Crispen Motor Car Co., Harrisburg, Pa.

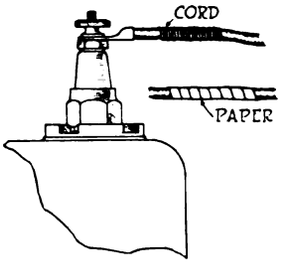


You Have a Good Idea

WHY not tell us about it so that we can print it on this page where it will do 20,000 *other garagemen and repairmen some good?*



WE are anxious to have you send in your good ideas. The Motor World Roadmen are now on the road—one in Boston and one in Detroit—collecting the best ideas for this page. These ideas will appear very soon.



IN the meantime why not do your share. A postcard will do and you need not mind about the drawing—just a rough pencil sketch.—Editor.

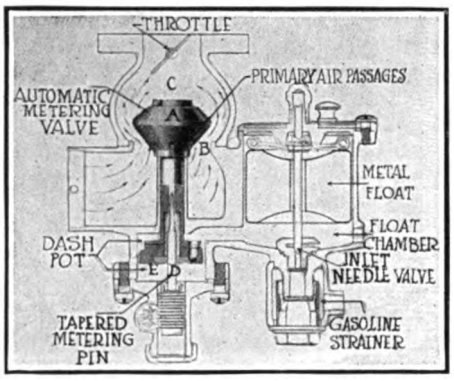
Accessories & Supplies



STEWART CARBURETER FOR FORDS

Detroit Lubricator Co., Detroit. PRICE, $15.

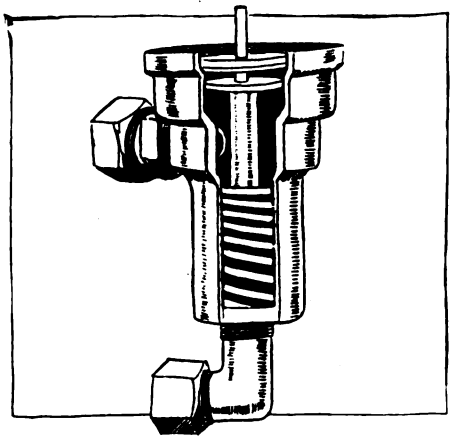
This instrument works on the same metering-pin principle as the other Stewart instruments, but is designed for the needs of the Ford engine. Besides the carbureter itself, a manifold, hot-air connections, dash adjustment and all fittings are included in the outfit as retailed at $15.

The principle of the Stewart carbureter may best be understood from the sectional view. The metering valve A rests upon the seat B when the engine is not running, but as the engine begins to rotate, the suction raises the valve from the seat, drawing in air around it from the air intakes. This suction also draws gasoline up within the valve stem, this mixing with the incoming air in the chamber C. The Stewart has but one adjustment, that being for the amount of gasoline. The air is a fixed amount, it being simply necessary to regulate the amount of gasoline admitted. This is controlled by the tapered metering pin D, and the adjustment is made when the engine is running at idling speed. When the right proportion has been determined at slow speed, it is evident that as the speed of the engine increases the metering valve A raises higher from its seat and away from the metering pin D. This allows a greater supply of both gasoline and air to be admitted in the right proportions as predetermined when designing the instrument.

In the Ford type of Stewart carbureter the float bowl is furnished in either one or two positions. Some Fords are specially equipped with a high-tension magneto, in which case it will be necessary to have the bowl at right angles to the air port or between the carbureter body and the hood base of the car. Where there is no high-tension magneto installation the float bowl is placed at 180 deg. to the air port, or forward of the carbureter body.

Stewart carbureter

MECHANICAL STARTER FOR FORDS



The Peoria Specialty Co., Peoria, Ill.

A chain and drum starter for Fords. The device is operated by a pedal placed just at the left of the low and high gear pedal on the footboard. The device is attached to the crankshaft in front of the radiator.

DUPLEX AIR VALVE

Duplex Vitalizer Corp., Elmira, N. Y. PRICE, $5.

A plug, screwed into the intake manifold, to supply additional air. The casting houses the valve opening into the manifold, the valve being operated by a piston working in a cylinder, which is also connected to the manifold. At low speeds the valve is held closed by vacuum, but at higher speeds the reduced vacuum allows the valve to open under the action of a spring and admit additional air.

Duplex air valve

BLAKE INSULATED STAPLES

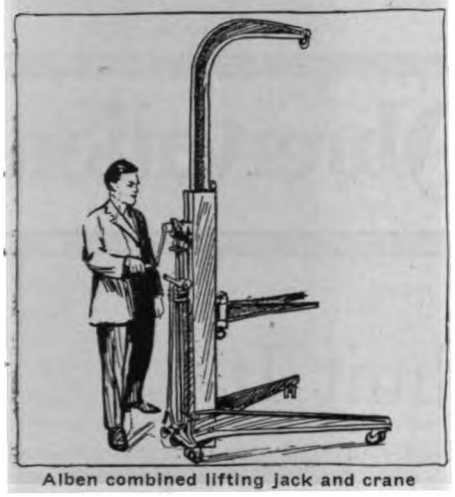
Blake Signal & Mfg. Co., 251 Causeway Street, Boston. PRICES: For twisted pair and single wire, in hard wood, use No. 1; for general use, No. 3; lots of 1000 to 4000, $1.45 per 1000. Single packages of 100, 15 cents per 100, plus 3 cents postage. For twisted wire and extra heavy pairs, use No. 5 for hard wood and No. 6 for general use; in lots of 1000-4000, $1.60 per 1000. Single packages of 100 staples, 17 cents per 100; postage per package, 3 cents additional.

These staples are designed for use on all low voltage circuits. They consist of a standard square shouldered staple, having good driving qualities, bearing a fiber insulation. This insulation is folded to give two layers of insulation under the head of the staple and a large bearing area on the wire.

EFFECTO AUTO FINISHES

Pratt & Lambert, Inc., New York, N. Y., Buffalo, and Chicago. Effecto enamel: Red, quarts, $1.60; pints, 85 cents; half-pints, 45 cents. Blue, gray, dull gray, green, yellow, quarts, $1.35; pints, 70 cents; half-pints, 40 cents. Black, quarts, $1.10; pints, 60 cents; half-pints, 30 cents. Top and seat dressing, quarts, $1.25; pints, 65 cents, half-pints, 35 cents. Varnish, quarts, $1.40; pints, 75 cents; half-pints, 40 cents.

This is an enamel designed especially for bodies. Only one coat is required and the composition is such that it will dry evenly and smoothly, according to the maker, no matter how carelessly it is applied. It dries quickly, so that dust does not have much chance to settle. It is said to be durable, will not crack, chip off nor become dull to weather or through repeated washing. Effecto Auto Finishing Varnish is for restoring the original luster of the car and is of use when the original finish is shabby but not badly chipped or marred. Effecto Auto Top and Seat Dressing is designed to restore mohair and leather automobile tops, seats, side curtains, leather work, etc. It is a rich black and dries in about an hour. There is no danger that clothes will stick to the seats, because it does not soften or become sticky, according to the manufacturer.



BLAKE TUBE FLUX

Blake Signal & Mfg. Co., 251 Causeway Street, Boston. PRICES: Single tube, 20 cents; if by mail, postage 5 cents. DEALERS: Ten tubes, 20 per cent; 25 tubes, 20-10 per cent; 50 tubes, 20-10-10 per cent; 100 tubes, 20-10-10-10 per cent.

This is a soldering flux contained in a metal holder, and is not a substitute for solder. The spout in the tube is aluminum and allows the paste to be applied directly to the joint at the same time as the heat without soldering up the vent. This container allows the flux to be applied exactly where it is needed.

Alben combined lifting jack and crane

ALBEN JACK AND CRANE

Alben Co., Milwaukee. PRICE, $85.

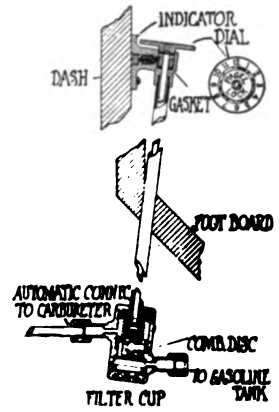
A portable crane with a bifurcated base and ball-bearing castor wheels. The boom or arm to which the chain is attached moves upward bodily, the upright part sliding in a hollow column and being actuated by a hand-crank, through gearing. The gearing gives two speeds, one for heavy loads and the other for light loads and quick lowering. Another feature is a jack arrangement, consisting of a pair of arms hinged to the sliding upright, so that they can be inserted under the load and the load raised by turning the crank. The arms can be swung to any angle and can be moved back out of the way when not needed. Minimum boom height, 6 ft. 4 in.; maximum, 9 ft. 3 in.; length of jack arms, 26 in.; weight of complete machine, 300 lb.

ICY-HOT MOTOR RESTAURANT

Icy-Hot Bottle Co., Cincinnati.

A motor restaurant at a more reasonable price than the wicker baskets used by many owners. The new models, made for parties of four or six, have cases of basswood, a material that shows very little tendency to warp. The box is 12 in. high, 15½ in. wide and 9½ in. deep. The color of the case is black, with a finish like patent leather, and impervious to water. The lining is in Bakst style.

It contains plates, knives, forks, napkins, cups, spoons and jelly jar and a large lunch box. The lower half has three divisions, two for vacuum bottles or jars and the other for fruit, crackers, cake, etc. There is a division above for an Icy-Hot jar or bottle, so that three vacuum containers can be carried.

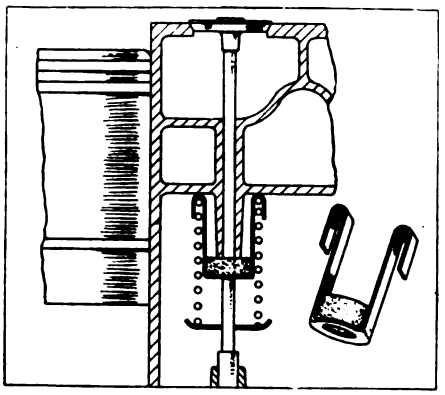


APCO VALVE PACKING

Auto Parts Co., Providence, R. I. PRICE, 50 cents. Felt washers, 12 cents per dozen.

This is a simple device for Fords, designed to prevent leakage through worn valve stem guides. It consists of a thick felt washer which goes around the stem and is pressed closely to the guide by a fitting which is attached to the top of the valve spring. New felt washers should be put in every time the valves are ground.

Icy-Hot motor restaurant



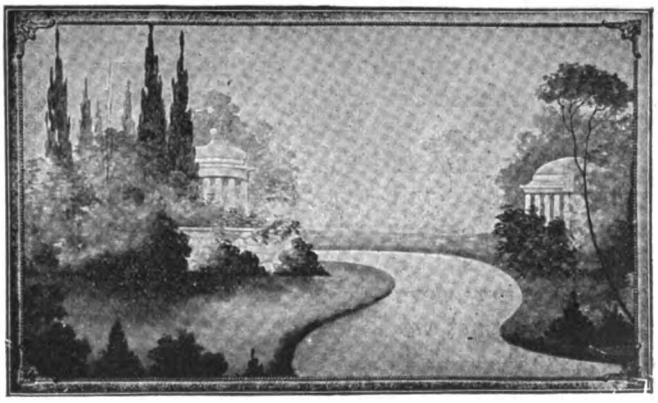
Combination gasoline lock

COMBINATION GASOLINE LOCK

Turner Brass Works, Sycamore, Ill.

The device is operated from the dash or cowl board and consists of three disks revolving in a chamber and engage with each other in the same manner as the disks of a combination lock. Each disk is pierced by a hole. When the lock is open the holes of all three disks are in alignment and the gasoline flows through unobstructed. The disks are controlled by the numbered dials, but a single turn on the dial throws these holes in the disk out of alignment and positively locks the flow of gasoline. A great variety of numbers may be used, making combinations of either two or three figures, and the owner can set his lock to any desired combination in case of discharging a chauffeur. The combination lock may be opened in the dark by feeling the notches. Inside the device is a strainer and filter cup which prevents dirt from clogging the needle valve seat. The cup also serves in removing water from the gasoline and the impure grease may be periodically removed by unscrewing the cap at the bottom. The price is $3.50 for cars with cowl boards and $3 for straight dashboard equipment.

Apco valve guide packing for Fords



ROUND-RUF GARAGES

Butler Mfg. Co., Kansas City, Mo. PRICE, $71 and up.

Sides and top are one piece in this sheet-metal garage, which is constructed of U-shaped pieces of sheet metal. The peculiar shape avoids waste space and gives maximum room at minimum construction cost. The length of the garage is variable, so that a larger car may be accommodated at any time by adding additional sections.

PAINTINGS FOR DISPLAY

Scenic paintings which may be used in arranging show window displays are made by Burt L. Daily, Dayton, Ohio. A large stock varying in both subjects and sizes are carried on hand, so that any order may be filled immediately. Work is also done on order. Scenic effects are sold by the square foot, the price varying from 15 to 20 cents, according to the size. Paintings under 15 sq. ft. are sold for $2 and up.

Scenic painting which may be used in car and accessory window displays

Editorial Observation

—And Now They Admit It

"MUCH ado about nothing" is the best way to characterize the attack of editorialitis which has caused a certain hardware trade paper to waste a half dozen pages of its space in an attack upon the National Association of Automobile Accessory Jobbers.

This paper devoted two pages to its verbal effusions a couple of weeks ago in trying to make out that motor car accessories are hardware and that therefore all hardware jobbers are accessory jobbers. When MOTOR WORLD replied to this statement which was filled with insinuations of varied nature, the hardware paper devoted four pages, last week, to saying the same thing it said before in two pages and which can be said in a few words, to wit:

"Motor car accessories are hardware. Therefore, the accessory jobbers ought to recognize ALL the hardware jobbers as accessory jobbers. Because not ALL are recognized the hardware paper is peeved, and in an effort to make itself solid with its readers it launches its attack."

But when it continues the attack and attempts to answer MOTOR WORLD it has, unknowingly perhaps, admitted the falsehood of its position, for instead of facts to back up its contentions it has filled its four pages with alleged comedy which seems well classified as what Chanceller James R. Day has termed the "frothings of an unsound mind." Having nothing to say, the hardware paper says nothing—and wastes four pages in saying it.

Vituperation, ridicule, satire—the ultimate resort of a defeated debator—avail nothing. Any one can call names but verdicts are won by facts, and the facts are, as MOTOR WORLD previously stated, that *when a hardware jobber conducts a legitimate wholesale business in motor car accessories he becomes an accessory jobber as well. If he doesn't, he ISN'T an accessory jobber—and that's the whole answer.*

From the start MOTOR WORLD has maintained that the fuss was trivial and the hardware paper's contention almost silly. The hardware paper in its four pages of vituperation and slap-stick burlesque has helped us prove it.

Paper Promises

FORTUNATELY—for himself—it appears that the embryo motor car dealer, the garageman, perhaps, who has never handled cars but who would like to, is becoming more cautious in his dealings with companies which promise great things on paper and then are unable, or unwilling, to live up to those promises.

Occasionally complaints are received that such and such a company has accepted deposits and promised to deliver cars and has failed to do so. But the reports are becoming scarcer though only within the past week still another has come in.

The case is a typical one. The garageman was urged to contract for several cars and required to pay a deposit on them. The cars looked good on paper, the price was right and if the cars had ever been produced there would have been no difficulty in selling them.

But the cars never put in an appearance. The company has not even a factory. It intended to put up a factory and build these cars with the deposits received from dealers and garagemen. Its intentions may have been good, probably at one time were good. But by the time the company was ready to put up its beautiful factory and turn out its beautiful cars, all the money so obligingly supplied by dealers and garagemen had been exhausted in administration expenses, in salaries to the officers, in commissions to those who took orders from the dealers.

And what redress has the garageman? He may sue for his deposit but even if he wins the suit what chance has he to collect for the paper company has no assets?

The moral, of course, is plain. Deal only with factories which already are successful, or with men who are known by their reputation to be honest and to have the capital to make their dreams come true. Beware of stock-jobbing schemes which have a high-sounding ring and promise immense profits. Better invest your money in first class mortgages and be certain of a small profit.

GARAGE AND SUPPLY HOUSE STATION CO-OPERATION

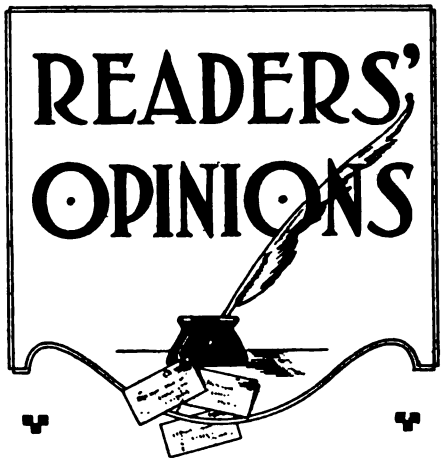
Editor Motor World:

The Jacksonville Garage and Accessory Dealers' organization "has grown this day" to broader and more intelligent business understanding. A deeper sympathy with fellow man and fellow competitor has been greatly emphasized since the organization came into practical existence, and much good has been accomplished.

The garages and repairshops have standardized on uniform prices for car storage and mechanical labor, and are working in harmony with the tire, accessory and filling station dealers. While there is no combination of fixed prices, all agree that a legitimate and just profit is necessary for the permanence and prosperity of their business success and a proficient protection to the automobile public.

Maintaining Tire Prices

Tire dealers, as a rule, are maintaining strictly published list prices, with an exception to the wholesale trade and to companies operating five or more motor-propelled vehicles, when a certain per cent off list is allowed.



Gasoline, for which there is such a great demand, is being sold by the dealers at a margin of 2 cents per gallon above the wholesale tank wagon market prices. Lubricating oil for automobile lubrication is supplied by the dealer at a price of 50 cents to 60 cents per gallon. The majority of public garages, accessory houses and filling stations are handling standardized brands, realizing that it is easier to sell advertised products of proven quality than non-advertised goods, appreciating also the fact that publicity and good advertising reduce selling cost to the lowest known minimum and increase the volume of sales.

No Cut-Throat Competition

The pioneer garage and supply house men can very well remember—and the time has not been long—when there seemed to be little prosperity for those engaged in this line of trade. Business was, in a way, all shot to pieces. Men engaged in the merchandising of automobile accessories, oils, gasoline, etc., groaned under the ordeal of cut-throat competition. In time some of the dealers began to realize that no real advancement could be achieved until abandonment of competitive tactics and genuine co-operation was promoted, which resulted in one of the best good fellowship organizations in the Southern States.

Co-operation, mutual interest and business understanding is their great slogan. —R. B. Dodson.

Jacksonville, Fla., July 6.

"Evidence of Progress"

Editor Motor World:

I have read with a great deal of interest your splendid editorial in the June 28 issue entitled "Evidence of Progress."

First of all, I wish to compliment you on the excellence of the article as an argument and an answer to the short-sighted, unfair and narrow-minded tirade indulged in by the editor of The Hardware Age. You have answered him in a most convincing manner.

I also wish to congratulate you on this additional evidence of the sincere interest taken by your publication in the improvement and upbuilding of the automobile accessory industry.

Motor World deserves the enthusiastic support of every jobber and every dealer in this great industry.—The H. F. Brownell Co.; H. F. Brownell, President.

More Evidence

Editor Motor World:

We have read with a great deal of interest your fine editorial in answer to the unjust howl set up by a crowd of soreheads.

We are referring to your editorial "Evidence of Progress."

We have talked to several other jobbers of automobile supplies, and they have all commented on your excellent answer to the lot of slush printed in the Hardware Age.—Carolinas Auto Supply House; Joseph G. Fitzsimons, President.

Ford Holds Sales Convention

DETROIT, July 8—The annual sales conference of the Ford Motor Co. has been in progress here this week, managers and assistant managers of the twenty-eight branches of the company in the United States and of the fifty-one sales and service branches throughout the country being in attendance. These men are responsible to a large extent for the marketing of half a million Ford cars for the present fiscal year which ends July 31, and on them will depend a great deal of the success of the contemplated marketing of 1,000,000 Fords for the next fiscal year. Somewhat over 500,000 cars will have been built when the present year ends, probbably being in the neighborhood of 560,000.

Such sessions as are being held are a semi-annual occurrence at the Ford factory, and at them are discussed the various problems that have come up in the various territories, means of more intensive selling, etc. Although no information with regard to the price nor in respect to the actual changes that will be made in the Ford car has been given out, it is very likely that the branch men have been told just what to expect in the way of price and what changes have been decided upon.

New Overland Coast Branches

TOLEDO, July 10—In line with its sales-expansion policy, the Willys-Overland Co. has taken steps to facilitate distribution by the opening of new branches at Denver, Jacksonville and Omaha, in addition to increasing its facilities at Columbus, Ohio; Springfield, Mass., and in its home city of Toledo. Buildings have been acquired in the first three named cities, and remodeling and other expansion is being carried on in the latter three. At Toledo the Atwood Automobile Co., which was the dealer, has been purchased outright, to be hereafter conducted as a factory branch, and A. A. Atwood and C. T. Atwood, who conducted the local agency, have been taken into the Overland organization, the management of the Toledo branch being now under G. C. Morgan.

C. T. Dunkle has been put in charge of the Columbus branch, following the acquisition of the business of O. G. Roberts, former Overland distributer here, the conversion of this location into a service plant, acquisition of another site for salesroom, and the leasing of the plant formerly occupied by the Columbus Buggy Co. as a storage space. Calvin Eib will be in charge of the Denver branch, and J. R. Jamison is to operate the Omaha branch, having been the dealer there prior to the factory representation. G. H. Johnson, from the Toledo offices, goes to Jacksonville to manage that branch. M. T. White, former Stevens-Duryea official, takes charge of the newly erected branch at Springfield.

Fifth Avenue Bus Adopts Knight

NEW YORK, July 10—The Fifth Avenue Coach Co. will use the Moline-Knight engine in its new equipment exclusively. The company has been experimenting with various types of Knight motors, running over a period of years. All the new equipment will be Moline-Knight motored, and the company's plans are so laid out that production of this equipment was started this month. It now has a few of these machines running.

The RETAIL NEWS

EAST

The Metz Co., Boston, has moved its Boston branch to Cambridge.

The Imperial Auto Supply Co., Springfield, Mass., has just been opened by the big company that has branches at New York, Chicago, Minneapolis.

The Longley Motor Sales Co., Providence, R. I., has moved into its new home on Broad Street.

The Paige Motor Car Co., Boston, has appointed Walter B. Hennigan sales manager. He was formerly with the Winton there.

The Athol Centre Garage, Athol, Mass., is building an addition that will care for twenty more cars.

Frank Beals, Wilton, N. H., has opened a public garage.

E. H. Hunter, Rochester, N. H., has moved his garage business to a more central location.

The Cadillac Automobile Corp., 144 North Broad Street, Philadelphia, has leased the first floor of the Metropolitan Building, Broad and Wallace Streets, which has been fitted up as one of the largest central service stations in the State. The floor space is 30,000 sq. ft.

Gomery & Schwartz, Philadelphia Hudson distributers, have taken title to the building formerly occupied by them at Broad and Cherry Streets and will erect a modern building on the site.

The Economy Motor Truck Co., having offices at 202 Franklin Street and service station and showrooms at 59 North Moore Street, New York, has renewed its contract with the H. J. Koehler S. G. Co., Newark, N. J., for the New York and vicinity agency for Koehler trucks. Victor Neustadtl is president, H. V. Neustadtl is vice-president, and H. Wolff is secretary and sales manager. Wolff was associated with Republic Motor Truck sales prior to his present interests.

MIDDLE WEST

The Mills Auto Sales Co., Lansing, Mich., has opened a new garage, salesroom and service station in the building formerly occupied by the J. A. Carr & Sons Taxicab Co. at 414-416 North Washington Avenue.

Pope Brothers & Dixon, Jackson, Mich., whose salesroom and headquarters will be at the Orpheum Garage, 120 West Pearl Street, have secured the agency for the Marion-Handley car.

H. F. Dibbert, Coldwater, Mich., with headquarters at the Southern Michigan Garage, has taken the agency for the Auto Kamp Trailer for Coldwater and Branch County.

C. A. Triphagen, Lansing, Mich., has been appointed local Chalmers distributer.

The Service Garage, Alma, Mich., will open its doors to the public this week in the building formerly occupied by the Ford Garage on West Superior Street.

F. E. Hines, White Cloud, Mich., has opened a garage in the Rosenberg Building, where he will carry a complete line of Ford repair parts.

J. E. McCleary, Fowlerville, Mich., plans to open a garage in the Martin store building on the west side of Main street.

Claude Huff, Niles, Mich., has purchased the garage business of James Hatch and took possession July 1.

Roecker Brothers, Saginaw, Mich., proprietors of the C. L. Roeser Co., farm implement and supply dealers, have taken the distributing agency of the Dixie Flyer for Saginaw, Bay, Midland, Tuscola, Genesee, Shiawassee and Gratiot counties.

A. E. Morrison, San Francisco, former Pacific Coast representative of the Nordyke & Marmon Co. and more recently a district sales representative of the Maxwell Motor Co., has been appointed manager of the distributing branch of the Hupp Motor Car Co. at San Francisco.

Henry Darts' Sons Co., Rock Island, Ill., has broken ground for a new garage on First Avenue between Eighteenth and Nineteenth Streets. The structure will be one story, brick. A line of supplies will be carried.

E. M. Carrier and **A. C. Hershey**, Freeport, Ill., have purchased the Farmers Garage at 46 South Galena Avenue. In addition to carrying on a general repair business they will carry a complete line of accessories.

Riley & Lawrence, Climax, Mich., have opened a new garage, where Ford accessories will be carried.

The Buick Sales Co., Pontiac, Mich., has moved from 105 South Saginaw Street to 14 East Pike Street.

The Collier Auto Co., Rockford, Ill., has opened a sales agency in the Cook Building, corner of South Church and Chestnut Streets. The Studebaker car will be distributed over Winnebago and adjacent counties. A line of supplies and accessories will be carried.

The E. B. Collins Supply House, Danville, Ill., has opened at 214-216 West Main Street. This firm handles supplies and accessories exclusively, doing a retail and wholesale business.

The Corn Belt Auto Co., Bloomington, Ill., has been organized by F. A. Sweeting and A. G. Alverson and has opened a sales agency and supply station at 201 East Front Street. The firm will handle the Marmon and Scripps-Booth.

The Defiance Tire Co. has located three agencies in Columbus, Ohio. Fred A. Walz & Co., 325 South High Street; the Spain-Wilson Co., 1408 North High Street, and the Linden Garage & Machine Co., Linden Heights, are the agencies.

John A. Pfister has opened a tire store and repairshop at 131 East Gay Street, Columbus, Ohio.

J. G. Borland has been made manager of the Savage Tire Corp. of Ohio, located at 139 East Gay Street, State agent for Savage tires.

The Vim Motor Truck Sales Co., organized several weeks ago in Columbus, Ohio, has taken over the Vim agency and will continue in the same location with its service station, 105 South Front Street. Charles A. Smith is president and J. W. Baker treasurer and manager.

The I. J. Cooper Rubber Co. has moved its salesrooms to 142 East Gay Street. W. W. Johnston is manager of the company.

S. W. Schott & Co., central Ohio distributer for the Empire, has sold out the agency to the Campbell-Gilchrist Sales Co., located at 170 North Fourth Street. Schott retires to take the active management of a garage in Westerville, Ohio.

The Ohio-Saxon Motor Car Co., central Ohio distributer for the Saxon, has taken over the building at 239 North High Street, formerly occupied by the Green-Joyce Co. The concern moved in the new location July 1. M. L. Yuster is president.

The Wilke & Seiler Garage Co., Forestville, Wis., announces that Bert Seiler has disposed of his half interest to Henry Knopp, Kodan, Wis., and the firm will be known as the Wilke & Knopp Garage Co.

The Suburban Garage Co., 26 State Street, Wauwatosa, Wis., has completed plans for adding a full second story to its present garage, 55 x 130 ft., and a two-story shop addition, 20 x 40 ft., at the rear. An electric freight elevator will be installed. A. D. Warren is president and P. G. Warren is secretary and treasurer of the company.

Walter Miles, Melrose, Wis., has moved to Blair, Wis., and is opening a garage and repairshop.

Bartie Dagenhardt, Cuba City, Wis., has opened a garage and service station for Jeffery cars in the building formerly occupied by Loeffelholz Bros. on South Main Street. The repair department will be in charge of Hansen & Hansen, Dagenhardt devoting his attention to the selling end.

A. L. Steffen and **A. J. Lutz**, Sheboygan, Wis., have opened a supply and accessory store in the York Building, 720 New York Avenue.

The Dietz Sales Co., Oshkosh, Wis., has been organized by Edward R. Smith to distribute the Dietz automatic auxiliary carbureter in the State of Wisconsin. Offices have been opened in the Globe Printing Co. Building and agencies are being established throughout the territory.

Boehme & Bruggemann, Alma, Wis., who recently established a garage and repairshop, announce the dissolution of the firm, Bruggemann disposing of his half interest to Ferdinand Wilk, Alma. The business will henceforth be styled Boehme & Wilk. Bruggemann has returned to Minneapolis.

R. P. Colwell, Symco, Wis., has taken occupancy of his new garage and repairshop, erected at a cost of $4,500.

The Auto Service & Supply Co., Milwaukee, specializing in Vesta batteries, has moved to new and larger quarters at 207 Fourth Street. Carl Aken has taken a financial interest and is vice-president and secretary of the concern.

The Marion Sales Co., Milwaukee, representing the Marion car in Wisconsin, has granted the Stutz Motor Car Co. of Milwaukee the right to retail Marion cars in the City of Milwaukee and environs.

C. C. Bradt, Wausau, Wis., has established a manufacturers' agency which will deal in motor car accessories and supplies. Among the products Bradt will represent are Havoline oils, Spruce oil polish and acetylene lighting systems.

James Merrick, Menominee, Mich., has purchased the Motor & Electric Co., State Street and Stephenson Avenue, Menominee, and will continue the business as an exclusive repairshop for electric and gasoline cars and service station for Maxwell and Studebaker cars, Bosch magnetos and Willard batteries. Merrick was associated with the Menominee Motor Truck Co. for several years.

R. G. Everist, Alma, Wis., agent for the Reo, is building a garage and service station at Waumandee, near Alma.

James Ovans, Prentice, Wis., operating a garage and service station, has taken the district agency for the Chevrolet cars in Price County, Wis.

George W. Boller, Milwaukee, has opened his new garage at Brady Street and Warren Avenue, styled the Lakeside Garage. It is a fireproof structure with 10,000 sq. ft. of floor space.

Jamieson Bros. Co., Poynette, Wis., is building a large garage and service station on the site of the Norton machine shop. The workshop will be in charge of Palmer & Beacham, Poynette.

Chester Bradford and **John Nelson**, Racine, Wis., have opened a garage, specializing in repair and commercial machine shop work, at Burlington, Wis., in the former Wagner machine shop on Pine Street. The firm name is Nelson and Bradford.

Digitized by Google

John Steckart, Sr., DePere, Wis., is building a garage and repairshop on James Street, to be 40 x 60 ft.

The Knickerbocker Garage, Hartford, Wis., has taken occupancy of its new building, a three-story structure, of which two floors are used for garage purposes.

SOUTHWEST

Henry C. Potter has assumed the management of the Automobile Tire Co., 2032 Commerce Street, Dallas.

R. L. Cameron, veteran automobile dealer of Texas, has formed a connection with the H. A. Lozier Co., which gives him north and northwest Texas sales rights for the Lozier cars. A shipment of these cars is now en route to Dallas.

C. L. Zutavern of Dallas and others interested have leased the entire building at 1915-17 Commerce Street and will open a factory branch of the Oakland Motor Car Co. The new firm will handle the Texas end of this company's distribution. It will not affect the local agent, R. L. Cameron.

Peter Thomason, Phoenix, Ariz., has taken over the service and repair department of the Byrns-Ray Cadillac Co.

Payne & Saufley, Phoenix, Ariz., accessory and tire dealers, have opened a branch in Globe, Ariz.

The Pioneer Motor Co., El Paso, Tex., now has the Moon agency.

The Blount Garage, Richmond, Mo., has been purchased by F. M. Gorham, who has renamed it Gorham's Garage.

The South Thornton Street Garage, Richmond, Mo., has been sold by Roy Shelley to Charles Peterson and Edgar Kincaid. It is reported that Shelley will open a garage in Rockingham, Mo.

Hite's Garage, Eldon, Mo., which has been used as an overall factory for the past two months, has been reopened.

Ernest Otto and Fred Baille, Fredonia, Kan., have bought the interest of L. J. Pritchard in the garage located in the Commercial Club Building.

S. C. Smith, district sales manager of the Mutual Motors Co., Jackson, Mich., is now in Kansas City to establish a Mutual branch.

The Acton-Parke Auto Co. announced on July 1 the establishment of a direct factory branch of the Maxwell with this company in Kansas City, with C. B. McLaughlin as manager. While this arrangement has existed for several months, the particular occasion of the announcement now was the opening of the service station at 3344 Main Street, the station being moved to the new quarters from 404 East Eighteenth Street. The Acton-Parke Co. has enlarged its quarters at 1708 Grand Avenue. The company is arranging a Maxwell Day for July 15, with a parade, and a picnic at Fairmount Park, which has been turned over to the Maxwell for the day. The event will be for dealers and owners of Maxwells of the Kansas City district.

H. H. MacDonald, district sales manager of Kansas and Missouri for the Denby truck, is now opening the territory, making Kansas City his headquarters. He has appointed F. P. Kimber representative for Kansas City. Kimber has returned from a visit to the factory and on July 1 opened temporary headquarters at 1621 Grand Avenue. He may build.

E. S. Hutchin, for 10 years in the used-car trade in Kansas City, is selling out his stock; he will go East soon and plans to return this fall to open a store Oct. 1 to handle Fords exclusively.

The 20th Century Mfg. & Sales Co., St. Louis, was incorporated with a capital stock of $3,000 with the following directors: Ed. M. Lynch, Humphrey A. Buck, Bernard P. Pogy, to deal in automobile supplies.

Guy Murray, Fairport, Mo., is building a garage which he will operate.

The William Berg Motor Co., Omaha, was damaged by fire June 24.

The Newell Motor Car Co., St. Louis, was incorporated with a capital stock of $100,000 with the following directors: James E. Newell, Leslie E. Newell, M. Frank, E. I. Dunbar, E. B. Foots, for the purpose of dealing in motor vehicles.

The Commercial Auto Body Co., St. Louis, was incorporated with a capital stock of $50,000 with following directors: Hugh F. Carlwright, M. E. Carlwright and X. P. Wilfrey, to deal in cars and supplies.

O. B. Parks, Mount View, Mo., has opened a garage and repairshop.

Brooks & Jackson and F. E. Shackelford, Pratt, Kan., have opened a garage.

John A. Carlson, McPherson, Kan., will erect a new garage building next door to his present site.

The Eller Bros., Gaylord, Kan., proprietors of the New Garage, have added a repairshop.

A. Bradbridge, Hutchinson, Kan., is razing his brick building, first used as a livery barn and then for garage purposes, and will erect another garage building.

Teator & Delap, Blairstown, Mo., have opened the New Garage in a new building.

Jarvis & McHarg, Columbia, Mo., have opened a repairshop, painting and trimming shop.

Walter & Jones, Kingman, Kan., have leased the part of the building occupied by the Greenleaf & Hanlon Motor Co. The Greenleaf & Hanlon company is seeking new quarters.

N. E. Hobson & Son, Kingman, Kan., are erecting a garage building at Sherman and Cedar Streets and will open a garage.

George Furlong, Agra, Kan., has moved his garage to the building north of the Agra Hotel.

Swinson & Shafer, Pratt, Kan., have moved into their new garage at the corner of Main and First Streets.

Grieb & Sappington, Carthage, Mo., will soon move to a new building being erected at Fourth Street and Garison Avenue.

The Supreme Motor Co., St. Louis, was incorporated with a capital stock of $10,000 with the following directors: Edgar L. Turney, Don A. Livingston and James P. Conner. It will do a garage and car dealer business.

F. K. Baity, Kirksville, Mo., has opened a garage and repairshop.

Charles Klopfestein and **J. P. Withrow**, Cherryvale, Kan., will open a garage in the Porter Building.

Emery Day, Raymond, Kan., is building a new garage.

Geo. B. Rockwell, Guynon, Okla., recently bought the Prairie Tire & Rubber Co.

B. C. Lindsey, Gallatin, Mo., has bought an interest in a garage and agency in Winchester, Kan., where he recently moved.

C. H. Briggs, Kanorado, Kan., has built a new garage.

J. E. Hilton, Springfield, Mo., will have charge of the Chevrolet agency in the new garage being built at 414-416 St. Louis Street.

Bennett & Wray, Larned, Kan., proprietors of the Old Trail Garage, have moved their business to the new Fritsell Building.

Sam Carpenter and **James Francisco**, Osmego, Kan., will open a new garage in the Grant barn.

The Briscoe Motor Sales Co., St. Louis, was incorporated with a capital stock of $5,000 with the following directors: W. C. Shields, Hy C. Deabold and Frank Bishop, to buy and sell motor vehicles.

J. H. Gear, Sr. Centerville, Kan., has taken over the Overland agency.

Miron Bunday, Bruce, S. D., will build a garage, 75 x 100 ft.

George Francis, White, S. D., has taken the Oldsmobile agency.

J. Julian, Bowman, N. D., has taken the Crow agency.

B. Erbe, Aberdeen, S. D., is erecting a $5,000 garage.

E. Hurst, Ray, N. D., is erecting a $5,000 garage.

The Reeves & Smith Garage, Steele, N. D., burned.

C. Borgerding, Belgrade, Minn., will erect a garage.

E. S. Leach and **E. W. Root**, Dexter, Minn., have bought the D. H. Spreckles garage.

Iverson & Harrison, Jeffers, Minn., have opened a garage.

Fred Darling, Minneapolis, has taken the Ross agency. He is president of the Jackson Motor Co., 1528 Hennepin Avenue.

The R. & L. Motor Car Sales Co., 1207 Harmon Place, Minneapolis, has added the Dixie Flyer to the Owen and Rauch & Lang line.

The Barclay Auto Co., Hennepin Avenue and Harmon Place, Minneapolis, has added the Roamer car to the Scripps-Booth and Kissel lines.

The Foshier Motor Co., handling the Dort, Enger and Pathfindes, is established in its new quarters at 2211-2213 Farnam Street, occupying the main floor and basement of the building, which is 50 x 120 ft., with a fully equipped repairshop in connection. Joseph Gerspacher, for 5 years assistant manager for the Studebaker Corp. here, is vice-president and sales manager.

MOUNTAIN

The Wm. Thorney Auto Co., Denver, Apperson distributer for Colorado and Wyoming, has moved from 1443 Cleveland Place to 1333 Broadway and has just placed on display the first shipment of touring and roadster models of the new Apperson Roadaplane.

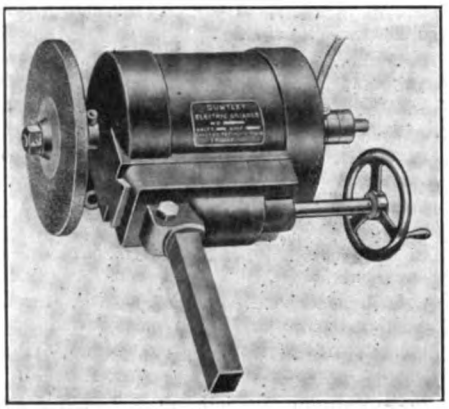
Harold Brinker, Cheyenne, Wyo., Cadillac dealer, has taken the agency for the Abbott-Detroit.

The Seventeenth Avenue Garage, Denver, 523 East Seventeenth Avenue, has been sold by Fred W. Cann to Hadsall & Jackson.

The Herring Garage Co., Denver, has bought the Hayutin Garage, a used car and garage concern at 1908-1914 Broadway.

The Mid-West Auto Sales Co., Denver, 1512 Broadway, King distributer for Colorado and Wyoming, has secured the distributing agency for the same territory for the Patterson, and also for the Wichita trucks and tractors.

PACIFIC COAST



Edwin Brown, proprietor of the Hollywood Mission Garage, Hollywood, Cal., has just completed a large addition to his place, 1728 Highland Avenue, and has added extensive equipment to his machine shop.

The Angelus Garage, 110 East Third Street, Los Angeles, has been remodeled. J. H. MacClure, proprietor, has put in a concrete floor and added to the floor space to meet the demands of a growing business.

The Fifth Street Garage, Los Angeles, has opened a second annex. The Fifth Street Garage is located at 221 East Fifth Street. Annex No. 1 is on Winston Street and the second annex is located on Maple Avenue.

E. J. Woodward, Los Angeles, has taken over the Woodward Garage, Pico and Alverado Streets, and completed a large addition. This addition includes storage space and an addition to the machine shop and machine equipment. This garage was formerly owned jointly by G. J. and E. J. Woodward, the former having sold his interests to his brother.

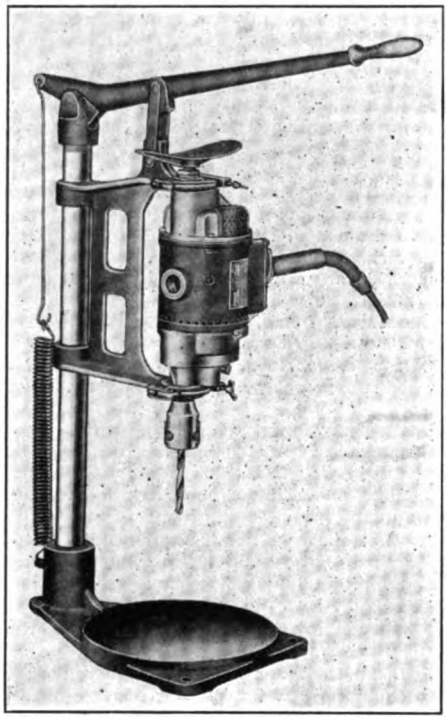
Chicago Pneumatic Tool Co.'s Duntley grinder for tool post work

Electric Grinder and Drill Double Purpose Tools

Grinder May Be Used for Surfacing Lathe Work or for Tool Grinding—Drill Is Portable but Is Quickly Mounted in Press

A problem that many a repairman encounters is that of doing profitably jobs that require special tools, but which do not come along with sufficient frequency to warrant the expense of the special appliances. A long step toward the solution of the difficulty is to make use of special tools and to keep them busy at regular work when they are not required for the semi-occasional jobs.



Such use can be made of the Duntley electrical drilling equipment manufactured by the Chicago Pneumatic Tool Co., Fisher building, Chicago, and 50 Church street, New York. The apparatus consists of two parts, the electric drill, which is of the portable type and can be used anywhere it can be reached by a flexible cable tapping an electric light socket, and a drill stand, into which the portable is fitted and in which it is used exactly as an ordinary type of drill-press is used.

Press for Portable Drill

The portable drill, housing the electric motor, gearing and drill chuck, can be used in any position for drilling on a motor or chassis without the necessity of removing the part to be drilled and taking it to the machine.

The drill stand has a frame, sliding on a vertical column, with two jaws between which the portable drill is held by clamping straps and screws. Vertical traverse is obtained by means of a lever, and the weight of the drill and frame is counterbalanced by a long coiled spring. The frame is kept accurately in line when sliding on the column by a feather and keyway. When the drill is required for portable service it can be removed from the stand in a few seconds and almost as quickly replaced. A breast-plate is fitted for portable work.

Drills are made in five sizes, the drilling capacities in metal being 3/16, ¼, 5/16, ⅜ and ½ inch; the weights are 5, 6, 10, 17 and 22 pounds, respectively. All sizes are made in the universal type—that is, they will run on either alternating or direct current—and for two voltages, 120 and 240. The two larger sizes, ⅜- and ½-inch, are also made in two other types, one for direct current only, 120, 240 and 600 volts, and the other for alternating current only, 120 and 240 volts. The manufacturers state that most of the garages and private owners using these tools have the universal type in the larger sizes, this being well adapted to all-round work.

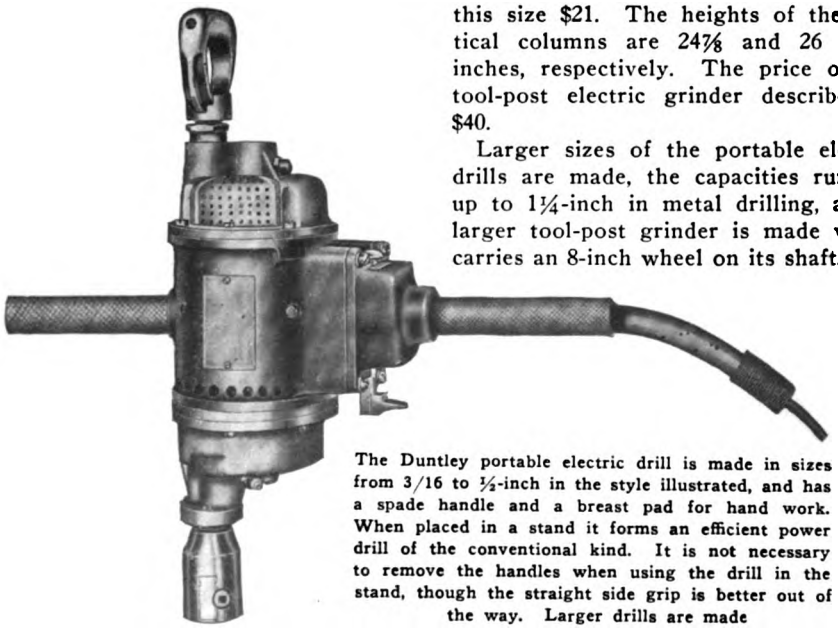
The drill as it is mounted in the stand for ordinary drill press work

The drilling stands are made in five sizes to correspond with the drills and are all practically alike, though the two larger have T-slots in the base so that work can be bolted down. The weights of stands for the two larger sized drills are 44 and 46½ pounds.

Grinding is a method of removing surplus metal that can be used advantageously in a great many cases, provided the requisite apparatus is available. Grinding produces the best possible surface on turned work, but a special grinding machine is nothing short of an expensive luxury when there are only semi-occasional grinding jobs to be done.

Grinder for Many Jobs

The Duntley electric tool post grinder belongs to the large family of lathe attachments and may be classed with the drill as a double-purpose tool because with the lathe it forms a practical surface grinder while it can be used in a separate mounting for ordinary small tool grinding, leaving the lathe free for ordinary work.



One of the time-saving uses of a portable grinder is to substitute it for a file. There are many jobs where a file is difficult to use but where the grinder can be made to work quickly and efficiently.

The tool-post grinder carries a 5-inch wheel and has a longitudinal slide operated by a small hand wheel. A square shank is provided for clamping the attachment in the tool-post. The motor is wound for direct current, 110 and 220 volts.

The current consumption of the ⅜-inch portable drill is about 300 watts, on the average, and of the ½-inch drill 350 watts. The tool-post grinder will average about 300 watts.

The price of the ⅜-inch drill is $55; the stand for this drill costs $20. The ½-inch drill costs $68 and the stand for this size $21. The heights of the vertical columns are 24⅞ and 26 13/16 inches, respectively. The price of the tool-post electric grinder described is $40.

Larger sizes of the portable electric drills are made, the capacities running up to 1¼-inch in metal drilling, and a larger tool-post grinder is made which carries an 8-inch wheel on its shaft.

The Duntley portable electric drill is made in sizes from 3/16 to ½-inch in the style illustrated, and has a spade handle and a breast pad for hand work. When placed in a stand it forms an efficient power drill of the conventional kind. It is not necessary to remove the handles when using the drill in the stand, though the straight side grip is better out of the way. Larger drills are made

Five Suggestions for Fire Extinguisher Windows

THESE are the five prize-winning windows in a window dressing contest promoted by the Pyrene Mfg. Co., New York. They emphasize the point that a fire extinguisher is a necessity on a motor car and about a garage and also make plain that dealers who sell Pyrenes can also sell them to house owners for use about the home. None of these windows is difficult to arrange; each brings home its point which is to increase sales. All of the advertising literature is supplied by the Pyrene company.

123 Tractors in Action at Dallas

That Number Already Registered—Dealers and Garagemen Flock to Demonstration—The Rules.

DALLAS, July 8—That the interest in the first National Tractor Show, to be held at Dallas, July 17 to 21, inclusive, is even greater than the committee in charge of arrangements had expected, is indicated by the hundreds of queries that are received daily and by reservations that are being made at local hotels.

Indications are, and plans to that end are being made, that 200,000 people will witness the tractor demonstrations. These demonstrations will be given daily each afternoon, on the 1000-acre Caruth farm, 5 miles north of Dallas. The farm is an ideal one. Noted for its black soil and smoothness, tractor dealers who have viewed the grounds declare it to be an ideal location. Tractor men and representatives from the motor car industry from all parts of the world will be here for the event.

The demonstration grounds are accessible by two railroads, an interurban and jitney buses.

Already there have been 123 tractors registered for the demonstration and before the week end it is expected numerous others will be registered. Entries already made are:

Avery Tractor Co., Peoria, 12 tractors; Texas Harvester Co., Dallas; 10 tractors; J. I. Case T. M. Co., Racine, 10 tractors; Emerson Brantingham Plow Co., Rockford, 10 tractors; Advance Rumely Thresher Co., La Porte, 9 tractors; Twin City Tractor Co., Minneapolis, 8 tractors; Sattley Bull Tractor Co., Dallas, 6 tractors; Rock Island Plow Co., Rock Island, 4 tractors; B. F. Avery & Sons, Louisville, 4 tractors; Moline Plow Co., Moline, 4 tractors; Ford Tractor Sales Co., Dallas, 4 tractors; C. O. D. Tractor Co., Minneapolis, 4 tractors; Denning Tractor Co., Cedar Rapids, 4 tractors; Joliet Oil Tractor Co., Joliet, 3 tractors; Peoria Tractor Co., Peoria, 3 tractors; Waterloo Gas Engine Co., Waterloo, Iowa, 3 tractors; Parrett Tractor Co., Chicago, Ill., 3 tractors; Electric Wheel Co., Quincy, Ill., 3 tractors; Interstate Engine & Tractor Co., Waterloo, Iowa, 3 tractors; Waite Tractor Sales Co., Chicago, 3 tractors; Simplex Tractor Co., Minneapolis, 3 tractors; McIntyre Mfg. Co., Columbus, Ohio, 3 tractors; Allis Chalmers Co., Milwaukee, 2 tractors; Standard Detroit Tractor Co., Detroit, 2 tractors.

Automobile men throughout the State have shown much interest in this demonstration, as it is pointed out that automobile dealers are the proper men to handle such propositions. Rules for the demonstration have been adopted. They are very stringent. Stands have been erected on the demonstration grounds. The fields are to be surveyed this week and most of the machinery will be placed in the mammoth sheds which are being erected. Thousands of dollars are being spent in the preparations for the demonstrations and it is confidently expected to be one of the biggest tractor demonstrations of the year. Farmers, dealers and business men from all parts of the South especially are expected. In addition, factory representatives and newspaper men from various sections of the United States will be here.

Demonstration Rules

THE following rules and regulations for the conduct of the eight national tractor demonstrations have been officially adopted and promulgated. They are designed to be fair to all participating and to prevent any possible attempt by any demonstrator to take an unfair advantage of the rest:

1. Public demonstrations shall begin at 1 and end at 3 p. m. Private demonstrations may be held in the forenoon from 8 to 11.30 a. m.
2. No exhibitor will be allowed more than one tractor of each size on the field during the public demonstrations doing the same kind of work. He may have one or more machines performing different operations, namely: one plowing, one disking, one seeding, etc.
3. Size of land for each tractor exhibitor for plowing demonstrations will be determined by the average number of plow bottoms pulled, the width of plows and speed of machine as given in company's catalog. Each tractor exhibitor must plow out dead furrow to its left.
4. All exhibitors will be allotted land in the same field or adjoining fields during each day's demonstrations. Land for private demonstrations will be provided daily.
5. All plows on any given gang must be set at the same depth and kept there during the day's demonstration. This depth will be announced daily by general manager. (Plows found operating otherwise will be ordered from the field for the balance of the day's work.)
6. In all public demonstrations, the motor or tractor must not be run at more than 10 per cent above its catalog plowing speed. Tractors may be run on high gear with normal engine speed, when disking, harhowing, seeding, etc.
7. Positions on field first day will be arranged alphabetically. Each field will be divided into four divisions: A, B, C, and D. These positions will shift daily, making each exhibitor occupy a similar position in the field as does his competitor. Each exhibitor will be required to finish his land daily, in a workmanlike manner, and assist in plowing the end lands as directed by the general manager.
8. Each field plowed will be surveyed and staked ready for afternoon demonstrations. These fields will be tested for the drawbar pull of a 14-in. plow, plowing at the specified depth previous to the demonstration. All manufacturers will be furnished information relative to drawbar pull so they can better determine the number of plows to use on each gang.
9. Each tractor shall bear a placard, showing the brake horsepower of the engine, the revolutions per minute, the plowing speed in miles per hour and the kind of fuel used.
10. All tractors on the demonstration field belonging to one exhibitor must be kept on or along the land allotted him for that day's demonstration, until the hour designated by management for returning to headquarters.
11. No machine will be allowed to operate with special equipment other than that designed for practical use with same. No spectacular methods will be permitted on the part of salesmen, or others, to attract crowds. The demonstration must speak for itself.
12. Each tractor exhibitor will have the privilege of burning any kind of fuel he desires, but no one will be permitted to burn fuel of higher gravity test than that used by his competitor burning the same kind of fuel. All exhibitors will be required to obtain fuel from source designated by general manager.
13. Public demonstrations will start on Tuesday of each week and close on Fridays. Mondays will be known as opening day.
14. No time will be required of exhibitors to make movie pictures or group photographs for commercial purposes. Manufacturers can arrange to get photographs during demonstration if they desire. Any manufacturer or representatives of farm or trade papers will be allowed to have their official photographers on the grounds to get pictures for their own use.
15. Manufacturers will be privileged to make dynamometer tests of drawbar pull of their tractors during any day of demonstration, but these will not be official and cannot be published as authorized by the management of the demonstration (such tests will be purely educational). They may also make fuel consumption tests if they so desire. These tests must be made in the forenoons, or following public demonstrations afternoons.
16. Arrangements will be made for daily demonstrations showing use of tractor, harrowing, disking, seeding and other farm operations, demonstrating general utility of the tractor. The rules governing these demonstrations will be the same as those applied to plowing.
17. The interpretation and inforcing of these rules shall be left to the local manager of each demonstration and the general manager of demonstrations.
18. Each company exhibiting at these demonstrations shall appoint one manager, who will be expected to report to the general manager not later than 9 a. m. each day for instructions and information regarding the day's work. The manager of exhibits will be held accountable for the work of his company, and no instructions will be issued to anyone else, nor will requests, instructions or complaints be recognized from anyone but this exhibit manager. He shall wear a badge furnished him, specifying his being official exhibit manager.
19. Each exhibitor will be expected to keep plows, tractors, etc., around his tent arranged in first-class order, and the land allotted him for exhibiting purposes free from circulars, rubbish, etc., such as will be distributed around headquarters daily. They will also be expected to use care at all times in operating machinery with respect to its safety for all visitors. The management will appreciate co-operation of these exhibit managers in all matters.

Service is Key to World's Prosperity

Betterment of Business Must Come Through Betterment of Salesmanship, says President Wilson, Opening Salesmanship Convention

DETROIT, MICH., July 10—*Special Telegram*—President Woodrow Wilson to-day gave his indorsement to "the betterment of business through the betterment of salesmanship." When he addressed the World's Salesmanship Congress in the Arcadia Auditorium he was enthusiastically received by the audience of 3000, to whom he drew close in his brief but explicit remarks.

He pointed out the future that lies in store for the United States and attributed success in selling relations and in business to a close understanding between the two parties to the transaction. His opinion of his audience and of American Business was indicated when he said:

"I have always believed, and I think you have always believed, that there is more business genius in the United States than anywhere else in the world."

Pointing out the element of adaptability that must prevail in the foreign phase of American selling, he said American industry and its sales organizations must become parted on the needs and tact of buyers and fit to that situation all of the much abused word "service." He said:

"There has been a great deal of talk, my citizens, about service. I wish the word had not been surrounded with so much sickly sentimentality, for it is a good, robust, red-blooded word and it is the key to everything that concerns the peace and prosperity of the world. You cannot force yourself upon anybody who is not obliged to take you.

"The only way in which you can be sure of being accepted is by being sure that you have got something to offer that is worth taking, and the only way you can be sure of that is by being sure that you wish to adapt it to the use and the service of the people to whom you are trying to sell."

The President also delivered a luncheon address and in the afternoon spoke to the nearly 3000 men at the Ford plant. Secretary of Commerce William C. Redfield told of the present prosperity of America and emphasized the need for the elimination of shameful waste in American industry.

Next Week

A complete report of the World's Salesmanship Congress.

The Program

DETROIT, July 10—The first national meeting of men whose vocation is selling began to-day in this city. It is styled the World's Salesmanship Congress and continues until Thursday. While the majority of those who will take part in the sessions are connected with American industries, several foreign representatives are scheduled to participate, giving the affair a world-wide aspect.

Most of those who are on the convention program are experienced in sales work and the discussions are not confined to any trade or group of trades. Sales executives and managers will give their experiences on many pertinent subjects.

The convention opened yesterday with addresses in two dozen churches on "The Ethics of Salesmanship." These talks not only served to spread the uplift idea of modern salesmanship among the people generally, but also made known to the city that the congress is being held.

This afternoon the formal opening was held in the Board of Commerce building and the regular work of the sessions begins to-day. The program follows:

MONDAY

Hugh Chalmers, president, Chalmers Motor Co.—Salesmanship.

Senator Lafe Young of Des Moines, Iowa—Your "Uncle Sam" Salesman.

Norval A. Hawkins, general sales manager, Ford Motor Co.—The "Man" in Salesmanship.

Arthur Brisbane, editor, New York Evening Journal—Salesmanship at Home.

Wm. C. Redfield (Secretary of Commerce)—Salesmanship Abroad.

Sir Thomas Lipton, London—Salesmanship vs. Sailsmanship.

Gordon Selfridge, London—Are Salesmen Born?

TUESDAY MORNING

General Session

Chairman—E. St. Elmo Lewis, Campbell-Ewald Co., Detroit.

Speakers—Seven 20-min. talks:

Frank Goewey Jones, author, Detroit—Integrity.

Edward Hines, president, Edward Hines Lumber Co., Chicago—Loyalty.

H. J. Heinz, president, H. J. Heinz Co., Pittsburgh—Perseverance.

Warren Hilton, president, The Society of Applied Psychology, San Francisco—Psychology.

W. W. Kincaid, president, The Spirella Co., Niagara Falls, N. Y.—The Salesman's Wife.

A. C. McMahon, salesman, National Cash Register, Chicago—Salesmanship Books and Courses.

Followed by discussion by—

B. P. Neff, secretary and sales manager, F. A. Patrick & Co., Duluth, Minn.

L. G. Muller, sales counsel, Chicago.

S. DeWitt Clough, president, Chicago Advertising Club.

W. C. Standish, district manager, U. S Tire Co., Detroit.

L. D. Robertson, Packard Motor Co., Detroit.

Chas. W. Hoyt, Hoyt Service, Inc., Garden City, L. I.

TUESDAY AFTERNOON

Sales Managers' Session

Chairman—Bartley J. Doyle, president, Keystone Publishing Co., Philadelphia.

Speakers:

R. H. Grant, sales manager, Domestic Engineering Co., Dayton, Ohio — Selling Schools for Manufacturers.

Walter Dill Scott, professor of Psychology, Northwestern University, Evanston, Ill.—Standardizing Selection of Salesmen.

Harry Tipper, president, New York Advertising Men's League—Driving vs. Leading.

F. C. Henderschoot, executive secretary, National Association of Corporation Schools, New York—Sales Schools.

John M. Bruce, sales counsel, New York—Hiring and Firing.

Brown Landone, Paris, France—Choosing Men.

George E. Watson, president, Southern Cypress Mfrs. Association, New Orleans—Price Maintenance.

Traveling Salesmen's Session

Chairman—Col. R. L. Dollings, president, R. L. Dollings Co., Hamilton, Ohio.

Speakers:

D. M. Roth, general director, Roth Memory Institute, Seattle, Wash.—Memory Value in Salesmanship.

Edwin A. Walton, advertising manager, Burroughs Adding Machine Co., Detroit, Mich.—The Correct Attitude Toward Advertising.

Lee Anderson, commercial manager, Hupp Motor Car Corp., Detroit—Co-operation.

F. H. Dodge, sales manager, Burroughs Adding Machine Co., Detroit—The Quota.

Blaine S. Smith, sales manager, Universal Portland Cement Co., Chicago—Contests.

A. A. Breed, president, Crane & Breed Mfg. Co., Cincinnati, Ohio—Standard Presentation.

Gage E. Tarbell, The Garden City Co., New York, 60 Wall Street—Beating One's Record.

Counter Sales-People's Session

Chairman—C. H. DeAcres, superintendent, Crowley Milner Co., Detroit.

Speakers:

J. C. Aspley, "Printer's Ink," Chicago, Ill.—Determining Basis of Pay.

J. D. Walker, Burroughs Adding Machine Co., Detroit—Making the Sale Produce a Profit.

James W. Fisk, sales instructor, Lord & Taylor, New York—Training Retail Sales People.

Lucinda W. Prince, president, School of Salesmanship, Boston, Mass.—Salesmanship in Public Schools.

R. H. Webber, president, The J. L. Hudson Co., Detroit—How to Determine a Salesman's Value.

Walt S. Goodwin, salesmanship teacher, Brooklyn, N. Y., 1920 Sixty-first Street—Using Diagrams to Teach Salesmanship.

Morris W. Ellis, Ellis Shoe Co., Nashville, Tenn.—Salesmanship from the Standpoint of the Employer.

WEDNESDAY MORNING

General Session

Chairman—Wm. H. Ingersoll (Robert H. Ingersoll & Brother, New York).

Speakers—Seven 20-min. talks:

V. L. Price, vice-president, National Candy Co., St. Louis, Mo.—Sales Bulletins.

Elizabeth Phillips Dowling, sales manager, Bureau of Credits, Detroit—Relation of Credits to Salesmanship.

C. Louis Allen, president, Pyrene Mfg. Co., New York—Bonus.

Anna Carroll, Philadelphia, Pa.—Woman and Salesmanship.

E. D. Gibbs, Robt. L. Stillson Co., New York, 209 West Thirty-eighth Street—Health.

Jas. W. Elliott, author, Rochester—Selling Self.

John G. Jones, general sales manager, Alexander Hamilton Institute, New York—Cost of Making a Salesman.

Followed by discussion by—

Louis A. Hebert, president, Melting Pot Association, Chicago.

T. C. Rice-Wray, manager, Pacific Mutual Life Insurance Co., Detroit.

C. E. Howe, sales instructor, Detroit.

Mrs. Silvano Alfredo Andrew, general manager, Fisher & Norris, Trenton, N. J.

E. F. Dahm, editor, "Better Business," University of Seattle, Wash.

Thomas A. Knapp, sales management instructor, New York.

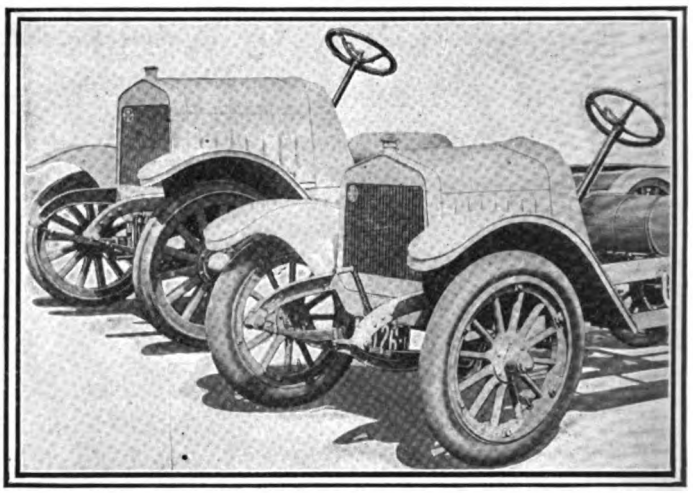
WEDNESDAY AFTERNOON

Insurance Salesmen's Session

Chairman—Edward A. Woods, president, National Association of Life Underwriters—Is There Unnecessary Loss in Selection and Training of Life Insurance Salesmen?

Speakers:

Walter Beeckner, second vice-president, New York Life Insurance Co., 346 Broadway—How Can the Selection of Salesmen be Improved?



(*Continued on page* 41)

Two Day-Elder Truck Models

One Pneumatic Tired, For Fast Delivery, the Other With Solid Tires

EMBODYING practically the same structural features in each, the Day-Elder Motors Co., Newark, N. J., is now producing two models of commercial chassis, rated at 1250 and 2000 lb. capacity, known respectively as the D-E Junior and Senior trucks. Both are conventional designs, with rather low, rakish lines, Hotchkiss drive through worm gears, and unit power plant assembly.

The two D-E truck models are quite similar in appearance and both are without governors

Specifications

Capacity, lbs.	1,250	2,000
Price	$875	$1,450
Wheelbase	108	128
Tires, front	33 x 4	34 x 3½
rear	33 x 4	34 x 4
Bore	3⅛	3½
Stroke	4½	5
N.A.C.C. hp.	15.64	19.61
Speed, r.p.m.	2,800	2,700
m.p.h.	42	35
Gear-ratio in high gear	6.5-1	7.8
Final drive	worm	worm

Both models are without governors, the smaller one being mounted on pneumatic tires and especially designed for fast delivery work, and the larger with solid tires. Both have small high-speed motors, which should show economy in ordinary work, and yet, being of the high-speed type, they are able to develop higher power than if they were governed. In each model the engine is incorporated with the clutch and gearbox and suspended on three points, final drive being by single shafts with two universals each.

On the Junior model the Le Roi motor is used and on the Senior a Continental. Both are block-cast, with valves to the right, and both have thermo-syphon cooling through square-tube vertical radiators in sheet-metal cases. Single high-tension ignition with hand spark advance is used on each model, both having Dixie magnetos. A Schebler carbureter is used on the Junior model and a Zenith on the Senior.

Clutches and gearsets on both models are the products of the Detroit Gear & Machine Co., and comprise dry-disk clutches and three-speed selective gearsets. The shafts and universals are of Hartford make, driving Sheldon worm-driven axles. Both torque and propulsion are taken by the springs.

Brakes are all on the rear wheels, consisting of side-by-side internal types, with rocking equalizers. Left steer and control levers are common to both models, Gemmer steering gears being used. Jones wheels are employed, the pneumatic-tired ones on the smaller model having demountable rims.

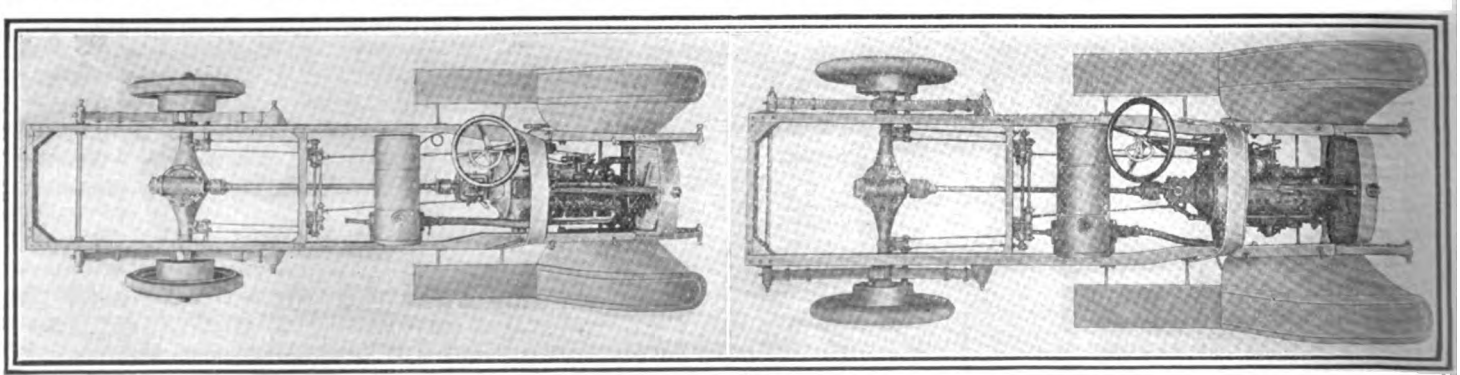
The Stewart vacuum system of gasoline feed is used, fed from a cylindrical tank beneath the seat on each model.

Prices as quoted in the specification table above apply to the stripped chassis only, including the driver's cab. Electric starting and lighting, including the lamps, will be installed for an additional charge of $85. Standard bodies are carried in stock and will be applied at extra cost, or the chassis will be sold without bodies.

New Federal Roads Bill Ready

WASHINGTON, July 10—The new good roads bill, under which federal aid in the building of roads is to be given the various States by the federal government in proportion to the area, population and rural delivery mileage of each State, is ready to be put into effect through the office of the Secretary of Agriculture. A total of $75,000,000, in addition to a total of $10,000,000 for the construction and upkeep of roads and trails within or partly within national forests, is provided for the carrying out of this act.

Champion Spark Plug Dealer Help Car



TOLEDO, July 10—Carrying its dealer help a little further, the Champion Spark Plug Co. has put on the road an Overland car which will carry from dealer to dealer the various paraphernalia necessary for the setting up of effective display windows. Already more than a score of towns and cities have been visited. George Nason is in charge of the outfit. The Champion company is planning a fleet of such cars.

Forbes Passes Great Divide

BOSTON, July 10—Walter J. Forbes, one of the pioneer accessory men in New England, died here last week following an illness of some weeks. He entered the motor accessory field 17 years ago and was very well known in the eastern field.

Reception for Jordan Officials

CLEVELAND, July 10.—Sixty of the leading manufacturers, business men and bankers of Cleveland, united in a formal welcome to the Jordan Motor Car Co. at a noon-day reception held in Cleveland last week.

Compact construction featured by worm drive characterizes both the Day-Elder truck chassis. Left, the 2000-lb. model; right, the 1250-lb. model

Association News

Colorado Association Picnics

DENVER, July 10—The close of a highly prosperous half year in the motor car industry in the Rocky Mountain territory was celebrated by the Automobile Trades Association of Colorado with a picnic at Bergen Park, 30 miles from Denver, in the municipal mountain park system in the foothills.

The affair was attended by more than 500 persons, who made the trip in about 100 cars. They were the association members, their families and employees, and such special guests as newspaper and moving picture representatives, and transportation for everybody was provided by the trades body. The available cars supplied by the members were not sufficient to accommodate the entire crowd and so the association hired sixteen touring cars at an expense of $250.

The plans were started a month ahead and were handled by six committees, which were under the general direction of two chief chairmen, one from the main trades body and one from the affiliated Salesmen's Bureau. There were fifteen active committeemen in charge of the various features, and these met at weekly luncheons to work out the details. The duties of the committees were divided as follows:

(1) To arrange the general program for the day's events. (2) To provide transportation. (3) To have moving pictures made of the leading features. (4) To arrange for advertising and publicity. (5) To attend to the supplies for games and refreshments. (6) To secure the donation of prizes for the contests. (7) To handle the entries in the contests.

Lemonade and coffee for everybody were furnished by the association, the lemonade being bought from the treasury and the coffee being donated by a large wholesale house. The lemonade cost about $10. Instead of buying lemons the committee bought a highly condensed lemon syrup from a bottling concern, which required less room in the supply car and far less work to prepare. One member donated an oil tank for the lemonade and another donated a large boiler for the coffee.

The cost of sugar, indoor baseballs and bats for two simultaneous games, and other small items ran the total expense up to $300, which indicates a healthy condition of the association treasury.

There were a 100-yd. dash, a tug-of-war and other athletic events for the men, and a potato race for the women. The prizes averaged in value from $7 to $8 for first prize and from $2 to $3 for second. All the prizes were donated by the several accessory concerns among the membership.

The majority of the dealers closed their places of business for the day to give their employees a full holiday, and incidentally to show their appreciation of a heavy 6 months' business, which had shown increases ranging as high as 200 to 300 per cent in many cases over the corresponding period of last year.

This was the trades body's first picnic and the event proved such a thorough success that an annual affair of this kind has been decided upon.

MILWAUKEE REPAIRMEN CLOSE SATURDAY AFTERNOONS

MILWAUKEE, July 8—Following the announcement by Milwaukee motor car dealers and garagemen that they will be closed every Sunday, a number of repairmen specializing in radiator, lamp and similar work have agreed to close at noon on Saturdays. These houses have never been open on Sundays. The Saturday afternoon closing will be effective only during the summer months and up to Oct. 7. Among the larger firms which have subscribed to the agreement are the Auto Lamp & Radiator Co., Detroit Auto Radiator Co., E. K. W. Abraham and Longstaff & Meredith.

Two Member Classes for St. Louis

ST. LOUIS, July 8—At the meeting of the St. Louis Automobile Manufacturers and Dealers Association at the Washington Hotel, July 6, an amendment was considered to provide for two classes of members, dealers and manufacturers, who will pay $100 initiation fee, and accessory dealers, who will pay but $40. The idea is to admit more accessory dealers so that they can enter the annual show as participating exhibitors and thus share in the rebates.

Monroe County Organizes

MONROE, MICH., June 28—A number of garagemen and dealers met at the Park Hotel last night for the purpose of forming a local organization, and after discussing the needs of an organization the meeting was called to order by L. C. Steers, secretary of the Michigan Automobile Trade Association, which is the Michigan division of the National Automobile Trade Association. The Monroe County Automobile Trade Association was organized and affiliated under the Michigan Automobile Trade Association. The following officers were elected to fill the term for the balance of this year: President, N. B. Hubbell, Hubbell Auto Co.; vice-president, L. G. Miller, Sternberg & Miller; secretary, C. J. Clapp, Monroe Garage Co.; treasurer, Chas. McIntyre, McIntyre Bros. Garage. Directors: F. M. Hausmann, Monroe Overland Co.; W. F. Loucke, Carleton, Mich.; H. W. Kleckner, Union Garage.

It was unanimously decided to hold the charter open for 60 days so as to get every eligible garageman and dealer in Monroe County to join the association movement.

No Fall Show for St. Louis

ST. LOUIS, July 10—The Automobile Manufacturers and Dealers Association of St. Louis has decided that instead of the usual fall show it will hold a show in the spring, the date and place to be decided later. In the place of the fall show, usually held during the fall festivities, which include the historic Veiled Prophet parade, which brings thousands of visitors to the city, there will be an "open week." All members will be provided with show space on Locust Street and all quarters will be especially decorated and arrangements made to take visitors along this thoroughfare. The association at the last meeting also amended the by-laws to provide that two tickets be nominated for the annual election and so that all members of 6 months' standing be eligible to participate.

Centralia Dealers Organize

CENTRALIA, WASH., July 10—Six automobile firms of Centralia and Chehallis have organized the Lewis County Automobile Dealers' Association and elected the following officers: President, A. C. St. John; vice-president, S. E. Stone; secretary, A. S. Kresky.

Ohio Canvassing for Members

COLUMBUS, OHIO, July 10—Since the resignation of A. J. Peebles as secretary-treasurer of the Ohio Automobile Trade Association, F. T. Price, its president, has assumed the duties of secretary in addition to that of president. He has resigned his business connections and will devote his entire time to organization work. Headquarters for the association have been established in the Huntington National Bank Building.

One of the first activities of Price was to secure three field men to canvass the Buckeye State for new members. They are Harry C. Buhrman, G. C. McKelvey and F. B. Bues. After being on their territories a week, reports show that many new members are being received and that the membership will be rapidly built up.

The local organization at Springfield, known as the Springfield Automobile Trade Association, will affiliate with the State organization in a body.

Digitized by Google

One of the new moves of the officials of the State organization is to secure members directly for the State association, instead of aiding in the organization of local units. This plan will be followed especially in the smaller cities and towns of the State. Where local organizations have been formed, however, they will be affiliated with the State association.

Denver Has Two New Bureaus

DENVER, July 10—Two new bureaus have been organized by the Automobile Trades Association of Colorado. One is for repairmen and the other for trimmers, painters, blacksmiths, tinners and carriage workers doing special work on motor cars. The bureaus are affiliated with the parent body, but have their own separate meetings to take up their own respective problems. The chairman of the first bureau is A. H. Gale, who runs a repairshop at 1361 Broadway, and the chairman of the other is C. Bergstrom, one of the proprietors of the Colfax Auto & Carriage Works, 510 West Colfax Avenue. Shop talks will be given by factory men here on business trips, and efforts will be made to establish the most practical and efficient methods of work and also to stop such evils as letting customers secure unreasonably low prices by playing contract bids against one another. As thorough standardizing of work and prices as possible will be sought in all the branches represented.

Westwood Heads Detroit

DETROIT, June 21—At a regular meeting of the Detroit Automobile Trade Association, which is the Detroit division of the Michigan Automobile Trade Association, held at the Wolverine Automobile Club, there was a much larger attendance than at any previous meeting for some time. There were several important matters to be discussed, as well as the election of a president and member of the board of directors. The board of directors were prevailed upon to accept the resignation of J. J. Towers as president, due to the fact that he could not spare the time to devote to the association work that was necessary. Towers, however, still remains a member of the board of directors and will continue to serve the association in this capacity.

W. G. Westwood of the Tire & Auto Service Co. was elected to the board of directors to fill the vacancy caused by the resignation of L. C. Steers, who found it necessary to resign, due to the fact of his secretaryship with the Michigan Automobile Trade Association occupying so much of his time and having to be out of the State so much on the advancement of the State work. At the board meeting which immediately followed, W. G. Westwood was also elected president of the Detroit Automobile Trade Association for the balance of the year.

There were two additional members appointed on the Gasoline Investigation Committee and the chairman of this committee promised rapid progress in their work from now on.

This association has what is termed an Alley-Rat Committee, that has been doing some splendid work, and when the question came up of increasing the number of members on this committee, it was unanimously adopted to make every member of the association a member of this committee and that each one should be on the lookout for infractions of the city ordinances and report it to the chairman.

RACING NEWS

De Palma Wins Minneapolis Race

MINNEAPOLIS, July 10—Ralph De Palma, driving a Mercedes, won the 150-mile race held at the Twin City Speedway July 4. The summary follows:

Driver and Car	Time Hr.Min.Sec.
De Palma—Mercedes	1:38:49.20
Aitken—Peugeot	1:40:14.5
Christiaens—Sunbeam	1:43:28.75
Milton—Deusenberg	1:44:11.95
O'Donnel—Haskins Special	1:47:37.95
Sorenson—Marse	1:56:14.45
Muller—Dans L'Argent	2:01:18.20

Haibe Wins Grand Rapids Race

GRAND RAPIDS, July 10—Haibe, in an Ogren, won the 100-mile race for a $1,000 prize, held at Comstock Park on July 4. Six cars started. The order of the finish follows:

Driver and Car	Time Hr.Min.Sec.
Haibe—Ogren	1:46:03.4
De Palma—Mercedes	1:47:59.0
Burt—Stutz	1:50:27.2
Andrus—Mercer	2:05:14.8
Mulford—Hudson	Flagged
Kline—Vernon	Flagged

Receiver for Twin City Speedway

ST. PAUL, July 10—Upon petition of the Standard Lithographing & Printing Co., Judge Hugo Hanft of the Ramsey County District Court named Philip Herzog receiver for the Twin City Speedway Co. Plans had already been made to put the company into bankruptcy and to have its assets sold to F. H. Wheeler, who resigned last fall as president.

Trade Active in St. Louis

ST. LOUIS, MO., July 3—Several of the accessory factories in this market are making improvements in their plants with a view to increasing the output.

The Commercial Auto Body Co. has acquired adjoining property and the building on the property will be converted into a lumber dry-kiln and a woodworking shop. Most of the bodies built are for Ford chassis.

The Piston Ring Sales Co. has leased the entire building at 3025-3027 Locust Street.

The K-P Piston Ring Co. will build at once an extensive addition to the present building at 3047-3051 Olive Street, which will double the present capacity of the plant.

The Moon Motor Car Co. shipped last week forty-one carloads of cars to the Van Wagener & Trimble Auto Sales Co. of Pittsburgh.

The local Chevrolet Motor Co. plant shipped 120 cars in a train of 16 cars to the Chevrolet Motor Co. of Fort Worth, Tex. The local plant is supplying the needs of the Fort Worth branch until the factory there is completed.

The Wagner Electric Co. has bought the factory end of the Carter Carburetor Co. of St. Louis. The Carter company will retain the marketing end of the business.

Dr. H. A. Uhlemeyer has been elected secretary and treasurer of the Moerschell Electric & Supply Co.

Separate Overland Used-Car Salesroom

KANSAS CITY, July 10—The Willys-Overland Co., because of the crowded condition of its present quarters, pending the opening of its new building, is maintaining a separate headquarters for used cars, in charge of N. L. White and N. B. Bensberger. A shop is maintained here also, where cars are put into condition and where cars sold and found at all unsatisfactory are given attention.

Massachusetts Registrations Jump

BOSTON, July 8—Massachusetts registrations for the first 6 months of 1916 show a great jump over the same period of 1914 and over the entire 12 months last year. Here are the comparative figures:

	Automobiles	Trucks
To July 1, 1915	83,868	9,900
Entire year 1915	102,633	14,733
To July 1, 1916	105,488	14,800
Gain over first six months 1915	21,620	4,900
Gain over entire year 1915	2,855	2,940

"EVIDENCE OF PROGRESS"

Editor Motor World:

As a member of the National Association of Automobile Accessory Jobbers, we are directly interested in the article published recently by the Hardware Age, and it was with very much interest that we have read your article in your June 28 issue, entitled "Evidence of Progress."

We feel that you have answered the first article in a very able manner and you have stated the situation very clearly.

We wish to take this opportunity as a member of the above association of expressing to you our individual appreciation of your efforts.—C. & E. Manufacturing Co., H. M. Cooper, Secretary and Treasurer.

Marshalltown, Iowa, July 6.

Government to Collect Petroleum Statistics

Carter Bill, Favorably Reported, Will Allow Probe into Increasing Price of Gasoline

WASHINGTON, July 10 — Another step in the fight being waged to find out the reasons for the rapid rise in the price of gasoline was taken to-day, when the Committee on Mines of the House of Representatives reported favorably the Carter bill, providing for the collection of information upon which Congress may base legislation to meet the constant advance in the price of gasoline.

The bill, which was introduced some weeks ago by Representative Carter of Oklahoma, authorizes the Secretary of the Interior to collect and publish all possible statistics and data relating to the production and marketing of petroleum products. These statistics and data would embrace specifically the number of wells drilled, total amount of products and any other information of benefit and value to oil production, all of which would be for the general information and use of the public. The bill carries an appropriation of $20,000 to defray the expenses of the investigation during the present fiscal year.

Chairman Foster of the Mines Committee declared that an earnest effort would be made to secure the passage of the Carter bill before Congress adjourned.

It is expected the final report of the Federal Trade Commission on its investigation into the gasoline and oil situation in the United States probably will be completed within 2 weeks. Commissoner Harris predicted a reduction in the price of gasoline would follow the report.

Wilcox Features Sioux City Race Meet

SIOUX CITY, IOWA, July 8—Wilbur D'Alene in a Duesenberg to-day won the 10-mile race on the local speedway, making 79.6 m.p.h. His time was 7:32. Merz in a Peugeot was second and Lewis in a Crawford Special came in third. Wilcox in a Premier won the 20-mile race in 15:19, with D'Alene second and Lewis third. The scheduled 100-mile race was cut to 50 miles by agreement. The event was won by Wilcox, his time being 40:59, or 72.87 m.p.h. Lewis was second.

Tractors Help Car Sales

KANSAS CITY, July 8—"The great increase of interest in tractors among the farmers of Kansas will undoubtedly largely stimulate the sale of motor cars," says H. H. Pierce, assistant manager of the Greenlease Motor Car Co., agents for Cadillac. "Every farmer with 60 acres or more wants a tractor. And they are all going to have them. Anything that shortens the hours of farm labor will tend to increase the sale of pleasure cars to farms, both because of the additional time the farmer will have to enjoy the machine and because the time-saving of the tractor involves greater efficiency in farm operations, and therefore larger profits. The introduction of motor-driven machinery will, of course, have a direct influence also, familiarizing the farmers with the advantages of horseless vehicles and transportation. The prospects are wonderfully bright for the sale of automobiles to the farmers of the West."

Haynes Adds Another Building

KOKOMO, July 8—The Haynes Automobile Co. is starting the sixth factory addition built during the past year. It will be a two-story structure, to house the repair department, and will bring this year's increase in floor space to a total of 180,000 sq. ft. It will be ready for occupation Sept. 1.

Saxon Dealers Average 23½ Miles Per Gallon

Nation-Wide Contest Won by Frye Motor Co., St. Louis, with Average of 34 2/5 m.p.g.

DETROIT, July 10—Results of the Saxon Motor Car Co.'s 300-mile non-stop run, conducted in all parts of the country by the Saxon dealers on July 1, have indicated that the Frye Motor Car Co., St. Louis, attained the greatest mileage per gallon, and hence this dealer gets the silver loving cup that was posted as the award for the winner. The Saxon six driven in the test by this concern averaged 34 2/5 miles per gallon.

In the non-stop run 206 Saxon sixes participated, traveling a total distance of 61,800 miles and having a grand average of 23.5 miles per gallon of gasoline and 175 miles to the quart of oil.

A newspaper man acted as observer in each case and, while the tests were not official, the results obtained are accurate in all cases so far as known. Some of the contestants encountered bad roads and hilly country, while rain interfered in other localities.

Some of the results obtained are:

Place	Dealer	Average mileage per gal.
St. Louis	Frye Motor Car Co.	34 2-3
Rochester	Wm. Knipper	20.1
Stockton, Cal.	Parnell & Letourneau	28
Portland, O.	Saxon Motor Sales Co.	27 3-11
Toronto, Ont	Saxon Sales Co.	24

Chattanooga	Jones Automobile Co.	19.5
Kansas City	Bond Motor Co.	26.69
Galesburg, Ill.	Seacord & Sons.	21.9
Providence	Saxon Motor Vehicle Co.	24.6

"EVIDENCE OF PROGRESS"

Editor Motor World:

In casually glancing through the issue of June 28 of your paper the writer's eye was caught by your editorial, on page 30, covering what I suppose is the editorial which appeared recently in Hardware Age. Whether this is true or not, I wish

Digitized by Google

to congratulate you upon the able manner in which you have put forth the position of the accessory jobbers' association. After reading the article I thought to myself, "There is certainly nothing more to be said." It is my intention to clip the two pages on which your editorial was written for future reference.

I believe that you will find your cooperation with the jobbers is thoroughly appreciated, although possibly their appreciation is not directly expressed. It is not the first editorial which I have noticed that has pleased me a great deal. I might also state at this time that within the last two weeks we have received a great number of letters asking us to make recommendations to manufacturers for issues in which to spread their publicity. I am more pleased than ever now that we have recommended in each case Motor World as being exceptionally strong in this particular territory.—S. E. Howe, Jr., Treasurer the Auto Equipment Co., Denver.

Duffield with Brunswick-Balke-Collender

NEW YORK, June 29—J. E. Duffield, formerly western manager for the Thermoid Rubber Co. and more recently with the United States Rubber Co., will be sales manager for the Brunswick-Balke-Collender Co., which, as was announced several weeks ago in Motor World, will enter the tire field. The company will produce practically everything of rubber which is used on a motor car, in addition to tires. Some of the products will be wrappe tread, single cure black tread and side wall non-skid shoe, styled "Skid-Not," and a self-healing tube.

Paige Improved; Higher Priced

(*Continued from page* 11)

on 14-in. steel drums. The face width of the brake drum is 2 in., and one set of brakes is internal expanding and the other external contracting.

The front axle is a one-piece drop-forged I-beam, heat-treated and provided with ball bearing spindles. The frame is high carbon steel, channel section, having a 4-in. web and a 3-in. flange. The thickness of the material is 5/32 in., and it is narrowed in front to permit of a short turning radius; at the rear there is a kick-up over the axle to reduce the height of the body. The springs are semi-elliptic front and cantilever rear. The front springs are 36 in. long and 2 in. wide. The rear are 48 in. long and 2½ in. wide. The tires are Goodyear or Firestone, with non-skid tread on the rear. The steering gear is the Jacox irreversible screw and split sleeve type, adjustable for wear in any direction. The steering wheel is 18 in. diameter, in one piece, and is made with a corrugated inner edge. The horn button is in the center of the steering wheel above the spark and throttle lever.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

Charles C. Meade will resign as manager of the Kansas City branch of the Ford Motor Co. Aug. 1 to open a business of his own. He has been negotiating with an eastern company for the local distribution of its cars, but is not ready to make the name public. R. C. Rice, manager of the Ford branch in Seattle, Wash., will succeed Meade.

A. E. Reid, who was formerly sales manager of the Serlis Motor Co., is now manager of the Oklahoma Chalmers Sales Co., Oklahoma City. Reid is vice-president and general manager of the new company, which will be sole distributer in the State of Oklahoma.

George H. Wright has been made sales manager of the Cole St. Louis Automobile Co., having charge of both retail and wholesale departments. Wright goes to St. Louis from Chicago, where he was assistant manager of the Cole agency.

Thomas H. Burris, St. Louis, has been made assistant manager of the Cadillac Motor Co. of St. Louis. He has been with this company 4 years.

E. C. Jewitt has been appointed supervisor of service in the Philadelphia branch territory for the Studebaker Corp., succeeding H. F. Hartman, who has been transferred to Detroit. Jewitt previously acted as service representative in the Indianapolis and Boston territories.

L. H. Leonard, who was service supervisor of the Studebaker Corp. for the South Bend territory, has been transferred to the recently opened Des Moines branch, where he will act in the same capacity.

J. B. Fry, formerly manager of the Detroit office of the Empire Rubber & Tire Co., has joined the Studebaker Corp. He is associated with the wholesale department of the Detroit branch.

L. M. Clark, Toledo, Ohio, has been made manager of the Toledo-Mercer Co., northwestern Ohio dealer for Mercer and Moon cars. He succeeds Lester C. Bailey, who has been manager since the organization of the company.

F. B. Norman, manager of the Portland, Ore., branch of the Ford Motor Co., has been promoted to the managership of the Ford branch in Des Moines. J. W. Capek, assistant manager of the Portland branch, is to become manager of the branch in Tacoma, while Charles E. Gordon and Walter Claphan, territory men in Oregon, will become assistant managers at Sacramento and Salk Lake respectively.

E. S. Hare has been appointed manager of sales of the Packard Motor Car Co. of New York, under E. B. Jackson, president of the company. Hare comes from Philadelphia. From 1909 to 1916 he was vice-president of the Commercial Truck Co. of America, Philadelphia, and joined the Packard organization Jan. 1, 1916, as a special representative of the motor truck department.

Charles M. Strieby, formerly manager of the Cottrell Motor Sales Co., at Boston, and before that assistant sales manager at the Regal factory, is now in charge of the retail sales of the Hawley-Cowan Co., Saxon dealer.

Frank Coveney, formerly with the Studebaker forces in Boston, has been placed in charge of the retail sales force of the Chandler Motors Co. in that city.

E. M. Elliott, formerly in charge of the production of the United Motor Truck Co., Grand Rapids, Mich., and since then in charge of the sales of the Mais trucks, has been made production manager of the Haynes Automobile Co., Kokomo, Ind.

J. H. Guy, vice-president and treasurer of the Advance-Rumely Co., Laporte, Ind., who has been with that organization since the spring of 1913, has resigned and in a short time will return to New York.

Frank H. Smith, assistant sales manager of the Chalmers Motor Co., Detroit, has resigned to become associated with the Harry Newman organization, Milwaukee, Chicago and Springfield, Ill., as manager of the northwest division of the Chalmers distribution system built up by Harry Newman.

L. W. Watkin, Jr., who for the past 9 years has been connected with the sales and engineering department of the Standard Roller Bearing Co., has recently become sales manager of the Wright Roller Bearing Co., Philadelphia and Spring City.

Lawrence H. Earle, sales manager, and **George A. Boggs,** assistant sales manager of the Continental Motors Co., have resigned and will become actively engaged in business together in the East, the nature of which has not been made public.

Hamilton W. Jones, Hartford, Conn., has resigned as sales manager of the Britton Co., Stearns-Knight distributer, to become associated with Milton J. Budlong, of the firm of Gaston, Williams & Wigmore, 140 Broadway, New York. Jones was formerly secretary of the Columbia & Electric Vehicle Co. and later associated with the New Haven Carriage Co.

W. H. Vinal, Hartford, Conn., of the Reo sales force, has been appointed assistant sales and publicity manager.

C. D. Hayward, Hartford, Conn., of the sales department of the Elmer Automobile Co., has been made assistant sales manager of the Milburn Car Co. of Connecticut.

Fred J. Wood, head of the service department of George D. Knox, Hartford, Conn., has taken a similar position with the Colonial Automobile Co.

S. S. Lindsey, sales manager of the Kansas City branch of the Buick Motor Co., has been promoted to branch manager of the Oklahoma City branch. He assumed his new duties July 1.

L. H. Mesker has been appointed sales manager of the Kearney & Trecker Co., Milwaukee. He will retain direct supervision of sales in the Ohio territory for the present time.

Kansas City Trade Widening

KANSAS CITY, July 10—New contracts and renewals being made this month are very generally larger than a year ago. The experience of the Maxwell is illustrative. One dealer in a large Kansas city had a sixty-one contract in 1915 and sold somewhat beyond that; he has contracted for 115 cars this year. Dealers' quotas generally are increased 20 to 50 per cent, and even 100 per cent, over the entire territory, and no contracts are made involving shipments of less than a carload. Seventy-five car contracts are being made in such cities as Abilene, Salina, McPherson, Smith Center and Horton. The Maxwell company is discouraging drive-aways, which involve additonal expense to both dealer and customer. The dealer pays about $24 for each car by freight in carload

Digitized by Google

lots to his store, and he pays about $30 on each car when drive-aways are arranged. The customer must pay his fare to Kansas City. The contracts on basis of carload lots eliminate the dealers who can hold a territory with one or two cars and so prevent its development.

Reo Buys National Coil

LANSING, MICH., July 10—The Reo Motor Car Co. has bought out the National Coil Co., which employs about 100 men. The building will be used to extend the manufacturing facilities of the Reo company. Although no figures are given out, it was stated by an official of the Reo Motor Car Co. that it has been decided to build 50 per cent more Reo passenger cars for the season of 1917. This will probably mean a total production of from 38,000 to 40,000 cars. A proportionate schedule has been adopted by the Reo Motor Truck Co.

More Room for Moline Plow

MOLINE, ILL., July 10—The Moline Plow Co. will enlarge its plant in order to take care of its tractor department and plans are under way for the construction of buildings which will cost $1,000,000 and give employment to 1500 men. The company proposes to erect a machine shop, 100 x 765; foundry, 180 x 360; pattern vault, 64 x 230; core room, 60 x 122; mill room, 80 x 200; and cupola room, 60 x 60.

General Motors Directorate Includes Chrysler

DETROIT, July 10—Further revision of the directorate of the General Motors Co. was made at the quarterly meeting, when Walter P. Chrysler, the newly elected general manager of the Buick company, was made a director following the resignation of Samuel F. Prior, who is prominent in the Union Metallic Cartridge Co. and the Remington Arms Co. Thomas Neal, former president of the organization and chairman of the board, is again an officer by his election as vice-president at this meeting. He will share the duties of the vice-presidency with Arthur G. Bishop, the Flint banker, who was elected a vice-president last fall.

In placing Chrysler on the directorate another of the General Motors subsidiaries was given representation on the board. Not long ago W. C. Leland of the Cadillac company was elected to the board, and, with the placing of W. L. Day of the General Motors Truck Co. and Fred W. Warner of the Oakland Motor Car Co. also on the directorate, there are four of the subsidiaries directly represented.

These recent director changes followed the resignations of J. J. Storrow, Albert Strauss, Emory W. Clark and S. F. Prior. The revised board as it now stands follows:

Pierre du Pont, chairman; J. H. McClement, C. S. Mott, C. W. Nash, Lammont Belin, A. H. Wiggin, C. S. Sabin, J. A. Haskell, J. J. Roskob, F. W. Warner, W. L. Day, W. C. Leland, W. P. Chrysler, Thomas Neal, W. C. Durant, L. G. Kaufman and A. G. Bishop.

Studebaker Assists Enlisted Men

DETROIT, July 10—The Studebaker Corp. has arranged to place all men who go to the Mexican border in Uncle Sam's service on full pay for the balance of the year.

Factory News of the Week

Buick Four at $665

FLINT, July 7—The General Motors Co. has again entered the four-cylinder field with a four-cylinder runabout, known as D-4-34, and touring car, known as D-4-35, selling at $650 and $665, respectively, f.o.b. Flint. The company will concentrate on this model and its small six, having discontinued the large six. The new four-cylinder model will be designed for an initial production of about 75,000. The motor is of the same overhead valve construction as the present six and is 3⅜ x 4¾, developing 35 brake horsepower. Other specifications include: 106-in. wheelbase, Delco ignition, Stewart vacuum fuel feed, 31 x 4-in. non-skid tires, three-quarters floating rear axle, semi-elliptic springs on both front and rear, the front being 30 x 2 in. and the rear 48 x 2. The car has three speeds forward and is geared 4 to 1 on high.

Armleder Raises Prices

CINCINNATI, July 10—On and after July 15 the prices on Armleder motor trucks, produced by the O. Armleder Co., will be: Model HC, 2-ton chain drive, chassis, $2,200; Model EC, 2½-ton chain drive, chassis, $2,350; Model HW, 2-ton worm drive, chassis, $2,400; Model KW, 3½-ton worm drive, chassis, $3,250. The Armleder Model HW-2 will be on the market within the next few weeks and will practically be similar to the HW with the exception that it will have many refinements throughout.

Fostoria Raises Prices Slightly

FOSTORIA, OHIO, July 10—The Fostoria Light Car Co. has made a number of improvements in its models and has increased prices. The touring model now lists at $735; the delivery wagon with open body $695 and with closed body $715. The width of the rear seat has been increased from 39 to 46 in. and the front seat from 37 to 42 in. A floating axle now is used, as is Remy ignition. There is also a natural wood dash carrying the various instruments.

Gearless Differential Prices Down

DETROIT, July 10—The Gearless Differential Co. has reduced the prices of its differentials for Ford, Overland and Chevrolet "490" cars. The Ford and Chevrolet prices were $20 and are now $15; the Overland price was $25 and is now $20.

Perfection Heaters on Cole-Springfield

CLEVELAND, July 10—The Perfection heater, manufactured by the Perfection Spring Service Co., is to be part of the standard equipment of the 1917 Cole-Springfield models.

Sparks-Withington is Expanding

JACKSON, June 30—Additions to the plants of the Sparks-Withington Co., maker of the Sparton horn and other accessories and parts for cars, are well under way and when completed will practically double the size and production possibilities of the factory. Paralleling the older plant, the new factory is 70 x 334 ft., half being two stories and the rest one story. It is to be white brick and steel and will be modern in every way. Much of the additional space will be devoted to radiator manufacture, it is stated.

Eights Coming From Los Angeles

LOS ANGELES, July 10—The Homer Laughlin Engineers Corp. has taken over the building and equipment of the McCan Mechanical Works, 2652 Long Beach Avenue, and is building a car to be known as the Homer Laughlin eight. The Los Angeles concern is building its own motors and every part of the car with the exception of the tires and electrical equipment. The paramount feature of the Homer Laughlin eight is its front drive. The car is to sell at $1,050. Three have already been built and a lot of ten is going through the factory now.

Holihan Doubles Capacity

DETROIT, July 8—The Holihan Mfg. Co. has purchased 3½ acres of ground on Milford Avenue and Pere Marquette Railroad and have let contract for the immediate erection of a factory 80 x 400 ft., with adjoining buildings for steel storage, shipping and enameling. By Sept. 1 the new plant will be occupied and production doubled. This is the second time the company has been compelled to seek larger quarters and it will employ about 500 men in the new plant.

Benford May Continue "Reliable"

NEW YORK, July 10—The decision of Judge Hand recently rendered in the case of the Champion Spark Plug Co. insures to the Benford Mfg. Co. the right to make and sell its Reliable type ½-in. plug exactly in the same form and proportions as before the initiation of the suit, the only stipulation being that none of these plugs shall have the black finish or the brand in red.

Thomas 2-Tonner Now Ready

NEW YORK, July 10—The Thomas Auto Truck Co., Inc., which was organized early this year by C. K. Thomas, formerly vice-president and general manager of the Federal Motor Truck Co. of New York, now has its 2-ton model ready for the market. Eventually there will be three other models, rated at ¾ ton, 1 ton and 1½ ton.

The 2-ton model is built entirely of standard units, the principal specifications including a four-cylinder 4⅛ x 5½ Buda motor, selective three-speed gearset, dry-plate clutch in unit with the motor, worm drive, with Timken-David Brown worm, and propulsion and torque taken through the springs. The frame is pressed steel, with a total overall length of 214 or 232 in. Wood wheels are fitted with 34 x 4 front and 34 x 4 dual or 34 x 6 single rear tires. The steering wheel is at the left, with control levers in the center. The standard wheelbase is 150 in., with 168 in. optional, and the tread is 58 in. The loading space is 112 in., with 130 in. optional. Regular equipment includes Bosch lighting generator, electric lamps, 6-volt 110-amp.-hr. battery, electric horn, bumper, windshield, front fenders, tools, etc. The company does not manufacture bodies, but will furnish conventional designs on orders. Special designs will also be produced.

Digitized by Google

Signal and Commerce are Merged

DETROIT, July 8—Merging of the Signal Motor Truck Co., maker of Signal trucks, and Commerce Motor Car Co., manufacturer of Commerce trucks, has been effected. The new organization taking over these two properties is to be known as the Signal-Commerce Motor Truck Co. and it is incorporated under the laws of New York with a capital of 600,000 shares of no par value. The proposition is to be underwritten by fourteen members of the Detroit Stock Exchange, and active in its management will be Thomas Neal, head of the present Signal concern, and W. E. Parker, who is the head of the Commerce company.

The capital of the Signal company was increased from $85,000 to $450,000 in January of this year, and by a stock dividend the Commerce company was also raised some time ago to $250,000 capital. It is planned to concentrate the production of a very complete line of trucks, ranging from light delivery types to heavy-duty vehicles, in the new plant of the Signal company, located on Commonwealth Avenue, this city, removing the Commerce manufacturing business from its present location.

These two truck manufacturers are strictly Detroit companies, their stock being largely held here. Each makes a range of models of different capacities, and their merger will eliminate a competition between them. Neal, at one time president of General Motors Co., later chairman of the board of directors of that organization, and now one of its vice-presidents, is to direct the policies of the Signal-Commerce concern as chairman of the board. Among the directors will be W. E. Parker, who is also connected with the Mexican Crude Rubber Co.; Myron Neal, of the Acme White Lead & Color Works; A. H. Buhl. T. J. Bosquette and W. K. Hoagland. There are also several other prominent automobile men interested whose names have not been disclosed. It is understood that the stock will be offered for subscription at about $6 per share.

Gillette Takes Over Amplex

SOUTH BEND, IND., July 6—It is unofficially stated that William Gillette, the millionaire razor king, will take over the Amplex Auto & Machine Works, Mishawaka. The price said to be paid to Rudolph Kamm for the plant is about $150,000. An option has been held on the plant for several months, but owing to an error in title the deal has been held up until the present time. The title has now been cleared by action of the court. The new company will be known as the Gillette Motor Co. and will manufacture the Wilmo rotating sleeve motor. It has been patented by M. L. Williams, formerly of South Bend, now of Chicago. Williams will be interested in the plant and will move to Mishawaka. The company will also manufacture accessories. Ray Austin of Mishawaka will be the chief engineer and C. E. Erickson of Chicago will be the general manager.

New Westcott Incorporated at $500,000

SPRINGFIELD, OHIO, July 10—The removal of the plant of the Westcott Motor Car Co. from Richmond to Springfield, Ohio, has been completed and the company re-incorporated under Ohio laws. The name of the company is unchanged and the authorized capital is $500,000. Incorporators are: B. J. Westcott, F. C. Johnson, C. W. Bringman, F. S. Anthony and Charles R. Reid.

Stearns-Knight "character"

accords with

Waltham accuracy

The special Waltham construction for automobile clocks produces a timepiece which lives up to the Waltham standard under any and all conditions of motoring.

As a feature of equipment, the Waltham is one of those "big little things" which are unfailing indications of a car's "character." The world-wide prestige of the name "Waltham" supports in the public mind the high standing of the car which uses this clock as part of its regular equipment.

Waltham accuracy, Waltham prestige, Waltham beauty of appearance—you owe it to your car and to yourself to have them.

The makers of the following cars include the Waltham automobile clock in their regular equipment:

Brewster	Haynes	Pierce-Arrow
Cadillac	Locomobile	Rauch & Lang
Cole	Lozier	Rolls-Royce
Crane	Marmon	Simplex
Detroit Electric	Owen Magnetic	Stearns
Franklin	Packard	Winton

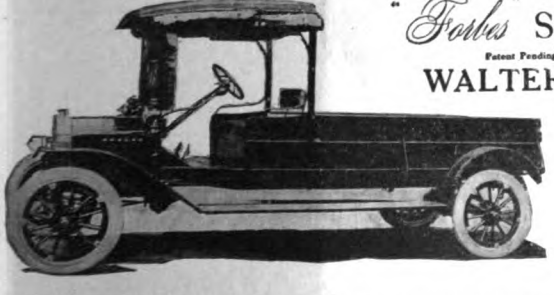
"Forbes" System

Patent Pending

A Longer Chassis
A Stronger Chassis
A Better Chassis



Rear Truss Bracket

Truss Brace

Front Truss Bracket

results from applying the "Forbes" System Patent Pending to Ford cars, lengthening the chassis for commercial purposes without in any way reducing the simplicity and efficiency of the original construction.

The "Forbes" System Patent Pending is an *addition* to the chassis—*not* an *alteration* of it. Any garageman carrying Ford parts can make all repairs or adjustments on lengthened Fords with the same ease and promptness as on the model as it came from the factory.

In the "Forbes" System Patent Pending each side of the extension section is made of steel channel and between them a *cross member* of cast steel carries the *thrust* of the drive shaft, allowing the motor to deliver its full power to the driving wheels.

Each side of the frame is trussed through its entire length and the brackets supporting the ends of the truss rods clamp round the frame making it

UNNECESSARY TO BORE ANY HOLES IN THE FRAME

The intermediate shaft floats between the motor drive plate and the universal and transmits a direct, positive drive.

We supply *every* part, every nut, every bolt and rod with complete instructions so that any mechanic can make the whole addition with despatch.

THE BEST PROOF

of the thorough effectiveness of the "Forbes" System Patent Pending is the repeat orders received from concerns after they have tested them in their own every day service.

We use only the highest grade material obtainable, and positively guarantee results.

We have a highly interesting proposition for distributors. Send for it today. The demand for the "Forbes" System Patent Pending will surprise you.

MOTOR WORLD

237 W. 39th Street **New York**

Digitized by Google

This distinctively American emblem will mark a new luxury car. The name will be announced next week

Distinctive and Irresistible
A New Luxury Car

A NEW luxury car has been created for the individual who prefers distinction in his motor car as well as his personal appearance. If all people dressed in dark colors, how monotonous Fifth Avenue would be.

This new luxury car, so distinctive in line, will not be difficult for the owner to find at the curb or at the country club, and he has a choice of brightness or the conservative in color.

Women with a natural appreciation for comfort, atmosphere, and poise will feel this car irresistible in its appeal.

Each custom style body is the result of a practical study of the comfort requirements of driver and passengers, in point of leg room, body support, location of steering pillar, auxiliary seats, cushions, pedals, levers, and foot rests.

It is the most comfortable body that can be built on a chassis with 127 inch wheel base and weighing only three thousand and fifty pounds.

Engineers know that it is only by fixing with extreme accuracy the delicate points of spring suspension and steering gear location that proper balance, distribution of weight, and ease of manipulation can be attained.

In point of balance, this car is supreme. It holds the road, speeding forward without a tremor; bouncing and swaying never.

Digitized by Google

Red-blooded Americans love a car that will get away and run like a cottontail when dust threatens.

This car will crawl along at snail's pace through crowded traffic on high gear.

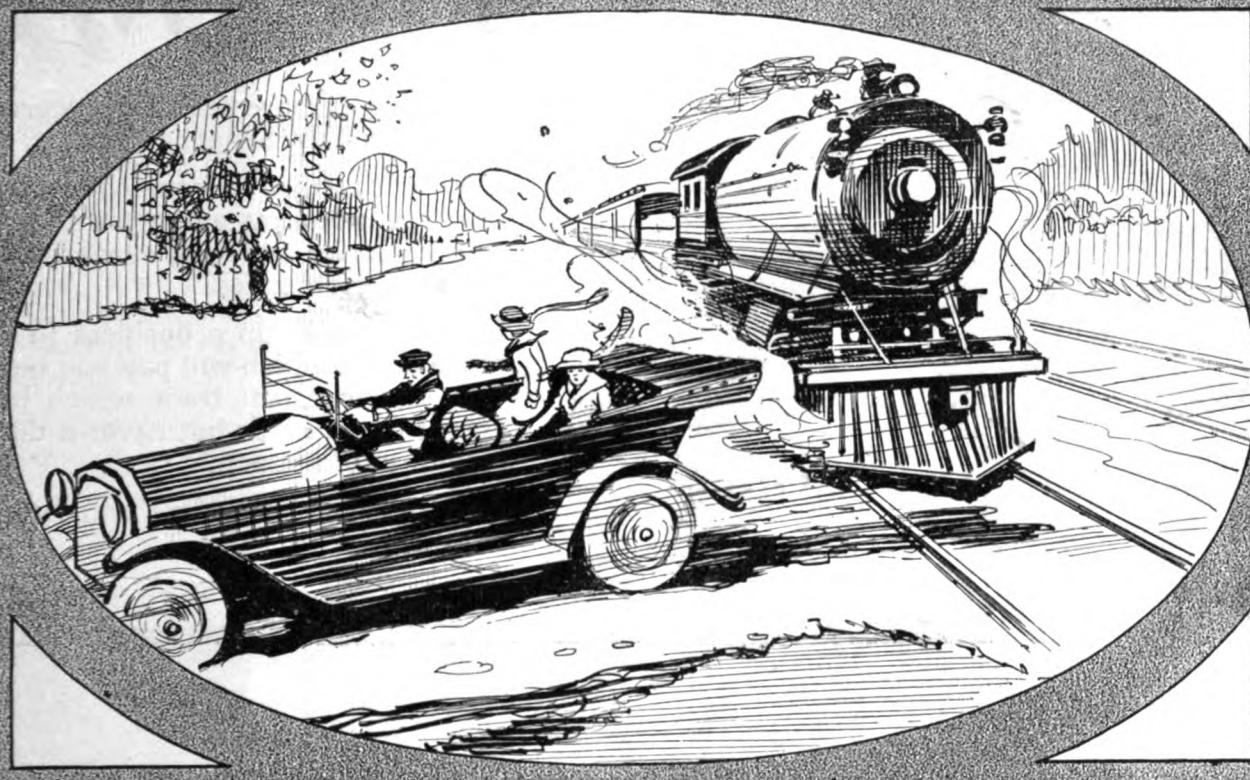
It will move with the speed of an express train on a country road and demonstrate on hills with any stock car made.

If any well informed, critical individual set out to build a car to suit himself from the finest units available in the world to-day, he would, if he chose to build without experiment, pick the same units as are found in this car.

It is produced by a company with ample capital, a modern plant, efficiently and economically organized, and inspired by a great ideal:

To build a car of mechanical excellence, equipped with advanced body styles, superior in finish, comfort, power, and durability, and to acquire a reputation based on quality, production, and careful inspection, regardless of quantity.

Only one hundred well established dealers who are in sympathy with this policy can be assured deliveries.



The complete announcement will appear next week.

Dealers and individuals desiring advance information may address

"The Swin

You will get more than the tire profits as an agent for Swinehart Tires.

You will attract to your counter the grade of motorists who want the best in accessories and who can afford to gratify their desires.

You will build up a business in one make of tire which will pay you better than the transient trade which buys one of many kinds but never a duplicate of any of them.

As a Swinehart agent you will develop

Swin

a mail order and telephone business with out-of-town customers. They know Swinehart Quality and Swinehart Mileage and know that the Swinehart Tire you send them will be a better tire than any make that they could personally pick out.

In creating a demand for Swinehart Tires among newcomers, and in supplaying the demand which has been created by us through years of tire making you will be building a business which will be yours for all time.

THE SWINEHART T

AKRON

Digitized by Google

hart Dealer"

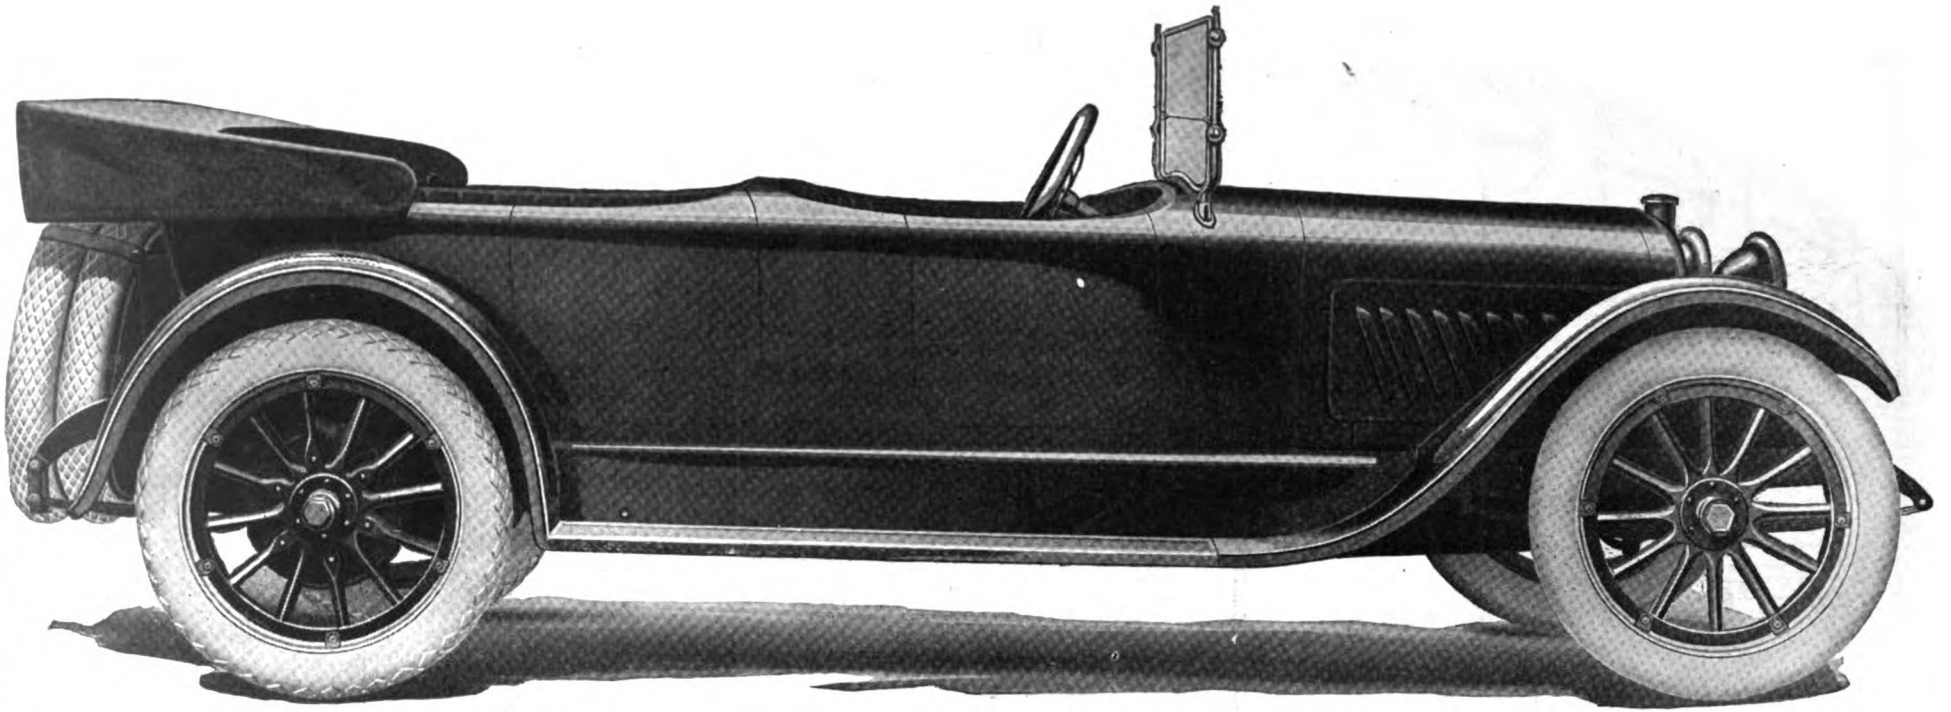
WE WILL NOT OPEN A FACTORY BRANCH IN YOUR TERRITORY.

Our enlarged plant is capable of taking care of our tremendously increased business and we are preparing for the further expansion we will need next year.

Our tire is hand-made and we use only the double cure wrapped tread process.

We have perfected a positive NON-SKID (Depression Type) of tire.

This tire is Guaranteed not to skid on a wet asphalt or macadam, and will hold the pavement better than any other make of tire equipped with chains.



There is plenty of Swinehart business for all. Don't be cajoled by "exclusive agency" propositions. There is little honor and no profit in having the exclusive rights to a tire few motorists will buy.

Write today and see what sort of a proposition we will make to the better class of agents.

ROSS EIGHT

$1350

F. O. B. Detroit

Manufactured by

ROSS AUTOMOBILE COMPANY

DETROIT, MICHIGAN

Many people never look further than the price tag. They rate a car by its price.

They never stop to think that back of a price may be a dozen viewpoints—that the price to-day is no criterion of automobile value.

For example, if you were told that a certain car had an 82 H. P. Herschell-Spillman motor, the most finely engineered and manufactured eight cylinder motor extant.

That it had a wheelbase of 130 inches—that it weighed, by dint of clever engineering skill only 3180 lbs; that it was built to endure, that it had the finest quality equipment and accessories—

You would probably say—"Well they will certainly have to get a fancy price for that car"—

But, you would be wrong in this particular case. For the Ross Eight has all these features, and many more earmarks of high quality and yet, it is priced at only $1350.

If the discerning dealers and buyers who question Ross quality because of the low price will go a step further and challenge *any* detail of construction—and then get a Ross Eight and literally pick it to pieces, they will do some revising of value standards.

We believe the Ross Eight, mechanically and from the standpoint of daily performances challenges any eight cylinder car at any price.

Save Your Back

Your motor *can* be made to start easily, even with low grade fuel, or cold or lean mixtures. Others' experience is proving every day that a shower of sparks is what you need. You get them every time with a

PFANSTIEHL Starter Coil

Gives a Shower of Sparks instead of one for Starting

You know your motor will *run* on mixtures that it won't *start* on. Why? Heat when running helps it. But in *starting*, all the heat has to be supplied by the *spark*, and the best single spark will only fire a mixture that is *exactly right*.

So with a *single* spark, the only way to start a motor is to keep on cranking and adjusting *till the mixture is right*. You can see that *more* heat from the *spark* would mean easier starting — less dependence upon a *certain mixture*.

The *only* way to get the *maximum possible heat* is to use a Pfanstiehl Starter Coil in your ignition system. It delivers to the spark plug a *continuous shower* of sparks while each cylinder is at the firing point. This intense heat will fire practically any mixture that a motor will run on.

The Pfanstiehl Starter Coil is easily applied to *any battery or magneto ignition system*, either with or without electric starter. Even if you have a starter on your car, the Pfanstiehl Starter Coil will be worth its price to you *in saving your batteries*. On any car it will also save gasoline, because you can have your carburetor adjusted for a *running* mixture instead of a starting mixture.

Our complete catalog sent free on request, showing wiring diagrams for every ignition system. See how the Pfanstiehl Starter Coil applies to your system. Fill out and mail blank below now while you think about it. Dealers write your jobbers or direct to us.

Model D or E
Pfanstiehl Starter Coil

Made with removable lock switch to be mounted in dash. Price $12.

Model F, without switch, for mounting under hood, price $9.

PFANSTIEHL COMPANY, NORTH CHICAGO, ILLINOIS

There is good money for Garages, Repair Shops, Supply Dealers handling this much needed coil. Our advertising in the automobile papers is educating your customers to want the Pfanstiehl Starter Coil. Write for our trade proposition.

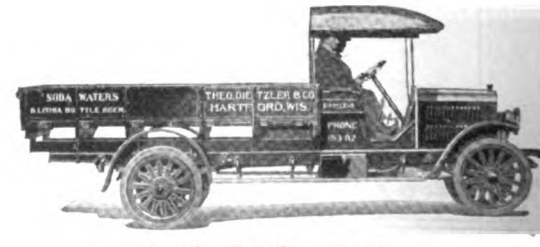
The Short Cut to Quick Sales

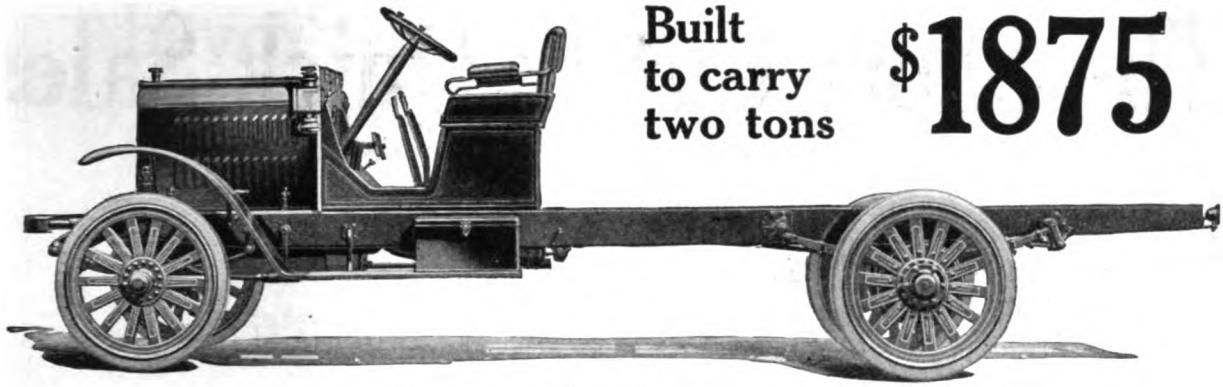
HERE'S another new KisselKar worm-drive Truck. **Built to carry two tons and to sell for $1875.**



With a modern line of worm-drive trucks Kissel is giving dealers a wonderful opportunity to close up immediate and profitable sales, by submitting what now, it must be admitted, is without doubt the market's best buy—plus a selling plan that interests purchasers and makes the question of financing the sale easy for the dealer.

Get in Front of the Selling

What more could you ask? A line of the most modern worm-drive trucks on the market—a range of sizes to fill every need. A line back of which is established reputation and financial strength, eight years of truck building experience—a line that is already firmly established in over 200 lines of business—that is well advertised and firmly grounded.



KisselKar Trucks fit your customers' hauling and delivery problems. They are the trucks they will most readily buy. You don't have to make the job fit the truck. Kissel has the truck that fits the job. Take the shortest cut to truck sales by handling KisselKar Trucks. You will find them the easiest selling trucks in your territory, aside from our plan which enables you to sell your customer on time.

The Only Safe Time-Proved Treatment To Stop Punctures

Here is the first practical treatment to eliminate puncture troubles. Bales Puncture Plugger is a long-time tested treatment which constantly circulates a charge of plastic, synthetic rubber against the inner walls of the tire. It quickly, positively and unfailingly plugs every puncture. *It is not a filler*—cannot harden, or dry up. It is—

Absolutely Guaranteed Not to Injure the Tire

We absolutely guarantee to replace your entire set of casings and tubes if Bales Puncture Plugger injures them in any way.

And we will refund your money if the treatment does not do everything we claim for it.

Read the guarantee!

Could any evidence be stronger?

35 Months—19,000 Miles

This is the only treatment that has been in use for over two years and has proved itself practical and perfect. It has frequently run over 19,000 miles in one tire. We have actual signed proofs of its value, waiting for you. It is not an "experiment."

Here is the GUARANTEE That Proves it

For a consideration hereby acknowledged, we, the undersigned, by this indenture, make the following guarantee, under penalty stated below, that—

Bales Puncture Plugger

Will not injure inner tubes or casings nor interfere with the resiliency of tires.

Will not harden, gum, dry up or deteriorate with use or be affected by heat or cold.

Will not stick inner tube to casing.

Will stop any kind of puncture in a pneumatic tire, from the smallest to the size of a twenty-penny spike.

That where we are shown that the use of Bales Puncture Plugger has resulted injuriously to the tire or tube, to replace said tire or tube, and also refund money paid for Plugger.

Bales Distributing Co.

Indianapolis **Indiana**

Digitized by Google

Backed by A Profitable Proposition For Every Dealer

The Bales sales plan is backed by big men who have successfully marketed automobile accessories since the dawn of the industry. Their proposition is a business plan which insures a profit and fair, satisfactory dealings with every distributor and dealer. There have been many "fillers" and "puncture cures" in the past. Here is

Why This Treatment Is Different

It has been time-tried and proved practical—35 months of use—thousands of miles of service stand back of it.

It is backed by an iron-clad guarantee, over the names of responsible men, not only to do the things where other preparations have failed, but we will replace the entire set of tires—casings and tubes—if it injures them in any way.

Read the big sales features on this page.

Act Now! Don't Wait!

Master distributors have been selected covering practically the entire country. There are a few master distributor territories still open. There are a considerable number of towns and counties in the various territories open. There are unlimited opportunities for retailers. Your inquiries will be properly handled for quick action. Write or wire today.

Bales Distributing Co.
Indianapolis, Indiana

Here are the BIG FEATURES That Sell It

Absolutely guaranteed not to rot or injure the rubber.

No cement—guaranteed not to stick tube to casing.

Holds tires up to standard pressure—no running on partly deflated tires. Makers guarantee tires from 3,000 to 5,000 miles—this treatment should give up to 20,000 miles.

Replaced casings and tubes and your money back if it injures your tire.

Treatment made by the dealer—not sold in bulk for the customer to use improperly.

Moderate in price—complete guaranteed treatment in the tires costs from $12 to $18 per set, according to size.

Backed by responsible men of experience and guaranteed by them in every way.

Oil-less Bearings are Saving American Motorists Many Thousands of Dollars Each Year

HOW?

Oil-less bearings are bearings that do not require oiling. They are self-lubricating. They remain perfectly lubricated, almost indefinitely *without attention.*

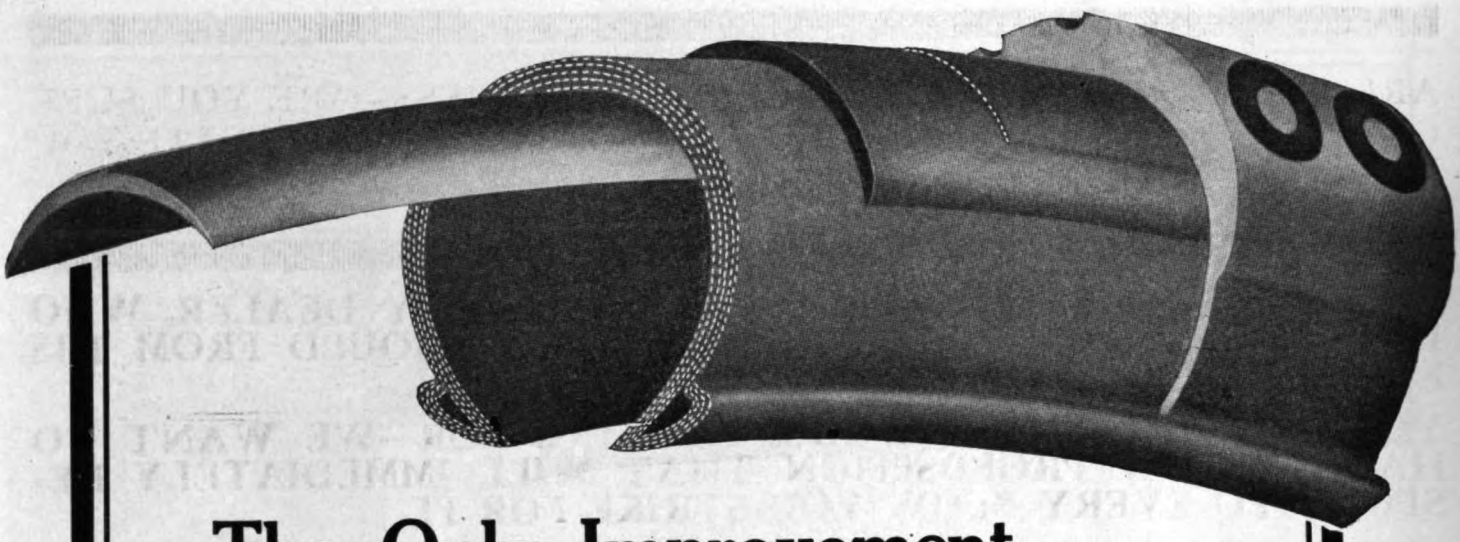
Any bearing, you know, must be kept constantly lubricated to allow the shaft to work freely within it. When a bearing is not kept lubricated, then both shaft and bearing soon become ruined.

Consequently, a bearing which will remain perfectly and constantly lubricated, without attention, is a mighty fine thing to have in those parts of an automobile that are difficult to keep lubricated.

In some places it is not only difficult *but impossible* to keep an ordinary bearing properly lubricated, even when you have the time and inclination to do so.

For this reason *far-sighted* automobile manufacturers no longer use ordinary bearings in inaccessible places or in places difficult to keep lubricated. They use OIL-LESS BEARINGS which, because of their construction remain permanently lubricated, *without attention.*

*Bound Brook Oil-less Bearings are made of the finest bronze commercially obtainable. They are specially designed and constructed to retain *Graphite.* Hence the name "Bound Brook *Graphite and Bronze* Oil-less Bearings" Oil does not hurt Bound Brook Bearings. As a matter of fact, oil slightly reduces the co-efficient of friction. Yet they do not *need* oil like ordinary metal bearings.



Manufacturers are invited to tell us their needs. We will then be able to suggest the best type of bearing suitable for their requirements. We have specialized in the production, use and installation of Oil-less bearings for more than 30 years.

BOUND BROOK OIL-*LESS BEARING COMPANY

The Only Improvement

—you can possibly make over using a Woodworth Trouble-Proof Casing—is to use **both the Woodworth Casing and Inner Tube combined.**

That combination means absolutely the greatest safety and comfort and the finest wearing qualities you can procure in an automobile tire.

No matter what you pay, you cannot possibly beat it—and from the puncture-proof standpoint you cannot anywhere near equal it. It is the greatest advance made in tire manufacture during the life of the automobile industry.

And ours is a **REAL GUARANTEE!**

WOODWORTH TROUBLE-PROOF // TIRES //

We assure you of at least 5000 miles without puncture or blow-out, in addition to adjustments for ordinary wear.

The Woodworth Tire is made as well as present knowledge and material will allow—we have spared neither time, effort nor expense upon it—then, in addition, we **add** a strip of non-heating chrome leather on the inner side of the casing, making the tire "Trouble Proof."

Write at once for our offer to dealers.

It will interest you exceedingly.

And territory is going fast.

Woodworth Inner Tubes are made of finest live rubber. They are strong and durable. It is economy to use the best.

ARE YOU SATISFIED WITH YOUR TIRE BUSINESS—ARE YOU SURE OF IT—IS YOUR FUTURE SECURE? IF SO, WE CONGRATULATE YOU —BUT—

IF YOU ARE A LIVE, DEPENDABLE, FAIR-PLAY DEALER, WHO IS NOT GETTING THE "COME-BACK" HE SHOULD FROM HIS EFFORTS—

YOU ARE THE MAN WE ARE LOOKING FOR—WE WANT TO HAND YOU A PROPOSITION THAT WILL IMMEDIATELY RESPOND TO EVERY BLOW YOU STRIKE FOR IT.

¶ CARSPRING TIRES, as you know, are rapidly increasing in popularity. We are selling them faster and faster as the motorists learn their real value through actual use.

¶ OUR DEALERS are making a big thing out of this—BECAUSE THE INCREASE IS THEIR OWN.

¶ We offer you, if your territory is still unoccupied, the full Carspring rights for that territory. Once you have it, it is yours for good. Every tire sold in your territory means a profit to you.

¶ You may appoint your own sub-dealers as the business grows. But we will appoint none, nor will we open any Factory Branch to eat up your profits after you have built them up to a fair size.

¶ We will help you—we will consider you as part of our organization—we will let you make your own adjustments and back you up in every possible way.

¶ We have thousands of satisfied dealers now, who—with our aid by advertising and otherwise—increased the demand for "Carsprings" 460% in a few months, forcing us last spring to decline many agency propositions.

¶ But now, with new machinery and increased factory space, we are in position to appoint additional representatives and guarantee immediate deliveries.

¶ We want one in your district. Are you the man?

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

Mitchell Buyers

The Sort of Men Who Choose Bate-Built Cars

Our dealers report that most of the Mitchells are now sold to leading men.

Chicago, in one week, sold Mitchells to officials of five big banks.

New York reports an overwhelming demand from the most critical class of buyers.

Everywhere the main demand comes from big business men. They are first to recognize, of course, the value of efficiency.

But 37 noted engineers—men of national fame—have also selected the Mitchell. And all because of John W. Bate.

The demand for Mitchells, on every hand, has trebled since last summer.

The New Appeal

Efficiency is a new factor in Motordom. It has, until lately, been almost impossible.

Models and types have been constantly changing. Tools and machines became out-of-date in a year. It was cheaper to buy parts than to make them. And profits permitted extravagance.

But the Mitchell concern—82 years old—had watched many an evolution. And we knew that in this line, as in others, efficiency would sometime rule. So years ago we brought John W. Bate here—the leading efficiency expert in the machinery-making line.

Now We Are Ready

Now we are ready—now when so much depends on factory efficiency. We have a model plant, all designed by John W. Bate. We have modern equipment which he has selected. We have the trained men.

We can build a car of the Mitchell grade for less than any other plant in America. We can give better value. And we can include—as we do in this Mitchell—26 wanted features which others omit.

Men are Learning

Men are learning what the Mitchell represents. We are spending this season $500,000 in advertising. And we shall never stop.

Mr. Bate's work is done. He has brought this great factory to the top mark in efficiency. In the car he has worked out 700 improvements.

Now we are telling the facts. And the demand for Mitchells will be ten times greater when all men come to know them.

We want to hear from dealers in unoccupied territories who feel that the Mitchell offers a great opportunity. And who feel that they deserve it.

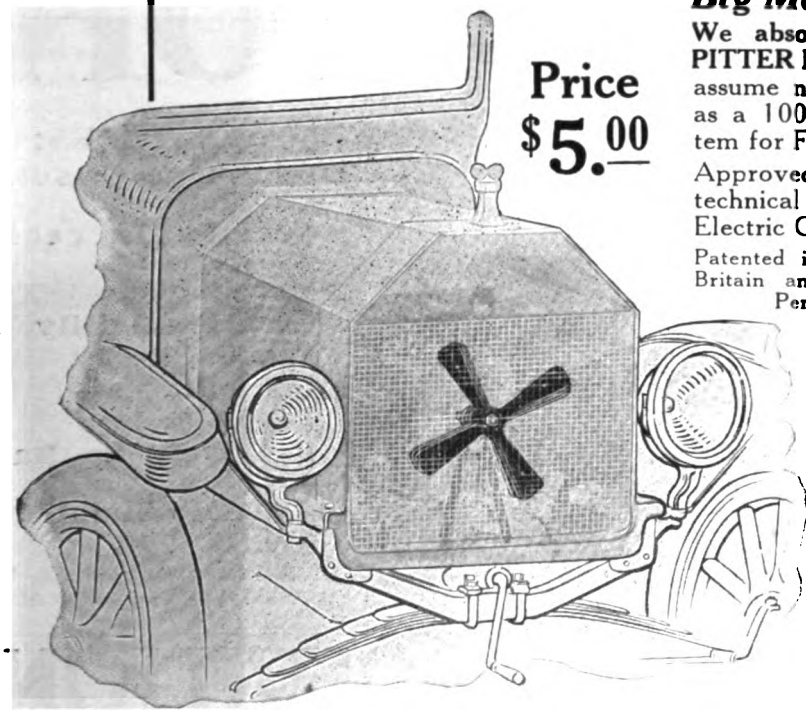
Could You Sell Ford Owners a 100% Efficient Cooling System For $5?

Recommended by Smith Form-a-Truck Co., and Dearborn Motor Truck Co., for use on all con.erted Fords.

If you could find a cooling system for Ford cars that would live up to a 100% efficiency guarantee, costing but $5, you couldn't keep enough on hand, or sell them fast enough to supply the demand. Ford owners with overheated motors would bombard your shop from morning until night. You couldn't keep a wise one from buying.



Recent experiments and actual road tests have proved that—

Ford Motors Will Not Overheat When Cooled with a PITTER MULTIBLADE FAN

That's not an entire cooling system for $5, but the PITTER Fan added to the cooling system furnished with Ford cars in place of the fan now included as equipment **will absolutely prevent the motor from overheating.**

The PITTER Multiblade Fan has 3 blades in 1. It draws 50% more air through the radiator than the old-style fan, and reduces cost of car maintenance at least 33⅓% by keeping the motor cool.

The PITTER Fan prolongs the life of the motor, reduces repair bills, and cuts the cost of gasoline by insuring more mileage from a better running motor.

Price $5.00

Draws air through every square inch of radiator surface—not just through the center.

Big Money For Dealers

We **absolutely guarantee every PITTER Fan to make good.** You assume no risk. As easy to sell as a 100% efficient cooling system for Ford cars, at $5.

Approved by leading engineers, technical magazines and General Electric Co., Ltd.

Patented in Germany, France, Great Britain and Canada. U. S. Patent Pending.

Write or wire for details and agency. Liberal discounts. Big sales. USE THE COUPON now.

SUNDERMAN SAFETY CARBURETOR

The universal satisfaction given by the Sunderman Safety Carburetor brought an immediate great demand.

The demand brought a vast increase in production.

Increased production brought about manufacturing economies which cut the cost of production.

We give these economies direct to motorists by making a flat cash price of $5.00 for standard size F.

FEATURES:

Enormous Gasoline Saving
Greatly Increased Mileage
More Power
Great Flexibility
Fast Get Away
Quick Pick-up
Easy Starting
Positively No Back-firing
Absolute Simplicity
SPEED

A wonder for Fords—Does great work on big cars.

"New Tops for Old"

THOUSANDS of automobile owners all over the country who are using Johnson's Prepared Wax and Johnson's Cleaner with such wonderful results will want to use our new product—

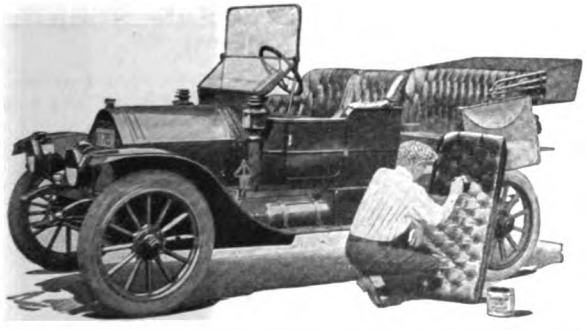
JOHNSON'S BLACK-LAC

It is unequalled for touching up **leather cushions—side curtains—tire covers—auto trunks—pantasote and mohair tops and linings.** One coat of Johnson's Black-Lac gives a rich, black surface just like new. It is easy to apply—dries in fifteen minutes—does not rub off on the hands or clothing—is permanent—water-proof and inexpensive.

It is splendid for blackening **fenders—rims—running boards—hoods—radiators—guards—lamps**—and in fact all worn metal parts. Prevents rust and keeps your car in a high state of repair.

Nationally Advertised

Our advertising campaign on **Johnson's Black-Lac** has already started. We will use half-pages in Saturday Evening Post—also large space in practically every motor paper. There is bound to be a large demand and we hope you will stock immediately. Automobile owners who have been in the habit of purchasing **Johnson's Cleaner** and **Johnson's Prepared Wax** from you will naturally turn to you for this new product.



It is no longer necessary to stock three or four different articles for dressing up automobiles. Johnson's Black-Lac is six products in one:

1—It is a mohair top dressing.
2—It is a leather top dressing.
3—It is a lining dye.
4—It is a cushion dressing.
5—It is a metal enamel.
6—It is a rim paint.

Johnson's Black-Lac is put up and listed as follows:

Quarts ..... **$ 1.10** **Half-pints** ..... **$ .40**
Pints ..... **.65** **Also in gallons for large users.**

Liberal dealers' discount. Mail coupon for further information.

S. C. JOHNSON & SON, Racine, Wis. **MW7**

I am interested in stocking Johnson's Black-Lac. Please send me complete information—discounts and names of jobbers in this locality from whom I can purchase.

"The Light That Failed"

Many dealers and garage owners throughout the United States have suffered defeat in business, because they did not adopt some adequate accounting system to direct them into profitable channels, and take them from the broad and too easily traveled path of loss—at the end of which was failure.

How much did you make in June?

Maybe you think so—but do you know?

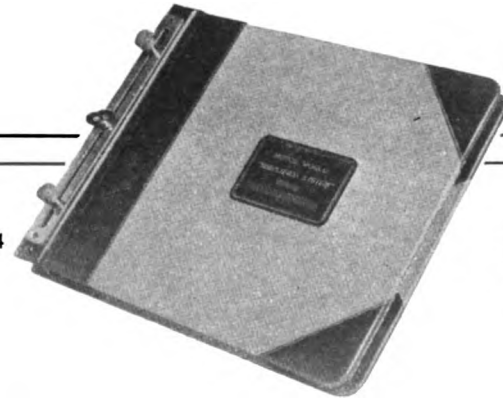
How much will you make in 1916?

Does your repairshop gain or lose?

How much do you make when you charge a customer for an hour of labor?

How do your May and June collections compare?

If you don't know these things you are not on the road to business success. You should have an accurate and timely record of all parts of your business. You should have a simplified and easy to operate accounting system that will light up the dark corners of your business—that will make your business road safe to travel.



Motor World has devised such a system. It costs $12 complete. Everything in one book. We advise you to get SOME kind, whether it is Motor World's or some other. But if you want this one (which is designed by experts who have made a careful study of the various problems of YOUR business) send $12—check or money order—and plan to get started on the right track August 1st.

Booklet with a complete illustrated description of the system (price $1.00) will be sent complimentary with each system. Send your order at once. Address:

This is a photograph of a cross-section of the tire that ran 9467 miles. Note that it has worn down as evenly as a piece of fine steel. This tire would be good for thousands of miles of additional wear.

9467 miles on this Republic Prōdium Process Tire

Toughest rubber in the world gives new solution of the tire problem

What the sole is to the shoe, the tread is to the tire. No matter how good the fabric or the inner tube may be, if the tread is weak, the whole tire is weak. With this principle before them, the Republic Rubber Company's experimental force has worked for years to perfect a tire tread stock that would overcome the difficulties of ordinary rubber. Prodium is their answer.

Prodium is a newly discovered substance, that, when compounded with high grade rubber makes the toughest material ever used on a tire. The tire section shown above is but one of many proofs of this statement.

Prodium, or the Prodium Process as it is now called, gives a tire tread that even fresh-cut rock does not cut or gash; that withstands extraordinarily high temperatures; that wears down as evenly as a piece of fine steel; that is oil-proof and grit-proof; that is more resilient than ordinary rubber.

In fact, Prodium Process Rubber is as near wear-proof as human ingenuity can make a material that must be flexible.

Stylish STAGGARD Black Tread

Trade Mark Reg. U.S. Pat. Off.

Republic Prodium Process Tires can now be had in the stylish black tread, so much in vogue among motorists. In the Staggard Tread or "WM" Tread non-skid styles, this new rubber furnishes immunity from skidding possessed by no other tire. And even the plain tread style has remarkable anti-skid qualities.

Make this test yourself

Write for a sample strip of Prodium Process Rubber. Try to break it. We have found few arms strong enough to tear a strand only ⅛ inch square. A strip 1 inch square will hold 3,400 lbs., or 20 average men. Get the sample today. Convince yourself that this is the toughest tread ever put on a tire.

Every Motorist Needs a Vulcanizer to Stop Tire Troubles and Increase Mileage

Dealers:

Here is your opportunity to supply the vast army of motorists with this needed accessory and make money. Do you know that motorists bought more vulcanizers last year than any other single accessory—save one? Think what a valuable accessory it is. It helps the motorist increase mileage.

Remember, a Shaler Vulcanizer is not "regular" or even "special" equipment. None comes with the car; the motorist **must buy it.** You not only get a good profit from the vulcanizer but the motorist must come back to you for vulcanizing supplies—thus more profit.

SHALER Vulcanizer

They will repair any cut, rip, tear or hole in either casing or tube, in a few minutes, and make the repair the strongest part of the tire. The Shaler is the only vulcanizer that has Automatic Heat Control. It can't undercure or overcure a tire.

They come in a great variety of sizes and types—Electric, Gasoline, Alcohol and Steam, for every requirement of public and private garages. Shaler Tube-Kit (for vulcanizing tubes), $2. Ford-Kit (for Ford owners), $2.75. Vul-Kit (to carry in tool box for roadside repairs to tubes and casings), $3.50. Model D (electric equipment for private garages), $12.50. Public Garages and Repair Shop Model, $60. Sold by leading jobbers.

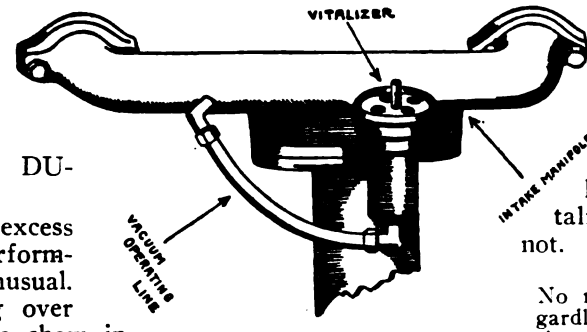
FREE GASOLINE!

Is Exactly What It Amounts to if You Use

THE DUPLEX VITALIZER



Actual Tests Show an 80% Increase in Mileage

When we GUARANTEE the DUPLEX Vitalizer to reduce the fuel consumption of any motor, we simply promise you the results being achieved by thousands of DUPLEX users throughout the country.

For instance, James J. Allen of Watkins, N. Y., made a gain of 54% in mileage through use of the DUPLEX.

Fuel savings, even in excess of this remarkable performance, are not at all unusual. Experiments extending over long periods of service show increases in mileage ranging from 10% to 80%.

It requires very little figuring on the basis of the above facts to determine in just how short a time the DUPLEX Vitalizer at $5 will pay for itself. In the long run, it really costs the car owner nothing. In fact, it makes handsome returns on his investment. In reality every day a motorist puts up with a fuel-thieving car he is paying dearly for his lack of a DUPLEX Vitalizer, whether he knows it or not.

ATTACHED TO MANIFOLD

No man who runs a motor car, regardless of what mileage he is getting, can consistently refuse to INVESTIGATE the DUPLEX in the light of the wonderful results it is showing for others. The story of DUPLEX performance costs nothing. We will send it free to anyone. Write for it—NOW. Use the coupon. Don't put up with low mileage a day longer. You don't have to.

GUARANTEE

If properly installed, we guarantee every DUPLEX Vitalizer to give increased mileage, power and motor efficiency. If at the end of 10 days it fails to do all we claim for it, full purchase price will be refunded.

Here is the little device that is smashing all sales records

Illustrating simple Construction of the Duplex

DEALERS AND JOBBERS: The high price of gasoline has created a tremendous demand for the DUPLEX. The ten day trial convinces.

Every DUPLEX you sell makes a dozen more sales. Territory going fast. Wire or use the coupon.

DUPLEX VITALIZER MFG. CORP.

ELMIRA, N. Y.

Remember that the DUPLEX Vitalizer differs from any other similar device on the market. It operates on the piston vacuum system. Its construction is unique. It not only holds all records for decreasing fuel consumption, but increases power and acceleration materially. It also lessens carbonization.

Price complete, $5. At your dealers', or direct on receipt of price.

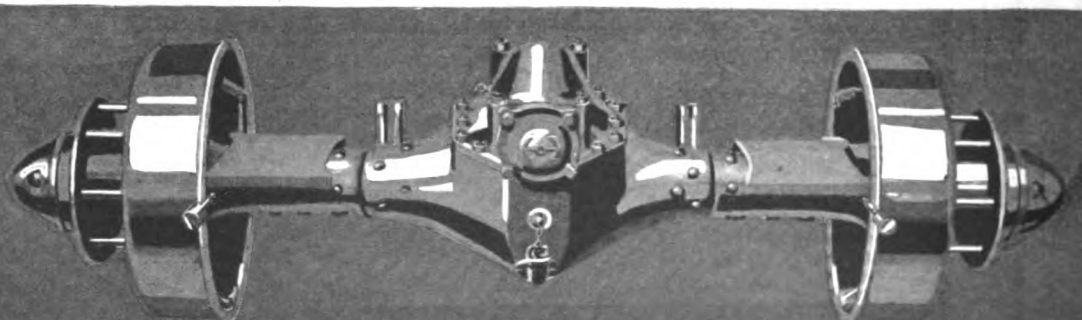
SHELDON

Where demands are heaviest, there you will find worm gears most efficient, because the more you use them the better they get. This is literally true. Up to the point of absolute destruction a worm gear improves with use.

¶ And, what is of still greater importance, is the fact that worm gear outlasts any other type of drive many times.

¶ This is just one of the characteristics of worm drive that has played an important part in bringing about the dominant use of worm gear axles for truck work.



¶ At the present time 93 of the most successful truck manufacturers in the country are using worm gear axles, and about half of the models, and more than half of the trucks actually produced this year will be worm gear driven.

And from the standpoint of first cost, worm gear driven axles are the most expensive type. They dominate solely because of merit.

"25 Miles Per Hour Over Rough Road"

Weaver Auto Ambulance Makes You a Big Profit In the Time It Saves

You know that the only way to make money hauling in wrecked cars is to do it quickly and with as little labor as possible. That is why the

WEAVER Auto Ambulance

is just as necessary to your garage as a front door. We have built it to meet just the conditions you are up against.

The Weaver Auto Ambulance is scientifically designed and constructed by skilled mechanics who have made a study of the requirements of this particular service.

It is full roller bearing, so that heavy loads can be towed with least possible energy—its rugged construction and secure clamping mechanism enables cars to be towed over rough roads at 15 to 25 miles per hour.

It can be securely attached to either front or rear axle of the car—one man can throw it into your service car, run out to the wreck and make the "tow-in" alone.

It is the *efficiency* of our Ambulance, resulting from its proper design and construction, which enables it to pay for itself in a few trips.

Send for complete Weaver catalog TODAY—NOW—this minute. It is full of money makers for the live garage man. Ask for booklet 731

Can You—

before reading the copy below Name The Car of these dominant lines

?

¶Of course you can. It's the new Reo Six—the "fashion plate" from which so many other makers are now designing their next year's models. ¶Those familiar lines—those graceful curves—catch your eye as the Reos glide by you on the road. ¶We said "glide" —not speed. Note the distinction, for our ambition has been to build cars, not for those afflicted with the speed mania, but who crave the utmost in luxurious riding. Reos are for touring, not for the boulevards alone or the speedway. ¶If you never have owned a Reo, never held the wheel yourself on a Reo Six, then you can but dimly appreciate what we mean when we say Reos "glide" by you. ¶Just try it—the Reo "one-rod" control is so simple anyone, woman or man, who has ever driven any automobile, can drive a Reo without instructions. ¶Note the smoothness with which the car accelerates—none of that tremor, that "palsied tremble" that indicates the flimsily made car. ¶And you'll be surprised to find, when you actually put them side by side, how little difference there is in the "get-away" of this sturdily made, durable Reo Six, as compared with those for which that quality is the chief claim. ¶Consensus of opinion is an excellent guide. Watch for the Reos—you'll be surprised at the number you'll see. ¶Then, too, note the class of people who drive Reo Sixes—car owners are divisible into distinct classes, you know, and the comparisons furnish an interesting diversion on the road. ¶You'll like the kind of people you see in Reos. They are your own kind. They are a class who desire real qualities in a car, not mere novelty. ¶You can't mistake a Reo Six for any other. The lines of the Reo Six are distinctive as well as graceful and artistic. They are "the lines they are all quoting"—which is trade vernacular for copying. ¶From that Reo radiator to the tire holder this car is distinctively Reo. ¶You will enjoy the distinction of being seen and numbered among those who own Reo Sixes—it is the hallmark of good taste, evidence of faultless mechanical judgment and a knowledge of values.

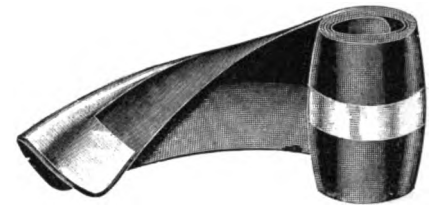
Big Selling Leaders For Live Dealers!

K-C TIRE ACCESSORIES are known as the **self-selling** line. They have new, easy-to-apply features which make a big hit with motorists. K-C sales are quick and profitable. K-C accessory customers stick. Note the selling-punch in the two items illustrated.



K-C "VULC-TITE"

SELF-VULCANIZING PATCH

Strip protector cloth from the vulcanizing gum; fold extension flap under; the patch adjusts itself to fit casing and pressure of inflated tube automatically vulcanizes patch to itself; forms complete cylinder around the tube —can't bulge—holds any blow-out or rim-cut.

K-C "RED-COAT"

SELF-VULCANIZING RELINER

The holland cloth strips down the center and across the end of this reliner protect quick vulcanizing gum, and the entire surface of the reliner is coated with a special red cement. Dampen with gasoline and the "Red-Coat" is ready for the casing. It vulcanizes instantly; can't creep; can be removed to use again.

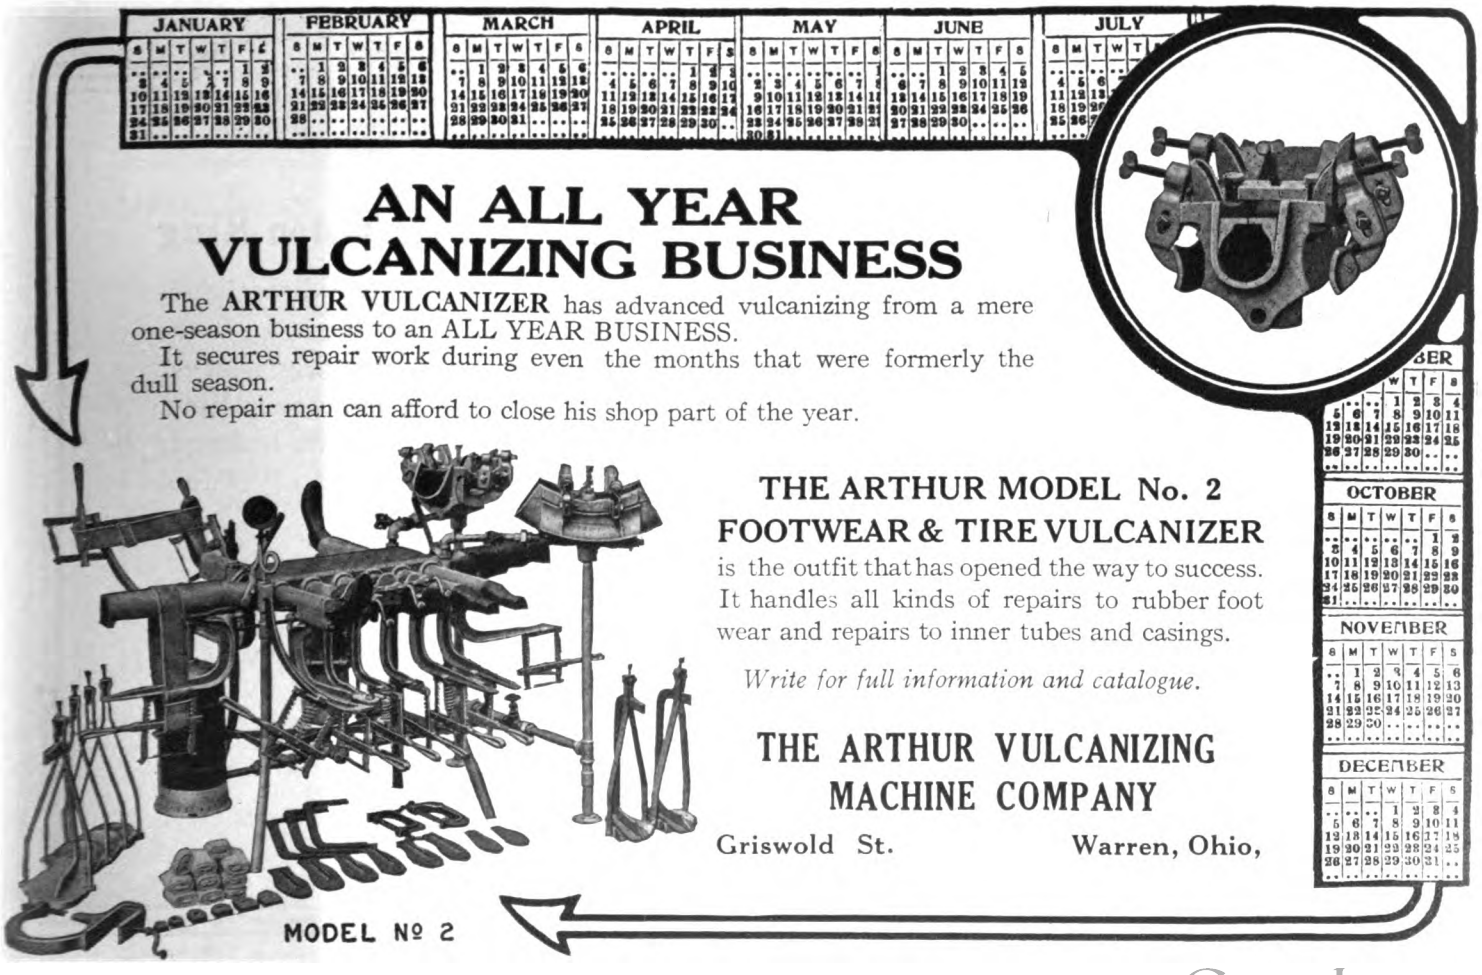
BRUNNER AIR COMPRESSORS

A BRUNNER AIR COMPRESSOR IN YOUR GARAGE AND A BRUNNER AIR SIGN ON YOUR GARAGE WILL BRING "BRUNNER WISE MOTORISTS" TO YOUR DOOR

The "Brunner wise motorist" is a fact—we created the "Brunner wise motorist" for you, Mr. Garageman by systematically distributing among the Brunner equipped garages for three years the three color enamelled iron Brunner Air Sign, educating the motorists to know that Brunner Service meant efficient, high class service and that is why the "Brunner wise motorist" is patronizing the garages that display the Brunner Sign.

The Brunner Sign is another Brunner Idea, it has proven its wonderful advertising value to the garageman. The Brunner Sign, like all other successful innovations, will be imitated, but—remember the Brunner Sign is backed up with THREE YEARS practical demonstration and is a proven success, it has a three years' start—watch the progress of the Brunner Sign and the growth of the standing army of "Brunner wise motorists"—get in on the ground floor, we are going to bring business to the door under the Brunner Sign.

The Brunner Air Compressor Has Been Consistently Demonstrating Its Sterling Value to the Garageman *in the Garage* Ever Since the Garage Business Has Been a Business.



The Brunner Line was designed and built for the garageman's special requirements, it has developed with the garage business, it has always been honestly built and honestly advertised, it has always been sold on a bonafide guarantee that we have always stood squarely back of, and is a good sound business proposition worthy of the garageman's explicit confidence. No freakish construction, no reckless advertising claims, no cut price inducements, everlasting guarantees or unlimited free trial offers, but—simply the good sound business proposition that it has always been.

THE UNIVERSAL AUTO PRESS

Possesses More Power, Higher Speed, Greater Capacity

EXCLUSIVE ADVANTAGES

1ST.—HIGH SPEED leverage of 1000-1 for ordinary work.

2ND.—HIGH POWER leverage of 2200-1 for extraordinary work.

42 IN. CLEARANCE. This clearance is necessary to handle all work that comes.

LOWER TABLE instantly adjustable on pins (no bolts to remove, no danger to workmen).

BOTH TABLES have wide faces to properly support the work.

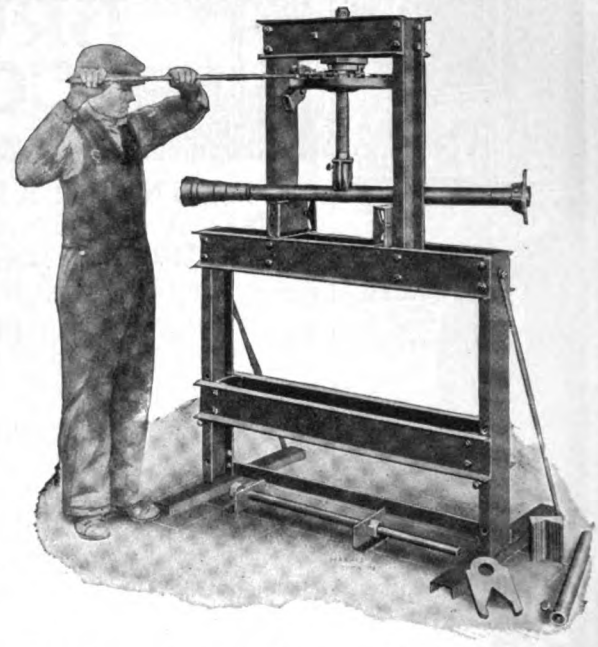
SCREW 2 in. diameter 4 pitch square thread, 12 in. travel. It does not revolve.

CHANNEL BLOCKING, properly braced (will not crush).

"V" PLATE which automatically adjusts itself to any size arbor, mandrel or shaft.

CAPACITY, 22 TONS Exclusive to this Press, for less than four times its cost.

than anything else of the kind. A glance at its exclusive features will show its superiority.



If you want a press that will take All work coming to your shop and do it quicker, better and easier than any other—write to us now for full information.

The 42-inch clearance will take every wheel (truck or pleasure car) that comes to your shop.

The two leverages enable you to do light work quickly and heavy work easily and perfectly.

The screw, exposed at the top, can be struck a hard blow without the slightest damage to the press. This is of great service in obstinate cases, such as a rusted shaft, which pressure alone will not move. No other press possesses this advantage.

Price : Complete : $46.75

The Universal Auto Press stands upon the floor independent of other support, and may be moved to suit conditions or turned over for pressing long work.

The Largest Gasoline Cars in the World are fired by Splitdorf Plugs

The 300-H. P., self-propelled, McKeen gasoline rail cars are used for most difficult service in Austraiia, Mexico and the United States. The high efficiency of these great gasoline cars is another testimonial for the

SPLITDORF SPARK PLUG

With the Green Hexagonal Jacket

Ninety per cent. of all engine troubles are due to faulty ignition. Seventy-five per cent. of them can be remedied at once and forever by the use of Splitdorf Plugs.

These plugs are practically indestructible, positively gas and oil tight. They are as nearly soot-proof as a plug can be. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motorcycle, motor truck, motor boat, aeroplane, tractor, and stationary gasoline motor. Write for Splitdorf Directory which tells which plug to use in *your* motor.

Splitdorf Plugs sell for one dollar everywhere. If you can't get them from your dealer, send to us for them.

A Safe, Certain, Bright Light at Slow Speeds for FORDS

The VAN SICKLEN Concentrator assures such a light at slowest engine speed, when you need it most.

At 5 m. p. h., 10 m. p. h. or 15 m. p. h. with a VAN SICKLEN Concentrator you always have sufficient light for every driving purpose. $2.00—the price of the Concentrator—is a very small price to pay for so necessary a convenience.

$2

VAN SICKLEN
AUTOMATIC
HEAD LIGHT CONCENTRATOR
FOR FORD CARS

The VAN SICKLEN Concentrator at all speeds below 15 m.p.h. automatically disconnects the right headlight, shunting double current into the left headlight. At 10 m.p.h., for instance, the left headlight burns as brightly as it ordinarily would at 20 m.p.h. Above 15 m.p.h. the regular Ford 2-lamp system automatically re-asserts itself.

Price, $2.00 complete, ready to put right on. Easily installed. Full instructions with each order. Installed under hood on dash. Guaranteed not to injure magneto or bulb. Neat, compact, handsome.

Note simple installation

Obtainable from most good dealers or sent prepaid direct upon receipt of price.

Dealers: Some desirable territory still open. Over 600,000 prospects. 40,000 sold in last two months. Wire or write.

Shake Hands With Simon Sure, Mr. Dealer!

(Your customers have never shaken him since they saw him in our magazine and newspaper advertising.)

He's a good man to know, is Simon Sure. He's [the spirit of Security behind

BATAVIA
SECURITY NON-SKID TIRES

His job is to see that those indentations go into every Batavia—to make them easy-running in fair weather on dry roads, sure-holding on tricky wet pavements and hard-fighting in mud and sand.

He knows the indented tread is best because it helps his friend Sammie Speed in good weather by reducing the friction surface—helps his team-mate, Willie Wear, too, because no rubber is put where it would just wear out without doing any good.

A modest kind of chap is Simon Sure. On sunny days—and most days are sunny—he doesn't insist that you know he's on the job. He doesn't put any lumps on Batavia to call attention to himself. In fact the only way your customers know he's there is that the indentations let the engine pull easier than it would if it had to lift a solid flat surface off the ground.

But get him in a sudden shower or muddy or sandy road and watch him work! Every high spot on his design comes around to wipe dry the pavement for the next high spot. Like a sprocket wheel his rubber teeth bite into soft mud or sand and pull.

A fair and foul weather friend is Simon Sure—especially fair. Next advertisement tells about his team-mates, Kid Care and Hi Quality. Watch for it, but meanwhile—quick! the coupon!

AUTOMATIC · IGNITION
CONNECTICUT

Gives the most effective spark at every speed for four, six or eight cylinder motors.

Delivers hottest spark at low speeds and a better spark than the magneto at high speed.

Connecticut Telephone & Electric Company, Inc.
Meriden, Conn., U. S. A.

Business Opportunities

I Establish Cut Rate Tire Agencies

There should be one in every locality. High cost of tires worries the auto owners.

One of the best paying lines of business

Nice, clean stock; no credit, no risk. Should net at least $600 monthly from now on and steadily increase. You can undersell your competitor 50 per cent and still give splendid value. Experience unnecessary. About $500 cash required to handle. Investment well secured. No traveling or canvassing, but a business of extraordinary merit suitable for any industrious man who means business.

Tires cost you in one or more makes

30 x 3.....$5.28
30 x 3½.....6.80

Other sizes in proportion. Immense Stock; Prompt Shipment. If you are tied up in the general garage or automobile agency business, not necessary to reply. But if you are free to enter into a money making business and are free to devote your entire time to it, answer immediately. Desirable open territory. For full particulars address

E. JANES,
1789 Broadway, New York City.

Carburetors

ALL SEASON'S RECORDS
made with Schebler equipment. Why not get a Schebler model B for your car. Our exchange proposition makes it easy.

Just a Moment MICHIGAN Owners

This is a matter of special importance that will not permit delay.
Michigan owners have been experiencing ignition difficulties due to the failure of the old Briggs Magnetos after two or three years of service. We took steps to overcome this by purchasing a quantity of Remy Magnetos—knowing that this is as thoroughly reliable, efficient a magneto as can be furnished even on the finest 1916 models.
Knowing the urgent need of our owners we offered them at the wholesale price of $24.50—less than half the regular price.
The first lot and a small additional shipment which was finally secured melted away almost immediately.
There are only a few left.
Do you want one? You can solve your ignition troubles now for $24.50. A month from now it will cost you double that.
Perhaps it would be best to wire. At least write today.

Price Complete $24.50

We positively do not carry repair parts at any other point.
This is only one of many special parts which we are offering to Michigan owners at unusually low prices. For instance, you buy your spark-plugs (standard size Champion) for 28c each. The regular price is from 75c to $1.00. Write for our list if you haven't one.
Our service department is doing its utmost to smooth out all troubles Michigan owners may have. No car has a finer service organization behind it. Send your orders or questions direct to the factory.
We positively do not carry repair parts at any other point.

KRIT

SPECIAL OFFER NO. 1

Cylinder Blocks Rebored to give 15 to 20 per cent more power

Our chief engineer has devised a method for reboring old scored cylinders which actually made them even better than when they were new, and at a price much less than you would have to pay for new cylinders.

Scores of Krit owners have already taken advantage of this method.

Owners have written us, "Can't believe it's the same old car." "Runs like new." "Gives me easily twenty per cent more power." This is the way their letters run.

And remember, this new price includes fitting the motor complete with new piston rings, pins, and new 3¾" pistons.

Price complete $28.50

You see, this is only one example of what your company is doing to aid you in keeping your car in good running condition. As we have told you before, we have discontinued all Krit repair stations and allow no dealers to carry a supply of Krit parts.

Order directly from the factory.

NOTE—Krit owners do well to look for this announcement in every issue of this publication. In nearly every issue an equally attractive special offer will be made.

KRIT MOTOR CAR CO.

Do You Own One of These Cars?

The Standard Motor Parts Company of New Castle, Indiana, has taken over from the Maxwell Motor Company the entire stock of repair parts and the entire service department of these cars.

Better service is being rendered than ever in the past, and many prices have been reduced. We are interested in every single car and in seeing that its owner gets the very utmost from it—not only in service and satisfaction but in economical upkeep as well. We keep no stock of parts at any dealers or **supply houses.**

Consult with us in regard to your difficulties. We positively do not keep a stock of repair parts at any point except at New Castle. Order direct from the factory.

Standard Motor Parts Company, Newcastle, Ind.

MOTOR BARGAINS

Don't try to buy parts for that old motor. We can sell you one to replace at much less money than you would pay for the parts to put it in running condition.

Used motors thoroughly overhauled put in perfect condition by the manufacturer as follows:

25 H.P. with carb. and base for mag	$ 95.00
30 H.P. with carb. and base for mag	95.00
25 H.P., new, with carburetor and base for magneto	120.00
30 H.P., new, without carburetor and base for magneto	115.00
35 H.P., new, with U. S. starting and lighting outfit, carburetor and Connecticut distributor	180.00

RADIATORS

We manufacture **genuine square tube Honeycomb radiators.** This type we guarantee will give more cooling surface than any radiator made. Prices on application.

Write for advance spring catalogue on carburetors, horns, tops, bearings, steering gears, magnetos, coils, and other parts and accessories.

Guaranteed for the Life of the Car

STOCKED BY ALL JOBBERS

Stop the Spring Breakage

It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a cheaper spring instead of a "NEW ERA *BETTER* SPRING." Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

New Era Spring & Specialty Co.
879 Woodward Ave., Detroit, Michiga

Harvey RACINE

BOLTLESS AUTO SPRINGS

Mean Freedom From Spring Repairs

Guaranteed From End to End

Harvey Boltless Auto Springs are formed and tempered on the Harvey Patented Automatic Machine, which does the work with absolute accuracy and uniformity and without the variations found in hand-made springs.

Another very important point about Harvey springs is that they are made without a hole at center. A small depression or bead prevents the plates from shifting and all the strength is preserved at the center. There are no weak spots in Harvey Boltless Auto Springs.

New Spring Book Now Ready

The Harvey Spring Book for 1916 is now ready for distribution. It is the most complete spring book ever issued and will be of great assistance to every Dealer, Garageman and Repairman. MAILED FREE.

THE HARVEY SPRING CO.

848 17th Street, Racine, Wisconsin

THE

ACME

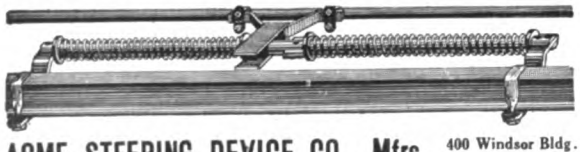
Size 6x16 Inches --- Patent Applied For --- Weight 4 Pounds

Ford Steering Controller

PRICE COMPLETE, $3.50

The ACME STEERING CONTROLLER is a simple and substantial Accessory, of practical value to all Ford Car Owners.

By the pressure of two coil springs acting upon the tie rod, the car automatically tends to a straight course, regardless of holes and obstructions, thereby relieving the strain of driving.



The ACME STEERING CONTROLLER is the only practical steering device for Ford Cars on the market. As proof of this, not 1 per cent of those sold to date have been returned. However, the Manufacturers stand ready to take back and make refund to the dealer for any machine returned.

It is easily seen from the description what the device will do, and the Ford Car Owner readily buys because of its simplicity and apparent effectiveness.

Have the device in stock and be in line for sales.

Be the first dealer to introduce the ACME STEERING DEVICE in your territory, and gain this advertising advantage.

Write to your jobber or to us for the discount to dealers.

Studebaker Opportunities

Another one in Illinois

—a city located about 178 miles from Chicago—a city nationally known for its production of plows, in fact, for all kinds of farm implements from harrows to tractors.

Population totals more than 25,000; leading industries—agricultural implements, carriages, wagons and motor cars. Rolling mills also form an important part of the industrial life, and extensive water power systems give promise of early and profitable business expansion. Such railroads like the Burlington, Rock Island and Illinois Central maintain large terminals in this city.

This is one of the few opportunities for energetic dealers that Studebaker has in the Middle West. Write for all the facts and details.

USL TRADE MARK STARTER BATTERIES

U S LIGHT & HEAT CORPORATION.

FREEDOM
From BATTERY TROUBLES

If you would solve your troublesome battery problems, get a USL and "Be Battery Happy."

Recent impartial tests made in competition with all well known makes of starter batteries, by competent manufacturers' engineers, have proved conclusively that the improved USL *machine-pasted* battery stands up longer and renders more efficient service than any other on the market today.

From the best information we can get, based on estimated outputs of cars, USL batteries will be specified equipment on more motor cars for 1916-1917 than any other. This ought to mean something to you.

Sold under a 15 months guaranteed adjustment plan. Built to fit all cars and all starting and lighting systems. Free inspection. Liberal "trade-in" arrangements. Service stations in all principal cities of United States.

Hudson Super-Six Endures The Supreme Test

The Hudson Super-Six, in many a test, has proved itself the greatest car that's built.

No car has ever matched it in hill-climbing. No other stock car ever went so fast. None ever went so far at top speed. And no motor of its size ever showed such reserve power.

Best Record By 52%

A Hudson Super-Six with stock chassis was driven 1819 miles in 24 hours on the Sheepshead Bay track on May 2nd. The average speed was 75.8 miles per hour.

That car, in a single round of the sun, went the distance from New York to Denver. It went 52 per cent farther than any other stock car had ever gone in that time. One man drove it all the way. No man could do that in a car which was not vibrationless. That man went farther in 24 hours than a man ever traveled before.

50 Miles In One

Some engineers figure that one mile at racing speed equals 50 miles of ordinary driving, in wear and strain on motor.

This car had run 2,000 miles before that test, at average speed of 80 miles per hour. So this 24-hour run made 3,800 miles which the car had been run at top speed—as high as 102 miles per hour.

Yet no part or bearing, when the engine was inspected, showed any appreciable wear.

The Thing You Want

What you want in a car above all else is reliability. And that's what these tests are proving.

It would take ten years of road work, perhaps, to show what we prove in a few days of speed work.

In all our tests we use a stock chassis.

The motor is exactly the same as in every Hudson Super-Six. So every man who buys a Super-Six gets the same super-endurance.

Excels Costly Racing Cars

At Sheepshead Bay speedway, at Chicago, and on other race tracks Hudson Super-Sixes—practically stock—showed greater stamina than the costliest special racing cars.

While great racing motors went to pieces under the terrific strain, the Hudsons ran through grueling contests without a stop.

Their speed was not always equal to winning first prizes, though they always were "in the money" and always were the sensation of the race because of their marvelous staying powers.

A Patented Motor

The Super-Six motor is a Hudson invention, controlled by Hudson patents. The principle which gives its utter smoothness is entirely new. That is why it out-performs any other car that's built.

It develops 76 horsepower from a small, light Six. That is 80 per cent more than old types. You rarely use that power. In ordinary driving you run at half its capacity, so the motor is never strained.

But the owner of a Super-Six knows that he has the power. He knows that his car is a master. He knows that in speed, in hill-climbing, in quick pick-up, no car can do what his does.

He takes pride in those facts. But his chief satisfaction lies in the car's endurance. He knows that his car will last. That another car at half the price might cost more in the long run.

Don't consider a fine car until you know the Super-Six. You would surely face years of regret.

While we are not now in a position to add new dealers with assurance of immediate deliveries, still we solicit correspondence from established dealers who are now making plans for the future

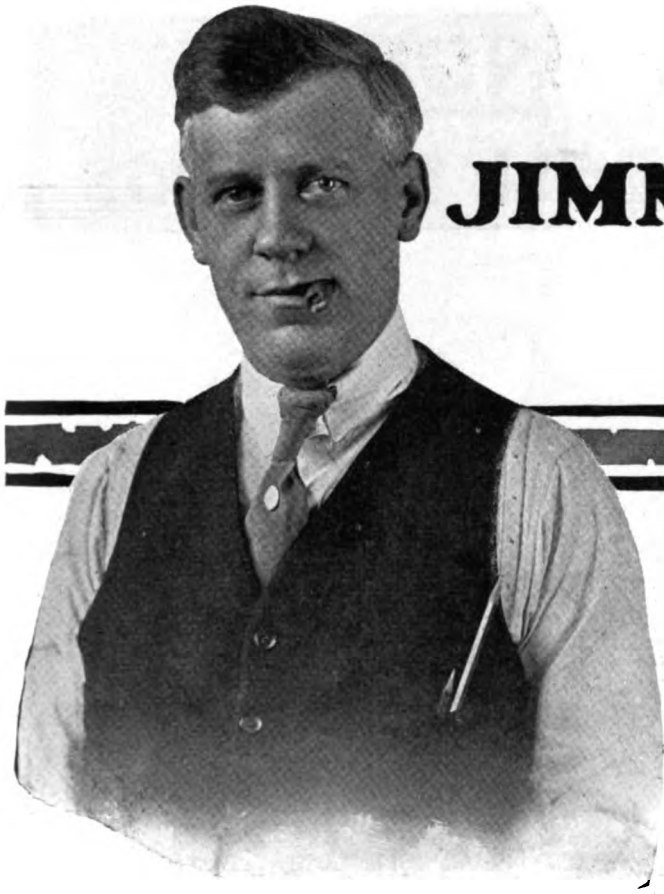
Why I am a Studebaker dealer!

Seven years ago we commenced selling Studebaker Autos, and during the interim we have had District Managers of all the other popular makes do their best to persuade us to change our line; but our years' of experience have thoroughly convinced us that Studebakers are the best and give the most value (by a large margin) for the money, the greatest amount of pleasure with the least amount of trouble. The longest service with the smallest expense, and last but not least, the Studebaker Corporation of America, is the fairest, best and squarest with their dealers and customers of any Automobile Manufacturing Company on earth, therefore I repeat the reason why we are still Studebaker dealers is obvious.

J. Clayton Backus

Backus Novelty Co.
Smethport, Penna.

AND the reasons, as he states, "are obvious". Any one of them is sufficient to hold the average dealer; but it isn't the "average dealer" that Studebaker seeks to tie up with. It is the above-normal type, who by keeping in close touch with the Sales and Service departments of the Company, and following systems that have proved successful, can build greater immediate and future profits.



Are you a member of the "above-normal" group? If so, Studebaker has some facts for you to read—if you will write for them.

JIMMY TURNER Says —

—"There's no way that I know to build trade on regular articles better'n to show a man a new thing that I know is right. And, believe me

BENFORD
INDESTRUCTIBLE
Battery Testers

are the goods. I'm strong for 'em.

"For instance, a wise driver from Bayside comes to me one day and says: 'I'm stumped—I got a ——— electric outfit and it's all to the good—storage battery and auxiliary ignition with dry cells.

"'Worked all right till last night—the storage battery went out of commission and I tried to work on the dry cells—and they sure *were* dry—nothin' doing. I had to take the old lady to the theatre in New York, and, believe me, I was sore; lost half an hour and my goat getting new cells, and now I'm "off" that system for life.'

"I found out that he never tested his cells, so after explaining to him the use of these BENFORD Battery Testers I sold them to him—one for his storage battery and one for his dry batteries.

"Sure, I made a good profit—but I did something for *him* too, and it's a cinch I'll get more of his business than his local man.

"You see, you don't have to be afraid of these Battery Testers. They're always right; they're handy, and you can't break 'em, and the maker guarantees them for 5 years.

"So, you see, I cash in every time I get a new thing for my trade."

Here is the Six of Sixes

No less a pace maker than the new Overland Four is the newest Overland Six.

It is the Six of Sixes! A snappy five passenger long stroke 40 horsepower model—easy to handle, light, economical, mighty comfortable, having all the advantages of higher priced Sixes, yet it comes *absolutely* complete at a lower price than any other Six of its size.

Its smart body design is long and low—having lines of artistic simplicity.

And the motor! This will warm the heart of every six cylinder enthusiast in the country.

The New Six
$925
f. o. b. Toledo
Model 85-6

35-40 horsepower en bloc motor
116-inch wheelbase
32 x 4 inch tires, non-skid rear
Cantilever rear springs
Auto-Lite starting and lighting
Vacuum tank fuel feed
Gasoline tank in rear with gauge
Electric control switches on steering column.

You've heard all about fast getaways—smoothness—crawling and climbing on high. This Six does all that and then some!

The tires are four inch. It has the complete Auto-Lite electric starting and lighting equipment with control switches on the steering column.

The wheelbase is 116 inches. It has cantilever rear springs and even-flow vacuum system with the gas tank in rear.

Some Six! Yet the price is lower than any other Six of its size.

WORLD'S SALESMANSHIP CONGRESS ORGANIZES FOR

"Better Salesmanship!"

World's Salesmanship Congress Takes Form in Detroit With the Backing of World's Ablest Sales Executives and Business Men

WHAT THE CONGRESS IS

IT is an organization representing all trades and businesses and its object is the Betterment of business through the Betterment of Salesmanship. The idea grew out of the Detroit Salesmanship Club. The Congress plans to embrace the whole world and to meet annually. It will work for sales instruction in schools and colleges and for more scientific effort by sales organizations.

WHAT THE CONGRESS DID

IT organized permanently, went into a detailed discussion of salesmanship and intensive methods, went on record in favor of sales courses in schools and colleges, advocated better training of sales managers that they may the better train their salesmen and furnish the start in reducing to a scientific classification the world of scrambled data that exists on the subject of selling.

DETROIT, July 13—The World's Salesmanship Congress closed its first session to-day.

The work of reducing selling to a science instead of permitting this world-old profession to continue in a scrambled condition has been started.

So far as the big work itself is concerned not a great deal has been done, for selling, as a science, is to-day much unclassified as knowledge. But more was done this week than ever was done before in the history of the world, for a start toward classifying selling data was never before made with such success.

Heretofore there have been facts and opinions regarding salesmanship. And many of the opinions have differed. This week clouds of these opinions filled the air, theories were aired, the conglomeration of data was stirred into motion and things now are in position for reduction to science.

This congress, which is now a permanent organization, is made up of executives from many trades. Since the movement had its inception in Detroit, and since the motor car men have developed several prominent sales executives, it is but natural that Detroiters should be among the leaders; but the leadership also numbers business men from coast to coast.

The resolution adopted which gives promise of the most effective and immediate results was one recommending the establishment of sales courses in schools and colleges, and the congress pledges itself to support that movement.

It also made "Service" its motto, and is endeavoring to surround the word with a fitting atmosphere and strip from it what President Wilson in his address to the congress termed "sickly sentimentality."

PRESIDENT NORVAL A. HAWKINS

"Let my action and my work be my expression of what I think of what you have done for me."—From the acceptance address of President-elect Hawkins.

The man chosen to head the organization is Norval A. Hawkins, general sales manager of the Ford Motor Co. The vice-president is Bartley J. Doyle, president of the Keystone Publishing Co., Philadelphia. The secretary-manager is to be chosen by the executive board, and D. M. Barrett, chairman of the temporary organization, originator of the idea and editor of a magazine devoted to selling, may be chosen. The association plans to publish a magazine or house organ.

The congress opened Sunday, July 9, with addresses in eighteen Detroit churches on "The Ethics of Salesmanship" by the nation's leading executives. Monday morning, July 10, the formal opening in Arcadia Hall was addressed by President Woodrow Wilson; also by Secretary of Commerce William C. Redfield and Arthur Brisbane, editor of the New York Journal.

President Wilson, as told last week in Motor World, touched upon national issues and complimented the congress on its ideals. Secretary Redfield spoke on the foreign trade possibilities of the United States, and said that manufacturers must study foreign fields and adopt methods to suit those fields.

Monday afternoon there were further addresses on sales topics; Tuesday morning and afternoon general sales sessions were held in the Board of Commerce building, which organization assisted in staging the convention.

Wednesday morning and afternoon departmental sessions were held in the hotels Statler and Pontchartrain, and that evening the visitors went for a boat ride on Lake St. Claire.

Thursday morning (to-day) the final session and the completion of the organization work was effected in the Majestic Theater, and this afternoon the convention held a salesmanship circus at Bois Blanc, going by special boat.

The selection of the next convention

Digitized by Google

city was left to the executive committee, but an expression of sentiment by the convention seemed to favor Philadelphia, which was well represented by official spokesmen. The date also is yet to be fixed, but doubtless will be in midsummer.

Nearly 3000 salesmen and executives registered at the congress headquarters, paying $3 each and securing credentials admitting them to all the sessions.

At the final session this morning solicitation was made for sustaining memberships of $100 each for 5 years and the total subscribed was approximately $36,000. It is planned to raise $100,000 for the promotion of the ideals of the congress.

The possibilities of the science of salesmanship are wonderful, as developed during the sessions. Various speakers touched upon special subjects and in their discussions disclosed leads to avenues of investigation that may enable salesmanship to be rendered more efficient by many fold.

Hugh Chalmers electrified the congress by a rapid-fire address in which he told how he selects men. He has laid down a set of ten points which govern his selection, and this was enthusiastically received by the hundreds who have selected by the hit-or-miss method.

Warren Hilton, president of the Society of Applied Psychology, San Francisco, made valuable contributions to salesmanship when he told how the science of the mind may be applied to the work of selecting men and making sales. Psychology has been regarded by many as a vague, valueless and mysterious matter.

Brown Landone, New York and Paris, a social investigator, told how even the tones of voice are effective in selling and how a study of the "other man's" tones may furnish a guide as to how to handle him. This was a phase of salesmanship new to most of those at the congress, and indicated the possible ramifications of the new science.

Norval A. Hawkins at the automobile sessions told how, by intensive methods, the Ford retail sales in the city of Detroit have been enormously increased, and he explained specifically how it was done.

At the same session Lee Anderson of the Hupmobile expounded his plan of "selling the obvious," which is selling to the prospect the things he can see and understand, and going light on the hidden internals which he cannot see.

L. D. Robertson, Detroit branch manager of the Packard, contributed with the story of how a well-worked-out plan had boosted the sale of Packard trucks in Detroit, and he also went into definite details.

F. H. Dodge of the Burroughs Adding Machine Co. interested the congress with the story of how quota plans have made the Burroughs business the success that it is to-day. And, as in many other talks, there was concrete data that could be used by others in their merchandising.

The addresses all the way through the sessions were equally valuable. The assignment of specific topics to the speakers caused to be brought forth a great array of facts, ideas and opinions, and disclosed the abundance of material that is available when the work of systematizing and classifying the knowledge of the profession really begins.

For their work before and during the convention awards of merit were given. These consisted of small diamond-set insignias for the lapel. The winners were: Woodrow Wilson, Norval A. Hawkins, Hugh Chalmers, Harry M. Jewett, Lee Anderson, Harry W. Ford, D. M. Barrett, Joseph Mack, W. C. Standish and Walter C. Cole, the latter secretary of the Detroit Board of Commerce.

D. M. BARRETT

The man who dreamed of the Congress and saw his dream come true. He probably will be its secretary-manager

Executive Board

President, Norval A. Hawkins, general sales manager, Ford Motor Co., Detroit.

Vice-president, Bartley J. Doyle, president, Keystone Publishing Co., Philadelphia.

Joseph Mack, president, Joseph Mack Printing House, Detroit.

One Man in One Day Sold 23 Fords

Norval A. Hawkins Tells How the Application of Scientific Methods Brought Phenomenal Sales

ONE of the most instructive and definite stories of sales success achieved through intensive salesmanship was contained in the address of General Sales Manager Norval A. Hawkins of the Ford Motor Co. at the motor car men's session in the Hotel Ponchartrain Wednesday morning of the World's Salesmanship Congress. Hawkins told how the city of Detroit was combed by a squad of salesmen, and his story explained the mystery from that much-rumored house-to-house sales method of the Ford company. He said:

"Ford Efficiency Clubs have been established in eighty-six Ford branches. We maintain that every man in the organization is a salesman. To date, little educational work has really been done. An approach to the dead-line of selling prompted us to see if salesmen could be taught to sell in units of one.

"First, we got a map of Detroit, 8 x 12 ft., and hung it on the wall. We took 2280 cards from our prospect file, sorted them by streets and put white tacks on the streets to represent the locations of the cards. We had twelve or thirteen salesmen and gave an individual map to each man, with instructions to tack his own map. One salesman had 400 prospects, scattered between Delray and Grosse Pointe, and spent two-thirds of his time traveling.

"We found that the prospect list of the different salesmen overlapped each other. We divided the city into districts and allotted a district to a salesman the same as we allot a county to a dealer. We made the districts by wards and precincts and worked upon a basis of voting population. The first district had 874 voters.

"We had forty-two districts and had only thirteen salesmen. We then picked a number of young men until we had forty-two, and graded them by what they had done the previous year. The best man had the first choice of districts, and so on. The salesman chose the district in which his own tacks were most numerous, but this left many tacks in other districts. He was given seven days to clean up outside his district, allowing one call to each prospect. Any that he failed to clean up went to the district in which they were located. On the strength of this 'last call' appeal, one

Digitized by Google

man got eleven sales the first day, nine the second and ten the third. One man got twenty-three in one day.

"We then found it was difficult to direct so large a group of men, so we divided them into groups of fourteen and selected three men as retail managers, giving a group to each retail manager. We then made out a new prospect card. This allowed for three calls on each prospect. The line after the third call is a dead-line and is in red ink. There are spaces for further calls, but if the record runs down to the dead-line with no sale, the card is for the attention of the retail sales manager, who interviews the salesman regarding the prospect. The card tells whom the salesman saw and requires specific information. We found that many salesmen were noting down future calls on the prospect in a haphazard manner, setting down the fifth, tenth, fifteenth, twentieth or twenty-fifth of the month. The 'out' column on this card is for calls when the prospect is not in, but we planned to make our calls by previous arrangement at a certain hour, when the prospect would be in.

"Why Do You Call on Prospects?"

"Why does a salesman go to a prospect? It is to save the prospect's time; otherwise the prospect could just as well go to the salesroom to see the car. By our new method we reduce the number of calls per sale from twelve to five in four months' time. We believe it is possible to reduce it to three calls in many cases. What do you suppose this reduction from twelve to five will save us in the cost of our car next year?

"As to making future engagements with the prospect, I asked a salesman if he had a diary. If not, I told him to get one. Supposing I call on a prospect. He says, 'See me next Tuesday.' I say, 'What time?' He says, 'Nine o'clock.' I tell him I have an engagement at this hour and ask him if 10 o'clock will not do. This arranges a definite appointment between us.

"As to pulling the order blank on a prospect, I told some of the salesmen that if they were unable to judge by any other rule, to talk 5 min. and then pull the order blank, no matter where they happened to be in the conversation. Some of the salesmen had been starting their interview with the history of Henry Ford and how he pays $5 a day, whereas that story and all that goes with it is told to the prospect when the salesman presents his card. If the prospect asks how great a man Chalmers or Ford is, tell him. If not, tell him what the car can do for him. All of our salaries are based on 3 per cent. Why then, spend time entertaining people when we can made more money closing them?

"If a man in closing asks when he can get a car, ask him when he wants it; and when he specifies the date, make him think that you are going to some little trouble to get it for him. Don't tell him when he can have it until he tells you when he wants it. Keep it on him, don't let him get it on you.

"If a man has called three times and hasn't closed, we assume that the prospect wants a new face and a new conversation, and we send a new man. I think it is a crime to let one man control any group of prospects. They belong to the Ford Motor Co.

"Under the new plan, our men go out with a definite task, so many cards, so many calls, and then come back.

"If the prospect has a used car to sell, we refer the sale to one of five garages in Detroit with whom we made arrangements to sell Fords. These garages trade, we don't.

"One prospect made an excuse that before he could buy he would have to arrange for the garaging of the car. We found that of our forty-two salesmen, not one of them knew of a garage to which a prospect could be referred. Our office got garage information, and now when a prospect makes this excuse the salesman can at once tell him the nearest garage and its rates.

That House-to-House Plan

"In case the white tacks on a map begin to run ahead of the red tacks, which are sales, that analyzes the salesman as a prospect getter, but not a closer. We then put a salesman in to analyze the territory and assign the salesman to canvass work. This canvass work is an original plan with us. We sent men out to ring every door-bell in town.

"To begin with, no one could plan a proper approach, but we finally figured that the only approach could be one based on service, so when the man rang the door-bell he told the lady or man of the house that he was investigating Ford service to make sure the cars were operating with satisfaction, and that because there are so many Ford owners, the only way to make sure to see them all was to call on everybody in town. This, of course, made an impression upon the person called upon and this was followed by other questions. We also sent a catalog and other literature. On the back of the prospect cards is the owner's record, and it requires that the salesman who sold the car must call on the owner every 7 days for a month, in order to make sure that the car is giving satisfaction. We found that before we adopted the new plan there was collusion between the service mechanics and the salesmen, and this new method eliminated it.

Require Daily Report

"We also adopted a salesman's daily report, which is mailed to the home office every day and which gives us an accurate record of what every one of our men is doing. We found that before the new plan was adopted, a man might call on twenty prospects and actually see only three. We have found that the average salesman will get more business out of from three to five calls a day than from ten or twelve calls a day. The value of this plan to the men themselves is indicated by the fact that last year we had men who earned $11,000, $8,000, $7,900, $5,200 and $4,800.

"After we adopted this plan in Detroit, the Detroit branch made a noteworthy gain as compared with our other branches. The result was achieved through close, intelligent direction of the individual man."

"Sell What the Man Can See!"

Lee Anderson Gives to Congress of Salesmen a Common Sense Easy Way to Sell

"SELL the obvious" is the sales creed of Lee Anderson, commercial manager of the Hupp Motor Car Co., as explained in an extemporaneous talk before the motor car men's departmental session at the Hotel Pontchartrain Wednesday morning of last week at the World's Salesmanship Congress in Detroit. Anderson's advice constitutes one of the needs of selling. It furnishes part of the science that salesmanship is to become when the work of the congress becomes a greater reality. He said:

"There is no line where men have used such mental alertness as in the selling of motor cars. Our dream is a steady production and sales curve, but the dream probably never will come true, because cars are essentially a seasonable proposition.

"Selling cars calls for unusual ingenuity, for a car is the second highest priced article bought in a lifetime by the average man. The highest priced is his home.

"In connection with car selling I believe the best word of advice I can offer is to 'sell the obvious.' A car is, after all, a piece of machinery, and it requires some technical knowledge to understand it. Hugh Chalmers said the other day in his address that if I ask you how much eleven times nine is you can tell me, but that you must know the whole multiplication table in order to tell me. A car salesman must have technical knowledge, but I protest against its insistent use.

Digitized by Google

"Many salesmen try to make it hard for themselves. Cars can never be sold by mail. The prospect must first see the car and ride in it in order to be convinced, and this usually requires a hard and strenuous verbal demonstration. Even then some prospects are never convinced.

"Where is the logical place to begin a verbal demonstration or sales talk? The place to begin, I believe, is with what the prospect can see and understand. I have heard some salesmen start with an elaborate description of the internals of the car, which are hidden from the prospect. I have seen the prospect touch the paint and open the doors at the same time that the salesman was telling him about the clutch, which he could not see and was not interested in at the moment. There are three reasons why this is wrong.

Get Point of Contact

"The first reason is that it is the salesman's duty to get the prospect's point of contact, and the easiest way is to find what pleases him most. You should sell him the thing he wants in the way he wants to buy it, or rather the thing you have to sell in the way he wants to buy it. We are surprised if the prospect talks his own natural language. It is an error for us to row against the current when to float is quicker.

"All people buy on what they see first. You see a girl and you like her looks, and on the strength of that desire her acquaintance. How often do you ask about the material and construction of the necktie you buy? How many of you know the material in your clothes, or, if you know it, how many of you know what the padding is? Our first inclination is to buy on sight. Sight is the first sense we use. Why not, then, sell first the thing a man can see?

Three Candy Ads

"I recently read three candy ads. Nothing was said of quality or construction. All of them were about a new and attractive style of package. Why was this, It was because the public takes for granted that certain large producers of candy make good candy and the selling is therefore a matter of the attractive package. Isn't the same thing true of cars? Therefore the package is a large factor. The prospect cannot see the valves, r.p.m. or vanadium steel springs, but he can see the lines and the paint and the upholstery, he can sit in the seats and can see the simplicity of control. I think it is basic to start with the things he can see and understand, and if he wants technical information he will ask for it. Every prospect takes it for granted that the better known makes of cars will run. and, knowing that, he is not interested so much in what makes them run as he is in those things that appeal to his sight.

"Every man resents a thing he cannot understand. How many of you know what the fourth dimension is, or how many of you can define the coefficient of a tangent? I could talk 15 min. on the fourth dimension and you would go out and say I was a fool. If I asked you if you understood it, many of you would say Yes, because you would not want to admit your lack of knowledge.

"Don't talk of the things a man does not understand. Think of the things we lie about. If I asked you if you know John Jones of Des Moines, or if you have read a certain book or seen a certain play, you are likely to lie and say Yes, or else dodge the question. If we lie about such small things, why won't we lie about the big things we don't understand?

"A salesman says an annular bearing is faced by a centrifugally grooved baffle plate. If you employ an electrical engineer to wire your house, do you ask him about the insulation on the wires, and about how the lamps are made? A car ought to be sold on the basis that it contains a certain potential amount of travel. A car is not alone a machine, it is style carriage, and you must sell the style element, but you should sell the style element first and reserve your fund of technical knowledge for later use.

"The abstract idea of a car is hard to sell. Everybody wants a car, and is sold on the abstract idea. Your task is to convince the prospect that he wants YOUR car. Many salesmen start wrong. If the name of the prospect is turned in by a friend, didn't the friend say the prospect was interested in buying a car? Why, then, start the sales talk on the abstract idea of a car? Salesmen who sell the largest quota sell the qualities of the car as it appeals to the prospect and then sell what the car will do.

"The last thing is to sell the prospect the technical side. To-day the greater number of prospects have some experience with cars, but they understand only the obvious technical things. If you think people know a lot about the technical side of the car, ask them a few technical questions and you will see how little they really understand. Yet, they believe they possess technical information."

SONG OF THE CONGRESS

"IT CAN BE DONE"

Somebody said that "it couldn't be done"—
But he, with a chuckle, replied:—
That "maybe it couldn't," but he would be one
Who wouldn't say so 'till he tried.
So he buckled right in, with a bit of a grin
On his face—if he worried he hit it;
He started to sing, as he tackled the thing,
That couldn't be done—and he did it!

Somebody scoffed "Oh, you'll never do that,
At least no one ever has done it;
But he took off his coat and he took off his hat,
And the first thing we knew he'd begun it.
With a lift of his chin, and a bit of a grin,
Without any doubting or "quit it,"
He started to sing, as he tackled the thing
That couldn't be done—and he did it!

There are thousands to tell you "it cannot be done,"
There are thousands to prophesy failure,
There are thousands to point out one by one
The dangers that wait to assail you.
But you just buckle in, with a bit of a grin,
Then take off your coat and go to it—
Just start in to sing as you tackle the thing
That couldn't be done, and you'll DO it!

Seek Cheaper Quarters for Repairshops

OMAHA, July 15—A search for less expensive quarters for repairshops, giving over the downtown space to salesrooms and display rooms, is a new feature in the progress of automobile business here. In this respect, the Chalmers distributer has taken the initiative, and its example is likely to be followed by other firms. Lease charges along automobile row have naturally advanced tremendously with the growth of business during the past few years, and it has become a much discussed question if the repair department business warranted the paying of such high rentals as are justly asked for space along this principal street of the city. On the other hand, locations practically just as accessible, and away from the high rent district, are available for the repairshop business, and it is more than likely that this condition will be taken advantage of by many dealers and distributers very soon. North Sixteenth Street and Sherman Avenue are being given the bulk of consideration at present, and the Chalmers people have already located there. Other firms are expected to follow soon, and the city will soon see, it is believed, a separate section for sales and repairs.

Says Trucks Keep 'Em Awake

COLUMBUS, July 17—To operate a truck through the streets of Columbus loaded above 3 tons with material that will admit of separation, is a misdemeanor and punishable by fine of from $5 to $50 and imprisonment of from 5 to 20 days.

This regulation was found in an old city ordinance, codified in 1896, which has not been repealed or declared invalid, according to City Solicitor Scarlett, who forwarded the information to Safety Director Barry as a means whereby trucks may be stopped from operating through the night in the vicinity of Bryden Road and East Broad Street.

It is said that the gravel trucks carry as high as 10 tons to a load. Scarlett says a provision will be made in the new traffic ordinance to put a stop to night traffic that prevents residents from sleeping.

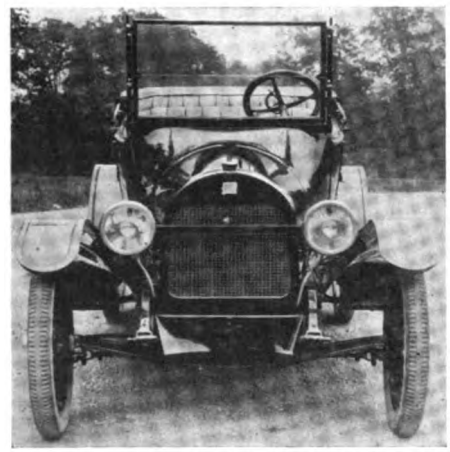
Buick Four for $665 Is Roomy Five-passenger

Runabout for $650—Buick Design Followed Throughout—Thirty-five H. P.—106-in. Wheelbase—Big Six Dropped



AFTER giving up entirely for a time the manufacture of four-cylinder cars, the Buick Motor Co. is again to put them out, in addition to continuing without change the production of the little six-cylinder model.

The new four, which, needless to say, is to be made in large numbers, follows characteristic Buick design throughout, with perhaps more alteration in the motor than elsewhere, although that unit is a valve-in-head type, as are other power plants of this make. It will sell at $665 as a touring car under the model designation of D-35, and as a roadster it will be priced at $650 and known as model D-34. In its general lines, especially the radiator, the new car is typically Buick. It has a wheelbase of 106 in. and there is plenty of room for five passengers.

Thirty-five brake horsepower is claimed for the motor, which has a bore of 3⅜ in. and a stroke of 4¾ in., giving a displacement of 170 cu. in. and an S. A. E. rating of 18.2 hp. These cylinder dimensions are not a great deal different than those of the little six, which has a bore of 3¼ in. and a stroke of 4½ in.

Other specifications of interest are the pump cooling; Marvel carbureter in conjunction with rear tank and Stewart vacuum feed, Delco starting, lighting and ignition; cone clutch; three-speed gearset in unit with the engine; driveshaft inclosed within a torsion tube; three-quarter floating rear axle; semi-elliptic springs both front and rear, and 31 x 4 non-skid tires all around.

Although the engine is an overhead valve design, it is probably the one part that is most at variance with previous construction, in that the cylinder head is detachable as a unit with the valves. It will be remembered that previous Buick construction has been to have the heads integral with the body of the cylinders, and to use valve cages, which, when removed, brought out each valve individually. The new design makes it possible to get at the valves when the head is taken off, and at the same time gives a free opening into the cylinders and pistons. The valve springs and rockers are not inclosed, but are noiseless, due to the lubrication provisions and the interposing of a felt pad at the ball end of the push rod, as in previous designs.

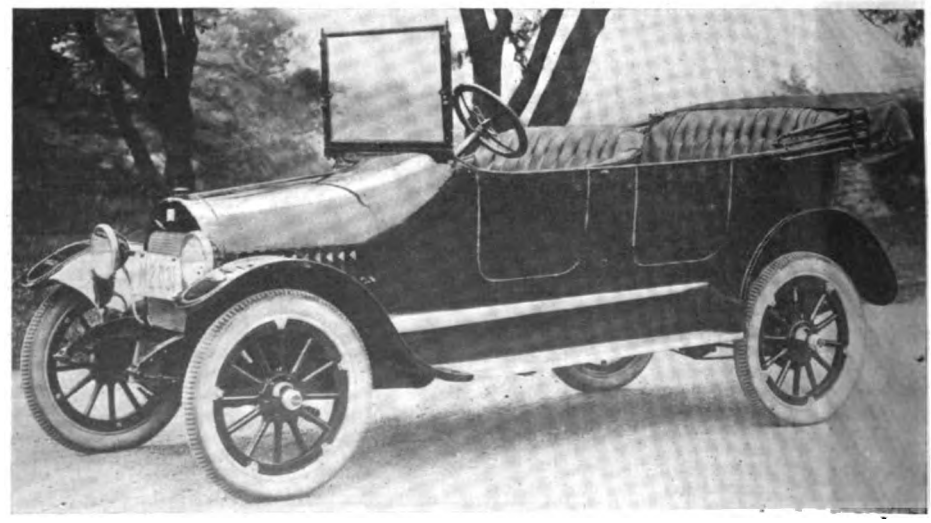
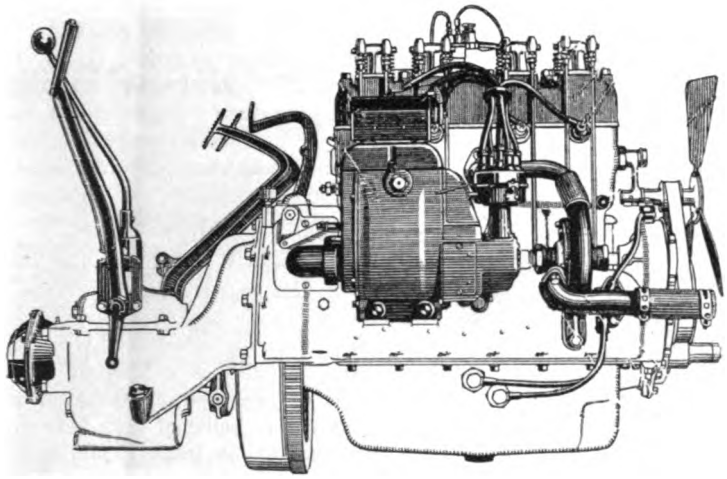
Wheelbase	106	115
Tires	31 x 4*	34 x 4
Wheels	Wood	
Make of axle	Own	
Type rear axle	¾ floating	floating



*Non-skid.

The rocker shafts supports are bolted to the head casting, and this also carries the water outlet connection.

There are three main crankshaft bearings and an equal number carrying the crankshaft, both of which parts are of sturdy section so as to reduce the vibration and make a smooth-running engine. Valves are quite large—1½ in. diameter—and the gas passages are as direct as possible, both features being power-giving factors. Conventional connecting-rods of I-beam section, and pistons carrying three rings each are fitted, the wristpins being pinned to the pistons so that the upper rod end has a bearing on the wristpin.



Likewise, care has been expended on the design of the lubrication arrangements. Oil is drawn from the pressed-steel under part of the motor by a cam-operated plunger pump, delivered through a supply pipe to each of the troughs under the connecting-rods and also through a special lead to the timing gears at the front. It is then splashed in the usual way to the various bearing surfaces by the dipper on the end of the rod. The troughs are curved so as to follow the rod end for a considerable distance beyond its dead-center position on either side, taking care of any difference in level between one side of the car and the other. On top of each connecting-rods upper end there is a hole drilled to catch some of the splashed lubricant and lead it to the bearing, and the tappets are spirally grooved so that they carry oil onto the entire surface of the chambers in which they work, making for quiet operation. On the left of the crankcase there is a breather, which is internally baffled so that any spray from the crankcase will not get out to collect on the outside of the engine, and there is also a float gage connecting with an indicator hand that plays over a dial mounted on the left side of the crankcase to inform the driver how much oil he has left.

Buick fits a leather-faced cone clutch to this car which is similar in design to that employed in other models. The cone

The new four is typically Buick externally as well as internally

Right side of motor showing high and accessible mounting of electrical equipment

itself is a pressing, and there are three springs placed at equal distances apart to hold the unit in engagement. There are also small springs inserted at intervals under the leather to force it out and produce a soft action. The clutch assembly includes two ball thrust bearings, the forward one taking the thrust from the engagement springs and the rear providing for the thrust occasioned by disengagement of the cone. The shaft on which the cone slides has six splines, and each of the engagement springs is provided with an adjusting nut which makes it a simple matter to give the proper tension, especially since the clutch can be reached below the bell housing without the removal of any parts.

Chrome-nickel steel gears are used in the gearset, these having stubby teeth so as to resist any suddenly imposed shocks. The bearing equipment for this assembly consists of a roller bearing for the clutch gear, double-row ball bearing for the square shaft, and plain bearings with bronze bushings for the countershaft.

The drive is taken through a single universal joint just back of the gearset, this being of large proportions and fully enclosed. The propeller shaft is also completely housed within a torsion tube that attaches to a large ball-and-socket joint on the rear of the gearcase, and terminates at its rear end in a flanged member that bolts to the front of the differential housing. Thus the torque is taken through the shaft housing and the ball joint at the front end, while the drive is through the rear springs.

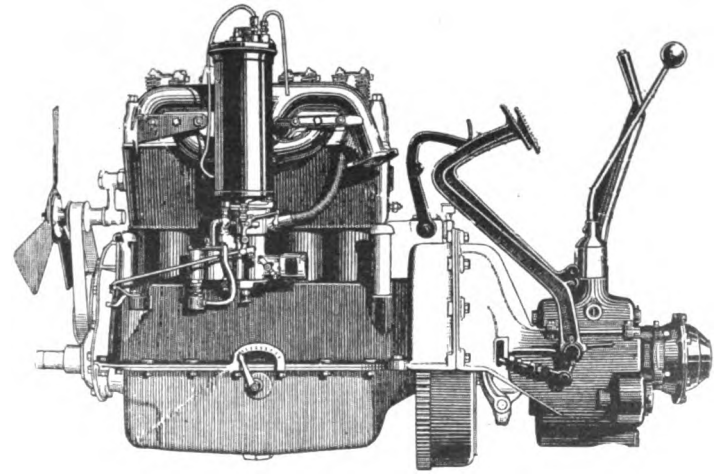
Of three-quarter floating type, the axle is a compact unit designed so that all the car weight is carried on the axle tubes, with no supporting strain on the drive shafts. These are mounted on spiral roller bearings at both wheel and differential ends, with a ball thrust bearing also fitted at either side of the differential. The gears are of the bevel type, and the ring gear has fifty-three teeth to thirteen on the pinion, giving a ratio slightly over 4 to 1.

On the new four, springs are semi-elliptic, long and flat. The dimensions are 48 in. long by 2 in. wide, and the mounting is somewhat unusual in that they are not directly below the frame rails, but bracketed so that they run outside. This was done principally because the frame tapers straight from the back to the front, and if the springs were placed under the rails they would also be at an angle, and this would have introduced an undesirable bending moment. As the frame is narrower at the front mounting than at the rear, the brackets at the front are simply brought out farther to allow the springs to parallel the wheels. The front ones are also quite long, measuring 30 in. and being of the same width as the rear.

Tapering the frame from back to front is also new to Buick design, but is becoming very popular with modern car designs. It allows a short turning radius, and at the same time gives excellent support for the tapering body along its entire length. To assist the side members there are four strong cross pieces, each anchored with the aid of gusset plates.

The popular sloping lines and smooth exterior, with hood blending into the cowl, are given the car, with sufficient rake to the steering wheel to give a good appearance. Attention has also been paid to the matter of leg room in the drive seat, and almost any type of person ought to find comfort in driving the car. Equipment includes all the fittings looked for by the car purchaser of today, among which might be mentioned the adjustable windshield, the one-man top, the electric horn, the speedometer, the extra demountable rim and tire carrier at the rear of the frame, etc.

Brought out over a year ago, the little six that is to be the new four's running mate for the coming year really requires no lengthy description here. It is known as model D-44 as a roadster, and with that body sells for $985. The touring car on the same chassis is called model D-45, and the price is $1020. Briefly, the specifications, which are practically the same as they have been since the car was introduced, are 3¼ x 4½ in. motor, developing 45 hp.; Delco ignition, starting and lighting; circulating splash lubrication; pump cooling; cone clutch and three speed gearset; 34 x 4 in. tires and wheelbase of 115 in.



Entries Coming for Tacoma

TACOMA, July 12.—The Tacoma Speedway Association announce that the famous Montamarathon race to be held August 5th on the Tacoma Speedway will be for a distance of 300 miles, with a purse of $10,000 for the one event. The track has already been placed in good condition, a new guard rail completed for the entire course, and this year should see much faster time made on the lattice track. Entries are now coming in, and those who have signed blanks to date are as follows (July 12th):

Rawlings, West-Duluth; W. Chandler, Crawford; Dave Lewis, Crawford; A. Johnston, Crawford; Wilbur DeAlene, Dusenberg; Tom Milton, Duesenberg; Unnamed, Duesenberg; Devigne, Delage; Franchi, Delage; Moore, Peusun; Duray, Omar; Barsby, Hudson Special; Rickenbacher, Maxwell; Henderson, Maxwell.

Hare Succeeds Jackson

NEW YORK, July 18—Elmen Hare has been made manager of the Packard Motor Car Co. of New York, succeeding E. B. Jackson. Hare has been in charge of special truck work.

New Marmon Closed Bodies Are Both Light and Low

Extremely Attractive in Appearance—Weight Reduced 25 Per Cent by Scientific Design and Use of Aluminum

The new Marmon closed cars set a new high mark of perfection. Not only are they attractive in line and luxurious in detail, but they are extremely light and low, yet with sacrifice of neither strength nor comfort. They are 25 per cent lighter than other cars of the same size and sumptuousness, it is said, and, although standard head room of 54 in. is allowed, the total height is only 81 in. In other words, with the car standing at the curb a man of ordinary height can look over it.

There are four standard types—limousine, landaulet, town car and convertible sedan. These bodies are built by Holbrook & Co., New York; New Haven Carriage Co., New Haven, Conn.; Kimball & Co., Chicago, and E. J. Thompson Co., Pittsburgh. The prices vary, the limousine costing $4,400 when built by New Haven and $5,250 by Holbrook; landaulet and town car, $5,350 by Holbrook and $4,500 by New Haven, and convertible sedan, Thompson, $3,950.

These cars weigh from 3700 to 4000 lb., according to the type and capacity, whereas other cars weigh 5000 lb. or more.

They are light, first of all, because the chassis is light, due to the extensive use of aluminum, particularly in the motor, and also because of the scientific frame construction. Second, the bodies are almost wholly aluminum. Third, underframing is eliminated. On account of the extremely rigid frame construction a very light body sill can be used, since this member is not required for strength or stiffness but merely to hold the body together while it is in course of erection. All inclosed bodies are built in one piece, except for the cowl, which is separate.

Very Low

Second only to light weight is the feature of lowness. The peculiar frame construction allows placing the floor boards several inches lower than usual. The front board is 24½ in. from the ground and the rear one 1 in. more. Naturally it is easier to get in or out of a low car, and passengers ride with greater ease. Furthermore, it is safe, as there is less tendency for the car to skid, roll or tip.

Another feature is the unit construction of frame and body. The body is practically part of the frame, and opportunity for squeaks and rattles to develop is minimized. This construction also insures perfect fitting of doors, even after long and rough usage, as the body is mounted on a firm foundation and there is no possibility of it twisting out of shape.

It is easy to change from a summer to a winter body. Since the cowl is part of the chassis and not part of the body, it is not necessary to disturb any of the wiring. Special prices are quoted for chassis with closed and open bodies at an advance of $300 over the prices given above.

Limousine Seats Seven

The limousine seats five inside and two outside, there being two seats folding forward in the tonneau section. The landaulet has the same seating arrangement. The extreme rear section of the body is of leather, and folds down; the top slides forward and the quarter windows slide down, so that the rear compartment is entirely open.

The brougham-landaulet, or town car, resembles the landaulet, but the driver's compartment is exposed. The front seat can, however, be protected by a leather extension from the roof and pantosote side curtains.

The convertible sedan is designed particularly for all-year use. All of the seats are fully inclosed and entrance is through two rear doors. The front seats are divided. The driver's seat is adjustable front or rear for leg length. A new window construction is used in which the steel-framed windows slide up and down and may be opened to any amount desired. The quarter windows may be taken out and placed in a compartment behind the upholstery of the rear seat.

The interior is trimmed in a neutral cloth which will match any of the three color option, Brewster-green, dark maroon or coach-blue deep. Roll curtains, nickel-finished hardware, carpet-covered footrail, interior light, ladies' vanity case and smoking set are regular equipment.

The body frame is ash and is covered with No. 16 gage sheet aluminum. Sheet aluminum is worked in around the windows so that moldings are not necessary. Wherever molding is used it is fitted to the body with screws. The roof is also aluminum.

In all types the back window is stationary, set in a rubber channel and absolutely stormproof. All sliding windows are made without independent frames. The front division glass is in one piece. The quarter windows are operated with broad lace window lifts and the others by cranks.

Each car is equipped with a heater, which keeps the interior comfortable even in the coldest weather. It is located in the heel board under the rear seat, and is operated by the exhaust from the engine. There is a damper so that the amount of heat may be controlled.

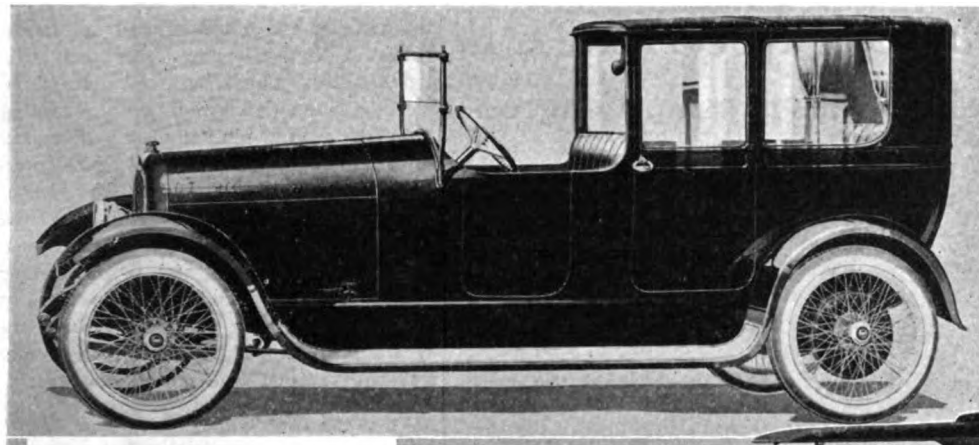
Wisconsin Has 100,000 Cars

MILWAUKEE, WIS., July 15—The 100,000 mark for registration of privately owned motor cars in Wisconsin was passed to-day in the office of the Secretary of State. This is a gain of more than 20,000 licenses over the total issue of 1915, and it is believed that between now and Dec. 31 at least 15,000 additional licenses will be issued, giving Wisconsin a total of 115,000, or 35,000 more than a year ago.

Studebaker St. Louis Men Meet

ST. LOUIS, July 15—The value of service in selling cars was the chief topic of the district meeting of Studebaker dealers here this week. More than 150 dealers and sales managers attended and, in addition, every member of the Weber Motor Car Co., local Studebaker dealers, were present.

Carl J. Simons, manager of the Studebaker branch here, presided. L. J. Ollier, vice-president of the Studebaker Corp. in charge of sales, was the chief speaker. He told how in Detroit, Studebaker service cars toured the city, seeking to help all Studebaker owners, and on rainy days they put up tops, leaving tags on the steering wheel to tell who did the kindness. They even helped in cases of tire trouble. As a result, he said, the Studebaker was a popular Detroit car at retail. He told the dealers that the Studebaker Corp. bore down heavily on overhead and that they could challenge all others on that point, which was an expense that brought the buyer nothing.



F. C. O'Meara, a former Episcopal minister, now an efficiency expert, was a speaker. All of the dealers were luncheon guests of Simons at the opening of the convention, and a morning session was held at the Studebaker branch, where the complete line was arranged for demonstration and mechanical experts were prepared for all queries.

Watching Gasoline Investigation

AUSTIN, TEX., July 18—The attorney general's department of Texas is watching with much interest the outcome of the proceedings that have been inaugurated in Oklahoma which have for their purpose the fixing of the price of gasoline at 17 cents per gallon. It is alleged by Attorney General Freeling of that state that the following concerns are in an unlawful combine in the production, distribution and sale of gasoline, and that they sell at lower prices in some

Right—Landaulet. An attractive model in which the roof slides forward, the rear folds back and the windows slide down

Left—Convertible sedan in which the glass and window posts may be dropped out of sight in a moment, giving virtually an open car

Below—The limousine is a standard design in every respect

communities than in others after making allowance for differences in grade and in actual cost of transportation:

Magnolia Petroleum Co., Kansas-Oklahoma-Texas Oil Co., Standard Oil Co. of Indiana, Oklahoma Refining Co., Miller Oil Co., The Texas Co., National Refining Co., Hugo Oil Co., Gulf Refining Co., Pierce Oil Corp., Lockhart Oil Co., Parris Oil Co., Cudahy Refining Co., Pioneer Oil Co. and McAlester Refining Co.

It is stated that Attorney General Freeling has obtained strong evidence against the defendant companies, which he will submit to the corporation commission of Oklahoma which is investigating the charges that he has filed with that tribunal.

It is claimed by the attorney general's department of Texas that practically the same conditions as to the production, distribution and sale of gasoline exist in this state as in Oklahoma. There is no uniformity of prices in the different towns or localities, and it is claimed that the fuel is selling several cents higher per gallon than is warranted by the supply and other factors that should enter into the fixing of the price. The Texas gasoline situation has been under investigation for several months, and it is reported that legal proceedings will be taken against several companies that are alleged to be in a combine to fix prices.

Train the Sales Manager

Reilly Went to the World's Salesmanship Congress and Thinks It Was Pretty Good

By Ray W. Sherman

THE study of selling had always interested Reilly and he had read for many weeks about the World's Salesmanship Congress that was to be held in Detroit, and since a boat ride across the lake furnished a fine diversion, he made business the excuse for pleasure and was right in the front row last week when President Wilson delivered his address to an enthusiastic 3000 salesmen.

It has been said that anything can be done according to a certain method, and when it came to attending sales meetings and conventions, Reilly generally followed a conventional form. Having worked up a great deal of interest, he invariably became one of the enthusiastic conventioners. and upon his return generally refrained from any comment until he had opened and read his morning mail; then, and this was one of those occasions, he began as follows:

To Train Sales Managers

"Tommy, I think this Salesmanship Congress in Detroit last week developed a most valuable idea when it took up the subject of training sales managers instead of salesmen."

"Aren't they going to train salesmen at all?" asked Tommy.

"Yes, indeed. they are," said Reilly, "but instead of going out there and shouting their heads off about the inefficiency of salesmen—no matter how inefficient salesmen may be—they displayed quite a little common sense in the matter and quite a number of them expressed the opinion that when it came to pulling salesmanship up to a higher plane, one of the most important and essential moves was to train the men who train the salesmen, which means that the start in all this systematizing of sales work must be done with the sales managers, which so far as the retail end of the business is concerned, means training the dealers, and so far as factories are concerned, means giving instruction to the men who boss us dealers."

"That isn't a bad idea, is it?" said Tommy.

The Sensible Plan

"Whether the sales managers relish the idea or not, it is the sensible plan," continued Reilly. "I have long had an idea of that kind in the back of my head, but I never heard it reduced to a concrete form until I went to the sessions at this congress and then I certainly did hear hear it. Some of those fellows. like Hugh Chalmers and Norval Hawkins, got up and told the congress about what can be done by a sales manager who has been trained to manage. You ought to see what Hawkins did with the Ford salesmen by supervising them as a trained sales manager should.

"And Hugh Chalmers told the convention a few things about the right and the wrong way to select men. Some of the speakers said there were men selling cars who could do a whole lot better in some other line of business, and Hugh Chalmers insisted that this idea of salesmen being born and not made was all bunk. He said if salesmen were born he would like to know who kept the list, because if he had such a list all he would have to do when he wanted a salesman would be to pick a man out of the list and his work would be done. I tell you, Tommy, they certainly demonstrated that there is a great deal of progress that can be made in the selling field and that the top-notch salesmen are the men who have studied and made themselves good and not the fellows who were born into the business and who are top-notchers because they were born that way.

The Quota Plan

"And then there was a fellow from the Burroughs Adding Machine Co., who told all about how they use a quota plan and how it has made the Burroughs company the successful corporation that it is. Without the supervision of the sales manager, he said, the company's salesmen never would have achieved the results that have been achieved, and when he got through you should have heard the rest of the crowd applaud him.

"I have always believed myself that there could be a lot more cars sold by any factory if the sales department would only work out some intelligent system of dealer help instead of shooting a lot of bulletins and letters at the dealers and shouting at them to sell more cars. Any dealer is willing to sell more cars if somebody can show him how to do it. As for these sales bulletins, one speaker said that most of them would be more correctly spelled if the last five letters of the word were left off, and I think he's about right.

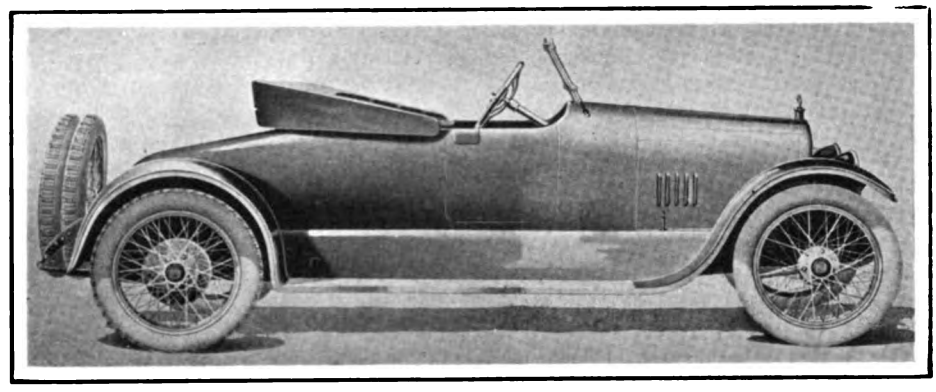
"There are one or two companies that have taken some real steps in this dealer assistance work and I believe they are going to find themselves amply repaid before they get through with it, and the time certainly is coming when the successful manufacturer has got to make his sales department a sales instruction department and not a sales order taking bureau. They talk about salesmen being order takers, but I believe some of the factory sales departments are more on the order-taking plan than any individual salesman I ever knew. One of the dealers down the street the other day showed me a screaming big folder he received from the factory which told all about what a hot car the company was turning out and how it expected its dealers to sell a lot of them this season and pile up a big fat lot of profits for the dealer and the factory this coming season.

Help Him Up

"If the sales manager of the factory had walked in the dealer's door and given a Free Methodist demonstration about the car, the effect would have been much the same and this dealer would sell just about as many cars on the strength of it. I have known this dealer for a long time and his early training certainly wasn't anything to help him be a top-notch salesman, but he is a capable fellow and is quick to learn, and if this factory sales manager would send him along some good dope on how to open and conduct and close a sale, there wouldn't be any need on the part of the factory for any screaming, red ink, Free Methodist circulars.

"And if this dealer were taught how to sell cars and became pretty proficient in it himself, there is quite a possibility that he could pass this instruction along to whatever salesmen he has working for him and keep increasing and increasing his own and the factory's business.

How About This?



"What would you think of a school teacher who took a switch and went after the kids because they didn't get their arithmetic correctly done, while all the time the teacher neglected to tell the scholar how to do the work? That, in my opinion, is about the system on which a great deal of sales work is being done to-day. Any sales manager can yell at his salesmen or his dealers and tell them they've got to sell things, but the real sales manager is the one who shows his people how the goods are to be sold.

"I tell you, Tommy, I think this Congress is going to achieve some results. It certainly has some good people back of it, and if they shove the Congress along the way they have pushed their own businesses, it is going to mean great results. If the time ever does come when selling is a science instead of a scrambled mass of information circulating around in the air like a cloud of dust, it will mean a great deal to every industry, and as near as I can dope it out, it isn't going to be many years before the motor car industry will be in need of some regular salesmen—and sales managers."

Custom Body Perfection Attained in Jordan Six

Moderate-priced Car with Distinctive Lines and Finish—Powerful and Flexible High-speed Motor—Standard Parts

Right—Jordan six roadster with wire wheels as an extra

Below — Four-passenger sport model with wire wheels as standard equipment

CUSTOM-BUILT quality and studied attention to body details are found in the Jordan, which is to sell for $1,650 with seven-passenger body. The aim of the manufacturer, the Jordan Motor Car Co., Detroit, is to produce a car which will give the owner maximum satisfaction, one which is not only perfect mechanically, but in which the body has been developed so that it is the last word in convenience, comfort and beauty. It is a handsome and really distinctive machine, and at the same time its high-grade chassis insures that it is up to the mark in both road ability and durability.

It is a standard chassis of "finished mechanical excellence," to quote the maker, fitted to suit the buyer, with a choice of distinctive and comfortable body styles. It is a car in which body lines, finish and body arrangement in their relationship to the mental and bodily comfort of the passengers are given first consideration. Yet is is a comparatively light, perfectly balanced machine, with rapid acceleration and capable of running from 2 to 60 m.p.h. on high.

Standard units are found throughout the car. Timken axles are used and bearings of this make are employed everywhere. The rear axle is a spiral bevel floating type. The radiator is a diamond core Fedders and carries a Boyce Moto-Meter. Gemmer steering gear, Willard storage battery and a motor driven tire pump are standard. The complete list of equipment includes tonneau foot rest, tool roll, tire repair kit, Sparton electric horn, instrument board with ammeter, speedometer, oil gage, switches, carbureter adjustment and one-man top.

The seven-passenger Luxury car, as already noted, lists at $1,650, with wire wheels $100 extra, the four-passenger sporting type with wire wheels as regular equipment, $1,750, and the roadster $1,650, wire wheels $100 extra.

Not a unit of the chassis is untried and the specification is quite conventional; its noteworthy feature is that each component ranks high among its kind and is the best model built by the parts specialist in question where there is any choice. Motive power is supplied by a Continental engine, 3½ x 5¼ in.. six-cylinder, this being the aluminum crankcase type, and the power plant is completed by a Brown-Lipe gearset and a Brown-Lipe multiple dry-disk clutch. As to the engine accessories, these include Bosch magneto ignition, Bijur two-unit lighting and starting, and a Stromberg carbureter, with Stewart vacuum feed from the gasoline tank at the rear end of the frame.

As can be seen from the illustrations, the hood has plenty of width and depth, the result being that the mechanical inhabitants of the bonnet are no more cramped than the human occupants of the body. Every essential is readily accessible.

Both front and rear axles are Timken products, the drive, of course, being by spiral bevel, and the frame is of deep section to give rigidity and enable the firmly-built body to keep free from looseness after long use.

The wheelbase is 127 in., tires are 35 x 4½, non-skid in rear. The weight is said to be only 3050 lb., due to the extensive use of aluminum. Vanadium steel semi-elliptic springs, 59 in. in the rear, 37 in. in front and 2½ in. wide are used.

The bodily comfort of the passengers has been studied with especial care, and a short trial of the car enables it to be stated with conviction that the ease of riding is very much above the average. It is not too much to say that very few cars indeed ride as well as does the Jordan. This desirable quality is attributable partly to the springs and partly to a special feature of the upholstery. Taking the former first, they are half elliptic front and rear, the back springs being 59 in. long and almost perfectly flat when the load is on them. They run beneath the axle and the rear end of the frame is brought well down in a sweeping curve to carry the shackles. This low hanging allows the frame to be brought fairly close to the ground, and the flatness of the springs gives lateral strength to resist rolling action, of which there is remarkably little.

New Upholstery Springs

In the seat cushions the Marshall spring is used. This has been developed for high-grade furniture and now makes its first appearance on an automobile. The usual nucleus of a cushion is a couple of wire frames separated by a number of large springs coiled to a big diameter. If one of these springs gives way under the stress of use there at once appears a hollow in the cushion, because each spring supports a large area of leather. In the Marshall construction the springs are much smaller and a great number of them are used. Each little coil is sewn up in a canvas container and scores of the springs are bunched together. A little padding then goes over the top and then the leather, so that every square inch of the cushion has in-

Digitized by Google

dividual support. Owing to the number of springs used each one can be soft, so that the effect is equivalent to a pneumatic cushion, though with less bounce. Another thing that makes for comfort is the shape of the seats, for this has been worked out so that the height and depth of each and the angle of the back is just right. The rear seat suits the woman of average stature, the front seat the average man, and to allow for variations in the stature of the driver the pedals are adjustable over a wide range. It is specially noticeable in the front compartment that the wheel and the door are in such proportion that any man can get into the driving seat from the left side without any difficulty, even when wearing a heavy coat.

Speaking of the driver's comfort leads naturally to a comment on the placing of the gear shifting and brake levers. These are within easy reach without stooping or leaning forward, and the two are far enough apart to make the chance of a mistake extremely slight. The gear lever is carefully fitted, so that it moves easily, and the clutch needs only a light spring. Also the long, flat rear springs and the Hotchkiss drive cause very little variation in the relative positions of the brake parts, so that there is little lost motion on the service brake pedal and a fairly light pressure exercises great stopping power. The frame is well narrowed in front, so that there is a good turning lock despite the 127 in. wheelbase.

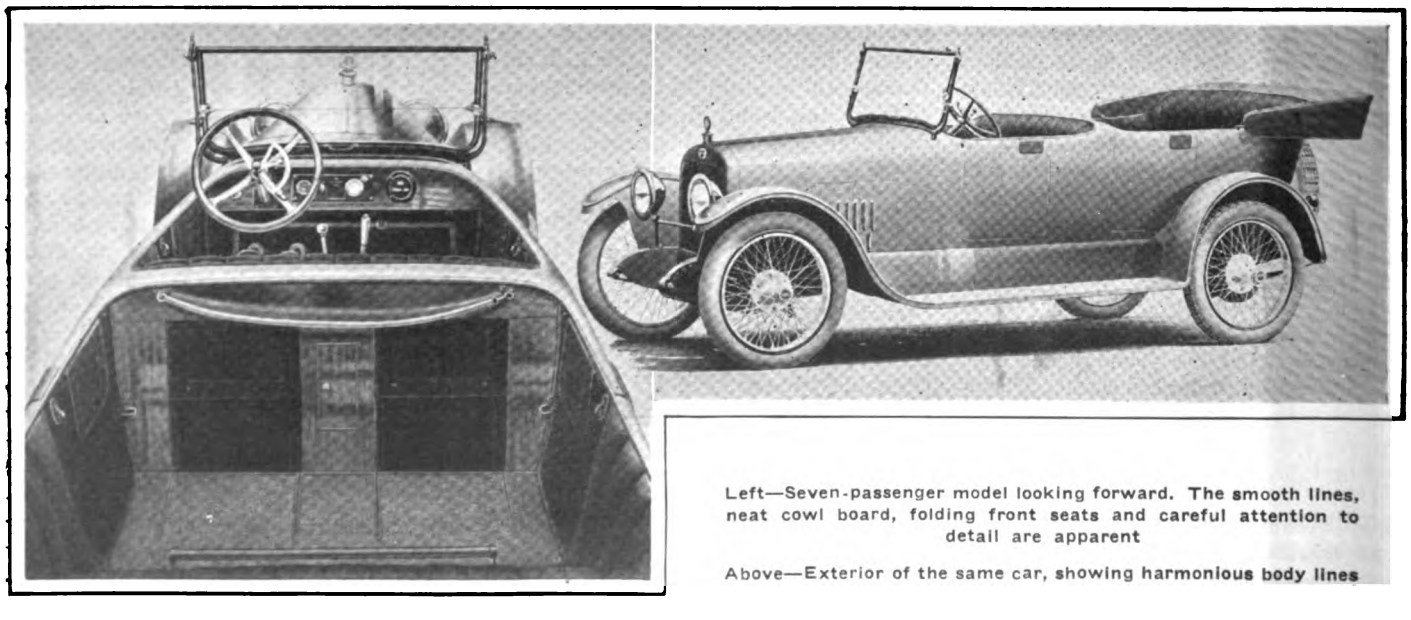
Returning to the body once more. it may be mentioned that the upholstery is all of the best hand buffed leather, a thick yielding quality with the dull gloss that contrasts best with the highly polished mahogany work on other parts. The back of the front seat contains the folding seats, which drop into compartments and are covered by leather curtains or flaps. All the rest of the seat back is light mahogany and is a regular custom style of job made of many pieces with matching grain. The center cowl effect is obtained with the minimum sacrifice of space, the front corner of the rear door being cut into the edge of the center strip.

Across the back of the front seat is stretched a rope strap with snap fastening. this being of a brown leather, to match the mahogany; there is a thick, soft tonneau carpet and a substantial foot rest. These petty details of body equipment are mentioned so particularly because each one contributes to the completeness and very real luxury of the whole. It is in the choice of such detail that the Jordan has striven to raise itself into the custom-built class. The sloping windshield. for example, is not just a windshield. Its proportions suit the car, its hinges work smoothly, the top sockets snap readily into place.

In order to maintain the standard set. the Jordan company is not planning a big output, but will use a very rigid inspection. In the main floor of the plant there is a special spot upon which each car has got to stand before it goes to the shipping bay. After every detail has had its individual inspection, after the car is reported as O. K., it has to undergo a final, painstaking checking up to insure that nothing has been overlooked, and the manufacturer is not going to grudge the cost of time spent in this way.

1917 Velie Biltwell Sixes Unchanged—Four-passenger Added

MOLINE, ILL., July 17—As far as the chassis is concerned, the Velie "Biltwell" sixes for 1917, made by the Velie Motor Vehicle Co., have undergone little alteration. Perhaps the most prominent mechanical alteration is the use of Timken axle equipment, though sundry little details have been improved, tending to enhance the value of the cars.



In the body line a good deal has been undertaken, and one of the most striking of the new models is the four-passenger roadster. The general appearance of this body is quite novel, with its sweeping side line running down to the rear deck. Internally there is all the accommodation of a four-passenger clover-leaf of ample proportions and plenty of baggage space in the deck. This roadster sells for $1,085, as does the five-passenger touring body, which is also quite new, being both longer and wider than that fitted to the 1916 chassis. There is a two-seated roadster at $1,065, this having a large amount of space for stowing baggage, and a four-passenger coupe for $1,750.

For special orders a range of other inclosed bodies is made, including a very neat little town job on distinctly French lines for $2,200, a touring sedan for $1,685 and a cabriolet roadster at $1,485. All the bodies fit the smaller chassis of 115-in. wheelbase. There is also a seven-passenger job on a larger chassis, this having a larger engine and a wheelbase of 124 in.

The Velie was one of the first cars to employ the taper frame with straight side rails, wide apart at the back and narrow in front, and this construction is still being used. It gives a wide base for supporting the body rigidly, and the straightness of the side rails decreases any tendency to weave.

On both chassis the engines used are of Continental make, and both are sixes, the smaller 3¼ x 4½ and the larger 3½ x 5½.

Dry-disk clutches are fitted to both cars, but the larger has a four-speed transmission, while the smaller has three speeds only. The tubular driveshaft has a universal at each end, the long three-quarter springs taking both torque and drive.

Left—Seven-passenger model looking forward. The smooth lines, neat cowl board, folding front seats and careful attention to detail are apparent

Above—Exterior of the same car, showing harmonious body lines

Those Dealers

GRAIN sown in any suitable soil will grow and bear plentifully. Fruit trees planted on proper ground will survive and bear fruit. Yet the farmer sometimes goes to great pains to fertilize soil that is fairly good even without that fertilization.

Why does he do it?

He does it because he is not satisfied with an average crop. He has invested his money in land and he wants the land to pay back every possible dollar. He could save himself labor and the cost of the fertilizer were he content with an average crop, but the farmer who is not content invests in fertilizer and gives his labor and in the harvest time is bountifully repaid for all of his extra effort and expense of the early summer.

THE distributer of motor cars is not unlike the farmer. The distributer's field is his dealer organization and the crop is the profit on the sales that the dealers and subdealers make.

And, like the farmer, the distributer can get an average crop by placing a number of agencies and waiting for them to sell cars. In the meantime he speeds up his own local retail organization and develops as high efficiency as possible in his own town and sells all he can at retail in his own city, where he is both dealer and distributer.

There is a wonderful opportunity for the distributer in fertilizing his dealer field. If, instead of being contented with an average crop, he would fertilize the field the returns would be so great that he would be surprised at the result. He would be as surprised as some farmers have been when they found that the much pooh-poohed methods of the agricultural college would really work after all and increase crops.

SOME factories have begun the fertilization of their dealer field; and other factories are little acquainted with a territory except as they know the distributer. They have little first-hand knowledge of the enormous army of dealers that lies out and beyond the distributer. It is in this field that the biggest work is to be done, the greatest opportunity for fertilization.

One factory in speaking of a certain territory speaks of its distributer and his fine place of business, but it says—and probably knows—nothing of the army of dealers under this distributer and how business is done by the little fellows. Yet it is these little fellows who are the roots of the industry. They are the men who ultimately sell the fine and shining product—and with a little fertilization they could and would produce a much bigger crop.

FERTILIZATION of the dealer field would consist of sales and business aid to the dealers and subdealers. A Business Development Bureau in the organization of every distributer and every factory would pay for itself many times over in the long run. Supposing that it did cost, say, $3,000 a year to run it. How many cars would have to be sold before this sum would be returned?

The dealer and subdealer in the smaller cities would be wonderfully helped by such aid from the distributer. If a dealer has had an agency for, say, two years, and if before taking the agency he was a retired farmer or an undertaker how efficient is he as a merchandiser of motor cars and a business man?

And, if that dealer can sell ten or a dozen cars a year on his own ability, how many more could he not sell if he had someone to school him in modern methods? Why, there is one dealer in Wisconsin who has been selling cars for years and who never knew until last winter that it was good sales work to ask the prospect to sign the order! How many sales do you suppose that dealer has lost because when he got down to the signing point he didn't know how to finish the sale? What would it not have meant to dealer, distributor and factory if somebody six years ago had shown this dealer how to close a sale? And how could this have been better done than by the Business Development Bureau of the distributer—or the factory?

A BUREAU of this kind would include a sales and business agent of a special character; he should be able to analyze a business, tell what ails it and how it can be made better. He should be able to tell a dealer how to sell more cars with the same effort, or how to make a little more effective effort in the same amount of time.

This Better Business Agent should be able to discern the failings of a business system and point the way to better accounting standards, even if it were necessary for the factory accountant to step in and put the finishing touches on this end of the job. The agent should know how to suggest advertising and plan campaigns. He should be an all around adviser in business and sales.

DEPARTMENTS of this kind operated by distributers would cost money. It costs money to fertilize land. It costs money to prune trees. It costs money to raise stock. It costs money to do anything worth while but the worth while things pay the money back.

Making the Customer Think Your Way

The story of how Fred A. Bean set out to win for his garage a warm spot in the heart of the car owner

"MOST of the abuses heaped upon the garage come from the fact that car owners are ignorant of conditions, and this ignorance, or unreasonableness, is usually the result of NOT THINKING." In these words Fred A. Bean, proprietor of the Grosse Pointe Motor Service Station, Detroit, sums up the conditions that he has found in his business, and to bring about a different frame of mind in the car owner he issued a booklet, entitled "Service."

It is an adaptation of the widely known Statler Hotel Service Booklet, and is sent out with the garage's monthly statements and is distributed to transients and in the drug store and bank with which Bean does business. The booklet consists of "A Talk with Our Employees" and "A Talk with Our Patrons," and the car owner who reads it and doesn't think better of Bean and his garage is unreasonable indeed. It is an educational propaganda that is meritorious. Bean has also issued a booklet on his price list that will be described next week. The story in the Service booklet follows:

The Service Booklet, 3½ x 5⅛ in.

A Talk With Our Employees

E. M. STATLER, president of the Hotels Statler Co., and one of the greatest present day architects of SERVICE, says:

"Life is Service.

The one who progresses is the one who gives his fellow-beings a little more—a little better—SERVICE."

As Garage operators, we have only one thing to sell, and that one thing is—SERVICE.

Without service there would be no customers, without customers there would be no garage—and that would mean no job—FOR YOU.

It is your duty to create and deliver that SERVICE—the BEST SERVICE possible. To see that every patron, regular or transient, receives it at all times.

Every time a patron goes out the door, see that he or she goes out with the desire to return for more—BEST SERVICE.

* * *

Service begins and ends with COURTESY.

Courtesy is demanded of you towards every patron at all times and under all conditions.

Remember that he has a perfect right to say that the carbureter is not adjusted, when you know it is, or that his car was not delivered on time when you know it was.

You are forbidden to argue any point with a customer.

You must adjust the matter to the Patron's satisfaction, or call upon the office to adjust it for you.

The largest Department Store in the United States has adopted the Slogan: "THE CUSTOMER IS ALWAYS RIGHT."—It is ours.

Never be familiar with a patron—neither shall you be surly or grouchy. BE COURTEOUS.

Don't lose your temper with a patron. If you do—do not stop to look for it—look for another job. It will be necessary.

Show as much attention to the patron who is spending 5 cents as the one who is spending $50. Show them just the same attention if they are not going to spend a cent.

* * *

WE know that some automobile owners make a practice of tipping in garages. We wish they would not—here. It is not necessary. Every patron is entitled to every bit of SERVICE from every member of our staff without a tip.

You are being paid in proportion to your ability to earn for us. If you are not being paid enough—it is your fault—your record is well kept.

Mr. Statler says: "Any employee who is wise and discreet enough to merit tips is wise and discreet enough to render a like service whether he is tipped or not.

"And he is wise and discreet enough to say 'Thank You' when he gets his tip."

This is the soundest logic we have heard on this evil.

The use of liquor for any reason is positively prohibited.

If you must take a drink—you MUST look elsewhere for your pay check.

Cleanliness is of vital importance. This applies to your personal appearance as well as to the building and its equipment. Our patrons are the ones who pay your salaries and they demand it.

* * *

OCCASIONALLY we come in contact with, and have to deal with, that pest—The Joy Rider. We do not cater to this class of patronage. Serve them as quickly and as courteously as the circumstances will permit. But allow no disturbance.

Remember that the garage floor should be just as safe for a lady in the middle of the night as our office is during the day.

Do not let any transient patron be misled as to our charges. We would rather he would go away without getting what he came for—than to get it and go away feeling that he was overcharged.

Always bear in mind that a garage should be governed by just as strict a code of ethics as any other business or profession.

* * *

Finally—It is your duty to see that EVERY patron gets—not simply Service, but, THE BEST SERVICE to be had in any garage, whether in Detroit or elsewhere.

S-E-R-V-I-C-E Spells Job—for YOU.

The suggestions which are given here will help you very greatly to give that BEST SERVICE.

It is not absolutely necessary that they be followed. Neither is it absolutely necessary that you be retained on our payroll.

See that every car goes out a little better washed and a little cleaner than from any other garage.

Digitized by Google

See that every car is delivered a little more promptly than from any other garage.

See that every car is handled and driven a little more carefully and a little better than the owner can have it done in any other garage.

* * *

DO not drive over 15 miles per hour. Do not start any car on other than first speed.

Inspect every car carefully before delivering; see that lamps, tires and warning signal are in perfect condition for the owner.

Do not eat or smoke in a patron's car.

Do not let patrons crank their own cars.

Do not let them wait on themselves for compressed air.

Do not let them fill their own radiators while you look on.

Do not let them open or close the garage doors.

Do not let them open or close their own hoods or remove the tank caps when being waited on for gasoline or oil.

Do not let them park or take out their cars alone. Assist them in every way possible.

Do not let anyone "stand around" without being waited on. See what they need as soon as they come into the building and serve them as soon as possible.

Do not wait upon any patron when smoking.

* * *

Do not approach a lady or car containing ladies, either in the building or out, without raising your hat.

Should a patron desire to use the telephone see that they are given a chair, shown the book, and that the office is quiet.

Should a patron desire to wash, see that the wash bowls are absolutely clean and that they have soap and clean towels.

Should patrons desire information concerning routes, hotels, places of interest, time tables of trains or boats, traffic or custom laws, see that they get it. If we have not the information, see that it is obtained for them.

Give just as Courteous Service—the same BEST SERVICE—over the telephone that you do on the floor.

Our Bulletin Book covers every detail of your work—it will pay you to read it—study it—learn it by heart. It will save you from being criticised from the office and our patrons from criticising us.

Do not forget the little things and we will not forget you.

* * *

Remember this—"You are an investment—It's up to you whether you are a good or a poor investment. If you earn us money by holding our old customers and by bringing us new ones, you will be a good investment. If you turn out to be a bad investment you will be dropped during the dull times just the same as we shut down the generators when the cars are all charged and we do not need to have any more current manufactured.

Do not simply "fill your job."

A Talk With Our Patrons

I WANT to quote Mr. Statler again; he says:

"Every little while I see some patron of mine who won't let me give him the good service that is here for him.

"Nearly always it is because he does not realize that it takes two—the server and the served—to make good service."

We cannot serve you the way you wish to be served unless you co-operate with us to a certain extent. This co-operation is only—in being reasonable.

* * *

Did you ever have the cook or the butler leave while the guests were arriving for dinner, or the chauffeur disappear when you were in a hurry to reach the theater or to catch a train?

We sometimes have a washer or a polisher leave in the middle of the night, with a floor full of cars, when we can not get another.

It is then impossible to send your car out in just the condition we would like to or that you would like to have it.

* * *

Do not misconstrue anything we say here—We are not complaining about what you have done. We are simply stating certain conditions as they exist and perhaps concerning which you have not thought and, as an automobile owner, you are certainly interested.

If you are feeling badly and consult a physician, who, after spending 10 or 20 min. in an examination, tells you that one of your lungs is tubercular, recommends a certain diet and suggests a trip to the coast, you pay for the examination and advice. You pay practically the same fee if his examination does not take over 2 min. Your cost is the same when he tells you there is nothing wrong with you, and sometimes his judgment is in error.

* * *

WHY shouldn't you pay us when you come in with supposed trouble in your car and our men make an examination? Is it fair to come to us for the examination, get our opinion, pay nothing, and go to the factory, service station or another garage to have your work done?

If you call a physician and he can do nothing, you pay just the same. If he operates, you have the fee plus the hospital expense.

If the operation is not successful your surgeon guaranteed you nothing. He has simply tried—that is all we can do. We may find that the motor was just as badly diseased as the man upon whom the operation was a failure. Shouldn't you pay us for our efforts just the same as you do the surgeon?

You consult an attorney, he considers the merits of the case and advises you not to go to court and charges you for his advice. You bring us a car, we examine and advise you as to what should be done—What is the difference?

You retain him to defend a case, he guaranteed you nothing and loses the case. You pay just as though he had won and in addition all of the court costs. Isn't our position very similar?

What is the difference between his position and ours?

The physician or lawyer has made no greater investment to obtain his knowledge and reach a certain degree of perfection than we have.

* * *

IT is hardly fair to drive into a garage with a flat tire, borrow a jack, tire irons, etc., use the compressed air, and then not expect to pay for it, when the garage have men regularly employed for this purpose?

Would you go into a tailor shop and borrow a thread and needle to sew a button on your coat; would you go into a barber shop, borrow a razor, brush, soap, etc., and shave yourself?

* * *

Good, reliable garage help is always at a premium. We can not afford to employ idle men. We can only employ as many as normal conditions will warrant. If several patrons want repairs at the same time, some one must necessarily wait, for the labor of every man is sold for a certain period.

It is one of the laws of supply and demand. We cannot foresee all of the congested conditions and accidents that occur and have extra men waiting. You certainly have similar conditions in your own business. You can not ordinarily get 4 or 5 hr. work from your dentist without arranging in advance.

The barber would not allow you to do your own work because you were in a hurry and there happened to be several ahead of you. Why should we?

You call your car, and five cars have been called in 10 min. previous to your call; it follows that some of the men have to return to the garage before your car can be sent out.

Officers and Directors of the Michigan Automobile Trade Association

1—*First Vice-president L. C. Rivers, Rivers & Norton Garage, Battle Creek.*
2—*Fred A. Bean, director, Grosse Pointe Motor Service Station, Detroit. (Bean is the author of the booklet that is the subject of the story on this and the two preceding pages.)*
3—*Secretary L. C. Steers, 518 Garage, Detroit.*
4—*Treasurer C. F. Strong, Coldwater Garage Co., Coldwater.*
5—*President L. F. Bertrau, Big Rapids Garage Co., Big Rapids.*
6—*Robert A. Wilson, Chicago, secretary of the National Automobile Trade Association.*
7—*F. L. Johnson, director, City Garage, Adrian.*
8—*George F. Robbin, director, Robbin's Garage, Port Huron.*
9—*C. W. England, director, Lapeer City Garage Co., Lapeer.*

We shall always endeavor to treat an emergency call as such and make the delivery at once.

Thirty minutes' notice will almost always insure prompt delivery.

If you get in trouble on the road, remember: "It never rains but it pours." —There are probably others in trouble at the same time and every available man has more than he can do. We are not keeping you waiting intentionally.

* * *

WHEN renting a house do you expect your landlord to deduct from the rent the time you are away on your vacation? Then why should you expect us to hold your space for you without charge?

Is it fair or reasonable to call us for a driver for your car at a certain time and when you find that you do not need him neglect to call us until after that man stopped his other work, washed and dressed, and expect there will be no charge?

Is it right that you arrange to send your car in for certain work at a specified time and then neglect to do so? You have engaged that man's time and we are holding him for you. When you break that appointment you are hindering some one else in securing his time.

Is it right that you should, when in trouble out on the road, telephone for a man to come to you, and when you perhaps locate the trouble yourself, drive away without letting us know, and later when a bill is presented, refuse to pay on the plea that no service was rendered?

A service was rendered you in our endeavor to get you out of trouble as quickly as possible, and though no labor was performed the man's time and the expense of running the service car must be paid for or we would stand to lose.

Is it being honest with the garage to bring a car in the last thing at night for some little minor repair or supplies, on which the profit amounts to a very few cents, leave the car over night and expect to pay no storage?

When you get a meal at a hotel, it does not entitle you to room unless you pay for it.

* * *

It is not right to say you have waited 30 min. for your car when it is only 10.

It is not right for you to say that you gave the order yourself when you left it for one of your servants, and the servant forgot.

* * *

Every well regulated institution must have rules for its government which must be inforced at all times.

Our insurance arrangements prohibit any smoking on the garage floor or in the shop.

The lowering of our insurance rates decreases overhead and helps to lower the cost of service to you.

Don't leave your car standing at the gas pump while you come in to use the telephone. The man behind you may want gas in a hurry.

Do not stop your car in the doorway. The other fellow may want to get in or out.

Do not drive in or out of the garage without having your car under absolutely perfect control, and always sound your warning signal. It is the sure way of avoiding an accident.

When you are waiting, do not get into another customer's car. We would not let him get into your car if you left it in our care.

Do not keep your motor running or race it on the floor. The gas and smoke from your car will cause a greasy film on the cars that are washed and polished and ready to go out.

Do not stop at the curb pump headed against traffic. It is a police order and the man will be obliged to refuse to serve you.

It is a state law that gasoline shall not be put into any container unless it is painted red and all openings fitted with proper caps. Please do not ask us to break it.

The man at the pump will ask you to stop your motor and put out all oil or gas lamps while he is putting in gasoline. Do not criticise him; he is only obeying the law.

* * *

We carry a very complete line of tires, tubes, supplies, accessories, etc., and shall appreciate your patronage.

If we do not have in stock just what will meet your requirements we can get it for you on very short notice at the regular list price.

YOUR suggestions for the improvement of our service are invited and will be greatly appreciated.

YOU can make our service the best in the world by co-operating with us.

ANGLES OF THE LAW

By George F. Kaiser

NEW YORK OWNER NEEDS NO DRIVER'S LICENSE

THE right of any person other than a chauffeur to drive a motor car without being personally licensed, in New York State, is upheld in a recent decision.

It was charged that a person had unlawfully operated a motor vehicle in the city of Yonkers without having first obtained a written license.

The court pointed out that the New York highway law provides, "That no person shall operate or drive a motor vehicle as a chauffeur upon a public highway in this State after the first day of August, 1910, unless such person shall have complied in all respects with the requirements of this section"; and further, "The term 'chauffeur' shall mean any person operating or driving a motor vehicle as an employee for hire."

"Nowhere in the act," said the court, "is there a requirement for a license; or the prohibition against operating without one, as applied to persons other than chauffeurs, or who fall within the above definition."

While chauffeurs are required to be licensed, the owner of the car may lend it or rent it to some inexpert person, who may run it without a license, and only the provisions of the highway law with regard to reckless driving will apply.

The court further remarked that the rights to the use of the highway are vested in the public absolutely for all kinds of conveyances, subject only to the restriction the State may impose on such use. It was held there was no violation. —People vs. Loughrey, Court of Special Sessions, Yonkers, June, 1916.

WHO IS GUILTY?

Editor Motor World:

I will be greatly obliged if you can solve this problem: A mechanic in a garage in the State of New Jersey left the garage in which he is employed with a car belonging to the garage to do some repair work on a private car some distance away. While the car belonging to the garage, and which the mechanic had taken out with the owner's consent, was standing on the street some acquaintances asked him to let them have the car for a while, as they would only be gone a short time. He consented to this, and adjusted the carbureter and a few other little things and told them to go. The car accidentally overturned while traveling slowly, smashing the top of the car, panes, etc. Who, in your opinion, is liable for the damage done to the car in this case—the mechanic who took the car from the garage with his employer's consent, or the friends who borrowed the car? If the mechanic wanted to be mean, could he not say that the car was stolen instead of loaned, and thereby cause considerable trouble?—Arthur Marion, New York.

The case you give is indeed a peculiar one. If the accident had occurred while the mechanic was driving he would not be responsible personally, even if it were caused by his negligence, as his negligence would be attributed to his master because he was engaged in his master's business while going out to repair the stalled motor car. Of course, the mechanic had no right to loan the car, as it was placed in his possession merely for the purpose of furthering his master's business.

The parties who borrowed the car were borrowing it for their sole benefit and, as no benefit accrued to either the mechanic or his master (the owner of the car) through the loan, the parties who borrowed it were under an obligation to take a very great amount of care and would be very properly held responsible for a very minor degree of negligence. Whether or not they were negligent when "the car accidentally overturned while traveling slowly" is something I cannot ascertain from your letter. If there was no negligence on their part they will not be responsible but will be free of liability.

The mechanic, however, I believe, is liable for the damages, even if there was no negligence on the part of the parties who borrowed the car, because of his breach of the trust reposed in him—that is, to take the car out, repair the other car, and then return it.

Matters naturally will be much complicated if the mechanic sets up a claim that the car was stolen from him; but that is a question of veracity, a question of who is telling the truth. If the car had been stolen, the parties who stole it and operated it would naturally be liable for any damages caused to it by reason of their having unlawfully taken it.

MUST GIVE UP CAR

A garageman must give up a car to a party whose daughter pays for a machine with his money and takes a bill of sale made out to her husband.

An action of replevin was brought to get back a car, or its value.

It appeared that the man, who was about 80 years old, sold a piece of property and went to live with his wife at the home of their daughter. Concluding to buy an automobile, he turned over the money to his wife, who subsequently handed it to the daughter. When the automobile was bought the daughter had the bill of sale made out to her husband, and when the father went to get the car it was gone. He finally traced it to a garage, where it had been left by his grandson.

It was decided that under the circumstances the father would have the right to recover the automobile from the garageman by replevin.

EVERYTHING MUST BE IN THE CONTRACT

THE Supreme Court of Michigan has once more confirmed the rule that when a contract for the sale of motor cars expressly provides that no agreement not contained in the order will be recognized, verbal statements will not be considered.

Suit was brought on a contract for the sale of ten motor cars, the purchaser having refused to complete the contract because of breach of warranty claimed by him. The seller's order contained the following clauses:

> It is understood that no verbal or other agreement or promise not clearly specified in this order will be recognized.
>
> The cars are 1912 models and are to stand sold as they are of this date in consideration of the special price.
>
> It is further understood and agreed that this paper, writing and printing constitute the entire agreement and understanding as between the parties hereto, and it is expressly understood and agreed that it may not be varied, changed or modified by any verbal understanding or agreement, or in any way except in writing by the parties hereto attached or indorsed hereon, and no agent or salesman has any right or authority to alter this agreement in any particular, except by written authority from some officer of the ——— Company.

After the cars were delivered the purchaser complained of defects in them.

The court held, however, that as they were sold "as they are of this date," they were practically sold "as is," and, being so sold, there was no implied warranty that they were reasonably fit for the purpose for which they were bought.—(Detroit vs. Engel, 158 N. W. 123.)

Plenty of Pep in Outing of Brooklyn Dealers

Over 300 Attended—Events Run off without Hitch or Delay—Prizes for the Winners

Charles Tate, Martin Evans Co., general manager of the outing. Tate was voted the most popular man in the Brooklyn Trade

THE members of the Brooklyn (N. Y.) trade—tire, accessory and car dealers—left the calm pursuits of business life on Wednesday, July 12, and held their sixth annual frolic at Witzel's Casino, College Point, L. I. From the time the "fleet" left the Brooklyn Motor Club at 10 a. m., until the last prize was awarded at 11 p. m., the 300-odd members were kept in circulation by the Klaxon voice of the general manager, Charlie Tate. There was "pep" from start to finish, and the events were run off like a three-ring circus.

This outing serves to bring together in play the men in the trades that are daily doing business together over the 'phone. For one day the competition of business is laid aside for the more exciting competition of sport. The procession reached the grove about 10.30 a. m., and immediately the ball teams were in action. Julius Bindrim's nine put up a plucky fight, but went down to defeat under the onslaught of the Del Martins. Though the score was 14 to 2, there was no decrease in the enthusiasm shown by the rooters on the side lines. This is the line-up:

Julius Bindrim's team: T. O'Neil, c.; F. Sanford, 2b.; S. Doty, c.f.; F. A. Gehrhardt, p.; L. R. Anderson, s.s.; Geo. Hochschwender, l.f.; J. C. Smith, 3b.; D. Doden, 1b.; J. Bindrim, r.f.

D. D. Martin's team: A. Schapp, c.; M. Marlborough, 1b.; Rippenger, 3b.; F. Miller, s.s.; Charles Tate, p.; W. Winans, 2b.; E. J. Maxfield, l.f.; Costello, c.f.; Del Martin, r.f.

The game was called off for luncheon about 1.30 and the dealers poured into the Casino dining-room. In direct opposition to the laws of nature, the games were started immediately after lunch, and continued without intermission until the dinner bell rang at 7.30. Most of these events are familiar, or else the names are self-explanatory. Here is the scorecard of the afternoon sports:

100-yd. Backward. Won by D. Soden, Soden Taxi Co.; second, F. A. Gehrhardt, Flatbush Auto Co.; third, W. Winans, Reo Motor Car Co.

100-yd. Dash. Won by F. A. Gehrhardt, Flatbush Auto Co.; second, A. W. Delaney, Ross; third, Lee Woodruff.

1—Arthur Jungkind, of Jungkind and Vogler, winner of the duck race, admiring his prize. 2—H. L. Carpenter (Pierce-Arrow), chairman of the general committee, speeding up the tilting contest. 3—E. E. Bell, Studebaker, leading Julius Bindrin in the row boat race. 4—Geo. Hockschwender, Parkside Garage, and L. R. Anderson, Standard Oil Co., vanquished all opponents in the tilting contest

Big Beaner Race (fat man's race). Won by G. H. Kennedy, Argyle Garage; second, R. Lynn; third, J. J. McGowan, Michelin Tire Co.

Monkey Race. Won by L. J. Stachelroth; second, J. C. Smith, Kelly-Springfield tires; third, Jay O'Connel, Ross.

Gymkana Race. This race was divided into two classes, one for Fords only and one for

The concentrated effort of the entire committee, and Charles Tate's

Digitized by Google

other makes of cars. The Ford class was won by Geo. Hochschwender; second, L. Pastre, Pastre's Auto Garage; third, R. L. Hudson, Gulf Refining Co. The general car class was won by A. L. Schapps, in an Abbott-Detroit; second, L. Meerloo, Studebaker; third, W. Wolff, Rambler.

Three-legged Race. Won by D. Soden and F. A. Gehrhardt; second, Lee Woodruff and A. W. Delaney; third, J. F. Cox and W. S. Buckham.

Shoe Race. Won by A. W. Delaney, Ross; second, W. A. Madison, Flatbush Motor Car Co.; third, Lee Woodruff.

Hop, Skip and Jump. Won by A. W. Delaney, Ross; second, J. C. Smith, Kelly-Springfield; third, Harry Wallace.

Running Broad Jump. Won by A. W. Delaney, Ross; second, W. Winans, Reo Motor Car Co.; third, W. Wolff.

Slowest on High. Won by L. C. Meerloo, Studebaker; second, E. O. Bolling, Oakland; third, Arthur Jungkind of Jungkind & Vogler, accessories, in a Velie.

Slowest on High—Fords. Won by J. F. Cox, Paul M. Marko Storage Batteries; second, F. T. Lewis, Diamond tires.

Dancing Contest. Won by G. H. Kennedy, Argyle Garage and R. L. Hudson of the Gulf Refining Co.; second, Brennan and Baldwin; third, Doc Miller, Ross, and Chas. Huber.

Duck Race. Won by Arthur Jungkind, Jungkind & Vogler, accessories.

Tilting Contest. Won by George Hockschwender, Parkside Garage, and L. R. Anderson, Standard Oil Co.

Rowboat Race. Won by E. Mell, Studebaker Corp.; second, J. Bindrim.

At 8.45 the meeting was adjourned to the Brooklyn Motor Club rooms on Bedford Avenue, where the prizes for the winners were awarded. These prizes were donated by the trade, and included several cups and medals, as well as many automobile accessories. A fine traveling bag was awarded to Charles Tate of the Martin-Evans Co. for receiving the greatest number of votes in the popularity contest. A. W. Delaney, Ross dealer, received the gold medal awarded by the Brooklyn Daily Eagle for winning the largest number of points in the afternoon sports. The members of the baseball teams were also awarded bronze medals by this paper. The outing was declared officially closed with the drawing of the Bishop, McCormick and Bishop prizes.

The plans of the outing were made and carried out by a general committee of twenty-two men, headed by H. L. Carpenter, Carpenter Motor Vehicle Co. This general committee was sub-divided into five groups, handling ticket funds, dinner and arrangements, athletics and prizes, publicity, and transportation. On the field the events were in charge of the general manager, Charles Tate of the Martin-Evans Co. A prize was awarded to the member selling the largest number of tickets. The tickets sold for $4 and covered the entire program. Transportation was provided by the members and a large sight-seeing car. Some of those present were:

Henry Aker, L. R. Anderson, G. D. Atwood.

C. F. Batt, C. Bedell, John Banzer, E. E. Bell, Julius Bindrim, E. L. Bixbee, J. F. Blaisdell, E. O. Bolling, J. R. Brennen, F. B. Bradley, W. S. Buckham.

H. L. Carpenter, John Campbell, Walter Casey, D. J. Casey, C. W. Cornell, J. F. Cox. A. W. Delaney, A. M. Delisser, A. M. Dickel, O. J. Duhamel, A. H. Doty, Jr.

H. F. Earle, W. Fait, M. F. Farrel, Harry Fischer, D. J. Fitzimmons.

Fred Gabriel, G. C. Gaillird, F. A. Gehrhardt, D. Golder, H. Gilbert, W. L. Gray, H. C. Grube.

F. R. Hance, Harry Haviland, Geo. Hochschwender, L. Hock, C. W. House, Charles Huber, W. J. Houldcroft.

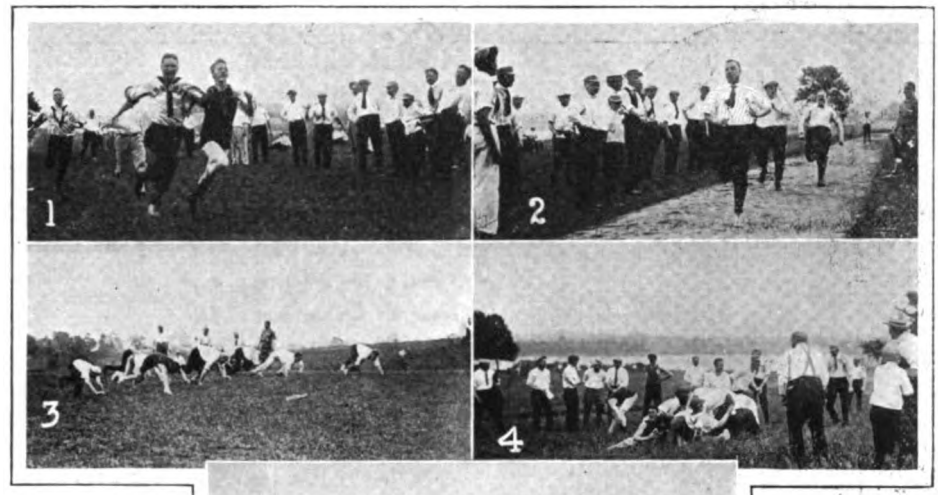
Thomas Ireland, Frank Jacobus, J. S. Jennings, Jr., R. H. Johnson.

G. H. Kennedy, S. W. Kessler, F. Kaine, J. Koplon, Herman Kramer, Herman Kramer, Jr., E. F. Korbell.

D. S. Lane, J. Lewis, F. T. Lewis, C. V. Linn, R. P. Lumley, H. T. Lythgoe, R. Lynn.

John McCormick, Jr., Vincent McKernin, J. J. McGowan, H. McLean.

K. Marko, H. Mayo, L. Meerloo, Paul Marko, A. J. Marlboro, Del Martin, E. J. Maxwell, W. A. Madison, Sam Miller, F. H. Miller, Doc Miller, I. F. Meyer, D. Miles, Jos. Miskend, J. B. Murphy, J. Muller.



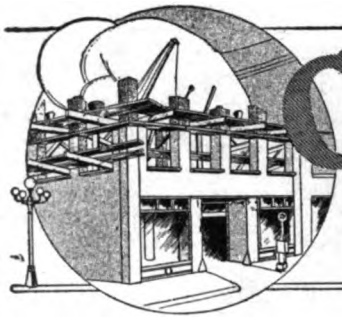
Jay O'Connell, T. B. O'Neil, Oscar Ostrom, L. Pastre, Thomas Pitt, J. Perry, M. P. Price, J. R. Porker.

Joseph Quirk, Harry Reed, Joseph Rippenger, H. J. Ross, Isadore Rotchford, C. Rotte.

Jos. Sands, W. E. Severn, F. Sanford, A. L. Schapps, J. Smith, F. Smith, H. Smith, W. O. Singer, D. F. Soden, J. G. Snyder, S. Snyder, Alex. Somers, J. Spencer, Jos. Stewart.

Charles Tate, J. T. Travis, J. Tronias, Frank Turner, William Tooker, B. Tucker.

H. Unwin, W. Van De Mark, Harry Wallace, L. T. Weiss, W. Wienan, H. H. Wilson, J. Wilke, T. H. Woods, Lee Woodruff, S. T. Williams, B. Wolff, G. C. Zeiner.



1—The hundred yard dash brought out lots of speed. F. A. Gehrhardt, Flatbush Automobile Co., won. 2—G. H. Kennedy (Argyle Garage), was an easy winner of the fat man's race. 3—L. J. Stachelroth showed the greatest dexterity in the monkey race, but was pushed to the finish by J. C. Smith (Kelley Springfield). 4—The shoe race brought the usual mix-up. A. W. Delaney, Ross, won

5—The slowest speed on high race was a genuine diversion. L. C. Meerloo (Paul M. Marko Storage Batteries) dragged in last—and won

megaphone were required to hold the dealers quiet for the group picture

Scientific Construction
GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

GARAGE, SHOWROOM, STORE AND SHOP

Herewith I am sending you a print of a plan for a garage I expect to build this summer. The lot is 65 x 100 ft. and has a wide street on the east, an alley on the north and a narrow street on the west. I expect to have the main garage 45 ft. wide and the shop 18 ft., with the balance of the width taken by walls. There will, of course, be several windows that are not shown, but I have a place at the northwest corner for a small window for display purposes, and it is where it can be seen from the main part of the town. The office and display at the northeast corner can also be seen from the business part of the town. This town is built around a square and the alley is 90 ft. from the square, so I am close enough for anybody to see into the window whether they wish to or not if they go along the south side of the square.

The town has about 800 people, with 200 automobiles in the territory.

The building to be of cement block (I own a plant for making them) and the wall between the garage and the shop to be solid, except for one large door and one small one. I do not expect to have any work on the main floor, so will not put in skylights.—Reader.

Your plan provides for a rather economical use of the space at your disposal, but there are two serious objections to it. You are only utilizing a small amount of valuable frontage space for display purposes, and you have no provision for an accessory store, unless the room you have labeled the storeroom is intended for this purpose. It seems, however, that it is merely a stockroom.

The repairshop is too narrow. You will have great difficulty in moving cars in and out of this room, due to the fact that it is so narrow. Of course, small cars, such as Fords, may be maneuvered quite easily, but it would be almost impossible to place a large car in this room.

Your plot is an odd size for a satisfactory layout. If it were a little wider or a little narrower, or if it were longer, much better arrangements for the storage of cars and the placing of different departments could be made. This will be evident by examining plans for other garages which we have shown in the Garage Construction Department.

Briefly stated, the problem is to find space for showroom, accessory store, stockroom and offices, and provide a strip about 25 ft. in breadth which may be used for a shop, and yet utilize the remainder of the space which is for car storage efficiently.

Obviously, the best place for the showroom, Fig. 4, is on the corner and adjacent to it; on the front is the accessory store. The remainder of the space on the front of the building is used by the shop, and while the shop is no wider than the one in your plan, its effective width is greater because it faces on the aisle running from the entrance of the garage proper. Thus the aisle is made to do double duty and provides space enough to allow the cars to be moved in and out of the shop with ease.

This arrangement of the front of the building leaves the garage proper at the rear an unbroken rectangle which can accommodate about twenty-three cars. As we have pointed out in previous answers in this department, the fact that there are two rows of cars on one side of the aisle should not cause any inconvenience, because it is possible to arrange the coming and going of the cars so that the front row is practically empty before a car in the rear row must be moved. This means that as the owners bring their cars in each night you must ask them at what time the next day they will require their machines. The machines which are to go out before a certain hour, say 10 o'clock, must be put in the first row, and those after this time in the second row.

The showroom should be finished in some light color, preferably white, and should be furnished. You should have pictures, rugs, chairs, a table or so, palms, and possibly a flat-top desk. It may strike you offhand that these things are not essential, but the more attractive you make the setting for your cars, the better impression your cars will make on prospects, and an attrictive showroom is an enticement; it draws the prospect to it, and once he is in it he is likely to stay longer than if the surroundings were not so good.

The fact that you are located in a small town does not make any difference. Probably you will be the only one in your vicinity with a showroom, and that in itself will put you ahead of your competitors. but there is no reason why you stop with merely a bare showroom. Why not go two steps ahead of your competitors instead of one, by making your showroom just as attractive as you possibly can? You will spend several thousand dollars in building your garage and one of the main purposes of this building is to promote your sales work. Therefore, the $200 or $300 extra expense which will be required to make your showroom ideal is not to be considered.

You have given no idea as to just how valuable the frontage space is and, therefore, we have placed the shop at the front of the garage. However, if there is a demand for store locations in your vicinity, it would be well to finish the front portion of the shop as a store and rent it to someone. The shop would then be pushed to the rear to the amount occupied by the store.

BUILDING 40 x 60 FOR VILLAGE

Editor Motor World:

Would like a plan or drawing of a garage 46 x 60 ft., one story. The building is to face the east. Would like as completely equipped repairshop as advisable for a town of 200 people. What size accessory room would you recommend? We do not figure on having a showroom.—P. Iverson & Son, Watson, Minn.

In view of the size of the town it seems advisable to combine the accessory store and your office in one, Fig. 2. The store should be furnished with a plate glass show window and glass show cases. You should have a good window display, which should be changed once a week.

The shop is placed at the rear, with the machine tools at one side. The wash rack is ploced in the aisle, but it is believed that you will not have so much washing that it will be inconvenient to have it there.

A bench is placed all across the rear and all or part of this space may be used as a shop, as required.

Unless your repair business is very small, it will propably be advisable for you to have at least a lathe, drill press, emery wheel and arbor press, together with a complete equipment of hand tools. If there is a machine shop in the vicinity you might eliminate the lathe.

TWO-STORY GARAGE AND SHOWROOM 100 x 150

Editor Motor World:

I am contemplating the erection of a modern, complete garage 100 x 150. I shall install a complete equipment of machine tools and painting department, and want good salesroom and offices. The plot lends itself readily to a one-story and basement scheme.—H. C. W.

Your plot is an excellent one for the construction of a garage, especially in view of the fact that the slope of the land makes the use of an elevator unnecessary, Figs. 1 and 3.

Cars are stored along two aisles running from front to rear, this arrange-

Digitized by Google

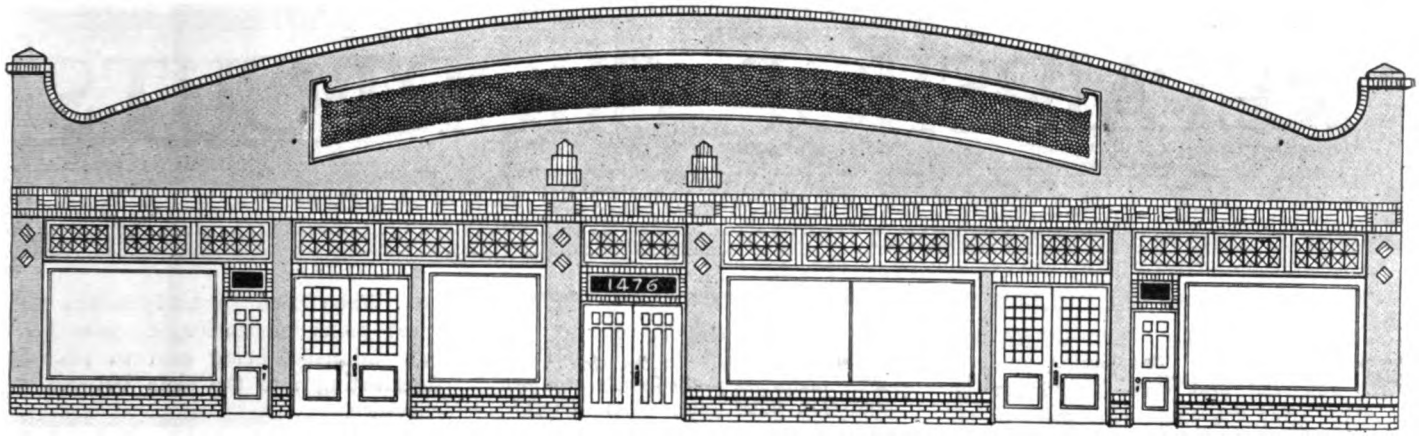

Fig. 1—At each side are stores for rent, and in the center at the left is the accessory store and at the right the showroom

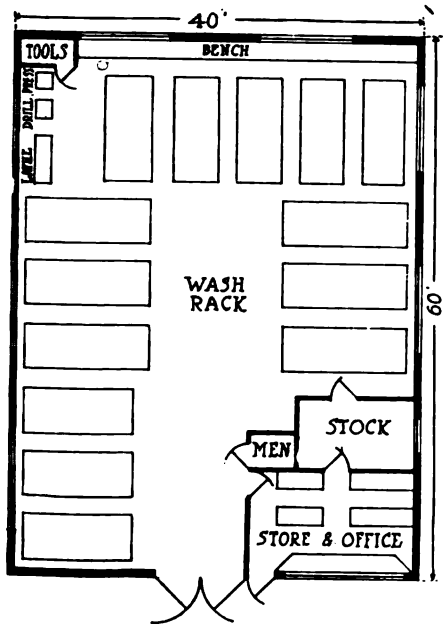

Fig. 2—Small garage with store and office combined

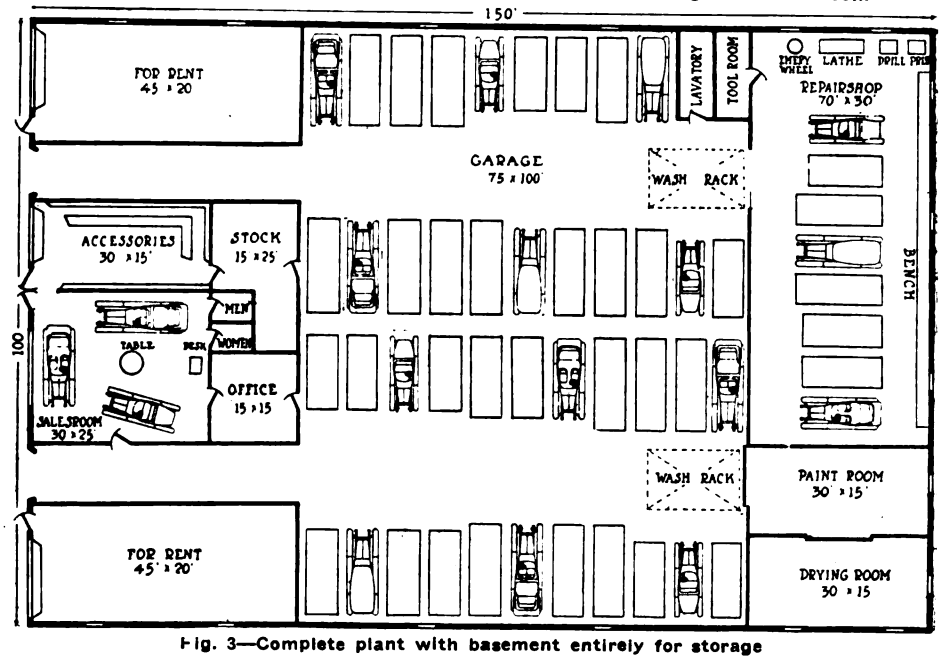

Fig. 3—Complete plant with basement entirely for storage

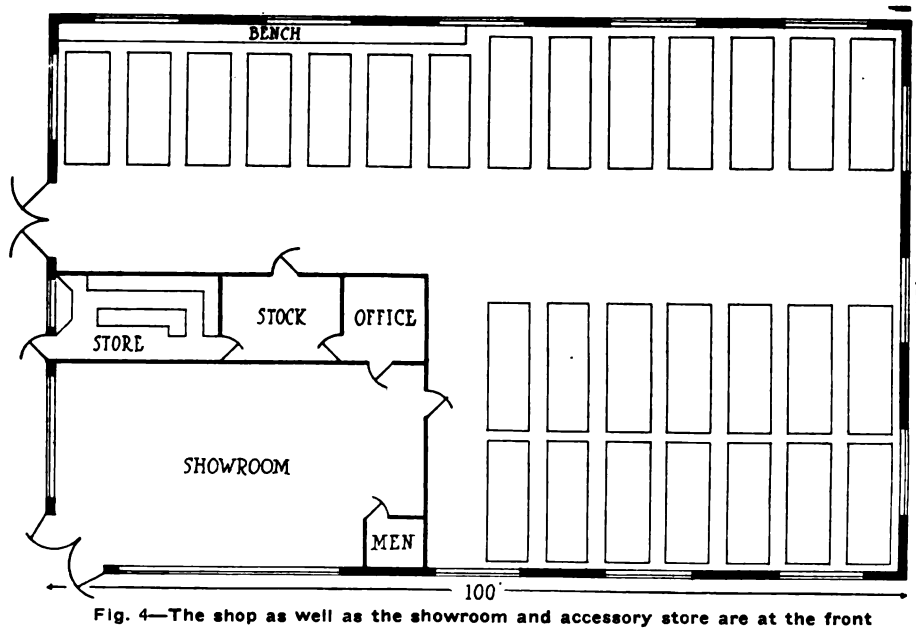

Fig. 4—The shop as well as the showroom and accessory store are at the front

ment being used on both the main floor and in the basement. This is the only satisfactory way of placing the cars, although it has the slight disadvantage that the entrances to these two aisles on the ground floor break up the frontage of the building and give some difficulty in arranging the accessory store and showroom.

Considering the size of the garage and the probable volume of your business in Watertown, it is possible that the size of the showroom and store is not large enough; but it seems advisable to combine them in the central space, which cannot be over 40 ft. wide, due to the location of the garage entrances on either side.

If the garage is situated on a main street it will probably pay you to have a store for rent in the space at either side of the two entrances, but if this is not the case this space may be used for the storage of cars.

In the latter event it would be advisable to have plate-glass windows at the fronts of these two spaces. You might use one for accessories and you might store your demonstrator in the other one so that it would be an addition to the display of cars in the showroom.

Editor Motor World:

I desire to thank you for the plans and for your courtesy in the matter. I have been studying the layout, and think you have worked it out splendidly. Your idea of concentrating the salesroom, accessory store, offices, etc., between the entrances appeals to me greatly.—H. C. W.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 761) CAMSHAFT PULLER

Camshafts may readily be drawn out by the tool shown. The timing gear is first removed and then the puller is screwed over the end. This member of the puller is free to turn on the long screw which actually does the pulling. The mechanism is mounted on a length of 3-in. pipe.—C. E. Bradish, Connell & McCone Co. (Overland), Boston.

(No. 762) CARBON SCRAPING TOOLS

With the tools illustrated almost any motor may be cleaned of carbon without removing the cylinders from the crankcase. The various shapes enable the mechanic to reach the most inaccessible parts of the combustion chamber.—John R. Mason, Fenway Garage, Boston.

(No. 763) ADJUSTABLE PULLER

The feature of this puller is the peculiar shaped hooks designed so that they may be effective on a wide range of gears. The arms are exceptionally strong and will grip firmly whether they are swung in to hold a small object or out to hold a large one.—C. E. Bradish, Connell & McCone Co. (Overland), Boston.

(No. 764) FLYWHEEL LEVER

When overhauling a motor, particularly when scraping bearings, it is necessary to frequently rotate the crankshaft. Usually it is so stiff that more leverage is necessary than that obtainable by merely grasping the rim of the flywheel. The lever shown is an excellent tool for aiding in this work.—C. E. Bradish, Connell & McCone (Overland), Boston.

(No. 765) BATTERY GRID PRESS

When storage battery plates become buckled they may be straightened by applying pressure. An arbor press, or even a vise, may be used, but where considerable work is done the small press shown will be found to be a great convenience.—C. E. Bradish, Connell & McCone (Overland), Boston.

(No. 766) PISTON RING SPREADER

Piston rings may readily be expanded so that they can slip over the pistons by the use of the tool shown. It consists merely of a steel ring with handles so that it may be expanded. At the top of each handle is a little nub which fits in the step of the ring.—Fenway Garage, Boston.

A Suggestion

YOU have tried out some of the ideas set forth in these pages and you have found them useful. Perhaps, however, you have found that you could improve upon them. Perhaps they have started you thinking and you have evolved devices of your own.

Make rough pencil sketches of your improvements on some of these things, or of your own ideas, and send them in with descriptions. We will fix them up for publication and give you credit for the ingenuity you have displayed. DO IT NOW WHILE YOU THINK OF IT.—Editor.

(No. 767) WELDING TANK FRAME

Tanks of acetylene and oxygen for welding and brazing are heavy and difficult to carry. The illustration shows a substantial frame for holding these units. It is made of flat bar stock and angle iron and is mounted on casters. There is a tool box in one corner in which not only tools, but also tips, fluxes and all the necessary paraphernalia for doing work of this character is carried.

(No. 768) MAGNECTIC PICKUP

The small diameter of this tool makes it excellent for picking up small iron and steel articles which have dropped into inaccessible places. One side of the coil is grounded on the handle and the other is attached to an insulated wire which runs up the handle and from thence to the battery. The other wire from the battery is connected to a small insulated sleeve at the base of the handle, so that by squeezing the handle the circuit is closed.—C. E. Bradish, Connell & McCone (Overland), Boston.

(No. 769) STRAIGHTENING AXLE

An axle was bent by the hub striking a polie and the owner was desirous of having the repair effected in the shortest time. This was accomplished by cutting a 2 x 4 so that it could be securely wedged between the hub and a ceiling beam. Then a jack was placed at the point where the bend occurred and the handle operated until the axle was straightened.

(No. 770) REPAIRSHOP HORSE

A serviceable and durable repairshop horse may be made from channel sections and iron pipe, welded together by means of an oxy-acetylene welding outfit. When used to hold motors with three point suspension, a cross brace may be used, being held in place by lugs fitting into the slots between the channels.

(No. 771) ADJUSTING BRAKE

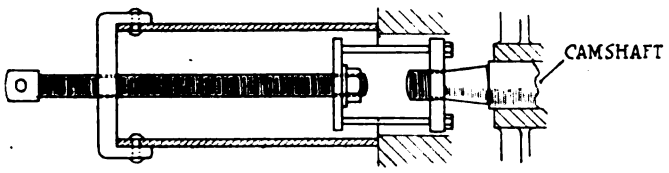
The illustration shows a method of using a jack for changing the adjustment of the brakes on an Overland. It will be found particularly useful when the parts stick.—M. C. H.

(No. 772) OFFSET SCREWDRIVER

Offset screwdrivers are as convenient to use as they are simple to make. They enable screws set in accessible locations to be reached with ease and are particularly useful to hold a machine screw head while the nut is turned with a wrench in the other hand.—J. R. Mason, Fenway Garage, Boston.

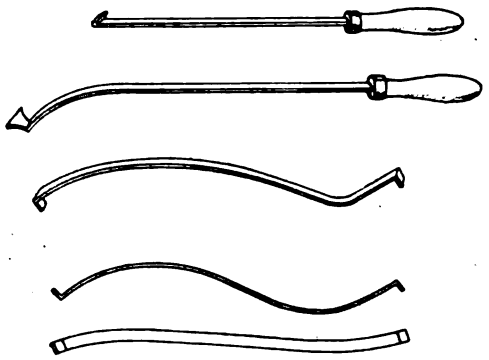
(No. 773) BLOWER FOR FORGE

A small blower for a forge can be made of odds and ends about the shop. For the sides, use wood, the circle being about 8 in. in diameter. The paddle which induces the draft can be made of tin inserted into a central spindle. For bearings a couple of large nails driven through the side casings will do. The top and bottom casing can be either light wood tacked in place or can be tin, which is easier to work. From the spindle a belt runs to an old fan motor. Almost any motor will suffice, because no pressure need be raised by the improvised blower; a continuous draft is all that is needed.—Gerhart & Young, Harrisburg, Pa.



(No. 774) RACK FOR TIRES

A rack for holding stock tires in position can be made of ¼-in. round iron rod fastened in place by ordinary staples. The rods should be about 5 in. apart in order to allow room for the larger sizes of tires.—Vuille Motor Co., Huntingdon, Pa.



(No. 775) REMOVING BEVEL PINION

To remove a tight bevel pinion on a taper seat, remove nut and rest edge of gear on bench. Take a cold chisel and round the end so that it will fit into the bottom of the tooth space, not touching the sides of the teeth. Put the chisel in place and strike several blows with a heavy hammer, and the pinion can be removed easily without damaging it in any way.—Cornell & Barber, Canton, N. Y.

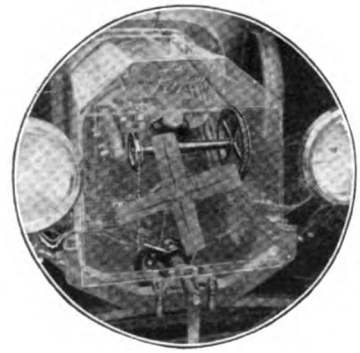
Accessories & Supplies

EVANS ALMETAL FIRE DOORS

Merchant & Evans Co., Philadelphia.

These fire doors, as installed, serve to close automatically necessary openings in division and fire walls. The construction is of the rigid, all steel indestructible type. In daily use the door is held open by a counterweight and cord, acting through a fusible link. In case of fire, the fusible link is melted, and the door slides shut under its own weight. This tends to confine the fire to one portion of the building, and the makers state that the insurance companies will allow a reduction in their rate after installation.

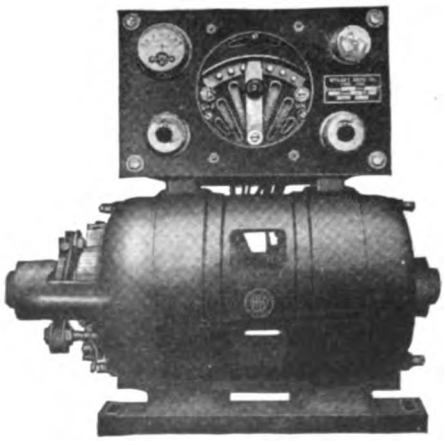


Evans' almetal fire doors for garage construction

SYMONS MECHANICAL STARTER

Symons Bros. Co., Winnetka, Ill. PRICE, $12.50 ($14 installed); dealers price, $7.50.

The Startford, enables the Ford driver to crank his engine from the seat. The fan belt pulley on the crank shaft is replaced by a combined fan belt and ratchet pulley. This ratchet pulley in no way interferes with the crank, which may be used as before. The ratchet is connected to the handle on the dash by means of chains working over pulleys running on a countershaft. This countershaft is supported by a special bracket comprising the upper hose connection and support for pulleys. A device enabling the motor to be primed from the seat is also supplied, and is attached at at point convenient to the driver's left heel.



Symons mechanical starter for Fords

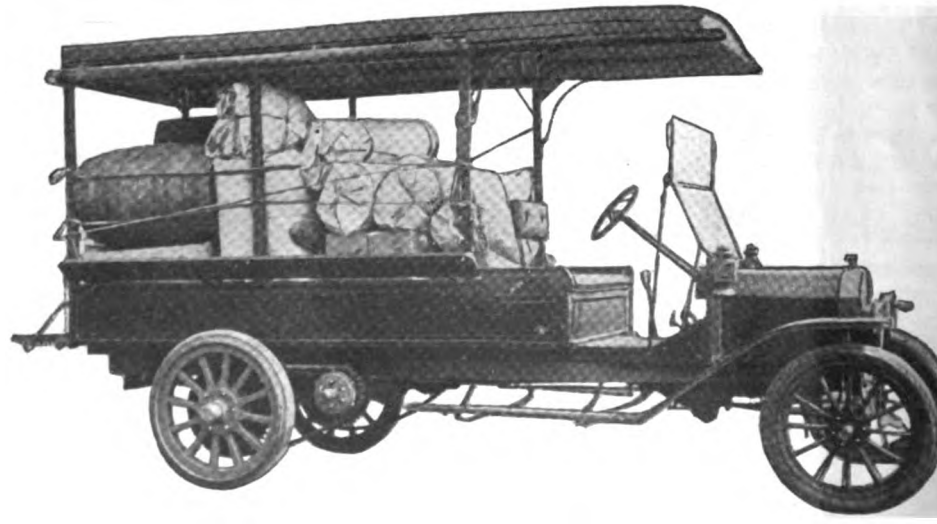
H. B. BATTERY CHARGING SET

Hobart Bros. Co., Troy, Ohio. PRICE, $10 cash, and balance in fourteen monthly payments of $10 each.

This installation provides a means of charging six 6-volt batteries or their equivalent at one time in a period of 10 hours. This set is furnished complete with switchboard and all accessories, ready to operate. Various types are made, depending upon the available current. It is stated that with this set anyone can charge automobile lighting and starting batteries by following simple directions supplied by the makers.

H. B. 6-volt battery charging set

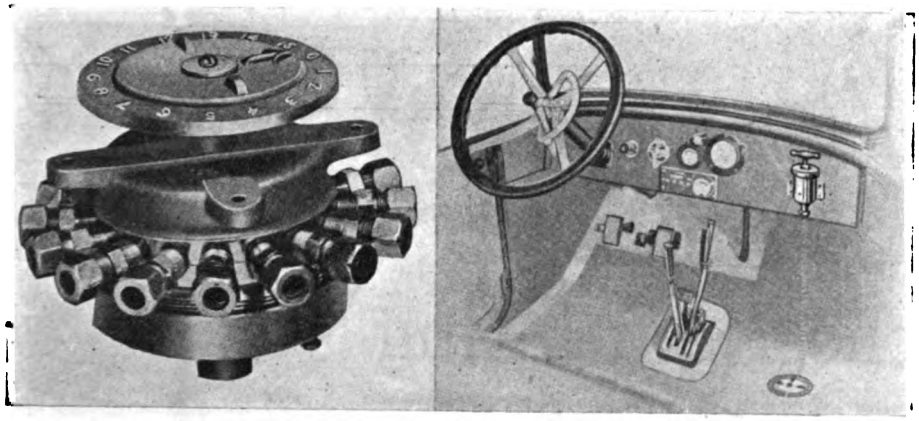
RAYFORD TRUCK FOR FORDS



The Rayford Co., Philadelphia. PRICE, $300.

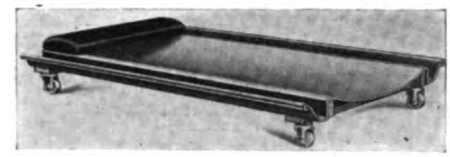
The Rayford attachment makes the Ford into a one-ton truck. It consists of a heavy pressed steel channel-section auxiliary frame securely bolted to the Ford frame. This frame gives a net frame length back of the seat of 8 ft., and permits the use of a 10-ft. body. Attached to this frame by semi-elliptic springs is an I-beam rear axle, carrying artillery type truck wheels. Chain drive is used, through sprockets attached to the Ford rear hubs. No part of the Ford car is changed except rear wheels with their larger tires replace the original wheels. The weight of the attachment is 1000 lb. bringing the weight of the truck up to 2000 lb. The standard sprocket gear ratio is 2 to 1, though other ratios may be furnished on order. The makers state that the Rayford may be attached in 2 hours, and fits the Model T Ford from 1909 to 1916.

RIM GRIPPING SUB-CASING



The Fisher Sub-Casing Co., 5048 Lake Park Building, Chicago. PRICE, 33 x 4, $7.80.

This sub-casing is placed inside the casing and is designed to hold rim cuts and prevent blowouts. It is supported at the bead by endless steel rims, made conical to fit against the inside of the outer tire. These steel rims are located below the place where tires ordinarily rim cut, and tend to hold the sub-casing in place, even though the outer casing is badly rim-cut.



Rayford ton truck for Fords

Monitor lubricator which takes the place of grease cups

Mecco auto creeper

Stanley self-lubricating springs

MONITOR LUBRICATOR

Monitor Lubricating Co., 1218 Chestnut Street, Philadelphia, Pa.

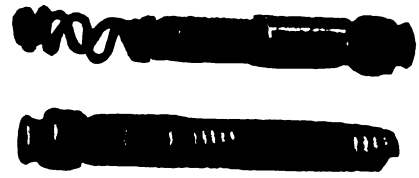
Grease cups are eliminated throughout the car and all grease is supplied by an attachment which is mounted in the driver's compartment. The device consists of a grease gun, which is fastened permanently on the cowl and which delivers grease to a distributor sunk in the floor board. Pipes run from it to the various points on the car which require lubrication. The top of the distributor consists of a dial with numbers placed at points on its circumference, each one corresponding to some pipe running to a point requiring lubrication. If the pointer is turned to number 3, for example, and the handle on the grease gun is screwed down, grease might be delivered to the right front spring bolt. The delivery of the grease to the various points is absolutely positive, and only occurs as the driver deems it necessary. The pipes running to the springs are carried along the frame side members and those running to the axles branch off from the frame and run along the springs. The pipes are sufficiently flexible so that the relative motion of the different parts of the car will not cause breakage.

SPEEDOMETER SHAFT REPAIR

The Speedometer Repair Co., 1303 West Jackson Boulevard, Chicago.

A process for repairing flexible speedometer shafts that is said to be the only one known. No solder is used, as this destroys the flexibility of the shaft, but a crimped steel ferrule is attached in such a way that it holds the broken ends together and yet gives the shaft the same flexibility as before being broken.

R & M PISTON RING



Modern Electric & Machine Co., Indianapolis. PRICE, $1 to $1.50.

The ring is made in three parts, the inner ring having a V-shaped outside surface. Fitting against each of the two faces of the V are smaller rings, which offer a flat surface to the cylinder walls.

SELF-LUBRICATING SPRINGS

Fulton Sales Co., 910 Michigan Avenue, Chicago. PRICE, Ford, $4.50 up; Hudson, $5 up; Cadillac, $9.50 up; Packard, $9.50 up; other makes in proportion.

Oil pockets are provided in the ends of every leaf, so that the springs may

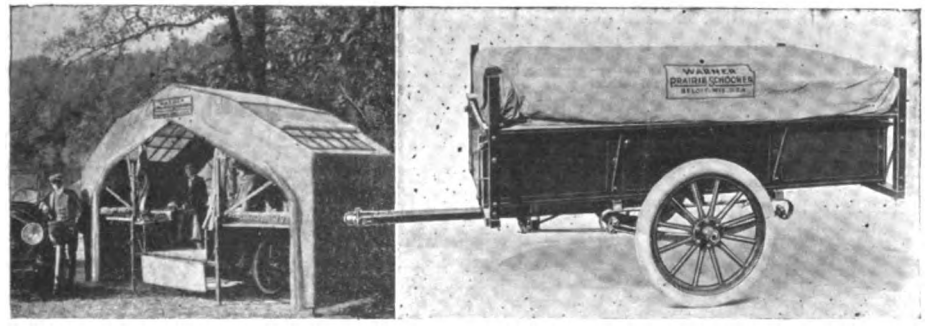
Speedometer shaft repair

R & M piston ring

be lubricated with an ordinary oil can. The pockets have felt pads which retain the oil, so that it is only necessary to supply lubricant two or three times a year. The action of the spring distributes the oil throughout the surfaces.

WARNER PRAIRIE SCHOONER

Warner Mfg. Co., Beloit, Wis. PRICE, $175 with solid tires; 30 x 3 pneumatic tires, $200.



The equipment comprises a folding tent of heavy waterproof khaki duck, two folding Pullman beds, 4 x 6, with Non-Sag springs and two mattresses, compartment curtains for each bed, ice chest, folding table and folding camp stove. There is also room for steamer trunks, blankets, camping supplies, etc., when the tent and beds are folded. The trailer with equipment weighs about 750 lb. and is built to carry 1500 lb. Fitted with pneumatic tires its speed capacity is 50 m.p.h and with solid tires 15 m.p.h. The trailer is built on automobile lines and is finished to harmonize with the car. The trailer tongue is adjustable, so that the box of the trailer is always level, irrespective of the make of car to which it is attached. The tent used when opened is 7½ x 14 ft., the eight legs supporting the beds and the tent being adjustable so that the beds can be made level on uneven ground. The beds are 4 ft. above the ground, the trailer body forming the floor of the tent. Stakes and guy ropes are included. The entire outfit can be opened and arranged in 10 min. by one man; in 20 min. the equipment can be removed from the Prairie Schooner, which can then be used as a commercial trailer.

MECCO AUTO CREEPER

Moeschl-Edwards Corr Co., Inc., Covington, Ky. PRICE, $2.

A creeper 20 in. wide by 36 in. long, with a smooth steel curved body and padded head rest. There are pockets at the sides for holding tools and small parts. Weight, 15 lb.

Do the Next Thing

IT HAS been said, and with a great deal of truth, that life in this work-a-day world is just one thing after another. But the important thing to bear in mind, particularly insofar as it concerns the lives of really successful business men, is that all of these things must be accomplished in their logical order.

In short, the successful man does the next thing. He does not skip all over the business field tackling one job and dropping it for another and then another. He does the next thing.

Every minute of the time of the president of the United States is carefully scheduled for some particular duty. At 10:02 in the morning he may have two minutes to sign some papers. And at 10:04 he has an important meeting with some of his cabinet members. And so it goes. He is continually doing the next thing. He can't skip one thing because it is hard and leave it for later. In order for him to make any progress at all, it is absolutely necessary that he do the next thing.

So it is with our most successful business men in every field of endeavor. No one can rush right into the office of a captain of industry and have his proposition considered immediately. No, indeed! The captain of industry is too busy doing the next thing. By and by when he gets around to it, he will consider the proposition—he will consider it when it is the next thing to do.

All of which means, of course, that every business man must have a plan of action for the day, for the week, for the month. He must know in advance exactly what he is going to do in the immediate future. Only in this way can he spread his attention over the great number of things that must receive it.

Nor is the motor car business any different from any other. The dealer, the garage and the repairman, the jobber, must do the next thing. You cannot climb a ladder without stepping on all the rungs. Your progress to the top means that you must step on each rung in succession. In short you must do the next thing.

One successful dealer has his stenographer write down in a diary each day the things that he must do that day. Then he does them. And he always does the next thing, next.

You may fool yourself by leaving the hard things till last. But you've got to do them anyway. So do the next thing.

Faulty Oiling Systems

OF late have come many complaints of a serious nature from dealers, garagemen and repairmen in practically all sections of the country. The trouble which causes the complaint is the rapidity with which the modern motor accumulates carbon deposit. Just where the trouble lies is difficult to state authoritatively though undoubtedly some—if not much—of it is due to faulty oiling systems. But be the cause what it may, one result is sure, and that is that an additional burden is placed on the dealer.

Practically every shop has troubles of this sort to contend with day in and day out, and makes of cars which have this fault are the rule rather than the exception. Neither is the trouble limited to a price class, but is found in the best and cheapest as well.

The fault seems squarely up to the manufacturer, and in view of the fact that dealers are often forced to include necessary repair work they are called upon to do under the head of free service, a direct loss to the dealer results.

What usually happens is this: The pistons are tight enough when they leave the factory, but due to lubrication systems of faulty design, they wear too rapidly, with the result that soon they are no longer sufficiently oil-tight. Occasionally, also faulty workmanship or material gives the same result.

Scraping the carbon out is only a temporary remedy. Permanent relief can only be obtained by cutting an oil groove in the piston below the rings and drilling holes from it to the interior, or else drilling holes at the lower edge of the lower ring groove. Sometimes even this is not sufficient and new pistons must be fitted.

All this means extra trouble for the dealer as well as extra expense in many cases. Furthermore, the inconvenience and expense to which the owner may be put is a serious detriment and may cause loss of sales.

Do It This Way

···QUERIES ANSWERED···

TAKING CARE OF USED CARS

Editor Motor World:

Please inform me as to the best plan for disposing of used cars of prospects who have used cars. I do not wish to handle them myself. What are your suggestions as to the matter?—Harry I. Benstal, Clay Center, Kan.

You may make a rigid rule not to buy any used cars yourself and may inform your prospects that you will take in and dispose of such cars to the best advantage possible. Then when you find a man willing to buy a prospect's used car, you may act as a go-between and work the prospective buyer up and the car owner down until they have gotten together on a price. We believe that this is as good a method as any.

You may also take in used cars and sell them for your prospects on a small commission, say 5 per cent.

You might take a car in, sell a new car and have a distinct understanding with the prospect that whatever price you get on the old car will be applied on the purchase of his new car. It is a safe practise under this method, however, to make the prospect pay the full list price for the new car and turn the money over to him when you sell the old car. It is much easier for the prospect to accept money than to give up money, and if you can get the whole price out of him in the first place it will be much easier going for you.

These methods have been followed with success by successful dealers. The one important part of the whole matter is to take a stand and stick by it. If you say you are not going to trade and then do make a trade, the news is going to spread and your defense will be beaten down. If you are not going to trade, simply do not trade, and let that be the end of it. If you do trade you will be like the dealer who wants to get the list price for his cars but who shaves the price a little for this man and that man, and winds up by getting so little that he doesn't make anything at all.

SPEEDING UP A FORD

A northern New York garageman made a Ford over into a light speedster in this manner:

The engine was removed, taken apart and thoroughly cleaned. The cylinder head was placed in a planer and 3/16 in. of stock planed from the face fitting onto the cylinders. This decreased the compression chamber and increased the compression, giving a much sharper explosion.

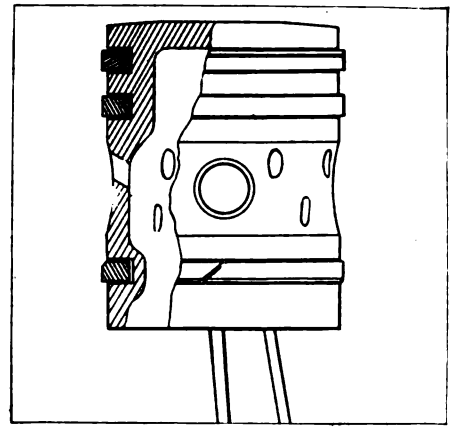

Fig. 1—Ford piston modified for racing

To insure a more perfect running balance and less vibration at high speeds, the weights of the connecting rods were then made equal. The center of gravity of each rod was also brought to the same relative position by careful filing and balancing.

Fig. 1 shows the method employed in rigging the pistons up for speed work. Alternate ½-in. and ⅝-in. holes were drilled in the pistons below the ring line, and by filing the inside of these holes the pistons were balanced. In addition to reducing the weight of the pistons, these holes serve for return flow of the excess oil and more perfect lubrication of the piston-pin bearing. Leak-Proof rings were fitted to the top groove of each piston to insure retaining the increased compression.

After a thorough overhauling the engine was reassembled. The spark timing was advanced and the cam shaft set ahead slightly, although both were later changed to suit the best running conditions.

In addition to the above changes on the engine, the steering wheel was lowered, a light body fitted to the chassis, and canvas mud guards made to replace the heavy metal guards. With this combination the car easily hit the 60-mile mark, and on several occasions did much better than that.

It was found that the oil consumption of the car rigged thus was very great.

TIMING OF MAXWELL MERCURY

Editor Motor World:

Kindly give me the following information on the 1914 Maxwell Mercury roadster:

1—Timing in degrees of the inlet and exhaust valves.

2—Gear ratio on high.

3—Explanation of the oiling system.—J. E. C.

1—The motor is timed as follows: Inlet opens 15 deg. past upper dead center and closes 40 deg. past lower dead center. Exhaust opens 40 deg. before lower center and closes 10 deg. after top center.

2—The ratio on high gear is 3.5 to 1.

3—The oiling system is a splash design, the oil being kept to a definite level by a standpipe in the center of the crankcase. The pump takes the oil from there and returns it to the tank. The same pump takes the oil from the tank through the sight feed oiler and by gravity it runs from there to the front of the crankcase and finds its level in the standpipe.

This pump does not oil the clutch compartment and it is necessary to put oil in from time to time. The disks in the friction clutch should run in a bath of oil to the depth of ¾ in.

NATIONAL TWELVE WIRING

Editor Motor World:

Will you kindly publish a wiring diagram for the 1915 National twelve?—Subscriber.

The diagram is shown in Fig. 2.

The RETAIL NEWS

EAST

The E. R. Benson Motor Car Co., Portland, Me., Studebaker dealer, has promoted C. A. Laidlaw, its retail sales manager, to be wholesale manager for Maine.

Frank H. Kenny, Worcester, Mass., Chalmers dealer, has taken a five year lease of new salesrooms on Main St.

Anson Williams, North Adams, Mass., has opened a garage on Summer St.

Rollins & Bean, Phillips, Me., have enlarged their garage.

Harvey Broadbent, Hudson, Mass., has leased the South Street garage.

O. A. Sylvester, Gardner, Mass., has started building a garage.

The Barre Garage Corp., Barre, Vt., has been organized by E. A. Drown, Morton H. McAllister and George Kent.

Herbert & Turcotte, Franklin Falls, N. H., have moved the Central Garage business into new quarters.

Antero Schiavina, Clinton, Mass., who sold the Main Street garage to Earl R. Pickford some time ago, is going to buy it back this month.

Phillips Garage, Rochester, N. H., has been enlarged by a 50 x 50 fireproof addition.

The Newport Auto Supply Co., Newport, R. I., has been chartered by James T. O'Connor, Thomas M. Dawley and Cornelius I. Sullivan.

The Maxwell Motor Co., Detroit, Mich., has opened a factory branch in Baltimore, located at 134 West Mount Royal Avenue. L. A. Tilley has been appointed manager.

The Abbott Garage, Franklin, Mass., has completed the first of several additions to its plant.

The Packard Motor Car Co., Boston, has approved plans for what will be the largest garage in Worcester, Mass., for its branch in that city.

The Hood Tire Co., Watertown, Mass., has appointed Edward Cross New England traveling representative.

The Stoddard Motor Car Co., Springfield, Mass., until a few weeks ago dealer for the Pierce-Arrow line for years, has signed up to handle the Locomobile.

The International Motor Co., New York, has opened a branch at Springfield, Mass., for Mack trucks.

The Woodbourne Auto Station, Jamaica Plain, Mass., which opened in November, 1915, has been sold by F. W. Boynton to Dana E. Sargent, Jr., Rochester, N. Y., who will continue the garage and Pierce-Arrow service station. Boynton will continue to be the agent for the Overland and has also been appointed Massachusetts distributer for the Michigan Trailer Co.

The East End Auto Co., Harrisburg, has opened a new display and salesroom at 120 Market Street. The dimensions are 28x40 ft. E. E. Adams is in charge.

S. B. DeWitt, A. Bingemen and **L. A. Hackett**, all salesmen, have combined and are now doing business under the firm name of the Motor Car Exchange with display rooms at 1239 Main Street, Buffalo. They have also secured the agency for the Lexington.

MOUNTAIN

F. C. Cullen, Denver, Studebaker distributer, is erecting a two-story service station, 100x125 ft.

SOUTHWEST

Ayers & Greene have opened a new vulcanizing plant on West Front Street, Kingman, Ariz.

Charles Iehl has taken over the management of the Old Trails Garage, Oatman, Ariz.

The Jeffery Distributing Co. of St. Louis has been incorporated. The officers are: President, Henry Rottersman; vice-president, Eugene Meyer; secretary, Jos. Van Raalte; Emil Rottersman, manager truck department; sales manager, J. L. Groover; treasurer, Gus Schmidt. The company will remove at once from 2638 Locust Street, to 2650 Locust, gaining thereby storage room for 100 cars, besides more spacious showrooms and mezzanine floor office quarters. The vacated building will be converted into a used salesroom and a service station for Jeffery owners. The Jeffery company was organized unincorporated last February and has placed more than 100 Jeffery cars and trucks since that time. A stock of car and truck parts will be carried under the new arrangement.

The Mississippi Valley Motor Co., St. Louis, has recently been incorporated to distribute Oakland cars throughout eastern Missouri, southern Illinois, western Kentucky, western Tennessee, and for the entire states of Arkansas, Mississippi and Louisiana. This company has for its president, E. A. Hatfield, for several years assistant secretary and director of sales of the Bain Wagon Co., Kenosha, Wis.

J. H. Eble, Lyons, Kan., has finished up his garage with a beamed ceiling and a hardwood floor .

E. J. Roberts, Westmoreland, Kan., has moved across the street. E. H. Brenton is head mechanic.

A. C. Mead, Heidelburg, Kan., has traded his farm for the Athol garage in Smith Center.

Hogeboom and Thompson, Goodland, Kan., have started the work on their garage extension.

Chas. Adamson, Elk City, Kan., has rented the building formerly occupied by Loether Bros. Garage, and will operate a garage.

Cline's Garage, Esbon, Kan., has been completed and occupation has already taken place.

Steele's Garage, Sharon Springs, Kan., is having a fifty-foot addition built.

Walter & Jones, Kingman, Kan., have moved to the corner of Main and Sherman Streets.

William Lampton, McCune, Kan., has opened a garage and taken the Overland agency.

Greenleaf & Hanlon, Kingman, Kan., have moved to the building formerly occupied by Grant & Oakes, and have taken the Overland and Willys-Knight agencies.

J. C. Jennings, Tixhoma, Okla., has purchased the State Line Garage from McCulloch & Renfro.

The H. & H. Garage, Altus, Okla., owned by the Harris Bros., is now in its new building.

Carle Hagar, Louisiana, Mo., has opened a garage.

Spurlock & Lumpee, Versailles, Mo., will soon move into the new garage building being erected next door to the Statesman office by William Schaper.

Roy Shelley, Richmond, Mo., has sold his garage to Chas. Peterson and Edgar Kincaid.

Meyer & Walker, Rockville, Mo., have dissolved but will handle the automobiles they are now carrying until their contract with the companies expires.

E. H. Farnsley, formerly of the Kansas City Auburn Auto Co., has sold out to B. E. Gridly. The firm will be known as the Auburn Auto Sales Co.

The Locomobile Co., of Missouri, Kansas City, is about to make arrangements for a second story for its building at Nineteenth and McGee Streets. The building is 50x130. The branch, under M. P. Leihy, handles Missouri, Kansas, Oklahoma and Texas, and the territory is rapidly increasing in production. The addition of the Riker truck promises greatly increased demands for space. The second story will be used for storage and shops.

The Cole Sales Co. has been organized in Kansas City, with headquarters at 1606 McGee Street, to distribute the Cole in Kansas and western Missouri. The Cole now has agencies in Topeka, Wichita, St. Joseph and Chillicothe. The proprietor of the sales company is George Stevenson, who at this location has been handling the Stearns-Knight for the past year. He will continue his representation of the Stearns.

R. V. Savage, Sedalia, Mo., formerly mechanic at the Sunny Side Garage, is now operating a garage of his own at 310 South Lafayette.

Furlon's new cement garage, Phillipsburg, Kan., has been completed.

Frank Cooper, Hutchinson, Kan., has leased the M. and L. Garage, and has already taken charge.

Wm. Charles, Downs, Kan., has purchased his partner's interest in the rentage of the B. & C. Garage, which will from now on be known as the Charles Garage.

N. H. Cannon, Kiowa, Kan., has sold his vulcanizing shop and is looking around for a new location.

The J. C. Schweitzer Building, Springfield, Mo., which is being erected on Jefferson Street, will house the agencies for the Chevrolet Motor Car Co., the Rubber Tire Supply Co., and the Hilton Garage.

John I. Cooper, Baxter Springs, Kan., has let a contract for a new garage building.

L. H. Hamper, Traer, Kan., has purchased the Harry Rathbun livery business, and is adding a garage and repair department.

G. L. Fenwick, Marysville, Kan., is building an extension of 32 feet to his 100x44 garage, for additional storage and repairshop room. He will install a heating plant in a new basement, and secure an electrical expert to take charge of the repair plant, which will have special equipment for handling electrical repairs.

Bert Smith, Herington, Kan., is building an addition to his garage.

B. F. Hardin, Albany, Mo., is remodeling a building for garage purposes.

The Overland Automobile Co., Hannibal, Mo., has consolidated its sales and service departments, formerly in separate locations; F. B. Oswalt is manager of the service department, and L. G. Wilhelm is sales manager.

Anderson & Son, Hannibal, Mo., are in temporary quarters pending the completion of a new garage. They formerly occupied the rooms now used by the Overland Automobile Co.

Young & Berry of Schell City, Mo., have bought the garage formerly owned by A. J. Boatright.

Teater & Delap, Blairstown, Mo., have completed a garage and repairshop, adding a welding department.

Allen Notley, Bigelow, Mo., has taken charge of the Bigelow garage, adding a repair department, and securing the agency for the Ford.

E. J. Roberts, Westmoreland, Kan., manager of the Westmoreland Auto Co., has leased a garage building recently erected across the street from his former location, and has moved into it: having now an enlarged repair and supply department.

Digitized by Google

The Ollinger Auto Co., Salina, Kan., has leased a two-story brick and concrete building to be erected shortly for garage purposes by Henry Eberhardt.

Will G. Price, Wichita, Kan., has already started the erection of his new garage on the southwest corner of English Street and Topeka Avenue.

The Smith Machinery Co., Webb City, Mo., is entering the motor car trade, and has secured the agency for the Pullman.

The Hammett Repair Co., Eighteenth and Grand, Kansas City, Mo., is about to enter the tire business, handling the Swinehart.

The Wakenight Plumbing & Supply Co., Searcy, Ark., is entering the automobile trade, having secured the agency for the Pullman.

The Entz Auto and Battery Co., St. Louis, Delmar and Clarenden Avenues, has thrown open its garage to gasoline machines. Heretofore only electrics were accommodated.

A. S. Zarko, St. Louis, has leased the painting department of the Great Western Garage, 2735 Olive Street. Zarko recently went to St. Louis from Detroit.

Ernest W. Abrogast, St. Louis, has been made sales manager of the Cadillac Automobile Co. of St. Louis. Abrogast has been local and district distributer of the Colt cars here but retired when the Cole-St. Louis Auto Co. was formed.

Geller, Ward & Hasner, St. Louis, has opened an uptown store at 3328-32 Olive Street, where the car lines will be handled exclusively. Complete lines will be handled at the Fourth Street store.

Simmons Auto & Repair Co., St. Louis, has opened a used car department at 1802 North Grand Avenue. Henry Oxtendorf is manager.

Bittel-Leftwich Tire Service Co., St. Louis, has opened three new stations at 3000 North Grand, 3211 South Grand and in Webster, St. Louis County. Two machines will be operated from each station without lessening the regular fleet at the main station, Grand and Lindell.

F. A. Plummer, Coats, Kan., is building a garage adjoining his blacksmith shop.

Roy and Elmer Chamberlain, Smith Center, Kan., have purchased the garage of William Bell, and will handle the Maxwell and Overland.

John Barnes, Potter, Kan., has bought the E. N. Melcher Garage.

J. J. Calvert, Liberal, Kan., is remodeling the old opera house into a garage and salesroom.

F. H. Inderwelsen, Larned, Kan., has bought the Frizell Garage.

Dan Beaton, Dexter, Kan., has leased the Callison Livery Stable and will convert it into a garage.

Albert Reinhart and **W. J. Huscher**, Bern, Kan., have formed a partnership for the sale of the Maxwell and Studebaker.

Omaha, July 12.—A direct factory branch for the Willys-Overland Co., under the firm name of Willys-Overland, Inc., has been opened here with J. R. Jamieson, president of the Overland-Omaha Co. in charge. The old show rooms at 2047-2049 Farnam Street, in the heart of Auto Row, will be maintained, and in addition the company occupies the old quarters of the Ford Motor Sales Co. at Twentieth and Harney Streets, the latter moving to the new branch factory at Sixteenth and Cuming Streets, recently completed. At the new direct factory branch a considerable addition to the present corps of mechanics will be installed to conduct the service shop and storehouse for a complete stock of parts. Besides this, a lot of new machinery will be placed in the building. Henry Werdehoff, who has directed the mechanical department of the local house for two years past, will have charge of the service department in the new location.

The Chalmers Motor Co., Great Bend, Kan., has formally opened the Santa Fe Trail Garage, which has just been completed.

Charles Rutledge, Inman, Kan., has leased the repair department of the George P. Kliewer Garage.

MIDDLE WEST

Justin P. Fleming, Jackson, Mich., Detroit Electric and Maxwell dealer, has disposed of his active interest in the Maxwell agency in this territory, although he will still look after the interests of former Maxwell buyers here.

The Simon Sales Co., Saginaw, Mich., which has the agency for the Overland in the southern half of Michigan with the exception of Detroit, will open a branch service station and selling agency in Lansing, Mich.

The New Auto Repair Shop, Jackson, Mich., has been opened in the rear of the Chevrolet Garage by H. T. Flick.

The Nashville Auto Co., Nashville, Mich., Overland and Saxon dealer, has purchased the equipment of the Winans Garage and Winans will retire from business.

William H. Freer, Jackson, Mich., has purchased an interest in the Orpheum Garage at 120 West Pearl Street, and together with Ralph Dennis will conduct a repair, livery and service station.

John B. Rowell & Son, Ithaca, Mich., will soon occupy their new garage, which is 150x44 ft. wide, and located on Pine River Street, north.

Ray E. Becker of the Becker Auto Co., Grand Rapids, Mich., Ford dealer, has purchased the controlling interest in the Peck Auto Sales Co., local Studebaker dealer. Both agencies will be operated entirely independent and in separate places of business under his personal supervision. The name of the Peck Auto Sales Co. will be changed to Becker Motor Car Co. and the new organization will occupy the present Studebaker garage on Lagrave Avenue. The Ford agency will be handled in the garage and service station at Sheldon and Island Streets under the name of Becker Auto Co. The territory to be covered by these agencies extends throughout western Michigan.

A. F. Ostrander, Mason, Mich., has opened a new garage.

The Willys-Overland Co. has opened a distributing branch in Denver, with Calvin C. Eid as manager. He was formerly assistant general manager of the J. W. Leavitt Co., San Francisco. The Overland company will spend about $25,000 for the erection of a new service station in connection with the branch. The Denver branch territory will consist of Colorado and parts of Utah, Nebraska and Wyoming.

E. J. Johnson, Denver, has signed a five years' contract to distribute Chalmers cars in Wyoming, New Mexico, Colorado and Nebraska. It is said that the Chalmers company will erect a new salesroom and service station in Denver, where Johnson's headquarters will be located.

The Master Sales Corp., 1241 Michigan Avenue, Chicago, has been organized for the sale of Master carbureters. Albert Halvorsen and Henry Scarborough, Jr., are the active members in this corporation.

The Michigan Oakland Co., Bay City, Mich., now located on Fifth Street, has leased the entire building which is being erected at the corner of Sixth and Adams Streets, with the exception of three offices. The structure which has a frontage of 50 ft. on Adams Street and 100 ft. on Sixth Street, will cost in the neighborhood of $12,000. It is expected that it will be ready for occupancy early in the Fall.

Aldrich & Moreau, Galesburg, Mich., have opened a salesroom, service station and garage on the corner of Main and Battle Creek Streets in the old Bennett House, which has been completely remodeled.

Louis Boomhower, Battle Creek, Mich., owner of an automobile agency and accessory store on South Jefferson Avenue, is to open a string of automobile accessory stores throughout Michigan. The first of the chain of stores is to be opened in Flint, Mich., on Main Street in the automobile district.

C. C. Signer, who was assistant manager of the Ford agency in Milwaukee, Wis., is to succeed Ray E. Becker as manager of the Grand Rapids Ford agency.

The Stewart-Warner Corp. has opened a service station in Grand Rapids, on North Ottuma Avenue.

L. J. Mannville, Grand Rapids, Mich., has been appointed distributer for the Enger car. He will erect a garage and service station in the heart of the automobile section.

The Barkwell-Buick Co., Grand Rapids, Mich., has taken new quarters at 66 Shelden Avenue.

The American Auto Supply Co., Grand Rapids, Mich., has removed to its new place of business at 16 Fulton Street, West. E. W. Stimson is manager.

H. H. Karston & Bros., Zeeland, Mich., distributer of Paige cars, have purchased a three-story building, giving twice as much space as the old quarters.

Laverne Goldsmith, Charlotte, Mich., will take over the garage formerly occupied by Frank Thompson.

The Simons Sales Co., Saginaw, Mich., wholesale and retail distributer for the Overland, has opened a branch and service station in Lansing, at 1110 South Washington Avenue. A. L. Devault is in charge as manager, and A. F. Bean is in charge of the service department. The Simons Sales Co., which has the distributing rights for thirty counties in eastern Michigan, has sold $1,500,000 worth of Overland cars during its fiscal year ending July 1, and has contracted for $2,000,000 worth for 1917. The concern has a sales force of twenty-five men in Saginaw and has seventy-eight agencies throughout its territory.

South Bend, Ind., July 12.—A ten-story industrial building primarily for the use of motor car agencies for offices, store and display rooms, will be constructed in this city by local interests headed by Horace M. Kauffman and Julius Jonas. The building complete will cost in the neighborhood of $400,000. Six floors will be devoted to the automobile trade and reservations have already been made for nearly all of the available space. The first two floors to be devoted to the automobile interests, will be divided so that on the first floor a large lobby decorated and equipped for the reception and convenience of buyers and agents will be secured. Fronting on two streets will be the first floor display rooms. On the second floor which will be constructed so as to be within view of the street will be another all glass front display room. Room will be provided in the building for the storing of stock cars.

Frank L. Kiep, Joliet, Ill., has purchased the lot corner of Chicago and Jackson Streets, 129x138, and will shortly erect a two story, fireproof garage.

Harrison Coddington, Abingdon, Ill., has let the contract for a new garage at 503 Main Street to be of brick construction and two stories in height. There will be a display room for cars and also for carrying supplies. The repair department will be in the rear.

Dwight Sullivan has been appointed manager of the Chalmers agency at Springfield, Ill., and will be distributer for the central Illinois territory.

The Wolfer-Cadillac Co., Davenport, Iowa, has been incorporated with capital stock of $50,000. This company succeeds the Iowa Auto and Tire Co., as distributer for the Cadillac in eastern Iowa.

Digitized by Google

E. R. Goodrow & Sons, Woodstock, Ill., will shortly open a garage on Throop Street, occupying a barn formerly used for livery purposes but which has been rebuilt and remodelled into a modern garage. There will be storage capacity for 86 cars. The firm will operate a sales agency, do a general repair business and also carry a complete line of accessories and supplies.

The G. A. Kraemer Co., Elkhart Lake, Wis., which completed a new fireproof garage and repairshop three months ago, is already so cramped for room that it is necessary to build an addition to the machine shop. The addition will be 60x40 ft.

O. A. Young, Strongs Avenue, Stevens Point, Wis., Overland dealer, is adding 24x70 ft. to his repairshop.

Albert Overman, Balsam Lake, Wis., has taken occupancy of his new garage and repairshop, of fireproof construction, 50x60 ft.

Wegner & Pirwitz, Fourth and Maple Streets, Marshfield, Wis., held the formal opening of their new garage and service station on July 1. The firm will do a general garage and repair business and deal in accessories, oil, etc.

The Schubring Motor Car Co., Wausau, Wis., incorporated with $25,000 capital, succeeds to the business conducted under the same style by Fred Schubring at First and Scott Streets. Mr. Schubring is president; L. H. Hall, vice-president and treasurer, and E. D. Widmer, secretary.

The Oakland Garage, 640-642 Oakland Avenue, Milwaukee, was opened to the public July 15 by Louis Nehrbass, who is completing work on a fireproof building, 60x114 ft. in size and two stories high.

Cunningham Bros., Burlington, Wis., have purchased the garage building of the Agner Automobile Co., Burlington, and will take possession January 1, 1917. The Anger Company is awarding contracts this week for a new garage, planned by Architects Leiser & Holst, Milwaukee. It will be 59x165 ft., fireproof, and will cost $15,000. The present Agner garage is 32x66 ft., two stories and basement.

The Standard Oil Co. of Indiana has opened the first of a string of filling stations to be established in upper Michigan, at Menominee, where a structure following the artistic design used in Milwaukee and other large cities has been erected at Kirby and Grand Avenues. Fred Liebherr, agent at Menominee for several years, is in charge of the station.

The Hudson Service Co., Fond du Lac, Wis., is rushing work on its new fireproof garage at East Division and Portland Streets and expects to be able to take occupancy by August 1. L. A. Voell is proprietor.

The H. L. Yaryan Co., Toledo, has incorporated for $10,000, will act as distributer for Westcott cars in northwestern Ohio. The incorporators are H. L. Yaryan, H. T. Yaryan, H. C. Adams, Blanche O'Brien and Nina F. Leavitt.

The Salem Motor Co., Salem O., incorporated for $40,000 by Frank W. Glass, Nellie C. Glass, Alva G. Kelley, Ferman N. Gaunt and Kirby Walker, wil ideal in automobiles and operate a garage.

The Railway Auto Co., Lebanon, O., has incorporated for $5,000 to operate a garage and repairshop by J. A. Kilpatrick, D. M. Worley, Charles Kohr, J. Warren Wood and Robert E. Kline.

The Automobile Hospital Co., Cleveland, has increased its authorized capital from $10,000 to $25,000.

PACIFIC COAST

Standard Motor Car Co., Tacoma, Wash., has been reorganized with Wm. L. Kirby, manager; W. R. Shoemaker, secretary and D. F. Baxter, sales manager. The new company will distribute the Allen car in Tacoma and Pierce County.

Guarantee Auto Repair Co., Tacoma, Wash., are now in new quarters at 1306-8 Tacoma Avenue. A. W. Pease is manager.

McArdle & Powers, Tacoma, Wash., are now operating the A Street Garage Repairshop.

Charles A. Ellison, Tacoma, Wash., is now sole proprietor of the Tacoma Tire Store, distributers of Knight tires and accessories.

Foster C. Gibson, Seattle, Wash., is the newly appointed manager for the Edison Storage Battery Co., and has opened quarters at 65 Columbia Street.

Roy Satterwaite, Seattle, Wash., is the newly appointed manager for Pacific Kissel Kar Company, which recently established headquarters in the Queen City.

Foster C. Gibson, formerly manager of the Edison line for the State of Oregon, has opened headquarters for the Edison Storage Battery Co. at 65 Columbia Street, Seattle, Wash., from which point he will have charge of the Edison lines for Washington, Oregon and Idaho. The new firm will be called the Edison Storage Battery Supply Co.

Tony Janette, Los Angeles, has opened a garage and repairshop at 775 North Broadway with two business associates. The firm is doing business under the name of Tony Janette & Co. The new garage makes a specialty of general overhauling.

J. E. Brown, Saugus, Cal., proprietor of the Saugus Garage, has completed extensive improvements which have made his garage one of the most attractive places on the inland route between Los Angeles and San Francisco. The building was widened, a concrete pit and cement floor were put in and the board front was replaced with a brick face. The place has been painted white with black and red lettering, which makes an attractive combination.

NORTHWEST

M. J. Mueller, Lisbon, N. D., has opened a vulcanizing shop in the Olson & Jones garage.

Steen Soum and **R. M. Wineman**, Dodson, Mont., have bought the J. H. Moore business and Ford agency.

McMahon & Boland, Brookston, Minn., are enlarging their machine shop to add a garage.

S. I. DeFrance, Reed Point, Mont., is building a garage, 45x50 ft.

The Imperial Automobile Supply Co., Minneapolis, is a new branch house opened at 1400 Hennepin Avenue. The company has taken the large space vacated by the R. C. Smith Auto Co.

George W. Peoples, Jr., Detroit, Minn., has leased the garage building and will open a garage and repairshop.

C. F. Miller, Annandale, Minn., has opened a garage.

J. T. Roufs, Victoria, Minn., has rented the Nordberg garage, and is operating it.

C. E. Knox and **J. F. Nichols**, Oakes, N. D., are building a garage.

Striegle & Osing, Arnegard, N. D., have organized the Arnegard Motor Co.

A. J. Johnson, Lead, S. D., will build a garage.

Andrew Johnson, Starbuck, Minn., has reopened the garage and repairshop.

Oscar Reeves, Glendive, Mont., is to be manager of the Lahr Sales Co. under new ownership.

Frank Thompson, Ekalaka, Mont., has bought the interest of his partner, William Walker, in the Central Garage.

Oscar Sorenson and **Charles Mallard**, Hingham, Mont., have let the contract for a larger garage, 40x70 ft.

William Culbert, Malta, Mont., has opened the North Side Garage.

Don Fulton, Red Cloud, Minn., has bought out George E. Hall in the Hall Garage, and with Earl Hall will operate it.

Nerdahl & Co., Hazel Run, Minn., are building a tile garage.

J. B. Thompson, Henning, Minn., is erecting a large garage.

The Olson Garage, Watkins, Minn., is being enlarged 25x60 ft.

Wallace Perry, Aberdeen, S. D., has moved his salesroom and garage to a new building at Third Avenue Southeast and Lincoln Street.

The Masters Garage, Hibbing, Minn., has been built at 227 Lake Street.

George Lenon, Jr., Columbia Falls, Mont., will open a garage in the remodeled Lord Building.

Harry E. Maher, Devil's Lake, N. D., will lease a garage being built by Dixon & Roberts, Third Street and Farrington Avenue.

F. A. Ward, Montpelier, N. D., is erecting a garage.

St. Paul.—A direct factory branch of the Ford Motor Co. has been established here for distribution in parts of Wisconsin and southern Minnesota. W. H. Schmelzel, Fargo, N. D., will be manager. He succeeds A. H. Sargent, who is transferred to Grand Rapids, Mich. Heretofore the office has been operated from the Ford branch in Minneapolis. W. P. Winders, assistant manager at Fargo, will be manager there. Superintendent F. C. Seiss at Fargo goes to Sioux City as assistant manager.

The Maxwell Motor Co., St. Paul, has opened new headquarters at 134 West Seventh Street. J. W. Martin is manager.

The Horton Motor Co., Fargo, N. D., has been made agent for Republic trucks.

Doyle-Overland Co., Fargo, N. D., is a new firm in charge of the Overland-Fargo district. W. J. Doyle will remove there from Carrington, N. D. Offices will be opened in the former Anderson repairshop on Roberts Street. Showrooms will open elsewhere.

Glide Automobile Co., Inc., Fargo, N. D., has been formed by several leading business men, with Will Isham, manager for the Avery Co., the leader. The company will operate a Glide factory branch for western Minnesota, North Dakota and eastern Montana.

The Turin Garage Co., Turin, Ia., has been incorporated by D. A. Wolfe, F. A. Reese and others at $10,000 capital stock.

The J. M. Wilson Garage, Sheldon, Ia., has been sold to Col. I. L. Ellis of Ida Grove.

Overmyer & Stammer, Casey, Ia., have dissolved, Stammer buying his partner's interest. He will conduct the business under the new name of the Stammer Motor Co.

F. C. Armitage, Kenesaw, Neb., has leased the Fischer Garage building and will open a repairshop at once.

John Uerling, Indianola, Neb., has bought the garage and accessory business of C. W. Thomann.

Frank Plummer, Chadron, Neb., will build a repairshop at once.

T. E. Blodgett, Williams, Ia., has sold his garage and business to V. J. Stark, who moved from Webster City, Ia., and took possession July 1.

W. R. Belcher, Sac City, Ia., will build a garage.

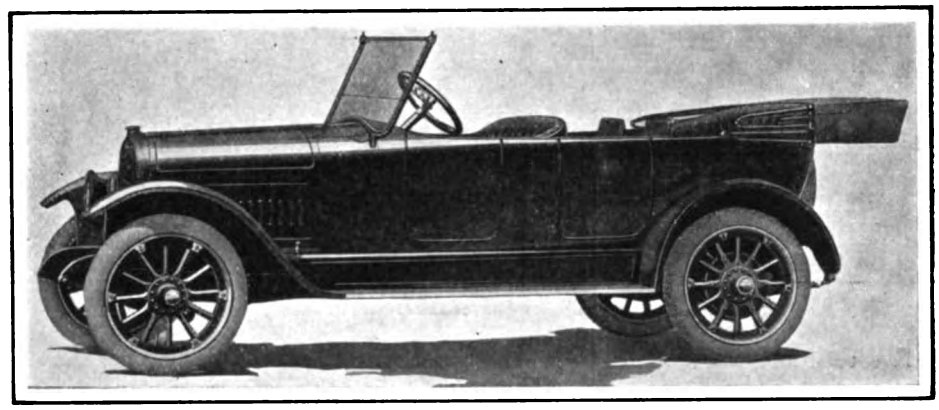
The Waubonsie Garage, Clarinda, Ia., capitalized at $10,000, has been incorporated by William Wehmiller and F. L. Buch.

William N. Foster, Dalton, Neb., has purchased the Dalton Garage and taken possession.

W. V. Gregory, Evanston, Wyo., has sold an interest in the Transcontinental Garage to Victor Jackson of Randolph, Wyo.

Wythers & Ball Auto Co., York, Neb., have bought the Broaman Garage on Grand Avenue.

William Lautenschlager, Western, Neb., has bought the C. Holcomb garage.



The Norman-Gash Auto Co., Elmwood, Neb., has bought the Louisville Garage at Louisville, Neb.

The Finicle Garage, Neligh, Neb., has been sold to Lefler Bros., Norfolk, Neb.

Digitized by Google

Two Marion-Handley Sixes Powerful for Weight

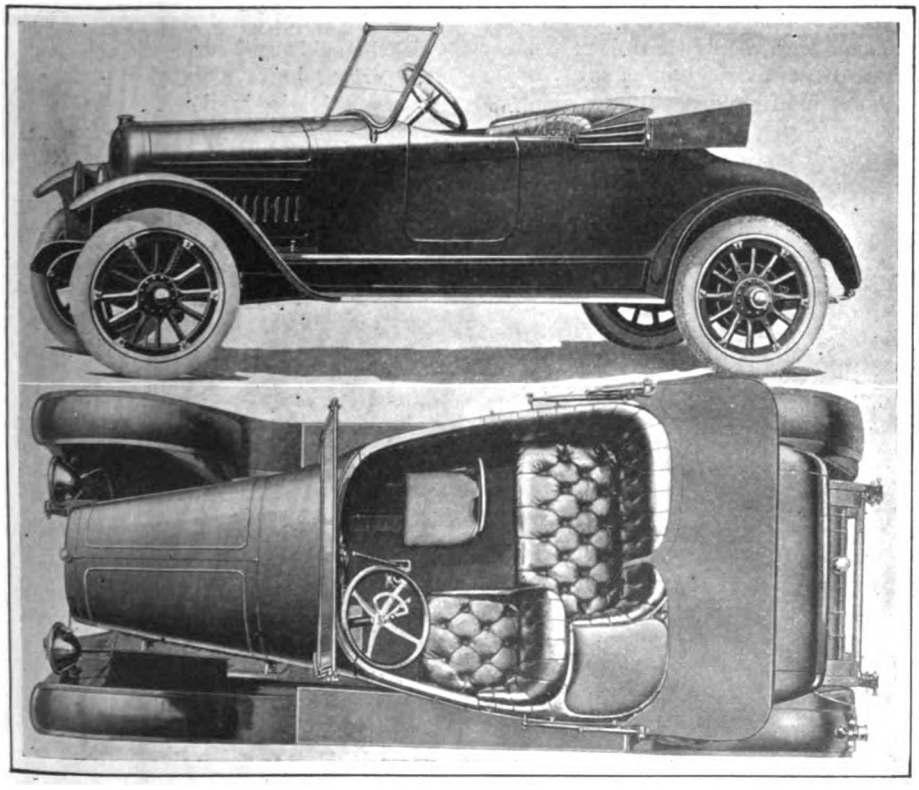
Prices $1,185 and $1,385 High-speed Motors Improved Lines

Seven-passenger 6-60 with tilted windshield and smooth exterior

TWO sixes will make up the line of the Mutual Motors Co., Jackson, Mich., for 1917. These cars are sold under the name of the Marion-Handley, taking the name from J. I. Handley, president of the company. The sixes are in two sizes, the 6-40 and the 6-60, and the two cars possess great similarity of design. Prices are $1,185 for the 6-40 and $1,385 for the 6-60, in either roadster or touring bodies.

In picking out the features of the Marion-Handley line, probably the outstanding point is the lightness in ratio to power. The smaller car has about 1 hp. for 60 lb. weight and the larger car about 58 lb. per horsepower. Throughout, both cars follow closely the up-to-date practice of high-speed motors with light semi-flexible frame construction.

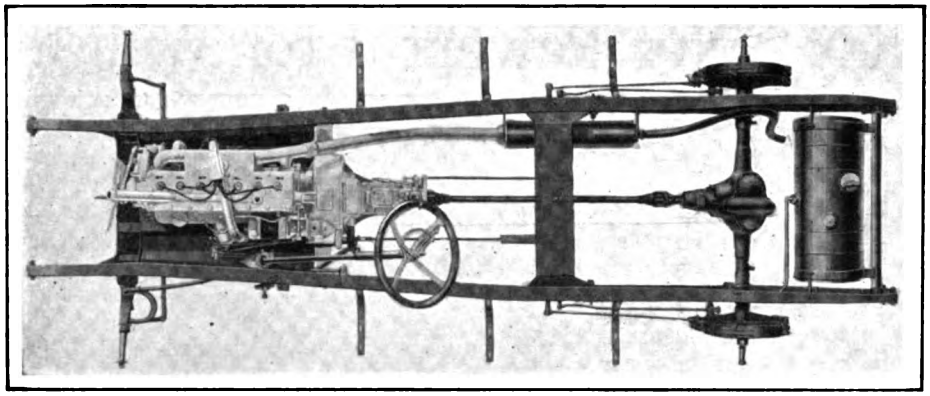
The 6-40 has a high-speed unit power plant, with the 3⅛ x 5-in. L-head cylinders cast in a block; it develops, according to dynamometer tests by the factory, 45 hp. at 2000 r.p.m. The upper half of the crankcase is cast with the cylinders and the lower of the crankcase is of pressed steel and bears no part in the structural strength of the motor, being merely used as a housing and an oil retainer. Its capacity is approximately 1½ gal. This part of the crankcase is detachable in the customary manner to permit of the adjustment of the connecting-rod and main bearings.



MARION-HANDLEY SIXES

Price—	6-40	6-60
Touring	$1,185	$1,385
Roadster	1,185	1,385
Number of cylinders	6	6
Shape	L-head	
How cast	Block	
Bore	3⅛	3½
Stroke	5	4¼
S. A. E. horsepower	23.3	
Ignition	Westinghouse	
Engine starter	Westinghouse	
Lighting system	Westinghouse	
Clutch	Dry-disk	
Gearset	Three-speed	
Tires	32 x 4	33 x 4½
Wheelbase	120	125
Wheels	Wood	

Three Leak-Proof piston rings are used on the cast-iron pistons. These are 3⅛ in. in length. I-beam connecting-rods are used and both the upper and lower rod bearings are 2 in. in diameter by 1⅞ in. in length. The crankshaft is also 2 in. in diameter and is supported upon three main bearings, the front being 2¾ in long, the center 2¾ in. and the rear 3⅛ in. These bearings are lubricated by a direct feed from the oil pump, thus maintaining a supply of lubricant to the crankshaft under pressure.



The remaining bearings are taken care of by splash, and the timing gears are lubricated by overflow from the front main bearings. The crankcase gear of the timing set runs continually in a well of oil. This permits the lubricant to be carried by the gear teeth over the surfaces of the entire timing set, thereby maintaining an oil film between the teeth of the gears at all times. The pump used is a plunger operated by an eccentric on the camshaft and is self-priming, because it is located in the oil reservoir in such a position that the last remnants of oil are sure to drain to the pump. A relief valve is provided to regulate the maximum pressure on the oil system.

One of the points which has been given a great amount of attention in the motor design is the matter of quietness in the valve driving system. The cam gear is Fabroil. This is a compressed cloth, produced by the General Electric Co., and is non-resonant. This gear has a face width of 1 3/16 in., with 10 pitch helically-cut teeth. The camshaft is carried on die-cast nickel babbitt bearings. There are three bearings for the camshaft, two being die-cast and the third an S. K. F. ball thrust, used at the rear end of the camshaft to take the thrust loads as well as the radial.

The four-passenger roadster has a novelty in a folding seat

Digitized by Google

Neatness is a feature of the chassis. Hotchkiss drive is used

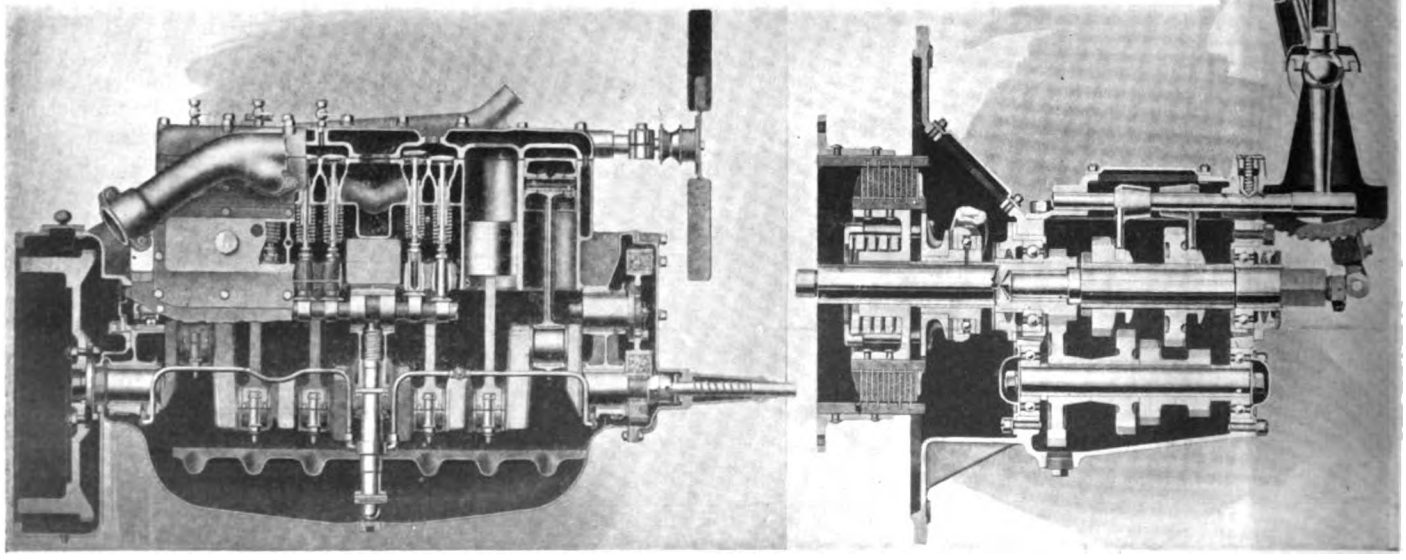
A special alloy steel which the manufacturers claim to have many of the characteristics of cast-iron is used for the valves. They are 1 3/16 in. in diameter and have a lift of 5/16 in. One of the main points in which the alloy steel resembles cast-iron in the valve is that they can be ground to a perfect seat. At the same time, owing to the composition of the metal, the molecular structure is much closer and the valves have a long life without the same possibility of pitting.

Cooling is by a centrifugal water pump which is driven off the timing gears and located on the valve side in the same line as the electric generator. There is a two-blade aeroplane type pressed-steel fan running on ball bearings and fitted with a rocker arm adjustment for belt tightness. The radiator is a hexagonal honeycomb type, having a capacity of 4 gal. and mounted by two bolts on the front cross-member. There is also another unique feature in the shape of a detachable case, which is of considerable assistance in making repairs.

Electrically the entire equipment is Westinghouse. There is a Westinghouse generator which weighs about 16 lb., including the automatic voltage regulating means. The battery, as well as the entire system, operates at 6 volts and the capacity is 80 ampere-hours. An ammeter is located on the instrument board.

Ignition is also taken care of by the Westinghouse unit, the distributor being mounted on the generator, and the same unit contains the breaker box, spark coil and condenser. These units are easy to reach for inspection. The breaker box is inclosed within a collar, which can be slipped out of the way when it is necessary to inspect or adjust the points, and the distributor cap is removable together with the spark plug leads.

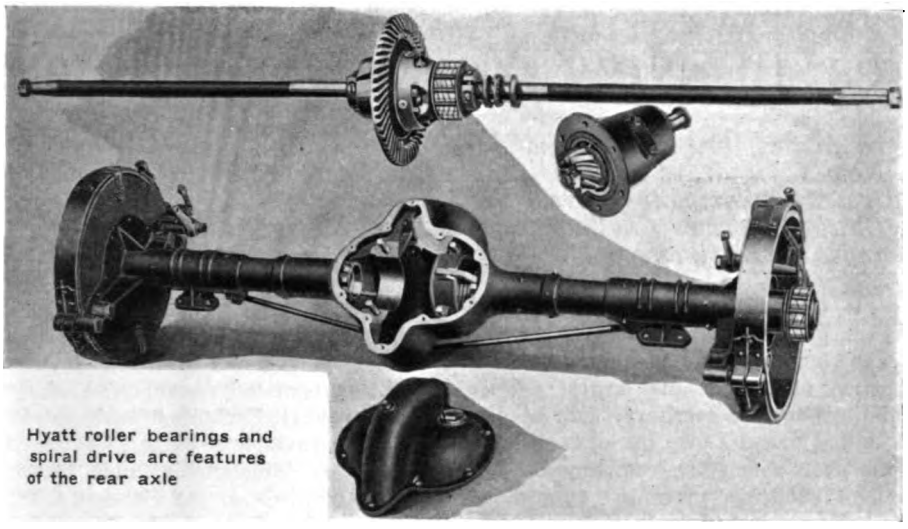
Switches on Cowl



Control of the ignition and lighting system is by means of a set of switches on the instrument board. The tail light is mounted in the center of the tire carrier and all these lamps together with the remainder of the electric equipment are wired on the single-wire grounded return system. In this the chassis, frame and metal body form one circuit. The starting motor is entirely inclosed and is engaged with the flywheel gear by means of the Bendix screw pinion shift.

A dry multiple disk clutch is employed, having eleven disks lined with multibestos. They are 8 in. in diameter and made of saw steel with an annular bearing for clutch release, this bearing being lubricated by the oil from the gearset, which enters the clutch by means of grooves cut in the clutch shaft. An adjustment is provided on the clutch release pedal to take up any wear or lost motion that may develop in the clutch release bearing.

A conventional three-speed gearbox is employed. The gears have a face width of ¾ in., and the diameter of the countershaft is 1 5/16 in., with a 1½-in. main shaft. The splines are cut to a depth of ⅛ in. The bearing mounting is made up of four annular ball bearings arranged for end play adjustment, and the reverse idler gear is mounted on a plain bronze bearing. The gear reductions in the gear box itself are 2½, 1 7/10 and 1 to 1, with reverse of 3.4 to 1. Final reduction is 4 5/12 to 1 at the rear axle.



Both the drive and torque are taken by the springs. A reduction of weight is further secured by the use of a tubular propeller shaft 1½ in. in diameter with 5/32-in. walls. The shaft is equipped with two double ball and socket universal joints and has a fore and aft travel of 2 in. The universal cup, ball and trunnion pins are hardened and ground and packed in grease.

Floating construction is used in the axle. This is equipped with a Brown-Lipe spiral bevel gear and is provided with a set of Hyatt high-duty roller bearings with adjustable ball bearings for side thrust. The pinion shaft is carried on two 100 per cent thrust type annular ball bearings, which are adjustable, allowing take-up for wear or play on the pinion shaft. The drive pinion can also be adjusted in regard to the mesh with the spiral bevel ring gear. Chrome nickel steel is used for the drive shafts and they are 1¼ in. in diameter. The entire differential may be removed by taking off

Left—Section through motor, showing details of construction. Right—Clutch and gearbox. The shafts are mounted an ball bearings

Digitized by Google

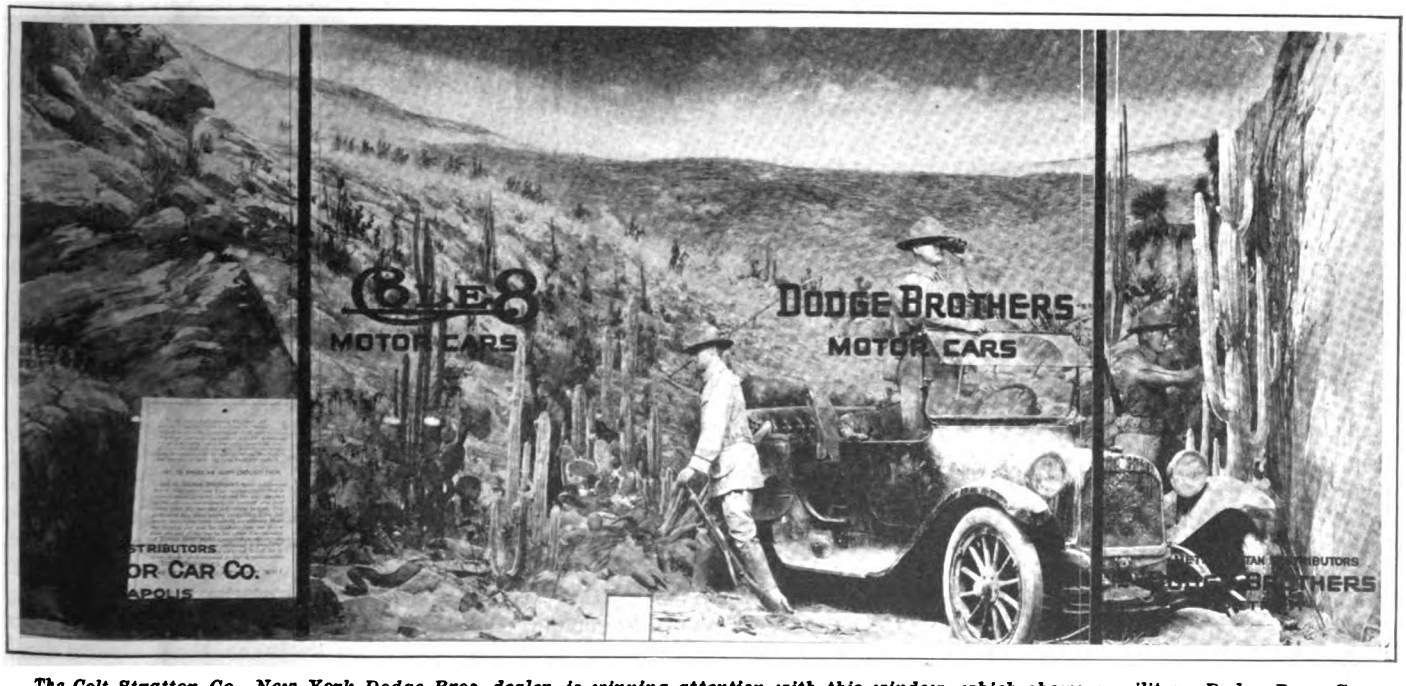
Hyatt roller bearings and spiral drive are features of the rear axle

the inspection plate over the differential.

Two sets of brakes are used with the drums on rear wheels. The service brakes are contracting and emergency expanding, both being provided with two adjustments, one on the brake rod ends and the other attached to the brake bands. The drums are 14 in. in diameter and have a face width of 2 in.

Both front and rear wheels are heavy second growth hickory, with twelve 1½-in. spokes. The front wheels are carried on Gurney annular ball bearings of the 100 per cent thrust type. A full equipment of Firestone demountable rims is furnished, adapted to 32 x 4-in. straight side tires. Non-skids are used on the rear wheels. The wheelbase of this model is 120 in.

Of similar design is the 6-60. This is equipped with a 300-cu. in. motor, having its 3½ x 5¼-in. cylinders cast in a block. This is also a conventional L-head design, and according to the manufacturers develops 50 hp. at approximately 1900 r.p.m. The crankcase in this motor is cast separately, of aluminum, and is equipped with a pressed-steel oil pan. All the bearings are supported in the crankcase and are accessible by removing the can. The inclosed valves are 1 11/16 in. diameter with 3/16 in. lift. They are operated by a single camshaft and both inlet and exhaust valves are interchangeable and have nickel steel heads electrically welded with carbon steel stems. The ends of all the valve stems are hardened to insure against wear from tappet action.



Pistons and cylinders are both reverberatory furnace iron, with a piston length of 3¾ in., fitted with three diagonally split concentric rings 3/16 in. in width. The piston pins are of annealed special steel tubing, hardened and ground, with the pin held stationary in the piston bosses. The bearing surface is given by a bronze bushing pressed into the upper end of the connecting-rod.

An integrally forged low carbon steel camshaft is used, carried on three bearings of white bronze. The dimensions of these cam bearings are 2 17/64 x 1½, 2¼ x 1⅛ and 2 7/32 x 1¾, respectively, from front to rear. The crankshaft is also carried on two bearings and is of special crankshaft steel, heat-treated. The main bearing dimensions from front to rear are 2 3/16 x 2 23/32, 2 7/32 x 2⅜, and the rear or flywheel bearing is 2¾ x 3. All the bearings are reamed to a fit on expansion arbors and then finished with a slow-running spiral cut power burnisher which is stated to give a bearing surface of over 98 per cent.

Lubrication is by force feed and splash, actuated by a horizontal pump driven by an eccentric from the camshaft. This forces oil through copper tubes direct to the timing gears and the main crank and camshaft bearings. The remaining bearings are taken care of by splash.

Throughout the remainder of the chassis the design of the 6-60 is quite similar to that of the 6-40, with the parts necessarily stronger and larger to take care of the higher power and greater weight. The Hotchkiss drive is used, but the reductions are different, the final gear ratio being 4 1/3 to 1, and the wheelbase is also greater, being 125 in., while the tires are 33 x 4½.

Shows the Dodge Brothers Car in Wartime Setting in Window

The Colt-Stratton Co., New York Dodge Bros. dealer, is winning attention with this window, which shows a military Dodge Bros. Car in the cactus and mesquite of Mexico. The foreground cactus is upright pieces attached to the floor and merges into a canvas drap of semi-circular form as a background. At the same time a moving picture film of a Dodge Bros. in Death Valley is shown at a nearby theater and prospects are invited

Important Changes in New York Dealer Field

1—*Overland opens factory branch in New York.*
2—*C. T. Silver, New York, drops Overland, takes Chalmers.*
3—*New Mitchell retailing company in New York.*
4—*James Levy, Chicago, former Chalmers dealer, takes Marion.*
5—*Numerous changes in Baltimore field.*

NEW YORK, July 17—Broadway, the motor row of the metropolis, has had more and bigger changes this week than has ever been known here or perhaps in any other city. Overland, Chalmers and Mitchell agencies have figured in the deals. C. T. Silver, who has had the Overland agency for the Metropolitan district for several years, has given it up and has signed a $6,250,000 contract to take one-tenth of the entire Chalmers output, this contract being the last official work of Paul Smith, the Chalmers general manager.

Because of this unexpected action taken last Thursday, Overland literally found itself without a home on Friday morning and now has opened a temporary branch at Broadway and Fifty-ninth Street, in the Circle Building, where Overland and Willys-Knight cars are on sale. Overland has found a manager in E. B. Jackson, former president of the Packard Motor Car Co. of this city.

Mitchell Changes

The third step in this three-way dealer change is that the retail Mitchell agency for the Metropolitan district has changed to the Mitchell Motors Co. of New York, a company recently organized expressly to take over the sale of Mitchell cars in New York City, Brooklyn, Long Island, Staten Island, Westchester County, Fairfield County, including Bridgeport, and three counties in New Jersey—Bergen, Passaic and Hudson. George Stowe, who has been manager of the New York Chalmers branch, has been made sales manager of this new organization, and the Carl H. Page Co., which has up to this time retailed the Mitchell, will now handle the Mitchell wholesale business for sections controlled by the new Mitchell Motors Co. of New York.

This expansion has been due largely to the recent expansion of the Mitchell factory, coupled with the fact that the company is preparing to build 25,000 cars during the coming season. Upward of 2000 Mitchell cars have been sold in the Metropolitan district during the past year and it is planned to double or treble this during the approaching year.

E. B. Jackson, formerly president of the Packard Motor Car Co., this city, has recently become associated with the Willys-Overland Co. at Toledo, in an executive capacity. He will make use of his experience and knowledge of metropolitan needs by devoting a large part of his time to the development of an organization in this territory.

The company has had in progress the erection of one of the largest service buildings in this territory, with a view to taking over its own business. Conditions over which the company had no control suddenly presented themselves on Friday and steps were immediately taken to establish a branch by locating temporary showrooms at 1826 and 1828 Broadway and establishing a service station at 150th Street and Gerard Avenue, the Bronx, in a building of 60,000 ft. It is the intention of the company to open sales and service stations in Brooklyn and Newark.

Overland's New Building

The new building which is in process of completion is located on West Fifty-seventh and Fifty-eighth Streets, between Tenth and Eleventh Avenues. This building is partially completed at the present time and when finished will have a floor space of 300,000 sq. ft. and will represent an investment of about $1,000,000.

The territory which Silver will have is approximately the same as that which he has had during the last 6 years, taking in New York City, Long Island, Staten Island, most of New Jersey and a part of Connecticut, with a branch in Bridgeport. He will also take care of the Atlantic seaboard on Chalmers parts.

C. T. Silver, Inc., as the new company will from now on be known, will handle 10 per cent of the Chalmers output, dating from Aug. 1, for the coming year. Business in Chalmers, Overland and Willys-Knight cars is now going on in Silver's salesrooms. The last two will be on the floors until sold, after which the Chalmers will be handled alone.

Silver's 7-Year Career

Silver began his automobile career about 7 years ago, being first associated with the H. J. Koehler S. G. Co. in the sale of Buick cars in Manhattan. Then he went to the Buick branch in Brooklyn. Later he established an Overland agency in that city, after which one was established in New York City at Broadway and West Forty-ninth Street. In 1914 he acquired possession of the Peerless Building, where he greatly enlarged his business with the Overland, Willys-Knight and Peerless.

Steps have been taken by the Packard company in this city and Philadelphia to appoint new men to fill in as heads of these respective branches: E. S. Hare, recently appointed manager of sales of the New York Packard branch and formerly vice-president of the Commercial Truck Co., Philadelphia, now becomes general manager of the Packard Branch in New York City. L. J. Eastman becomes general manager of the Philadelphia Packard Branch.

Levy Takes the Marion

CHICAGO, July 17.—Following the transfer of the Chalmers agency in this city to Harry Newman, Inc., James Levy, the former Chalmers dealer, has taken the distribution of the Marion-Handley. He has formed the James Levy Motors Co. and will do business at Twenty-third Street and Michigan Avenue.

Changes in Baltimore Field

BALTIMORE, July 15—A shake-up in the motor field in this city has taken place during the month and many changes have occurred in the handling of agencies, the establishing of factory branches and the forming of new corporations.

The Maxwell Motor Co., Detroit, opened a factory branch at 134-36 Mt. Royal Avenue. L. A. Tilley, for a number of years special representative of the Maxwell, is in charge here. The Wilson Motor Co. formerly handled the Maxwell line.

The Mar-Del Mobile Co., Charles Street and Mt. Royal Avenue, is now handling the Saxon, with Lyman Bryan in charge. This line was formerly handled by Neely & Ensor.

The Eastwick Motor Co., West North Avenue, A. Maurice Eastwick, president, which firm for 9 years handled the Ford, is now handling the Dodge Bros. The Dodge line was formerly represented here by the Mar-Del-Mobile Co.

The Ford Motor Co. will open a factory branch in the Colonial Garage, 10-20 East North Avenue, with E. T. Backus, formerly manager of the Ford branch in Dallas, Tex., in charge. The Ford branch begins operation Aug. 1. The Colonial Garage is one of the largest in the city and will be further enlarged. A lease has been taken on the property for 2 years.

The Chevrolet Motor Co. of New York, Inc., has established a factory branch

Digitized by Google

here, with James J. Flynn, formerly special representative of the Willys-Overland Co., in charge, at the temporary location, Maryland and North Avenues. A lease for a long term of years for property on Richmond Street, formerly the Richmond stables, which will be remodeled into a three-story sales and service station, will be the permanent home of the Chevrolet factory branch.

The Morton & Loose Corp. has been formed and is now located at Eager and Morton Streets and is handling the Haynes, as well as carrying a line of accessories. Clyde Loose is president of the new corporation. Morton and Loose formerly handled the Hupp line here.

The Stuart Automobile Co., 27 West Mt. Royal Avenue, is now handling the Hupmobile.

The Reo Maryland Co., St. Paul Street at Mt. Royal Avenue, E. H. Habersham and P. A. Miller, proprietors, is handling Reo pleasure and commercial cars. This line was formerly handled here by the Stuart company.

The Laporte & Heinekamp Co., Cathedral and Chase Streets, a new company, is handling the Mitchell, which was formerly handled by the Wilson Motor Co.

The Poehlman Automobile Co., Chase and Cathedral Streets, A. Trust Poehlman, president, which company formerly represented the Chevrolet line, has gone into the wholesale accessory business.

The Campbell & Niedringhaus Co. has just located at 144 West Mt. Royal Avenue and is distributing Lee tires.

Gramm Does $4,000,000 Business

LIMA, OHIO, July 15—The Geiger-Jones Co., which controls the stock of the Gramm Motor Truck Co., is offering for sale a limited amount of the new issue of preferred 7 per cent cumulative stock at 101. The stock was authorized at a meeting June 17 by more than 80 per cent of the stockholders of record.

In the statement issued with the call for stock subscriptions, the company is shown to have had profits of $579,000 in 1915 after deductions for depreciation and other charges. In other words, the profits were sufficient to pay the preferred dividends and 66.4 per cent of the common stock outstanding at the end of the year. The business of the company in 1915 amounted to more than $4,000,000.

212,000 Cars in Ohio

COLUMBUS, July 15—W. H. Walker, Ohio registrar of automobiles, in a report covering the year to July 12, reports owners to the number of 212,000 have registered cars. Electric owners to the number of 4700 registered cars and dealers and manufacturers to the number of 2800, making a total of 219,000, which is about 50 per cent more than the number of motor vehicles registered in Ohio up to the same time in 1915.

C. W. Nash Buys the Thomas B. Jeffery Co.

Former General Motors Man Will Continue Business—Said to Have Paid $10,000,000

KENOSHA, WIS., July 14—The Thos. B. Jeffery Co. has been purchased by C. W. Nash, who will sever his connection as president of the General Motors Co. on Aug. 1, at which time he will locate in Kenosha.

The new arrangement is not a merger in any sense of the word, states the Jeffery company, and no financial manipulation enters into the deal. Jeffery policies will be continued and enlarged upon.

The capital stock of the Jeffery company was $3,000,000, but it is said the price paid is $10,000,000.

The Jeffery family, it is understood, will retire from the business, although, it is stated, Charles T. Jeffery, Harold W. Jeffery and Thomas N. Kearney will continue for a time on the board of directors. The deal was participated in by Lee, Higginson & Co., Boston bankers, who helped finance General Motors several years ago.

Paul Smith, Chalmers Manager, Dies in Fall

NEW YORK, July 15—Paul Smith, vice-president and general sales manager of the Chalmers Motor Co., Detroit, died to-day as a result of his falling or jumping from the window of his room on the tenth floor of the Hotel Biltmore.

Smith has just completed a $6,000,000 deal with C. T. Silver for the transfer of the local agency of the Chalmers company. He was suffering from an attack of ptomaine poisoning, which is said to have had nervous complications.

The position of vice-president of the Chalmers company has been held by Smith for the last 2 years. He was 33 years old and born in Maine. He was educated at the University of Illinois to be a physician. Ten years ago he was a physician in Columbus, Ohio, but for only a short time, as he found that life too dull. From there he went to Detroit, working as a day laborer in an automobile plant. Shortly after this he became Columbus dealer for the Goodyear Tire & Rubber Co.

While he was sales manager for the Goodyear company in New York City, Walter Flanders became interested in him and made him sales manager of the E. M. F. Co. This was in 1909. In 1911 he assumed the same position in the E. M. F.-Studebaker Co. In 1912 he organized the Flanders Motor Car Co., and the following year joined the Lozier forces. It was in 1915 that he became associated with the Chalmers organization.

Smith was a member of the Detroit Athletic Club, Fellowship, Harmonic, Racquet, Anchor, Curling and other clubs of his home city. He also had served as a first lieutenant in the First Cavalry of the Illinois National Guard. Besides the widow, he is survived by a little daughter.

Objects to Time-payment Plan —Dealers not Bankers

July 14, 1916.

Editor Motor World:

The time-payment system can be looked at from one aspect only. This is: Is the dealer in the automobile business or the banking business? Banks were organized originally for the purpose of lending money, and in order to safeguard their depositors they are required to have a certain capital.

Should a dealer be allowed to jeopardize his own interests by becoming the indorser of his customers' notes.

Is it worth while to lend a man $500 in order to make a thousand-dollar sale? The sooner the automobile dealers of this country recognize the fact that credit is a pure loan, garnished with fancy verbiage, the sooner the public will come to recognize them as useful citizens; not willing to saddle those with debts who are not able to bear them.

If time payments are a necessary evil, let the dealer act as the representative of the factory, and let the factory take the risk; they can better afford it, and in default, their machinery for collections is better organized.

Yours very truly,

C. L. CLARK.

Glenbrook, Conn.

Bendix-Bijur Suit Decided— Eclipse Machine Co. Licensed

BUFFALO, July 14—The Eclipse Machine Co., Elmira, N. Y., has a license to manufacture the Bendix starting gear under the Bijur patent, No. 1,095,696, according to a decision handed down to-day by Judge Hazel in the United States District Court. The suit was brought by the Bijur Motor Lighting Co., Hoboken, N. J., and charged that the Eclipse company, and Vincent Bendix, Chicago, infringed the patent. The defense was that Eclipse and Bendix hold a license contract and this contract was declared valid.

First Farm Tractor Demonstration On

Using 1000-acre Farm near Dallas, Texas, and the Farmers and Prospective Dealers Throng This Southwestern Metropolis

DALLAS, July 18—Texas will buy 5000 farm tractors in 1916. Last year Texas farmers bought upward of 1700 tractors, and in the past three seasons tractor manufacturers and dealers have disposed of more than 3300 machines in Texas.

With the formal opening of the first of the 1916 national tractor demonstrations here to-day this city is crowded with farmers who are ready to purchase machines and with motor car dealers and garagemen who are ready and willing to complete arrangements to do business with the farmers. One big distributer of motor cars already has signed up to distribute tractors. This is the Frawley Motor Co., distributer of Reo and Briscoe cars. The Frawley company has contracted to distribute throughout the entire State of Texas, and possibly also Oklahoma, the Denning tractor produced by the Denning Tractor Co., Cedar Rapids, Iowa.

It is reported on good authority that at least four other big motor car distributers, and possibly five, will make similar connections with other tractor concerns this week. The Dallas demonstration is held on the Caruth farm, of 1000 acres, near the city. There are now, by actual count, ninety-five tractors on the ground and more to come. In addition there is a large display of tractor accessories.

The demonstration will be formally opened to-day, and every day until Friday there will be public demonstrations of power plowing, disking, harrowing, cultivating and the use of tractors for other farm work, such as ensilage cutting, wood cutting, pumping, etc. Saturday the entire demonstration will be moved in special trains to Hutchinson, Kan., and from there to the other centers included in the circuit.

Fuel Prices for Tractors

DALLAS, TEX., July 18—Gasoline is wholesaling here for 18 cents and retailing for 19 to 20 cents, the price having been dropped 1 cent this month. Distillate, of which little is used, sells for about the same figure, but kerosene, used largely for farm tractors, wholesales for 7 to 9 cents, the retail price varying from 10 to 20 cents, depending upon locality. Solar oil, also used largely for tractors, wholesales at 7 to 9 cents less than carload lots and from 2¼ to 4 cents in carloads. Fuel oil used in industrial plants is as low as 2 cents a gallon to dealer.

This Is the First

of a series of stories on the tractor demonstrations being written by a Motor World staff representative who is covering these important trade events. Each week during the demonstrations, which continue for 8 weeks, an analytical article will bring the important facts of these tests to Motor World readers.

NEXT WEEK

Why Texas Needs the Farm Tractor

WATCH FOR IT

By Stanley P. McMinn

DALLAS, July 14—Dallas, Texas, and the Southwest are ready for the first National Tractor Demonstration the Lone Star State has ever had. Indications are that the event will surpass even the expectations of the local committee and the national committee. The demonstration will begin on July 18 and will continue until July 21, inclusive.

Dallas has made plans for the entertainment of at least 100,000 visitors. These will come from all parts of the State. More than 150 tractors will be in operation. There will be all kinds of demonstrations. Especial interest is being taken in the Good Roads Demonstration. Automobile dealers from the Southwest are interested in the demonstration and have shown this interest by expressing a desire to attend. The entries for the event already are greater than the local committee had expected.

A. E. Hildebrand, Bloomington, Ill., manager for the National Tractor Demonstration, who will have charge of the eight demonstrations in various parts of the United States, arrived in Dallas Sunday night and has assumed charge. Monday he met the local committee, which is composed of Lamonte Daniels, chairman; Thos. N. Stephens, secretary; C. A. Sattley, C. A. McCline, W. I. Bogardus and W. T. Davis. Members of this general committee are also chairmen of the following committees: Finance, publicity, concessions, exhibits and entertainments, respectively.

The demonstration will be held on the Caruth 1000-acre farm, an ideal spot for such a demonstration. The scene is accessible by interurban, two railroads and a jitney bus line. Proper railroad switches have been built and barns have been erected in which the machinery will be kept. Stands are also being erected for the crowds which will witness the demonstration.

It is expected this show will prove a revelation to Texas farmers, and for this reason no expense is being spared by the national committee, by the local committees and by the exhibitors to make it in every way a success that will redound in good to the farmer and to the development of Texas agricultural resources in a manner that nothing else can do.

The list of exhibitors has surpassed the expectations of all concerned. The manufacturers who have agreed to exhibit, according to Secretary Stephens, are:

TRACTOR EXHIBITORS

Those Marked with An Asterisk (*) Will Participate in the Demonstrations

*Advance-Rumely Thresher Co..LaPorte, Ind.
Albaugh Fover Co.....Chicago
Allen Tractor Co.....Chicago
*Allis-Chalmers Mfg. Co.....Milwaukee
American Tractor Co.....Des Moines
Andrews Tractor Co.....Minneapolis
Aultman Taylor Co.....Mansfield, Ohio
*Avery Co.....Peoria
*Avery & Sons, B. F.....Louisville, Ky.
Bates Tractor Co.....Lansing
*Best (C. L.) Gas Tractor Engine Co., Oakland, Cal.
Boring Tractor Co.....Chicago
Brillon Iron Works.....Brillon, Wis.
Buckeye Mfg. Co.....Anderson, Ind.
Bull Tractor Co.....Minneapolis
Bullock Tractor Co.....Chicago
*Case (J. I.) T. M. Co.....Racine

Customer: Have you Weed chains?

Clerk: We have not; but we have a splendid variety of chain stump pullers.

Resta Wins at Omaha, Mulford Takes Second

Under Blazing Sun Speed Champions Entertain Nebraskans on Rough Wood-surface Speedway

OMAHA, July 15.—(*Special Staff Correspondence.*)—Under a hot sun, Dario Resta in his Peugeot, drove to victory in Omaha's second annual motor derby today, nosing out Mulford, who had been looked upon as a likely winner until almost the end of the scorching battle. His time for the 150 miles was 1 hr. 30 min., 3 sec., an average speed of 99.2 m.p.h., a record for 150 miles on a 1¼ mile track.

One life was snuffed out, that of Don Columbo, mechanic for Franchi in the Peusun, when they went through the so-called safety wall in front of the grand stand.

It was a day of thrills and sweltering heat. Some difficulty was experienced at the beginning in getting the cars bunched for the starting flag. Fred Wagner started the cars off two abreast, the peculiar construction of the Omaha speedway not permitting the usual number to stand in one line for the first lap.

Resta jumped into the lead on the first lap but was crowded close by Mulford and Rickenbacher, Mulford leading Dario before ten laps were made.

The Omaha track has not stood up as one would expect. The 2 x 4's have split and there are many ruts, some as much as 2 in. deep. It is possible, racing men believe, that if these ruts had not been there Franchi would not have lost control of his car. Further, if the so-called safety wall had been anything but two 2-in. planks, say like the Chicago track safety wall, the Peusun would not have gone over.

At 50 miles Mulford led, Resta was second; Rickenbacher, third; Milton, fourth, and DePalma, fifth. The toll on tires was terrific. Mulford was forced to stop many times toward the end of the race, when seconds counted. Many of his changes were made in 20 to 25 seconds.

Resta led at the end of the first hour, his speed being 101.37 m.p.h. He and Milton were the only ones who made no tire changes.

In the eightieth lap Jack Gable drove the Burman Special, the same car in which Burman was killed at Corona last April and which is being campaigned for Burman's widow, through the fence and into the infield. The car turned over three times, but Gable and his mechanic, Harry McGraff, were thrown out on the first impact and escaped with a few bruises.

Before the race Mulford refused to let the Hudson Super Six go in. This left Vail without a mount but Ralph finally was won over and Vail took the car. His ignition wires caught fire once, he changed mechanics once when his first mechanic was overcome by the heat, and then Vail ate up all the tires he had and had to withdraw.

Rickenbacher went out at 101 miles with valve trouble. He was in third place at that time. DePalma was forced to withdraw soon after Rick. came in, Ralph's trouble being a broken valve cap.

Only seven of the seventeen cars that started were running at the finish. They were Resta, Milton, Mulford, Kline, Muller, Henderson and Stringer.

In the 50-mile free-for-all that followed 30 minutes after the finish of the big race, seven cars started, DePalma heading them all and winning at a speed of 103.45 m.p.h., his time being 29 min., 2.47 sec. Rickenbacher was second, Henderson third, Lewis fourth, Stringer fifth, Milton sixth and Rawlings Duluth Special went out in the twenty-third lap with a broken crankcase and Mulford in a Hudson withdrew at the end of twenty-four laps with a burned out bearing.

About 15,000 people witnessed the races. The infield was thick with cars and the prejudice which resulted from the meager field of last year, when the date given Omaha was one day following Sioux City, where several cars were put out of the running to the disappointment of Omaha, was not in evidence today.

The time for the 50-mile event at intervals of 20 miles follows.

Pos.	Car.	Driver.	20 Mi.	40 Mi.	50 Mi.	M.P.H.
1	Mercedes	DePalma	11:54.45	23:13.30	29:02.47	103.45
2	Maxwell	Rickenbacher	11:56.78	23:47.70	30:01.65	99.89
3	Maxwell	Henderson	12:11.22	24:12.45	30:07.16	99.61
4	Crawford	Lewis	12:18.10	24:12.94	31:37.10	94.89
5	Mercer	Stringer	13:08.30	26:12.30	32:51.40	91.38
6	Duesenberg	Milton	12:39.30	25:00.30	32:59.61	90.90
7	Hudson	Mulford	12:29.00	Out—Burned bearing.		
8	Duluth Special	Rawlings	13:10.43	Out—Broken crankcase.

Association News

Michigan Convention in October

DETROIT, July 17—The Michigan Automobile Trade Association will hold its next annual convention in Flint, Oct. 12.

Genesee County Organizes

FLINT, MICH., July 15—The Genesee County Automobile Trade Association was organized here last night and has affiliated with the Michigan Automobile Trade Association. The officers and directors are: President. Sam Wey, Park Garage; vice-president. M. Davison, Lunt & Davison; secretary, Otto P. Graff, Ford Sales Co.; treasurer, A. B. Hurd, Hurd Auto Sales Co.; directors, C. H. Bliss, Childs-Bliss Auto Co.; Ralph Knight, Clio, Mich.; H. Woodin, Woodin & Lang; H. Wetherald, Wetherald & Zimmerman.

An invitation was extended to the State association to hold its convention in Flint, Oct. 12, which invitation was accepted. The next meeting of the Genesee association will be held July 26 at Cumings' place of business at 8 p. m.

Plan Show at Ohio Fair

COLUMBUS, July 18—Steps are being taken by the Columbus Automobile Show Co. to enclose one of the large buildings at the Ohio State Fair Grounds when the annual fall show will be held in conjunction with the Ohio State Fair, Sept. 2 to 9. The plan is to include only automobiles, both pleasure cars and trucks, in the building, and make it distinctively an automobile show.

Another Row in Boston

BOSTON, July 15—The Boston motor organizations now have another fight on their hands. Mayor Curley has stated that as there is a deficiency in the running of the ferries that he proposes to increase the fare for motor vehicles from 10 cents to 25 cents. So right away the Boston Automobile Dealers Association, the Boston Commercial Vehicle Dealers Association, the Bay State and the Metropolitan Automobile Associations have written him letters requesting a conference on the subject.

Three years ago ex-Mayor Fitzgerald proposed the same thing, and Louis K. Rourke, superintendent of public works, had a scale worked out to make the increases. The motor organizations requested a conference and they convinced the mayor that it would be unjust to the East Boston business houses and the residents there who owned motor cars, for there is no bridge to that section, while Charlestown, South Boston and Cambridge all have bridges. Therefore East Boston would be handicapped by an added tax on business vehicles owned there. So he dropped it.

Change Meeting Night

TOLEDO, July 17—The Toledo Automobile Dealers' Association, a new organization, has changed its meetings from every Monday night to the first Monday of every month with a noonday meeting every Monday. The officers are: President, E. A. Wilkinson; first vice-president, C. P. Landman; second vice-president, M. R. Himes; treasurer, C. L. Sturtevant; secretary, V. G. Kibby. Secretary Kibby recently reproduced the association editorial on page 21 of Motor World of June 14 and used it effectively in promoting organization work.

Champion Plugs on King Demonstration

NEW YORK, July 12—Much of the credit for the performance of the King eight-cylinder car which was run on the Sheepshead Bay Speedway without a motor stop for 10,850 miles was due to its ignition. Throughout the run a set of standard Champion Spark Plug Co.'s plugs was used.

Any Old Nails or Screws?

OMAHA, July 12—Five cents per lb. for nails and screws picked up in the streets of North Loup, Neb., was offered by the automobile club of that city. The resultant campaign, carried on largely by schoolboys, netted 285 lb. of rusty metal, which was displayed in a store window. The reward still stands, and the streets are safe for motor car traffic.

Koehler Names Foreign Dealers

NEWARK, N. J., July 17—The H. J. Koehler S. G. Co. has just completed negotiations with the following foreign countries to handle Koehler one-ton trucks in the countries named: Dirk Van Der Mark, Keizersgracht 635, Amsterdam, Lolland; W. H. Wheeler, Calcutta, India; The Motor Shop, Madras, India; F. Galban, Havana, Cuba.

18,000 Cars in St. Louis

JEFFERSON CITY, MO., July 17—The first 5 months of the State's fiscal year with reference to automobile licenses—starting Feb. 1—showed more automobiles licensed in the State than during the entire year 1915. St. Louis has 18,098 now, against 16,421 last year; Kansas City 10,847, against $9309. Outside these two big cities, Jasper County, which contains Joplin, has the largest number of automobiles, increasing from 2668 in 1915 to 3892 on June 30, 1916.

Co-operative Garage in New York

NEW YORK, July 17—A co-operative garage is to be operated at 32-34 West Sixty-sixth Street on a plot 50 x 100. It will be called the Owners West Sixty-sixth Street Garage and it is planned that patrons shall be stockholders, as is the case of a number of co-operative apartment houses in that neighborhood. It will be managed by the Wylie-Carey, Thayer Co.

Ford Promotions in St. Louis

ST. LOUIS, July 10—At the meeting of the Ford Efficiency Club at the roof garden on the Ford assembly plant, Manager W. C. Anderson announced promotions effective at once. The meeting was a leave taking to T. E. Huber, assistant manager here, promoted to manager of the New Orleans plant. Huber was presented with a silver table service. Harry V. White will succeed Huber; W. R. Johnson, a road salesman, succeeds White as manager of the wholesale department; M. J. Callahan, service manager, succeeds Johnson; H. L. Bagley, city salesman, is promoted to manager of the East St. Louis plant, to be opened Aug. 1 in an expressly erected building 100 x 90, three stories high. Last year Bagley ranked third among all Ford salesmen for total sales.

To Plow at Night

ST. LOUIS, July 17—Frank E. Goodwin, president of the St. Louis Tractor Farming Association, announces that arrangements have been completed for night plowing exhibitions at Kinloch Park, near this city, where the tractor exhibit of tractors and accessories will be held July 31 to Aug. 4. At last count Mr. Goodwin said that thirty-one tractor companies and thirty-one accessory companies had completed details for exhibiting their wares. There are no prizes in any departments. It is estimated that 50,000 farmers will visit the exhibition.

Gold Chassis Meets Ezra Meeker

ST. LOUIS, July 15—The Weber Motor Car Co. entertained many visitors here July 11 to see the Studebaker gold chassis, which was on exhibition that day. It was to have been on view 2 days, but was delayed by a railroad wreck. A crowd of 1000 persons was waiting for the exhibit when it reached the Weber show rooms Monday night, being 12 hours late. B. V. Bassett of the Studebaker engineering department, accompanied the chassis.

Digitized by Google

Ezra Meeker, the 86-year-old good roads worker, was in St. Louis 2 days last week in his Pathfinder twin six with a prairie schooner body, spreading his propaganda for a better Oregon trail. His car attracted much attention on the city streets, although he did not use his Warner trailer in the city. He made his headquarters here with the Ebbeler Motor Co., distributer of both the Pathfinder and the Warner trailer.

Frye Wins Saxon Cup

ST. LOUIS, July 15—The Frye Motor Car Co., Saxon dealer, has been informed that the Saxon six touring car entered by that company in the Saxon company's 300-mile non-motor-stop contest had won the cup, which will be forwarded to the local company as soon as the lettering can be completed. The local car made an average of 34.68 miles to the gallon of gasoline.

Sharing Profits with Employees

OMAHA, July 12.—A profit-sharing plan on automobile sales is the project of H. Pelton, White distributer for Omaha territory, arrangements for which have just been completed. The plan has four phases. The first of these phases deals with the sale of White pleasure cars and trucks. The second has to do with the sale of Franklin cars. The third covers general garage business, and the fourth deals with repair-shop business. Each of these divisions of the company will be handled independently of the other three. At the end of the year, beginning with July 1, all profit above a certain stated per cent will be divided among the salesmen on a basis of earnings. Salesmen and shopmen will have the double incentive of doing the maximum amount of business with a minimum of overhead expense.

Charge Short Gasoline Measure

NEW YORK, July 17—The Bureau of Weights and Measures, following an investigation, claims to have discovered that gasoline companies and truck drivers are working in collusion. It is maintained that the driver signs a receipt for more gasoline than he receives and is rebated.

Plan Run to Yellowstone

ST. PAUL, July 15—Plans for the Yellowstone automobile tour which leaves Twin Cities July 20 have been completed, with an entry list that includes participants from as far east as Pennsylvania. According to members of the committee in charge, more automobiles will be in line when the excursion pulls out for Gardiner, Mont., than ever left on a Northwestern tour before. A number of dealers have entered.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

Ben R. Evans and **Russell W. Long** have joined the sales force of the McQuay-Norris Mfg. Co., St. Louis, as field men, traveling out of the St. Louis plant.

M. D. Montgomery, who has been acting manager of the Denver Goodyear branch during the illness of the late S. E. Gillard, has been made manager of that district.

F. C. Moyer, who has been in charge of the Goodyear Des Moines branch, has been made manager of the Minneapolis branch in the place of G. H. Barmore, who has been appointed manager in Milwaukee.

F. W. Telford, former supervisor of the Goodyear motor truck tire sales in Chicago, has been made manager of the Des Moines branch.

T. J. Fitzgerald will fill the managership of the El Paso Goodyear branch left vacant by the death of G. F. Dennis.

G. H. Smith has been appointed sales manager of the Mercer Automobile Co., Trenton, N. J. He formerly was connected with the White and Peerless.

S. H. Humphrey, formerly vice-president of the Chalmers Motor Co., has been made vice-president and manufacturing manager of the Briscoe Motor Corp., Jackson, Mich.

C. J. Ledwitch, who has had extensive experience with foreign trade has joined the export department of the Maxwell Motor Co.

P. J. Eubanks has resigned as sales and advertising manager of the Barley Mfg. Co., Streator, Ill., effective August 1.

Wallace C. Hood, former general sales manager of the Chalmers, Everitt, and Empire companies, has organized the Wallace C. Hood Service Bureau with offices in the Dime Savings Bank Bldg., Detroit. It will act as manufacturers' representative.

Allen Loomis, for the past 10 years with the Packard Motor Car Co., Detroit, has resigned as research engineer to devote his attention to private engineering.

Factory News of the Week

Mitchell Motors Co. Formed

NEW YORK, July 11—The Mitchell Motors Co., Inc., has been formed and will acquire and operate the business of the Mitchell-Lewis Motor Co., Racine, Wis. The new company has a capital of 125,000 shares, no par value, and the issue has been syndicated by Ladenburg, Thalmann & Co. and A. G. Becker & Co. of Chicago. The offering price of the stock is $67 a share. The Mitchell-Lewis Motor Co. was founded in 1903 and the output has grown from eighty-two cars in 1904 to 6186 in 1915. For the present fiscal year to end Oct. 13 the output will be upward of 10,000 cars. On this output and results obtained thus far earnings for the present fiscal year are estimated at $1,400,000, or over $11 per share. During the 10 months ended Oct. 31, 1915, net profits of the company were $815,756, or $6.50 per share. An audit by Price, Waterhouse & Co. shows total net tangible assets of $4,500,000, equivalent to $36 per share. Net current assets are over $2,000,000, of which $926,672 is cash. Mitchell cars are being produced at present at the rate of 15,000 per annum, and the present plants have an annual capacity of 18,000 cars.

Neville Absorbs More-Room

DETROIT, July 12—The Neville Steering Wheel & Mfg. Co. has absorbed the Neville More-Room Steering Wheel Co. F. A. Vollbrecht, formerly general manager of the King Motor Car Co., is president of the new corporation, John V. Harding is vice-president and A. W. Webber secretary and treasurer. Harding is known in the trade through his 6½ years' work as special factory representative of the Motz Tire & Rubber Co., and later the Goodyear Tire & Rubber Co., in Detroit and the country at large. Webber was formerly of the General Motors Co. The new company has obtained fireproof quarters at 74 Congress Street West, Detroit, where it is now devoting its energies exclusively to manufacturing a full line of Neville More-Room steering wheels. William Langton has been appointed factory superintendent, and the factory is now producing its wheel in quantities to take care of both manufacturers and the jobbing trade.

Leak-Proof Plant Expanded

ST. LOUIS, July 12—The McQuay-Norris Mfg. Co. has just completed an addition to its factory which increases the plant by one-third and gives 100 ft. of frontage on Locust Street in the heart of the automobile district.

Drexel Succeeds Farmack

CHICAGO, July 17.—The Drexel Motor Car Corp. has succeeded the Farmack Motor Car Corp., and is issuing stock at $10 per share. It is capitalized at $2,000,000.

Gillette Buys Out Wilmo

CHICAGO, July 17.—The Wilmo Co., manufacturer of accessories, has sold its property, patent rights and good will to the Gillette Motors Co., Mishawaka, Ind. King C. Gillette is president.

To Build Armored Cars

DETROIT, July 17.—The Armored Motor Car Co. has been formed to manufacture armored motor car bodies. The principals are at present in Washington, D. C., and plan to stage, soon, a test for the inspection of the government. The company plans to use King chassis.

To Concentrate on Accessories

COLUMBUS, July 15.—The Peters & Heron Dash Co., one of the oldest concerns in the country engaged in the manufacture of dashes and other vehicle parts, has sold its dash business to the McKinnon Dash Co., of Buffalo and Troy, O., for the purpose of devoting its entire attention to the manufacture of dimmers, robes, top covers and other accessories. The concern has been making these accessories for several months and the entire plant will now be used for that purpose.

Digitized by Google

Chalmers People to Play

DETROIT, July 17.—Over 5,000 Chalmers employees and their families will be guests of the Chalmers Motor Co. at the annual Chalmers outing to be held at Bois Blanc Island in the lower Detroit river Monday, July 24.

Chief among the events of the day will be the award by Hugh Chalmers of a $1090 Chalmers Six-30 touring car, to the employee who has turned in the most valuable suggestion to the company during the past six months. An additional $500 in gold will be divided among other employees according to the merit of their suggestions.

Milburn Raises Prices

TOLEDO, OHIO, July 17.—The Milburn Wagon Co. has advanced the selling price of its products. The Model 22 Brougham, formerly selling at $1585, has been advanced to $1685, taking effect July 15. The advance was necessary because of the higher price of all materials which goes into the manufacture of the vehicle.

Site Secured for Hester Tire

LIMA, OHIO, July 15.—Three acres of land, lying between the C. H. & D. tracks and Jefferson Avenue, have been obtained by the Chamber of Commerce as a site for the factory building to be erected by the Hester Tire & Rubber Co. Plans for the main factory building, 60 x 150 ft., and power house, 60 ft. square, are nearing completion.

The Hester Tire & Rubber Co. is a $100,000 concern, incorporated under the laws of Delaware and at present doing a general rubber jobbing business. One hundred men and girls will be employed at the start, and the force will be increased later, it is said.

A Correction

PORTLAND, ORE., July 17.—A retail news story in Motor World, June 28, stated that the American Tire Co., Portland, Ore., distributed Knight tires. The American Tire & Rubber Co. distributes U. S. tires instead of Knight. The owners are D. L. McPhee, J. K. Cassidy and C. M. Herald.

Buick Men Go to Factory

DALLAS, July 15.—The following Buick representatives in Texas, headed by J. W. Atwood, manager of the Dallas branch, left Dallas Saturday for Flint, Mich., where they will visit the Buick Factory; Tom A. Lester and E. A. Detzel of the Dallas force; E. M. Hunter of Abilene; D. M. Corfall and B. K. Appleman, Beaumont; R. W. Ramming, Wichita Falls; C. B. Oliver, Caldwell; Geo. E. Paxton and J. W. Crouch, Snyder; J. W. Stokes, Midland; J. L. Higginbotham, Tahoka; A. G. Ilsing, Fort Worth; Frank Heard, Brady; R. M. Kinard, Stamford; J. M. Butler, Corsicana and W. T. Johnson, Hubbard City. The party made the trip in a special car.

Overland Stock on 12 Per Cent Basis

TOLEDO, July 13.—The directors of the Willys-Overland Co. yesterday declared a regular quarterly dividend of 3 per cent in cash, placing the regular dividend on a 12 per cent per annum basis. The directors also declared an extra stock dividend of 10 per cent.

The cash dividend is payable Aug. 1 to holders of record July 24. One-half of the 10 per cent stock dividend is payable Oct. 2 to holders of record Sept. 15. The remainder is payable April 2 to holders of record March 15.

After the meeting President John N. Willys stated that orders received last week for immediate shipment amounted to over 10,000 cars. Business was never better than the present. During the six months ended June 30, 1916, the number of cars sold and delivered was 94,477, being two and one-half times the shipments in the corresponding period of 1915.

The company has built 37,841 cars between Jan. 1 and June 30. The biggest shipments for a single day were made on March 27, when 1111 cars left the factory.

Are You Building for Permanent Success—as the Michelin Dealer is?

The Michelin Dealer finds his business growing steadily larger and more profitable, because he makes customers easily and **holds** them

He hears none of the complaints that the dealer gets who is willing to sell cheap tires that do not give the mileage.

He has none of the difficulty making sales that the dealer must overcome who sells high-grade tires at high prices.

He offers a tire of unsurpassed quality at a price that is almost as low as that of the cheapest makes. Sales come easy—and once he makes a new customer he holds him. That's why the Michelin dealer's business is **permanently** successful.

Biltwel Line

Velie

Bigger—Better—More Powerful Velie
More Business for Dealers

THINK of the demand there will be for the Bigger—Better—More Powerful Velie—with the following added advantages!

Timken Axles both Front and Rear

Are but an evidence of the quality and superior specifications found throughout the new car. Recognized as the standard of excellence. *Money cannot buy better.*

Four more inches of body length give more room, more comfort, more luxury—with a new note of distinctive charm in the lines of the 1917 design.

Many subtleties of engineering refinement *give more power*, silence, suppleness—securing every ounce of energy out of every dro- of fuel.

At $1085. The price for the coming season remains in the "$1000 class"—the slight advance being far short of the actual increase in cost of materials that go into the car.

The Greater Velie Now Ready

Velie Biltwel Six has made an astounding record in the last year. It created a demand that tripled our output—tested the capacity of "A Mile of Velie Factory"—made a name for style, finish and performance that you now hear wherever automobiles are discussed—won its way into the most exclusive motoring circles. How, then, could we make a Greater Velie?

We simply added to it. And now with everything in and on, the Greater Velie is ready for still greater victories.

Write for advance circulars with full description of the Greater Velie and our plans for the coming year.

1917 Velie Biltwel Features

Six-cylinder Velie-Continental Motor
Timken Axles front and rear
Removable Cylinder Head for Inspection
Helical Gears in Motor—no chains
Enclosed Multiple Dry Disc Clutch
Hotchkiss Drive—no noisy torque arm
Spiral Gears in Floating Rear Axle
Remy Automatic Ignition—Push Button Starter
Double Bulb Headlights—Dashlight
All Wires Enclosed in Metal Conduits
Rear Gasoline Tank—Vacuum Feed
Simple Rocking Gear Shift Lever
Luxurious Body, 4 inches longer
Unusually Wide Doors—easy to enter
High-Grade Leather Upholstery
Cushions Deep Tufted—Real Curled Hair
Long, Flexible Underslung Springs
Expanding Tire Holder—no Straps
Mirror Body Finish—20 Operations Deep
Light of Weight—Economical of Fuel
Everything in and on—ready for the road

EQUIPMENT—One-man top and envelope; quick, adjustable side curtains; ventilating rain-vision windshield; Stewart speedometer driven from propeller shaft; electric dashlight; portable light; coat rail; foot rail; electric horn under hood; 5 demountable rims; full tool equipment.

Velie Motor Vehicle Co., 115 Velie Place, Moline, Ill.

$1085

Digitized by Google

for 1917

Backed By One of the Largest Motor Car Advertising Campaigns

1917 Velie Biltwel Line

Model 28, five-passenger Touring, $1085; four-passenger Companionable Roadster (original and exceptionally smart type), $1085; two-passenger Roadster, $1065. Enclosed bodies exclusively designed; Cabriolet, $1485; Touring Sedan, $1685; four-passenger Sociable Coupe, $1750; Town Car, $2200. Wire wheels on any model $70 extra.

Model 27, seven-passenger Six, completes the line: 124-inch wheelbase, 45 h.p., 35x4½ tires, 4-speed transmission. The utmost in luxury and refinement. Price, $1550. Ask for Catalog.

8—Body Styles—8

A body for every want and every purpose. Read list. The line is complete.

THE Velie National Advertising Campaign will use dominating space in the Saturday Evening Post, Collier's Weekly, Literary Digest, and other publications of their standing.

It will use big space in the leading newspapers. From time to time the factory will place large advertisements in the dailies. In addition to this expense, *borne entirely by the factory*, the Velie offers the most liberal advertising cooperation with dealers at every point. Write for details.

The pick of the farm press has been scheduled for the Velie campaign right through the coming twelve months.

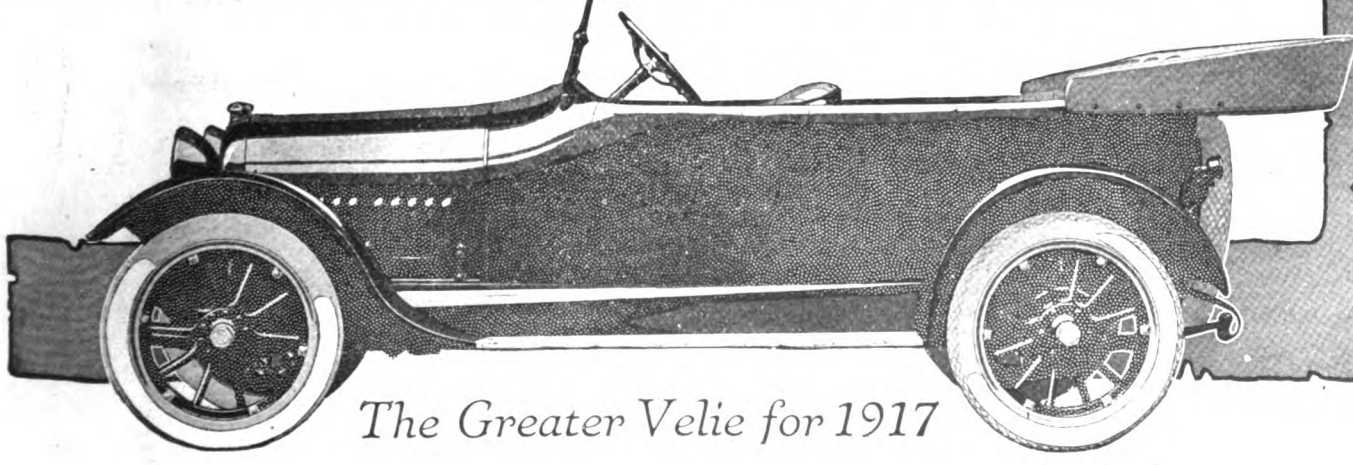
In the Major Class

With the plans made—money appropriated—space contracted for—the Velie campaign for 1916-17 takes its place with the select few of the major class. It is fully justified.

No other car in the light six class made such a high percentage of gain in the last year as the Velie.

And it will make still greater gains this year. Back of the surpassing Velie Values is the Velie Prestige—half a century of manufacturing experience—the reputation of one of the most substantial organizations in America. "The Name Insures the Quality"—Responsibility, Service, Satisfaction.

A Glance Ahead



Our output for the coming year will be at least doubled. This means for Distributors and Dealers in every locality a rare opportunity.

It means a line for every demand—city, town and country—backed by efficiency and experience—by record of many years in making good. A line on the rising tide of an enormous demand. Nation-wide distribution in the hands of the most representative men is the goal which the Velie will achieve this year.

If your territory is open for the Greater Velie Biltwel Line, write or wire at once for our liberal proposition. With our big, national advertising campaign starting at once, immediate action is necessary.

Better still, come to the factory. Write or wire for an appointment.

RESPONSE! QUICK and POSITIVE!

A Brisk, Sprightly Motor in Addition to Fuel Savings of 15 to 35 per cent.

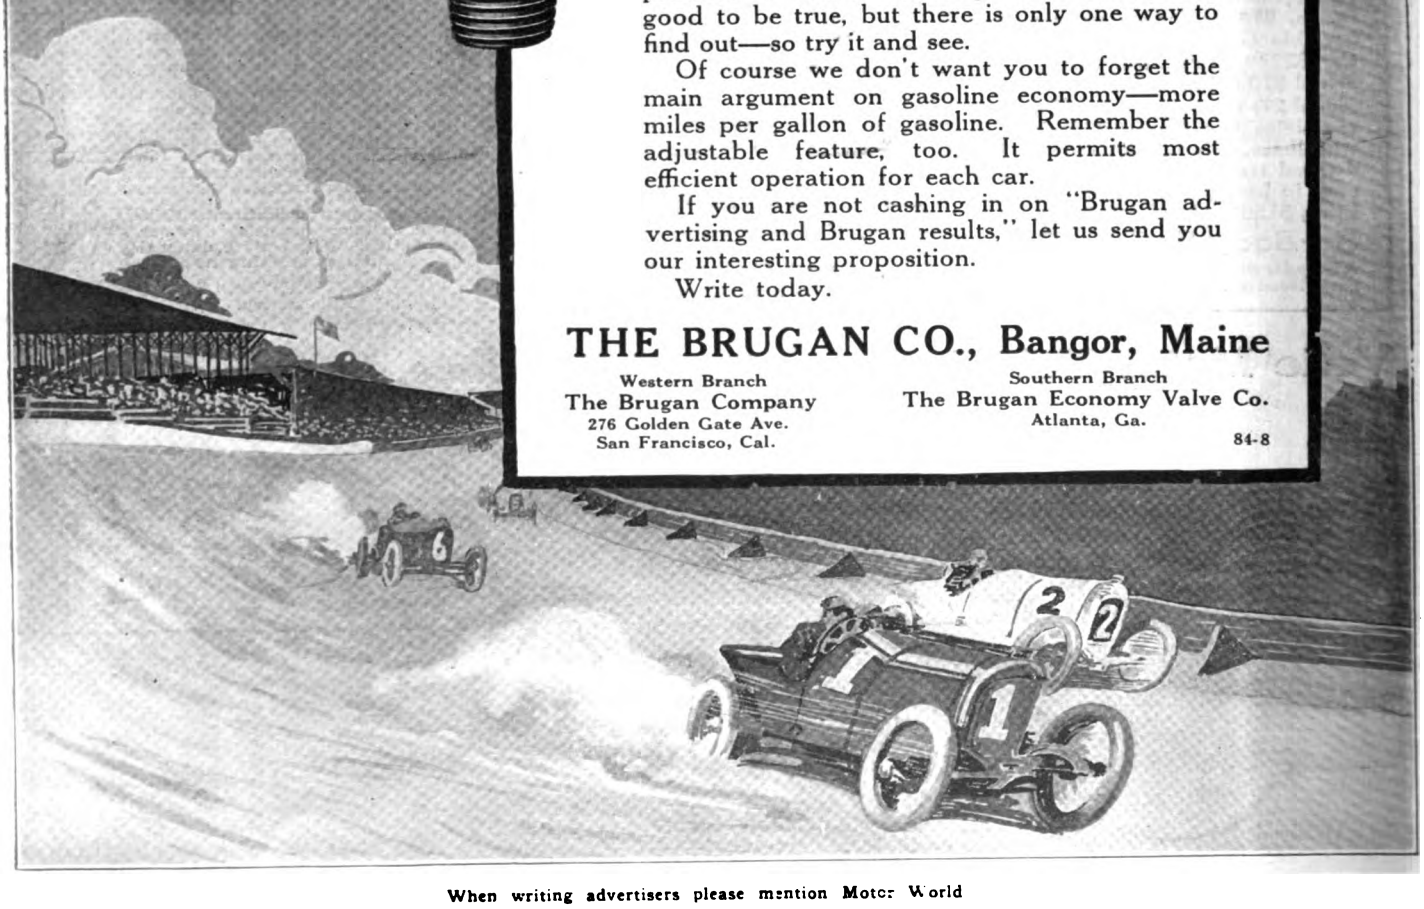
Just because motorists are so enthusiastic about the savings in gasoline that they are making with our new valve, some dealers are forgetting the other advantages it gives. So we call your particular attention to the fact that you can guarantee to customers a motor that is more brisk and sprightly, that responds more keenly and vigorously, when they have installed a

BRUGAN ECONOMY VALVE $4.00

This little "miracle man," besides saving 15 to 35 per cent fuel and giving greater power, will so tone up the motor that it is a new pleasure to drive. Perhaps that sounds too good to be true, but there is only one way to find out—so try it and see.

Of course we don't want you to forget the main argument on gasoline economy—more miles per gallon of gasoline. Remember the adjustable feature, too. It permits most efficient operation for each car.

If you are not cashing in on "Brugan advertising and Brugan results," let us send you our interesting proposition.



Write today.

The Realization of a Great Ideal

Jordan Seven-Passenger Luxury Car,
Wade Park, Cleveland, July 10, 1916

This illustration is taken from an actual photograph not retouched

Digitized by Google

The Realization of a Great Ideal

THE new Jordan Luxury Car is the realization of a great ideal. It is the result of ten years of constant study of what particular people expect to find in a motor car.

Those in whom good taste is inherent value a motor car for its distinctive appearance, quality in detail, finish, body comfort, and performance. This is the Jordan ideal.

A standard chassis of finished mechanical excellence, fitted to suit the buyer, with a choice of distinctive and comfortable custom style bodies. In this advanced style class this new luxury car has assumed a positive leadership.

It is the first American car in which body lines, finish, and body arrangement in their relationship to the mental and bodily comfort of the passengers is given first consideration.

It is a car in which there is not a cramp or squeeze for driver or passengers.

It is a light, perfectly balanced automobile with wonderful acceleration, with unusual flexibility of applied power.

It travels with silent power and ease on high gear from two to sixty miles per hour. It will demonstrate on any hill with any stock car made.

It is economical, with over-sized tires and perfect carburetion.

The wheel base is one hundred and twenty-seven inches, yet the car weighs only three thousand and fifty pounds. Aluminum is used extensively.

The chassis includes all of the finest universally approved mechanical units. It is designed and built with extreme accuracy to be produced in limited numbers under the most rigid inspection system.

It is produced in a modern factory, organized and operated to realize the great ideal laid down by the founder of the company.

It is a car which commands the respect of the manufacturer, the dealer, the salesman, and the owner.

Only one hundred well established dealers will be authorized to sell the Jordan.

Digitized by Google

A CHOICE OF CUSTOM STYLE BODIES

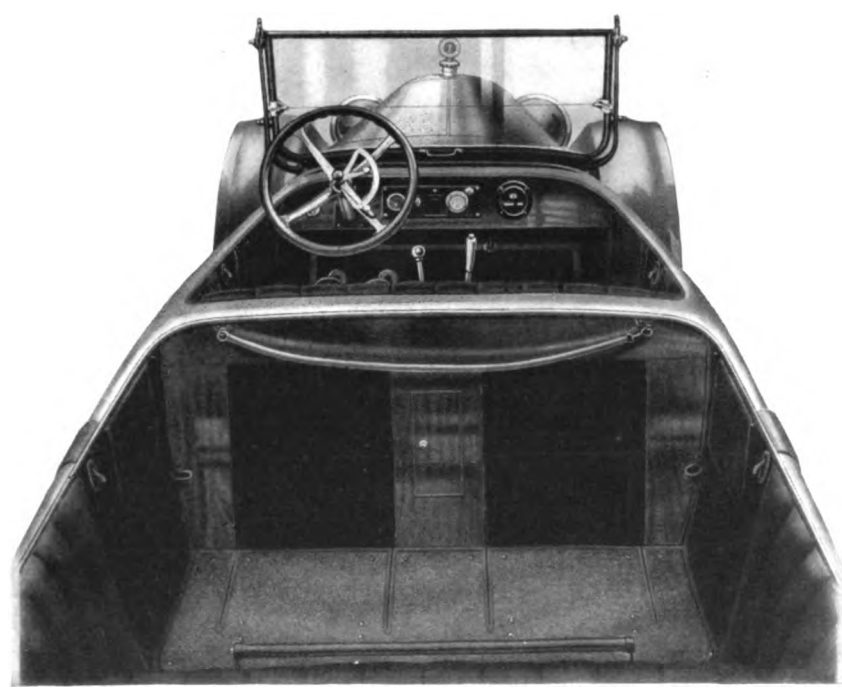
People who know, realize that in the motor car of the future, the determining factor is to be the body. Given a perfect chassis, a choice of custom style bodies is both practical and fashionable.

The Jordan touring bodies are straight as an arrow from motometer tip to top cover, fashionably long and low.

The racy roadster and four passenger sport models are low and rakish, with seats cleverly arranged for complete comfort.

The enclosed types include Sedan, Limousine, and Coupe, and are fitted with bodies of the Springfield permanent top style—exclusively 1917 vogue. These exclusive style bodies have been fashioned and built for the Jordan by the best body builders in America.

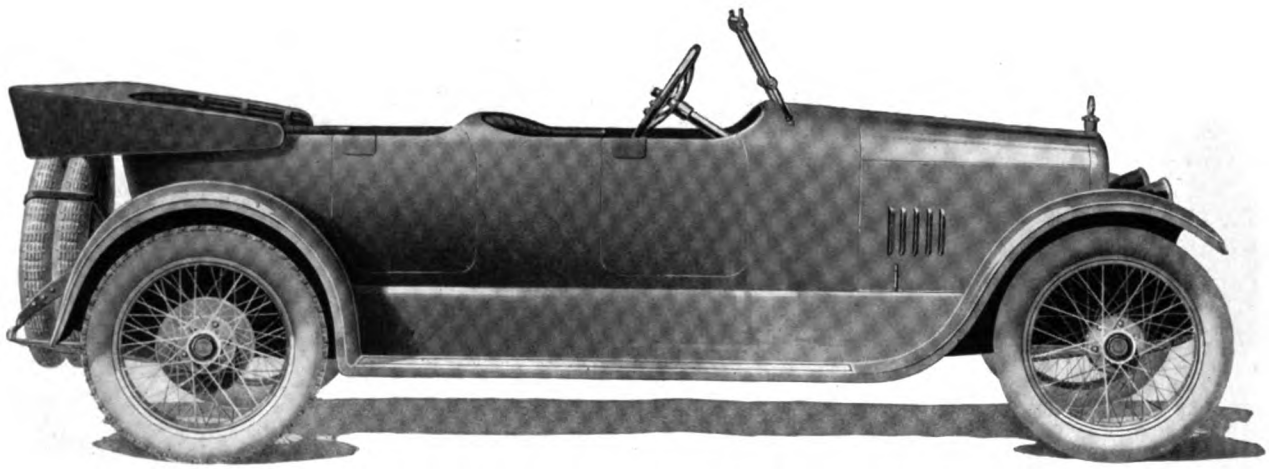
To inspire the owner's pride and save depreciation, twenty painting operations, a detailed finish in hand-buffed pleated leather and custom style mahogany cabinet work are provided, encouraging the owner to keep his car year after year.



There is more room for the driver; more room in the rear seat; and a distinct innovation in seat cushions is introduced for the first time. The effect is almost pneumatic.

On special order the standard Jordan chassis may be fitted with custom made bodies by the world's leading makers.

A NEW COMFORT AND PROPER POISE FOR WOMEN



Jordan custom style bodies are designed to please the woman of good taste. She is an unerring judge of quality and in this car she will find a new kind of comfort and proper poise.

JORDAN

Interior of Jordan Seven-Passenger Luxury car. A straight line from motometer tip to top cover. Tilted overlapping windshield. Long levers within easy reach. Rear compartment in hand-buffed pleated leather, with custom style mahogany cabinet work. Tan leather round robe strap with nickel attachments. Auxiliary seats in concealed compartments. Cabinet for thermos bottle with Yale lock; 48 inch rear seat. Finest hair cloth carpet. Marshall cushion springs.

Digitized by Google

Jordan Four-Passenger Sport Model, low and rakish, with seats cleverly arranged for complete comfort

JORDAN

The tall man and the short man will find freedom from discomfort in the adjustable pedals and convenient arrangement of pedals, steering pillar, and levers.

The woman who is accustomed to appear well in public chooses to ride in a car of such beauty of line, comfort, and seating arrangement as to give her proper poise.

In the Jordan car she always appears to advantage.

Watch her if you please when she inspects this car.

First the long, low line of the body catches her eye.

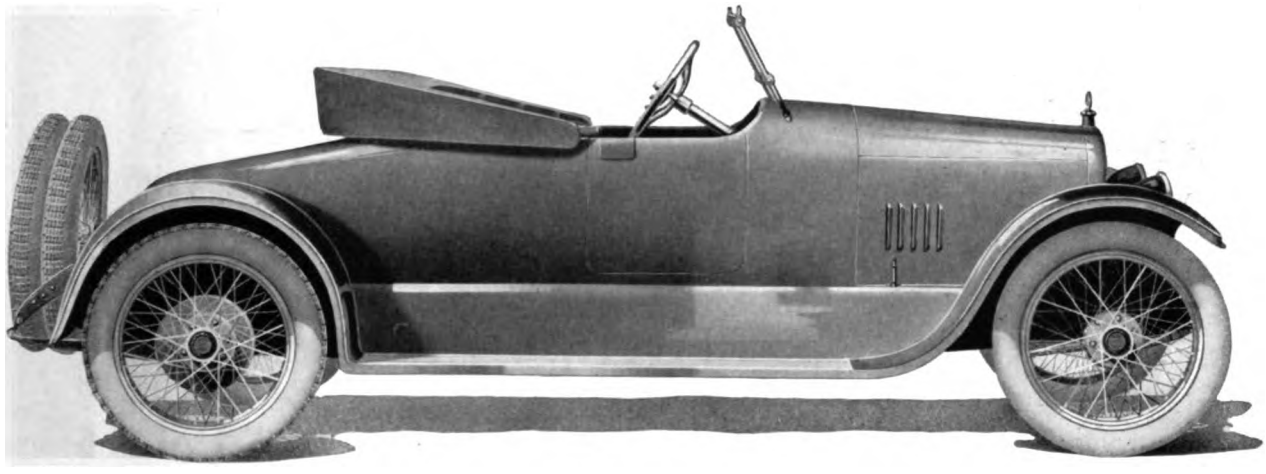
It is of the ultra straight line type with a gracefully tilted overlapping windshield.

Then she notices the richness of color and the little details of finish.

Too many cars are funereal—she has her choice of brightness in the Jordan—a snapping shade of rich maroon or the dignity of a Venetian green.

Next she places her hand on the hand-buffed leather upholstery. It is rare in quality and no buttons are visible. It is straight French pleated and dirt can find no resting place.

She glances at the back of the front seat and discovers the mark of the custom designer. An artistically turned double cowl—a broad expanse of mahogany panelling, a cabinet for thermos bottle and gloves, with a Yale lock for security—compartments which completely conceal the broad, comfortable auxiliary seats and a long, tan leather round robe strap with nickel attachments.



The woman next looks down at the rug. It is pleasing in color and soft in texture, the expensive gray hair material previously used only in the highest priced cars built.

She sits in the rear seat. It is 48 inches wide. Low enough for her to easily reach the foot rest yet high enough to avoid the clothing discomfort women experience when the position of the knees lacks grace.

She loves that feeling of sitting down in the car instead of on top of it.

Sitting upright while riding along the boulevard as a woman chooses to do, the upholstery supports the body at the proper point, while on the country road she may

Jordan Sixty Roadster.
Model for red-blooded young men

JORDAN

lounge as she pleases and her shoulders always rest in deep cushions.

The new Marshall cushion seat spring used in the Jordan is the greatest contribution yet made to motor car comfort—it is almost pneumatic.

It was first adapted to the finest built upholstered furniture. Now it has brought the last touch of comfort to the Jordan car. No sagging or matting or hardening. Just a mass of small resilient spirals, each one enclosed in its own linen bag. It's an exclusive Jordan feature.

The woman finds the height of the seat arm just right so that her clothing does not bind.

The doors open wide and the auxiliary seats, finished in hand-buffed leather, leave plenty of room for the knees.

She is happy.

Picture the satisfaction of her husband as he seats himself at the 18-inch corrugated mahogany steering wheel.

He enters the seat from either side with perfect ease even when clad in heavy ulster. The woman who drives may enter or leave the front seat with equal ease.

There is a racy tilt to the steering post.

He sits down in the seat and finds the levers within easy reach without leaning forward a particle.

They are long and operate within a small radius.

The pedals are adjustable.

He doesn't feel cramped beneath the steering wheel.

The accelerator pedal is not in a cramped position.

The dash is beautiful in its arrangement and mahogany finish.

He looks straight out over the long hood to the motometer, puts his foot on the throttle and the car is away. It moves forward in admirable strength and silent ease.

Digitized by Google

A CAR FOR RED-BLOODED AMERICANS

Red-blooded Americans love a car that will get away and run like a cottontail when dust threatens.

It is only human to admire power in reserve even though it is never used.

Mr. Jordan drove this car 5,230 miles, running night and day, with few stops, just to find out what would be the experience of the average owner in touring. He wanted to see what the car would do on all kinds of roads and under all conditions without the attention of an expert mechanic.

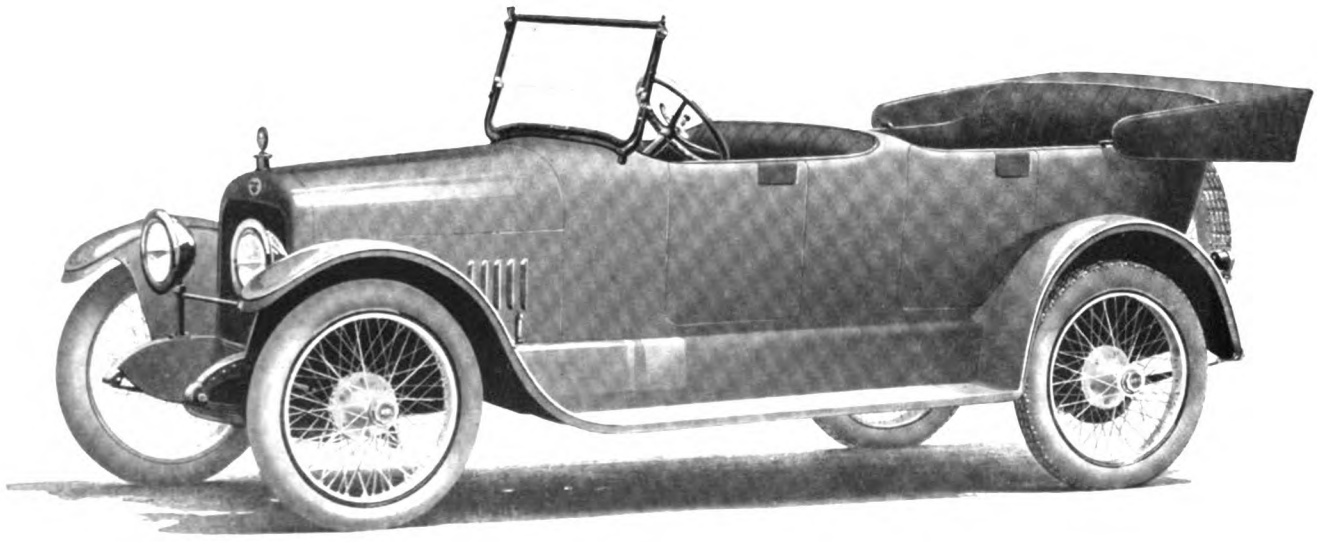
He chose the roads of Eastern Ohio and the mountains of Pennsylvania for the test.

At Uniontown, Pa., he wrote a letter in which he said:

"Until you visit Uniontown you will never be able to appreciate the feelings of a fly climbing out from the bottom of a milk pitcher. In this town there is no local speed limit necessary. You can go just as fast as you can go.

"The longest hill is a little more than two miles and there are two convenient watering troughs on the way up the mountain where many motor cars find it desirable to stop.

"At the foot of this hill is the famous 'Turkey's Nest,' a steep and tortuous curve and a heart breaker for cars that lack power.



"I have seen motor cars driven into 'Turkey's Nest' at sixty miles per hour at the risk of the driver's life come limping out into the stretch beyond at scant thirty.

"To go over the crest of the hill on high gear is motor-car bliss and it means immortality in Uniontown.

"I drove the car out to the hill. Begg, the engineer, had told me that 'Turkey's Nest' was dangerous. You might meet a car coming around the hairpin. A man was stationed at the curve and I went back to give the car a chance for a getaway.

JORDAN

Distinctive and irresistible, the Jordan owner can always find his car among those at the curb or country club

Digitized by Google

"I hit 'Turkey's Nest' going forty-five; came out of the turn at thirty and gave her the gas for two miles up that tortuous climb.

"We passed ten cars at the first watering trough and seven at the second. She was hitting thirty-two when I sighted the hotel at the summit. I gave her more gas. The little red line on the motometer was creeping up.

"'Give her more gas," yelled Begg above the roar of the cut out.

"The red line kept going up and the car was picking up.

"'Thirty-three,' the speedometer read.

"'Thirty-four,' and trembling on 'Thirty-five.'

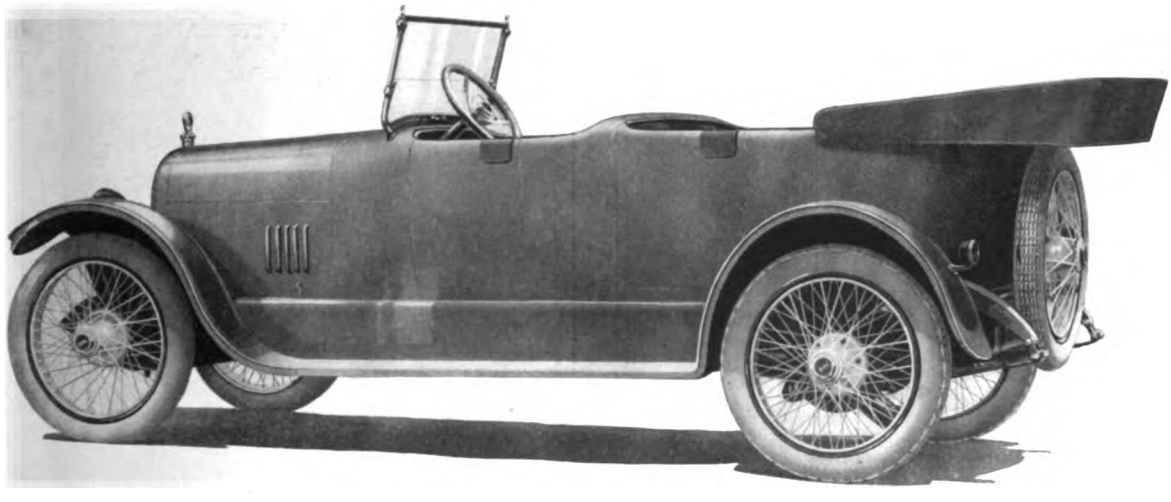
"I shot the spark down a trifle, stood up on the throttle, and she went over the top at thirty-five."

THE ALL-AMERICAN CAR

If any well informed, critical individual set out to build a car to suit himself from the finest units available in the world today, he would, if he chose to build without experiment, pick the same units as are found in the Jordan.

It is the product of the best engineering minds in the industry.

No one man's ideas have prevailed.



The one recognized engineering authority in the design of each specialized unit has not only vouched for the character of the product of his own genius, but he has also served jointly with the others in selecting the most approved design for each unit.

You could not buy or produce in the world today any motor car units which would excel in reputation, quality, and service the units which comprise the Jordan chassis and complete equipment.

Not a single high grade unit is lacking.

JORDAN

The Jordan, distinctive in line and color,
is unlike any other car on the road

Digitized by Google

FEATURES OF THE JORDAN

A chassis including all the finest universally approved mechanical units.

A choice of custom style bodies.

A choice of brightness or the conservative in color—Jordan maroon or Venetian green. A lasting body finish.

Hand-buffed French pleated leather, Marshall cushion springs, hinges and locks concealed. Custom style mahogany panelling throughout.

More room and comfort for the driver. Rear seat 48 inches wide.

Continental built the modern high-speed, six-cylinder Jordan motor, 3½ x 5¼, cast en-bloc.

Jordan equipped it with Bosch D. U. 6-ignition A. C. spark plugs and Bijur two-unit, six-volt, starting and lighting system—the only positive system. Stromberg carburetor, horizontal plain tube type.

Wheel base 127 inches—real comfort is not possible in less.

Weight 3050 pounds—aluminum used extensively.

Vanadium steel springs, 59 inches in rear, 37 inches in front, 2¼ inches wide, semi-elliptic.

Timken axles and Timken bearings throughout. Front, drop forged I-beam, rear spiral-bevel floating.

Fedders diamond core radiator with Boyce motometer.

Gemmer steering gear. Short turning radius.

Brown Lipe multiple disc dry plate clutch and three-speed transmission, with chrome nickel heat-treated gears and shafts. Cane shift with extra long levers. Adjustable pedals.

Willard storage battery. Motor driven tire pump.

Drive, Hotchkiss type through tubular propeller shaft, double universal joints, oil tight. Powerful brakes.

Firestone oversize tires 35 x 4½ inches, non-skid on rear. Eighteen-gallon rectangular gasoline tank with gauge and Stewart-Warner vacuum feed to carburetor. Tilted overlapping rain vision windshield. Firestone demountable rims. Tire carrier.

Most complete equipment—tonneau foot rest, tool roll, tire repair kit, large Sparton electric horn, electric-lighted instrument board including speedometer, ammeter, oil pressure gauge, combination ignition and lighting switch and carburetor air adjustment. Solar headlights, large and powerful, equipped with small bulbs for dimming lights. Special design one-man, De Luxe Neverleak top, anchored to windshield. Long round tan leather robe strap with dog collar snap.

Curtains attach securely at all points.

Deliveries of seven-passenger Luxury Car commence August first.

Jordan seven-passenger Luxury Car $1650, wire wheels $100 extra.

Jordan four-passenger Sporting type $1750, with wire wheels, regular equipment.

Jordan Roadster $1650, wire wheels $100 extra.

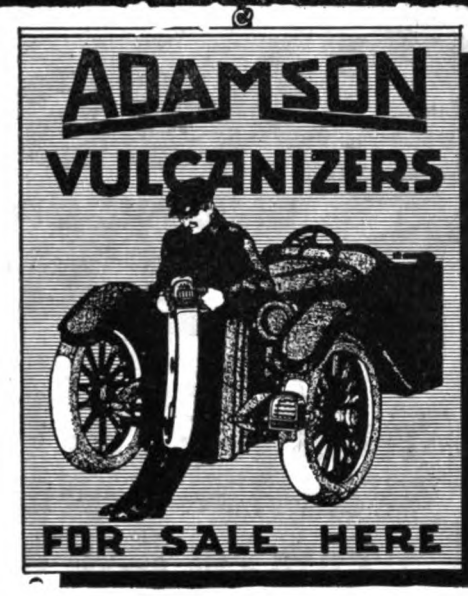
This Will Be the Biggest Year of All for Dealers Who Sell

ADAMSON VULCANIZERS



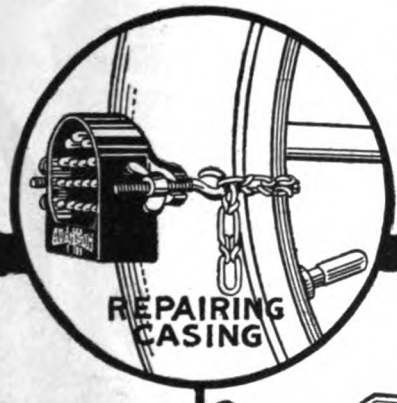
More touring will be done this year than ever before. Nearly a million four hundred thousand new cars will go into use without any tire repair equipment whatever. Tires cost more money than in the past. And it all sums up to this—

Every Car Owner Must Have a Vulcanizer

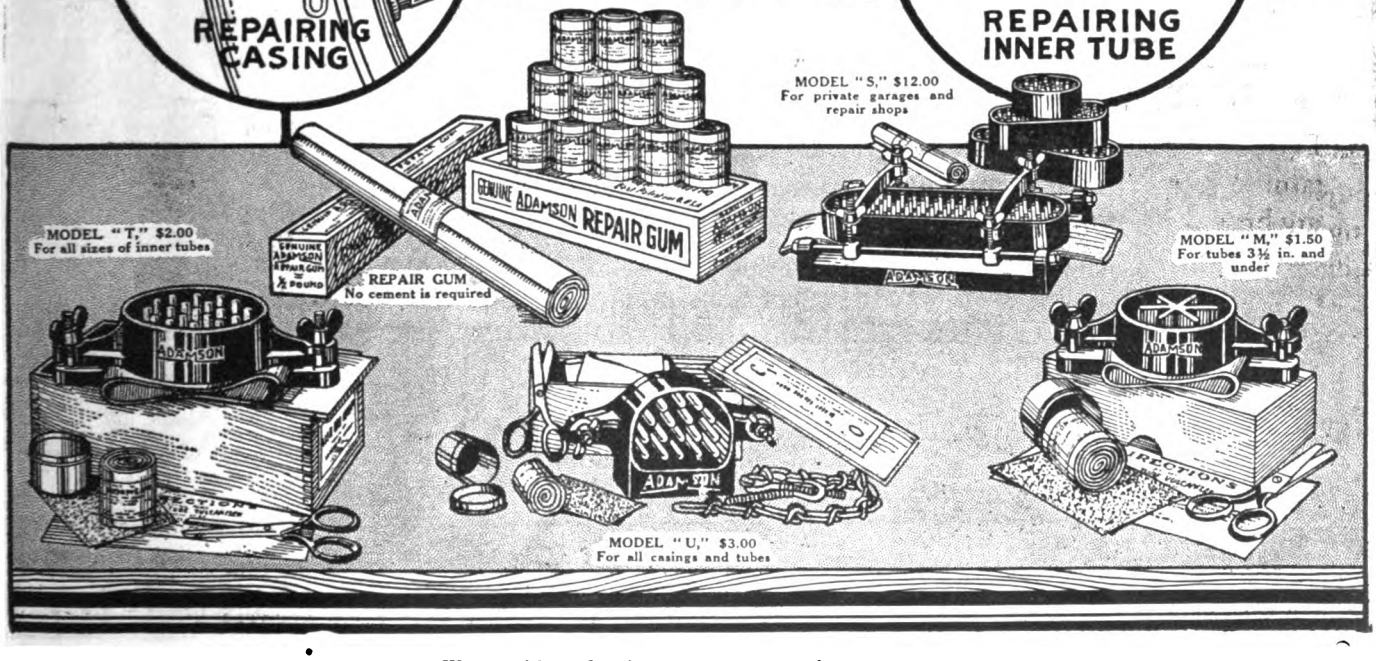
Are you prepared to cash in on a good share of this ready-created, profitable business? Hundreds of prosperous, successful dealers know "Adamson" Vulcanizers as the easiest selling Automobile Accessory on the market; know that the friendly recommendation of more than a million satisfied customers is a big sales asset.

Show Your "Adamson" Vulcanizers Right Up in Front

Give them a good display where your customers can see them. Right now is the season when "Adamson" Vulcanizers sell best of all. Somebody is going to sell vulcanizers to your customers and it might just as well be you. Let us tell you more about it. Write us today for your copies of new booklet, "Care and Repair of Tires." **It's free.**



ADAMSON REPAIR GUM



is essential to the most successful operation of "Adamson" Vulcanizers. It's a sure guarantee against failure. It is especially prepared for use with "Adamson" and any other portable Vulcanizers. Cures to just the right degree without the use of cement.

CASSCO ENGINE DRIVEN TIRE PUMP $8

"Let Your Motor Do the Work"

The Saving This Pump Effects In Your Tire Expense More Than Pays For Itself In One Season

Pumping your tires by hand is hard and disagreeable work. It's back-breaking, time-consuming, hand-blistering work—a slave's job.

With a Cassco Engine Driven Tire Pump you can *easily* keep your tires properly inflated, so that you'll get all the built-in mileage each tire has. And you can do it in a twinkling—simply sit back and "Let the Engine Do the Work."

Sectional View

Displacement—Stroke is 1 inch in length. Bore is 2½ inches in diameter, giving a piston displacement of 5 cubic inches.

The cost of the Cassco Engine Driven Tire Pump is only $8, a price surprisingly low when you consider that other pumps cost much more, yet are no more dependable or simple in operation than the Cassco.

Each Cassco Pump is packed in a substantial carton containing air hose, tire gauge, all necessary fittings, including brackets, gears, nuts, bolts, etc., with a card embodying a diagram of the installation and complete and detailed instructions for attachment. These instructions are so simple and explicit as to make the installation an easy matter—even for the motorist.

TIREOID

"IT SEALS PUNCTURES"

65 Nails were driven into this tire—Tireoid sealed every puncture

TIREOID is the liquid puncture sealer that everyone is talking about. Men nationally prominent in motoring and financial affairs are backing it. These men, as well as constantly increasing thousands of other car owners, KNOW that TIREOID puts an end to the most aggravating trouble connected with motoring—PUNCTURES!

That is why TIREOID is sweeping the country. That is why every one of America's 3,000,000 motorists who values his tires, his time and his pocketbook is bound to come to TIREOID.

That TIREOID does end punctures anyone can prove to his own entire satisfaction on

Six Months' Money-Back Trial

Dealers appreciate that no motorist can consistently fail to take advantage of so liberal an offer.

It is unnecessary to point out to dealers that with TIREOID they can step into a run of ready-made business. No such remarkable opportunity has faced dealers for years.

Foresighted dealers never neglect to investigate any proposition that offers a chance of profit. Send coupon today, with no obligation on your part, for booklet, "The End of Puncture Troubles," dealer's proposition and full information.

Here is the Board of Directors of The Tireoid Company:

THESE men are nationally known in the financial and automobile world. Their names alone are sufficient assurance for the claims made for the merit of TIREOID.

A. WATSON ARMOUR, Vice-President of Armour & Co., Chicago.
MARTIN J. INSULL, President of the Middle West Utilities Co., Chicago.
NELSON N. LAMPERT, Vice-President of Fort Dearborn National Bank, Chicago.
JAMES LEVY, President of Chalmers Motor Co. of Illinois, Chicago.
LAFAYETTE MARKLE, President of the L. Markle Co., Distributors for Studebaker Cars, Chicago.
H. H. MERRICK, General Manager of Credits of Armour & Co., Chicago.
H. E. OTTE, Vice-President of the National City Bank, Chicago.
W. T. PERKINS, Assistant Cashier of the National City Bank, Chicago.
C. W. PRICE, President of Overland Motor Company, Chicago.
F. E. PRICE, Vice-President of Anderson Electric Car Company, Detroit.
W. L. ROHRER, President of The Tireoid Company, Chicago.
ROBERT F. WOOD, Assistant to the President, General Asphalt Company, Philadelphia.

The Verdict of These Men of National Prominence Counts

An Internal Ge

Dealers Don't Miss This

WE thought we had the simplest, strongest and cheapest "converted-Ford" truck possible in the Rayford Commercial Chassis. But just look at this one! **An Internal Gear Drive** 1-ton truck made from a Ford, for $300.

¶Your customers know that an Internal Gear Drive combines the lightness and strength of Chain Drive with the silent smoothness and superior wearing qualities of the worm. They also know the Ford—its strength and compactness.

¶The Internal Geared Rayford combines the best form of heavy service drive with the tried and proven Ford Chassis, without disturbing a single Ford part in the slightest way.

¶The gear is attached to the Ford axle, and that axle becomes a jackshaft—nothing to do but turn the wheels. The Rayford I-beam axle carries the load.

Exclusive Territory — Immediate Deliveries

and the greatest personal latitude we give to dealers handling the Rayford. From the moment you order a demonstrator every sale in your territory brings you a commission. We do not insist that you contract to sell any certain quantity—we leave that to the truck.

Wire or write at once. Remember, this Rayford has absolutely no rival—so do not delay until your territory is allotted to someone else.

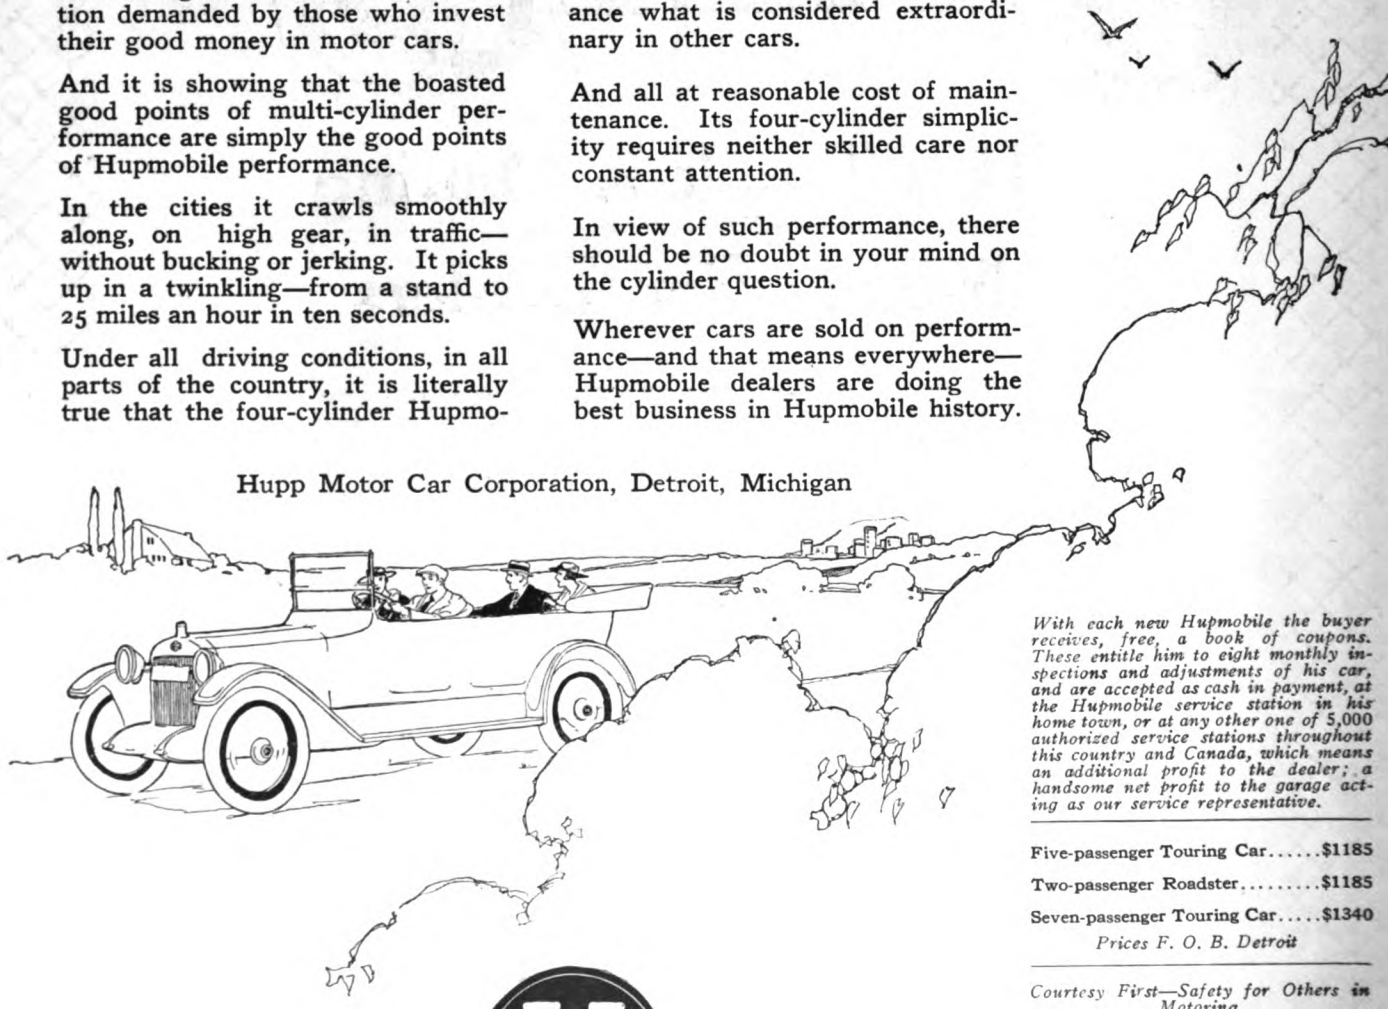
Hupmobile

ON New York's Fort George Hill; on Denver's Lookout Mountain; on Philadelphia's Tam-o'-Shanter; on Seattle's Coon Hollow Hill; in Florida's "ball-bearing" sand; in Louisiana's mud and Kansas' "gumbo"; on California's stiffest climbs—*side by side with cars of every type*—the Hupmobile is proving itself the superior of most, and the equal of any, in power-performance and high-gear work.

It is doing so in actual demonstration demanded by those who invest their good money in motor cars.

And it is showing that the boasted good points of multi-cylinder performance are simply the good points of Hupmobile performance.



In the cities it crawls smoothly along, on high gear, in traffic—without bucking or jerking. It picks up in a twinkling—from a stand to 25 miles an hour in ten seconds.

Under all driving conditions, in all parts of the country, it is literally true that the four-cylinder Hupmobile is doing in ordinary performance what is considered extraordinary in other cars.

And all at reasonable cost of maintenance. Its four-cylinder simplicity requires neither skilled care nor constant attention.

In view of such performance, there should be no doubt in your mind on the cylinder question.

Wherever cars are sold on performance—and that means everywhere—Hupmobile dealers are doing the best business in Hupmobile history.

Hupp Motor Car Corporation, Detroit, Michigan

With each new Hupmobile the buyer receives, free, a book of coupons. These entitle him to eight monthly inspections and adjustments of his car, and are accepted as cash in payment, at the Hupmobile service station in his home town, or at any other one of 5,000 authorized service stations throughout this country and Canada, which means an additional profit to the dealer; a handsome net profit to the garage acting as our service representative.

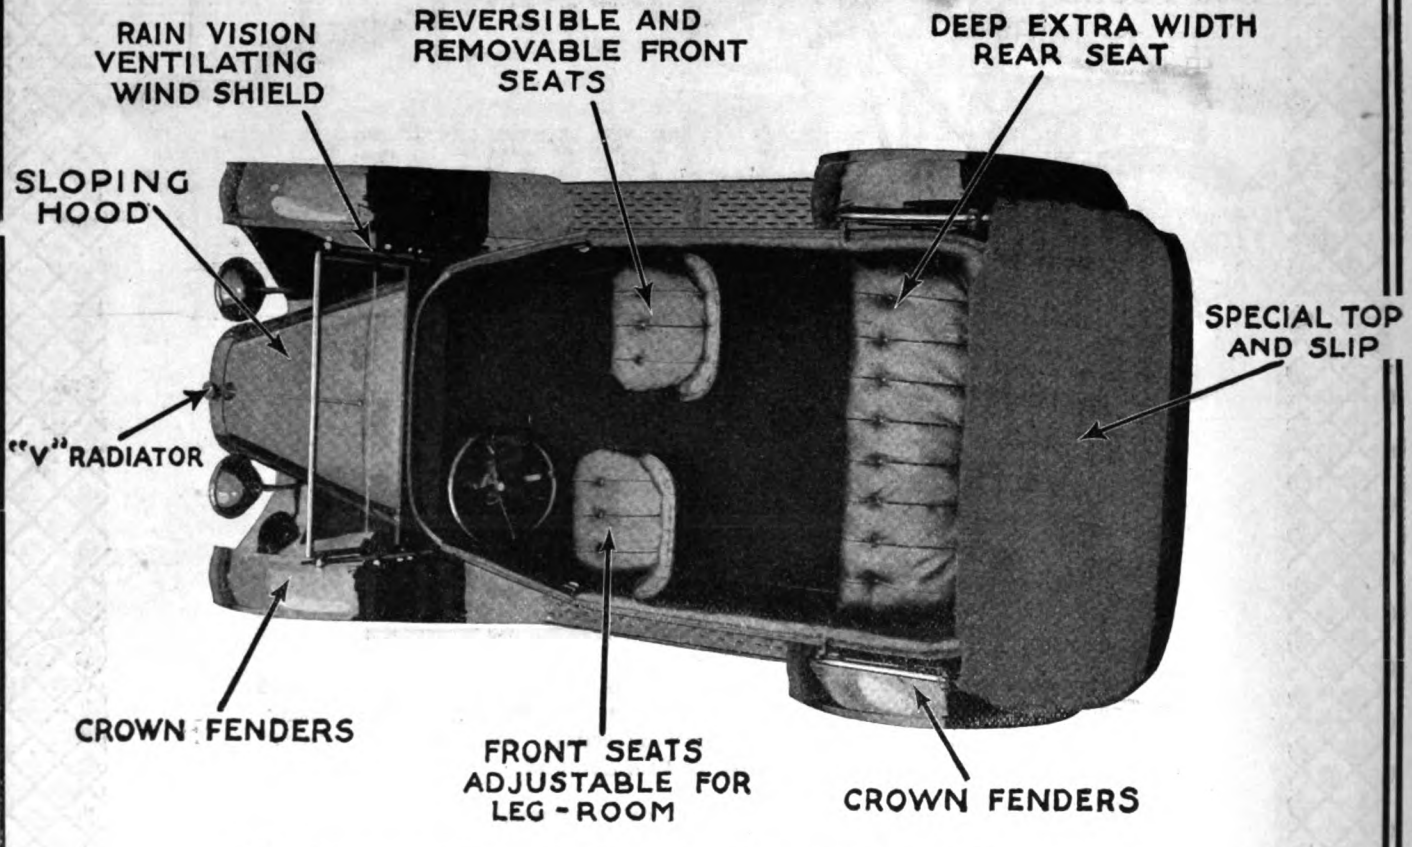
De Luxe Bodies Transform Thousands of Ford Cars

Our dealers tell us that the remarkable success they are having in selling De Luxe Bodies lies not only in the fact that they are the finest and most beautiful bodies ever designed for Ford cars, but are the most complete and convenient ever built for any car.



Note the special features shown in the interior view below. No other body built for any car at any price combines them all.

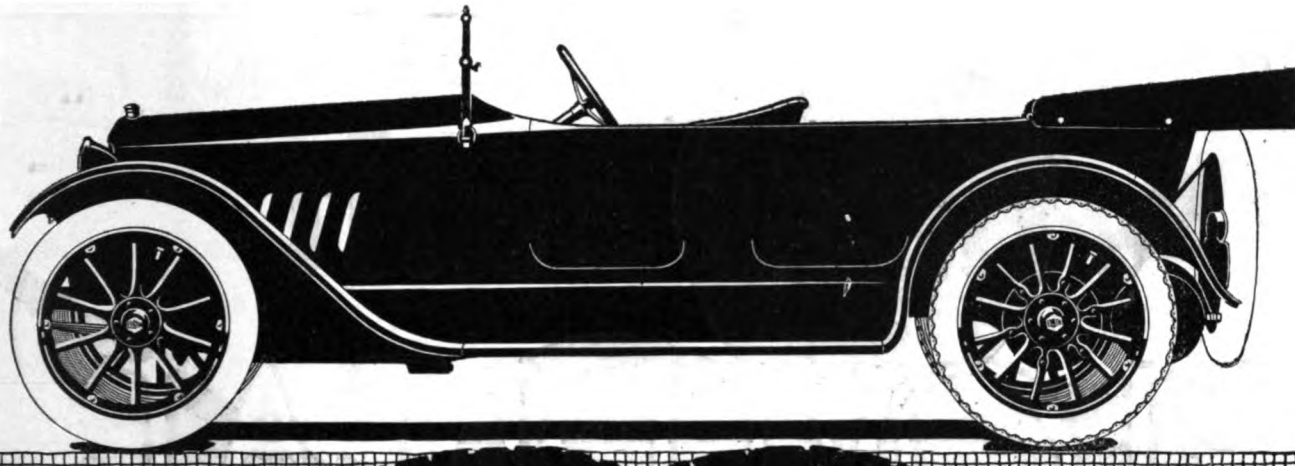
Special attention is called to the divided front seats, which are removable, affording plenty of room for baggage and sleeping quarters when touring.. You don't need a trailer.

These seats may be removed to face the rear when desired, and are movable forward and back any part of eight inches, giving proper leg-room for all drivers.

All of these front seat changes are "made-in-a-minute" by the simple operation of two nuts.

Send for a beautifully illustrated free booklet.

De Luxe Special and Exclusive Features



Price Touring Body complete, $260.00—f.o.b. Detroit. Includes "V" radiator, sloping hood, 9-inch crown fenders, dust shields, special rain vision ventilating windshield, splash plate, lamp bracket extensions, instrument board, foot accelerator, special one-man mohair top, single tire holder, Stewart Vacuum gasoline system. Snappy De Luxe Roadster Body, $197.50 f.o.b. Detroit. Includes above features except tire holder and gasoline tank. Single tire holder, $2.50 extra.

DEALERS: Many thousands of all light car owners, as well as owners of Ford cars, are becoming vitally interested in these beautiful De Luxe Bodies. And people who have not previously considered buying Ford cars are now purchasing them because they can get the De Luxe equipment.

We have some **exclusive** territory left to apportion to live dealers. Perhaps it is your territory. Write us and let us tell you all about the matter. We are receiving hundreds of inquiries weekly and these inquiries are invariably referred to the nearest dealer, so that our distributors get the entire benefit of our big advertising campaign. De Luxe Bodies are quickly installed on either old or new Fords.

Elgin Character

BUILT LIKE A WATCH ELGIN

BUILT LIKE A WATCH ELGIN

The **Elgin Six** is a car of refinement and distinction. It is characterized by the dependability and easy-riding qualities found only in cars of much higher price.

Big, beautiful, powerful, yet strictly a "Light Six," with mechanical construction of the highest standard, from the powerful six-cylinder valve-in-head motor to the smallest detail.

In size, appearance and mechanical qualities the **Elgin Six** leads the field in its price class, embodying style and values found only in other cars selling from $200 to $400 higher.

There are so many big special selling features in the **Elgin Six** that Elgin Dealers keep the wires hot calling for "More Elgins." Some desirable territory open for dependable dealers. Write or wire.

These Special Features Make Elgin Sales Easy

- Six-Cylinder Valve-in-head 35 horsepower Motor.
- Unit Power Plant, Three-Point Suspension.
- V-Type Radiator, Thermo-Syphon Cooling.
- Combination Force Feed and Splash Lubrication.
- Two-Unit Dyneto Electric Starting and Lighting System.
- Delco Ignition System.
- Stewart Vacuum Feed, Rayfield Carburetor.
- Springs, Semi-Elliptic Front, Self-Oiling Cantilever Rear.
- Multiple Disc, Dry Plate Clutch—Steel on Raybestos.
- One Man Top—Jiffy Curtains.
- Quick Detachable and Demountable Rims.
- 114-inch Wheel Base.

One wing of the raw stock room, showing piles of bevel gear blanks. Before these forgings are accepted they are subjected to an exhaustive physical and chemical inspection.

BROWN-LIPE

IN order to insure quantity production, it is obviously essential to carry ample stock of raw materials. As a graphic illustration of the assurance of ample stock in the Brown-Lipe factories, the above illustration of one wing of the raw stock room is shown herewith.

These beveled gear blanks are first tested, both physically and chemically, in what is called the Raw Stock Inspection Department, before they are piled in stacks as indicated herewith. From this room they are then sent in to the factory for their first machining operation.

Imposing as this enormous stock looks, it is easy to understand how essential such a stock is when it is remembered that Brown-Lipe differentials are used on a dominant percentage of the pleasure cars in America—excluding one low-priced car.

NATIONAL

The Kit of Six
National Mazda
Auto Lamps

Name Your Car

Here they are—the proper lamps for any car! The KIT holds a set of six lamps—front, side, rear and meter lamps. The GUIDE (free) tells which Kit for which car.

With eight Kits, you've a Kit for nearly any car. You're fully prepared—yet with the very smallest possible capital involved.

Each Kit contains the new MAZDA C gas-filled headlight lamps now in popular demand.

Digitized by Google

MAZDA
AUTO LAMPS

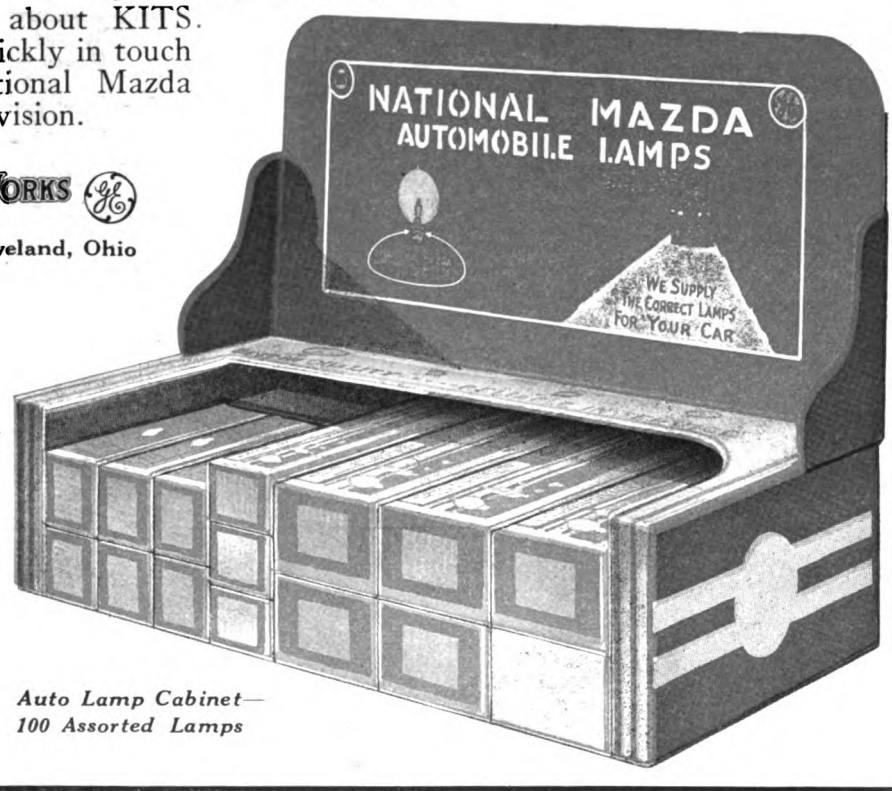
Show this National MAZDA Auto Lamp Kit to your Customer. Then talk to him like this:

"That looks like a convenience, doesn't it—always having a complete set of renewal lamps handy? But even that isn't the big part of the idea!

"This Kit is no luxury. It's a much-needed accessory that every auto owner should have. It's safety insurance! Avoids arguments with corner cops. Prevents risky driving over dark and dangerous roads. When you need a new lamp you need it at once! And the price of the whole Kit would be cheap for just the one lamp you want! *The only way to have the lamp you need, when you need it, is to have it with you.*

"Here! Toss this under the seat. Stow it in the side pocket, or in any odd corner of the car. Then forget it. Some day when it saves you money, loss of time, police court fines, and inconvenience, you'll come in and *thank me* for selling it to you."

A stock of eight assorted Kits gives you the right Kits for 70 per cent of cars.

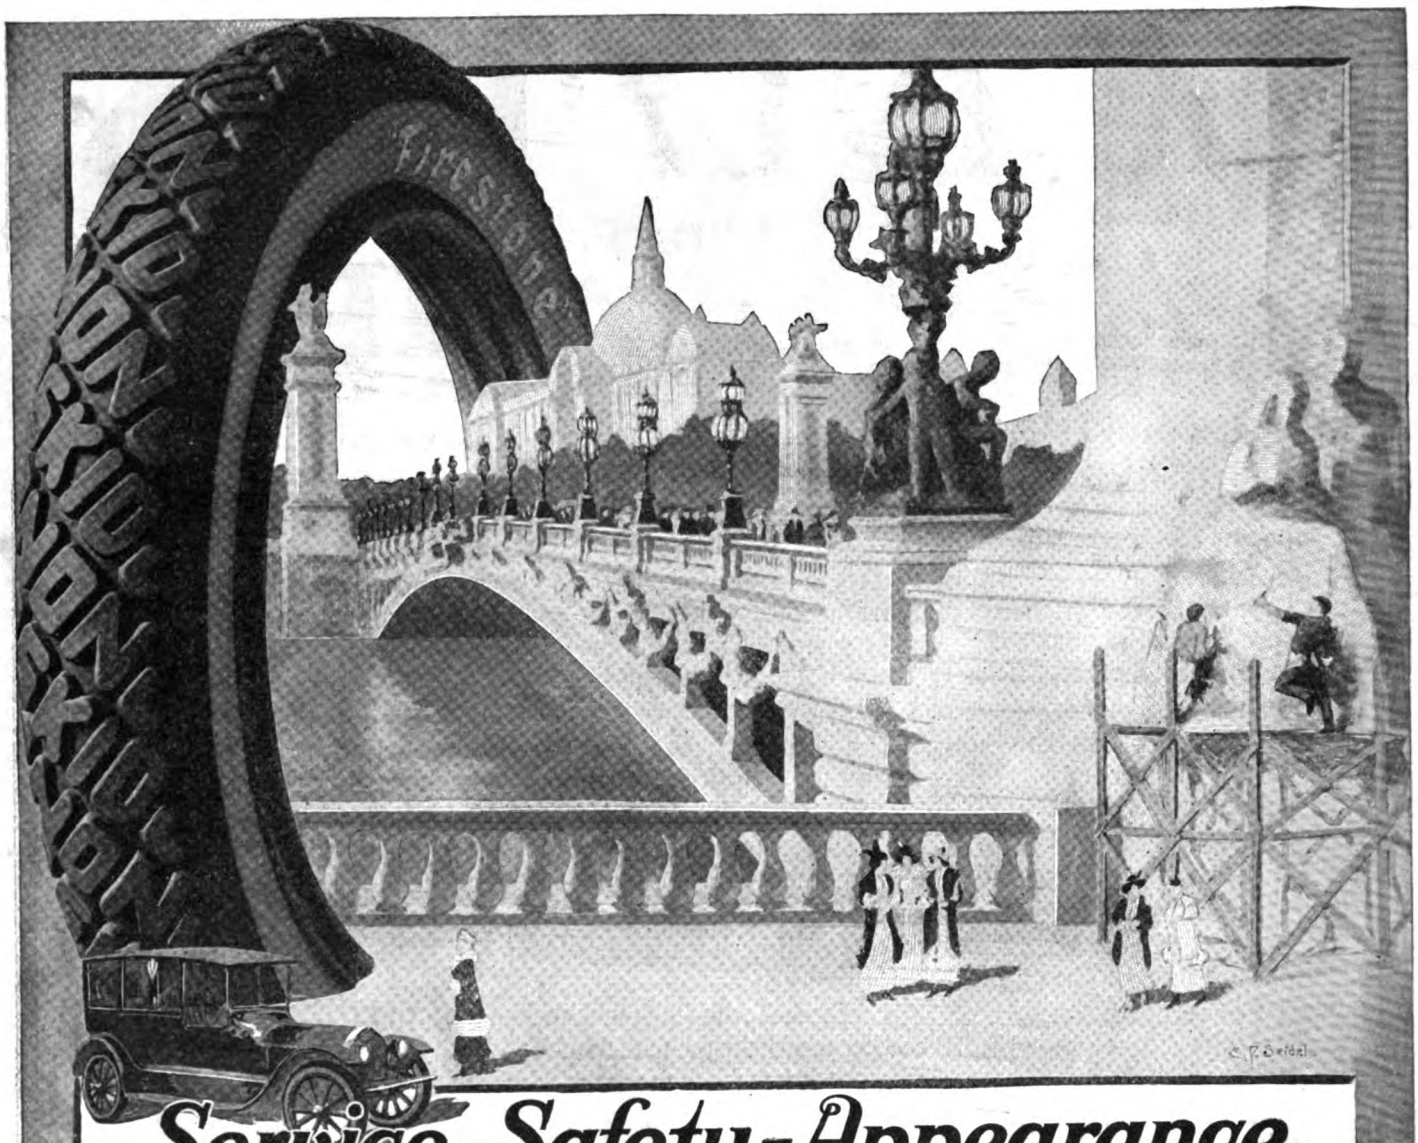


By selling Kits you sell six lamps instead of one. You make a six-fold profit *and you do your customers a service.* Selling Kits brings later business—for the customer will be back to have his Kit refilled.

For refilling the Kit, and for selling single lamps, you need the100-Lamp CABINET and the "National Guide to Proper Lamps for Any Car."

For full information about KITS and CABINETS, get quickly in touch with your nearest National Mazda Lamp Agent or Sales Division.

NATIONAL LAMP WORKS
OF GENERAL ELECTRIC CO.



30 Nela Park **Cleveland, Ohio**

Auto Lamp Cabinet—
100 Assorted Lamps

THE Cabinet, from which you can refill the Kits or sell single lamps, covers a still wider lamp demand. The whole investment is small—the variety almost perfect—the keeping of stock is made easy—and the self-advertising, self-selling ability of both Kit and Cabinet make this the ONE way to handle the auto lamp business!

The 1917 Enger

Pull the Little Lever

Your Twelve Is a Six

Push the Little Lever

Your Six Is a Twelve

THE most marvelous automobile improvement yet invented!

Just move a little lever and the trick is done—the trick that is turning the automobile world topsy-turvy.

One minute your car is a twelve with tremendous power for a lightning get-away, slow driving in crowded streets, or for hills and heavy going.

The next instant you have a six, for all normal driving—and the most economical six the world has ever seen—35 miles per gallon—read the affidavit shown below.

Just a touch of the little lever on the steering column does it all—cuts out six of your twelve cylinders and cuts them in again—in an instant.

This Enger invention makes possible the supreme motor car combination—luxury and economy.

In other cars emergency power eats up fuel all the time—needlessly—extravagantly.

In the Enger Twin-Unit Twelve you have emergency power in abundance—but it uses fuel for *surplus* power only when called upon. The six cylinders that are idling one instant are adding extra power and push the next.

Never has a car stirred up such enthusiasm. Never was a car such an instantaneous success.

For no other car at anywhere near the price even approaches such attainments in either luxury or economy—none at any price combines them.

35 Miles Per Gallon

Sworn Statement

STATE OF KENTUCKY } SS
COUNTY OF KENTON }

Affiant, J. H. Jolly, being first duly sworn, states that he made 36.8 miles per gallon of gasoline, at an average rate of speed of 20 miles per hour, driving an Enger Twin Motor Car, 1917 Model, carrying three passengers and equipped with the Economy Mechanical Device, on June 14, 1916, at the Motor Speedway, Indianapolis, Ind.

Subscribed and sworn to before me, a notary public, thi· 24th day of June, 1916.

John T. Murphy.

Twelve and Six

The Motor That Has Upset All Calculations

HERE is the Enger Twin—Unit Twelve—the motor that has upset all calculations—the motor that has opened new realms of luxury and new realms of economy—the motor that is already creating an enormous enthusiasm.

The driver by means of a small lever on the steering column can cut out six of his twelve cylinders in an instant—and can cut them in again just as quickly whenever he needs them.

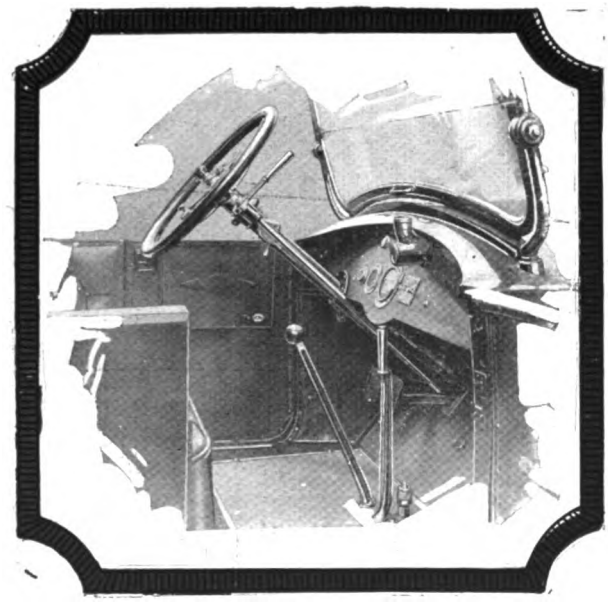
You have two motors—a twelve and a six—both in one.

And the mechanism is very simple—and practically fool proof. There is nothing delicate to get out of order—nothing to stick or jam. The action is absolutely positive.

The Enger Motor Car Co.

Cincinnati Ohio

Digitized by Google



-Both In One

Within Easy Reach

JUST below the steering wheel on the steering column is the little lever that performs such wonders. A little push or a little pull makes your car a twelve or a six in an instant—with no fuss—no trouble.

Just Move the Lever

HERE you can see how inconspicuous the little lever is—and how conveniently it is located.

Just move it—and you have the most economical six in the world, that will take you 35 miles on a gallon of gas—or a powerful twelve with all its advantages.

The Greatest Dealer Opportunity of a Decade

DURING the last ten years there have been hundreds of improvements made in automobiles—both mechanical and in appearance.

Most of these improvements, however, have been gradual and have been common to all cars. They have meant nothing unusual to the dealer as far as any one make of car is concerned.

But here is an Enger invention—that comes like a bolt from the blue—years ahead of other improvements.

And it's an invention that means sales—greatly increased sales. It is exclusively an Enger invention—is found *only* on the Enger car.

Our Twin-Unit Twelve will revolutionize driving. It will create a demand for Enger cars—and the dealer who handles Enger cars will be in the limelight from now on.

Dealers in all parts of the country are already feeling the popular demand for the Enger Twin-Unit Twelve. Its success has been instantaneous.

And other dealers in open territory sensing the tremendous demand for such a car, are already getting in on the ground floor.

There are many places still open for dealers who can represent the Enger—who are alive and fully awake to the opportunities that the Enger car offers as a money making proposition.

Write or wire us at once and if your territory is still open and you are the right man you can tie up with this new Enger model with its marvelous motor.

Don't delay. Let us hear from you today.

Specifications

MOTOR—"TWELVE" Cylinder cast en bloc. Angle of cylinders 60 degrees from center line, 2 11/16" bore, 3½" stroke. Valve in the head Motor. Construction of Motor allows for removing head. Aluminum Pistons, Leak-proof rings.

LUBRICATION—Force feed, through hollow crank shaft.

CARBURETION—Carburetor with manifold hot water jacketed.

37 4/10 Miles on One

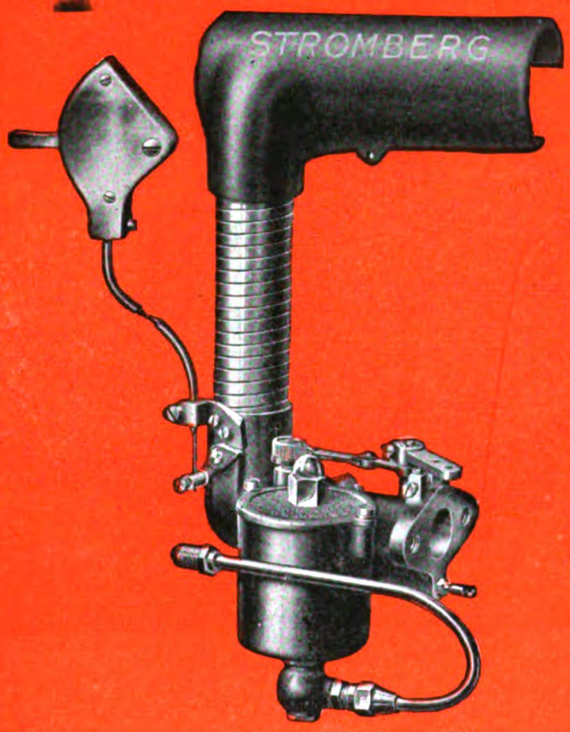
Now Ready for FORDS

All Official Ford Economy Records Smashed!

IT'S here! The New Stromberg Carburetor for Fords—the one Carburetor long sought for by hundreds of thousands of Ford owners—the one Carburetor that will bring down gasoline expense.

Think of getting 37 4/10 miles on one gallon of gasoline!

In an official test April 1st, observed by F. E. Edwards, a representative of the A. A. A., a Model T 1915 Ford, carrying three persons and weighing 2170 lbs., traveled actually 37 4/10 miles on one gallon of gasoline—an official feat never before accomplished. Without changing the adjustment of the New Stromberg Carburetor, the Ford was accelerated from a standing start to 25 miles an hour in exactly 11.4 seconds— a marvelous feat, and conclusive proof of the New Stromberg's acceleration.



Then the Ford was speeded up to 43 miles an hour and throttled down to 7 miles an hour on high — extraordinary flexibility for a Ford car.

The Center of Attraction

It's perfectly natural that over 150 car builders should merely say "Willard" and forget battery problems.

By doing so they accomplish three things.

Most important of all, they add to the salability of their car by assuring the owner of a reliable battery.

They lessen their own service responsibility by relying on 800 Willard Service Stations, every one in charge of an expert.

And finally, they make it easy for the car owner by affording him the battery helps which the name Willard implies—free inspection, advice, literature on care, and expert attention.

Booklets P-13 and P-14 go into more detail. Write for them—they're free.

NATIONAL TOURING WEEK

AUGUST 6th to 12th—1916 **EVERYWHERE**

"SEE YOUR OWN STATE FIRST!" IS BATTLE-CRY OF GREAT PUBLICITY CAMPAIGN UPON CAR-OWNERS

"Best in the Long Run"

Goodrich
Black Safety Tread Tires

Over 1,000 Newspapers "Mustered In" to Picture and Describe Attractive State Tours During National Touring Week August 6th to 12th and Thus Give a Big Boost to Automobile Touring

The B. F. Goodrich Co., Advertising to over 60,000,000 Readers That Goodrich Road Maps, Route Cards, Etc., Will Be Supplied Free Through Tire Dealers. Dealers Not Yet Supplied Urged to Write Goodrich Immediately

Akron, O., July 20—EXTRA!—It looks as if Automobile Supply Dealers would slice a juicy melon during August. Cars which are run mainly about town use up few supplies in comparison with the supplies required by cars which are used for touring.

A great "National Touring Week" publicity campaign is scheduled for August 6th to 12th, during which time over 1,000 newspapers will carry pages of attractive pictures and alluring descriptions of short and long motor trips in their respective states, and The B. F. Goodrich Company

An assortment of Goodrich Route Cards, Road Maps, etc., suitable for free distribution in your particular locality will be sent on request to Goodrich dealers.

will advertise its free touring information service, consisting of road maps, route cards, state guides, etc., to over 60,000,000 people.

Will Increase Dealer's Business

While intended to educate car-owners to the pleasures and advantages of all year 'round automobile touring, it cannot help but to result in a big increase in August business for dealers selling tires, oil, gasoline and accessories provided they "do their bit" in assisting the plan.

This beautifully colored transparent window sign will be a permanent "puller" of new business to your place. The man planning a tour is a good customer to have. This sign will bring him to you.

The B. F. Goodrich Company, is supplying dealers who sell Goodrich Tires with attractive display material with which to hook up to the campaign.

Any who are not as yet supplied with Goodrich state maps, route cards, etc., to distribute free, will have same provided for them if they will *immediately* address the National Touring Bureau of The B. F. Goodrich Company, Akron, O.

Safety Brakes Old and New

When small boys called "ice wagon" after the lumbering safety with its solid tires, low gear and its handle bar brake, Johns-Manville was making Asbestos Brake Lining.

The machinery that made the bicycle and countless other industrial machines where the severest braking requirements were to be met, had brakes and clutches faced with it.

And why—because it withstood the action of heat, grease, oil, water and grit. Because it wouldn't burn nor slip, and outwore other braking materials.

This was years before the motor car came.

Johns-Manville
Asbestos Brake Lining

has the same basic materials in it today as then.

And since there are more brakes to line now than in the old days, it has made more friends—an army of motorists, who buy it and rebuy it because of its record on their own car brakes.

Atwater Kent Ignition

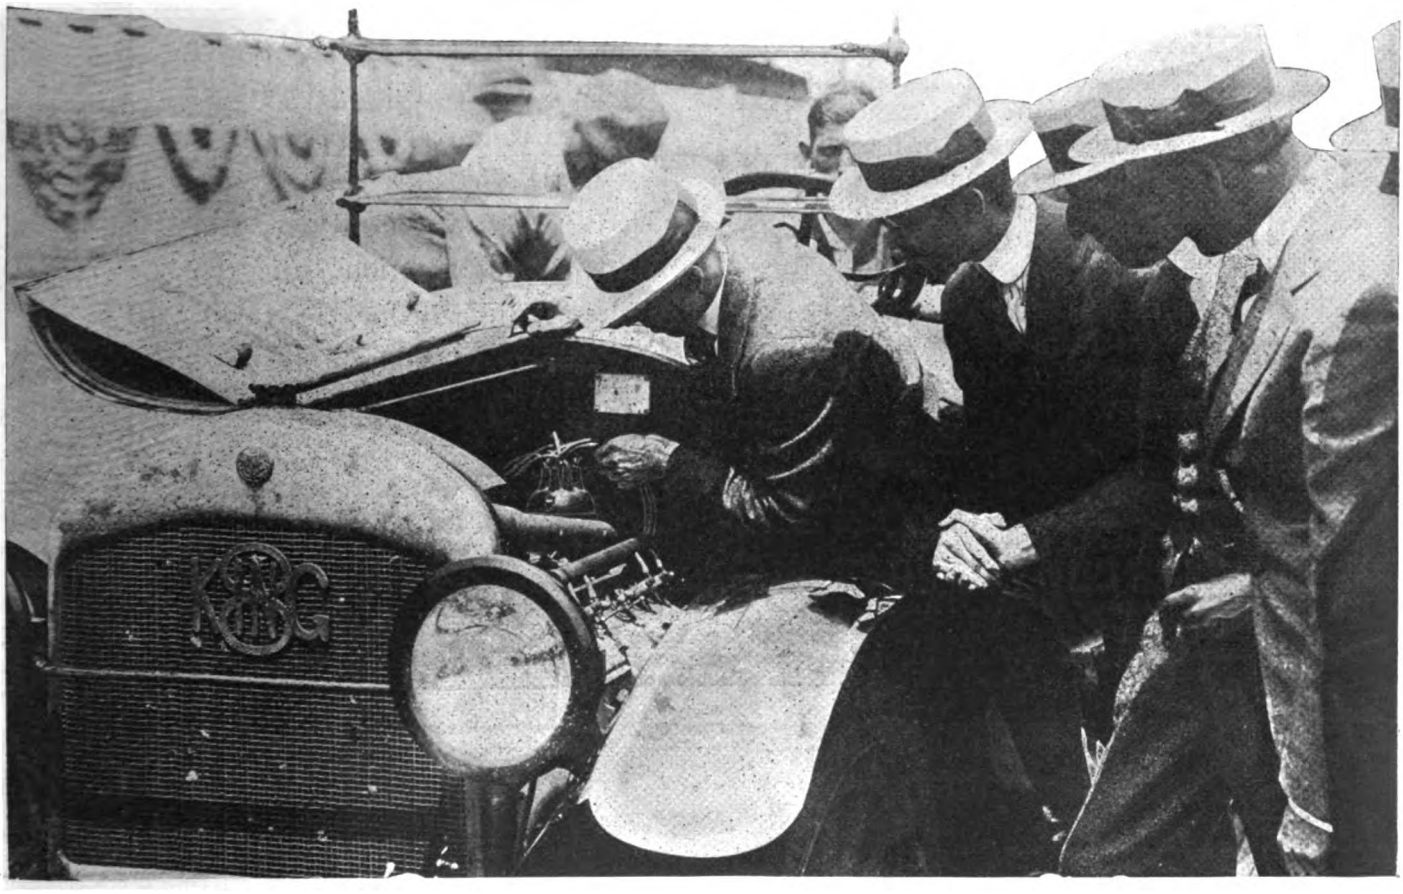
Perfect Score in King Test

(See Newspapers and Automobile Publications)

11,000 miles (including idling distance) in 14 days without stopping motor *and without touching any part of the Ignition System!*

One hundred and twenty millions (120,000,000) of accurately timed, uniformly hot sparks at the rate of 1360 sparks per minute or 22 per second—with the motor firing as smoothly at the end as at the beginning of the run—good for perhaps another ten thousand miles!

This is undoubtedly the most rigid test to which any ignition device has ever been subjected.



The performance of any car depends absolutely on the unfailing efficiency of its ignition system. That is why King and many other standard cars are ATWATER KENT equipped.

Furnished also for magneto replacement on any car—a wonderful opportunity for dealers, garages and repair shops. A special outfit for Ford cars.

President Ward and Chief Engineer Chase of King Company inspecting ignition system at end of 10,850 mile non-stop run.

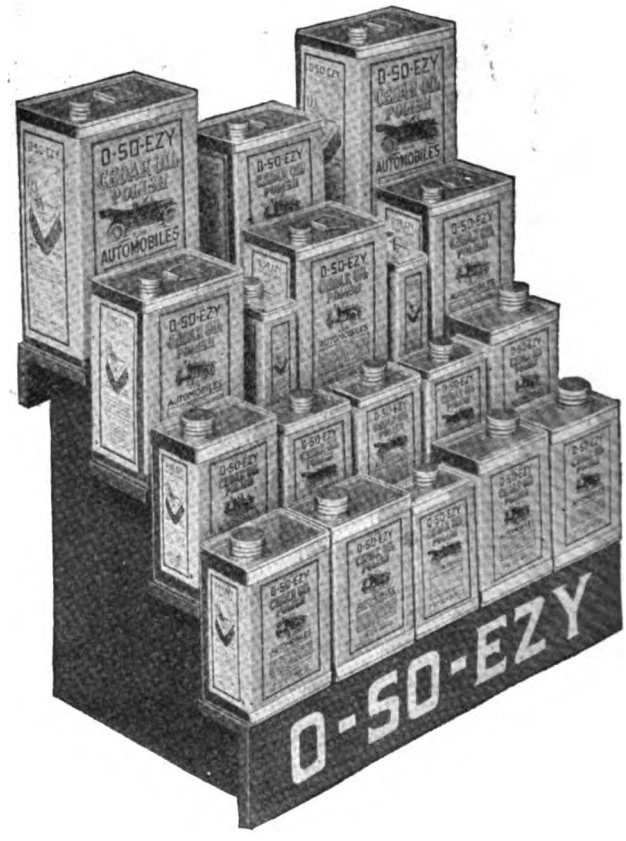
"Use Water for Washing; O-So-Ezy for Polishing"

Your customers have the highest regard for your advice, and expect you to give them the best advantage of your expert judgment.

O-So-Ezy Cedar Oil Polish is the fit medium for you to cement even closer this regard and friendship.

Once Over with O-So-Ezy

You can tell them with confidence that one application of O-So-Ezy will bring out and emphasize every bit of gloss and luster possessed by any painted, varnished or enameled surface. The unanimous commendation of the automobile industry bears you out in this statement.



O-So-Ezy is not an automobile wash; that function can be performed only with water. Warn your customers against rubbing over grit; that is the only necessary admonition.

Here is your Opportunity

The accompanying photograph shows the ideal polish stock with free Silent Salesman, which we are holding for your order.

A sensible, widely advertised article, endorsed by unqualifiedly authority and staged in a way that will ornament any store or salesroom—that is the O-So-Ezy story.

26 Extra Features

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

Bank on John W. Bate

There is no safer reliance for a motor car dealer—or a motor car owner—than to bank on John W. Bate.

As an efficiency engineer in machinery lines Mr. Bate stands first. And he has for 30 years.

His crowning work has been done for the Mitchell. This model plant is of his creation. And this Mid-Year Mitchell is the 17th model built under his direction.

What Efficiency Is

John W. Bate's idea of efficiency includes many items. It means utmost value through reduced factory costs. Mr. Bate has cut our costs 50 per cent. No other plant could build a car like the Mitchell at the Mitchell cost.

It means, in Mr. Bate's mind, a lifetime car. He has studied every part to this end. He builds oversize parts, fixes big margins of safety, uses much Chrome-Vanadium steel. In the Mid-Year Mitchell 440 parts are either drop forged or steel stamped.

As a result, six Bate-built cars have averaged 164,372 miles each—over 30 years of ordinary service.

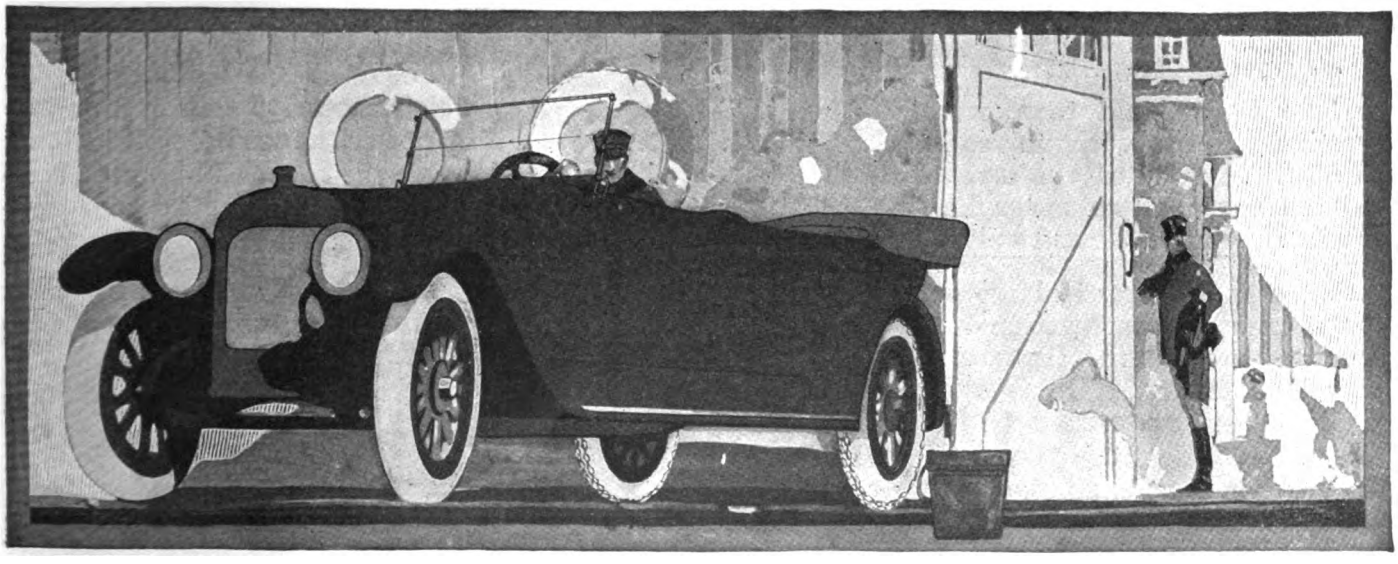
It includes the extreme in tests and inspections. No faults or flaws or errors are found in Mitchell cars.

Amazing Results

You will find in the Mitchell greater value than in any other high-grade car.

You will find 26 costly features which other cars omit—all paid for by factory savings.

You will find in one car all the best new ideas of all the this-year models. We examined 257 Show models before completing this.



You will find the finished product of John W. Bate's efficiency. His every idea has reached its fruition in this Mid-Year model.

We have much more to say to competent dealers in sections not yet closed. And such dealers should hear it.

In the past 12 months Mitchell sales have trebled. And they are going to treble again.

FERRO MOTORS

Reg. U. S. Pat. Off.

There were V-type motors before Ferro, and there were vertical motors with valves in the head, but until the arrival of the Ferro, there never had been a V with overhead valves.

Even in the vertical motor, valve-in-head construction has become noted for its power development. In the V-type motor, there are added to the paramount advantages common to valve-in-head engines, others to be found nowhere else.

The result: A compact, light-weight motor, with an abundance of power, unusual acceleration, unequalled accessibility, marked freedom from vibration and low up-keep cost.

There's a Ferro for any size car from 2000 to 5000 pounds—three Eights and a Twelve.

We shall be glad to send full information at your request.

Power for Fords

A Real Opportunity For the Trade

THE Bosch-Ford Attachment makes the Ford car really efficient, it makes possible an easy and mechanically correct installation of the Bosch Magneto on Fords.

The result is a positive betterment of the car, giving more power, more speed, more economy, and, at the same time, reduction of wear on the engine and the car in general.

The magneto is a Bosch Magneto, the same quality, workmanship and material that go into the Bosch Magnetos supplied to the manufacturers of the White, Pierce-Arrow, Marmon, Mercer, Chandler and other high-class makes of motor car. The few fittings that are necessary are made in the Bosch Factory, too.

If you sell automobile accessories, or run a garage, take advantage of this proposition. The ability of the Bosch-Ford Attachment to meet every claim assures satisfied customers, which are necessary for your success. It's not a luxury—it's a NECESSITY.

Stock a few of these attachments now. Your orders will be shipped from nearby supply stations, thus cutting down shipping expense and making your profits real profits.

Be Satisfied *Write for the "Key to Ford Efficiency" if you want to know more* **Specify Bosch**

Five of a Thousand Endorsements

"...The Bosch Company make strong claims for this equipment, but after having tried it thoroughly I am of the opinion that they do not claim enough....I am using one-fourth less gasoline and am not troubled with carbon, overheating or ignition difficulties of any kind....with the present equipment it is a revelation and you could not buy mine back for several times its cost, if I could not replace it.
"E. U. GRAFF, Supt. of Schools, Omaha, Neb."

"...I would not take $100.00 for the outfit today if I could not buy another one. It has given me perfect satisfaction in every respect, and I can highly recommend it to any prospective purchasers. J. E. CAUDLE, Richmond, Va."

"...I can start easier on cool mornings than with any of the other systems and run smoother. There is greater elasticity to the engine, absolutely no overheating (in fact the water in the radiator has not once boiled since Bosch was installed) and can 'pick-up' from low speed without missing a 'shot.' This statement is hardly believable, but nevertheless absolutely true...
"J. F. BERGESCH, Lankershim, Cal."

"It is a pleasure for me to recommend your magneto to Ford owners...the motor will pull 100% better up hills and in bad places with a Bosch than it will on a coil. ...It took me only two and one-half hours to install it with the tools that came with the car.
"J. W. TRACY, Lansing, Mich."

"...I was obtaining from 12 to 15 miles before the change on a gallon of gas and have made from 20 to 22 miles after the change. The first trip was 240 miles and accomplished it on 12 gallons of gas. ...I have been able to take every hill on high speed. I used my Ford Dynamo for lighting and head lights and it gives light enough to satisfy anyone. I would like to let every Ford owner know the improvement that the Bosch Equipment makes...if the cost was double it would more than pay to install one...
"WILSON MARKS, New York."

Why The Pabst Brewing Company Uses Sterling Trucks

PABST'S—one of the largest breweries in the Country and of world wide reputation—uses Sterling Trucks. Here is an organization able to buy the best of everything. Price isn't the big feature with them. They demand the most in quality for the money spent—the basis on which every highly efficient organization or individual buys.

Before they bought, the Pabst Brewing Company made a thorough investigation of trucks. They found one truck in the field that predominated in quality—the Sterling offered them greater truck value than any other make. And now they own a Sterling fleet—have standardized Sterlings.

You can sell more trucks this year, and every year, if you handle the Sterling Line. Sterling Trucks are simpler—over 300 parts have been eliminated in their construction. They cost less to operate and less for maintenance. They're built to stand up to the daily grind of rough roads and heavy loads—built for hard work and long life. Five sizes—¾ to 5-ton, worm-drive; 7-ton chain drive.

Write today for open territory. Prices, terms, full information about the Sterling selling plan on request.

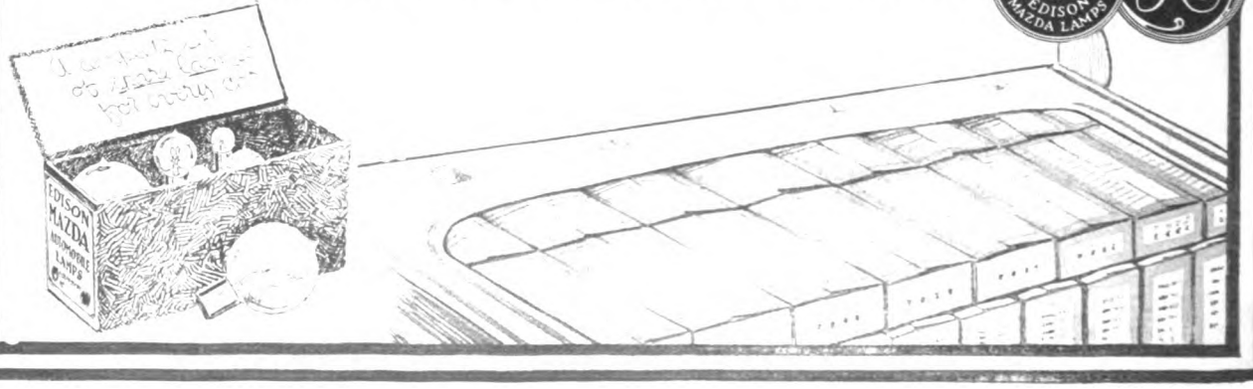
and a Good Profit all along the line

FOR the price of a good tire you can put on your counter our Automobile Lamp Assortment containing enough selected sizes and types of lamps to supply the **right** lamps to practically every automobile owner in your locality.

Our booklet lists the proper lamps for all electrically lighted cars so your clerk can't make a mistake. Better still, our new lamp chest makes it easy for you to sell six lamps instead of one to every driver. From the Assortment stock you select the proper head, side, rear and meter lamps and pack them in the lamp chest. With it the car owner is insured against **any** lighting emergency.



Write today for our money-making dealer proposition. Be the **first** in your locality.

BAUSH
WORM DRIVE

Extreme accuracy in manufacture is one of the essentials of satisfactory worm gear performance. In cutting Baush Worm Gears many of the worm surfaces are held accurate within a ten-thousandth of an inch.

With these slight permissible variations it is necessary to check our machine work with extremely sensitive micrometers. Not only do we employ micrometers, but these micrometers are frequently inspected so as to be certain that the machining operations are held within the specified limits.

Not only are Baush Worm Gears produced by special machines particularly adapted to this work, but these machines are handled by specialists who make worm gears day after day—worm gears and nothing else.

We are also manufacturers of Multiple Spindle Drills, Radial Drills, Lassiter Stay Bolt and Bolt Turning Machines.

Haywood's

Nationally Advertised

Tire Repair and Vulcanizing Service

In these days of high tire prices, the tire repair business is getting bigger and better than ever, as motorists learn the method of true tire economy. Why not cash in on this opportunity? Put in a Haywood Tire Repair Plant. Link up with a nationally advertised tire repair service. Six years of Haywood's advertising has standardized the Haywood method.

The Sign of the Man and Machine

—is the connecting link between the tire repair man and the automobile owner. It chains the established trade of hundreds of customers to your business. It connects your shop with a national tire repair service—a standardized service—a service that motorists know absolutely to be economical, practical and efficient.

The Haywood System

—is scientific—a true system of conservation of tires—a system that saves motorists thousands of dollars on tire bills. It means repairs that are lasting—vulcanizing that holds—repairs that are solid as the original tire itself, insurance to motorists of no regrets on the road.

Haywood's Tire Repairing and Vulcanizing Plants

The Haywood Plants are complete, all in one unit—are easily operated—no experience necessary. Here is your opportunity to make big money—to add hundreds of dollars in profits a year to your business. Occupies only a small part of your shop—can stand right out in the open where your customers can see it—a constant reminder to keep their tires repaired. Your shop equipped with a Haywood Plant is the motorist's logical haven for tire repairing. It completes your service—a service that customers like—a service that brings and holds business at big net profits.

Write for New Catalog

Use a letter, or post card or simply send the coupon below. This brings the big book of facts—tells all about tires and how to repair them—shows outfits in use—gives proof of successes—shows how we co-operate with plenty of advertising and plenty of help—how you link up with a national service. Book gives complete details. Write today. Don't delay.

Built Sturdy as a Bridge

W & C Double Arm Shock Absorbers are built **with the same exacting care and consideration** for the widest margin of safety as the heavy girders of steel bridges.

W & C is invariably the choice of Ford owners who know most about shock absorbers. A prominent physician in a western city wrote us he had tried 5 different makes of shock absorbers on his Ford car without satisfaction. No sooner had he equipped with W & C Absorbers than he wrote us that at last he had discovered the **ultimate** shock absorber for Fords.

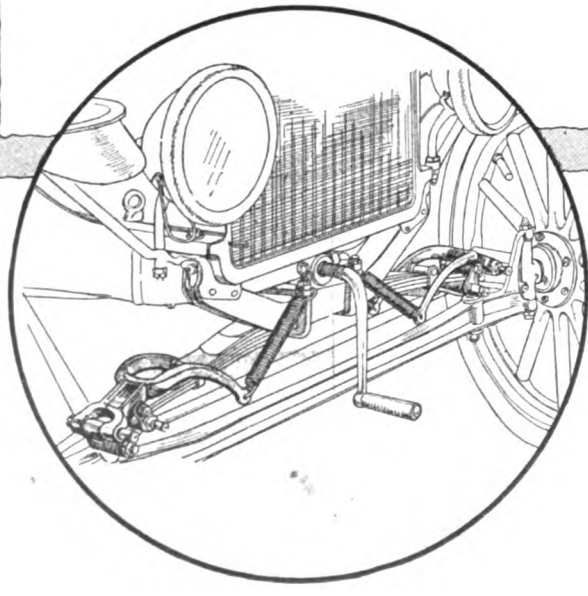
W & C

Original Double Arm

SHOCK ABSORBERS

FOR FORDS

Regardless of how many different makes of shock absorbers you have used, if you have never tried W & C you have never tried the best quality and easiest-riding shock absorber on the market.



Every part entering the construction of W & C Shock Absorbers is guaranteed. Double arms, malleable castings, milled surfaces, hard oilers, steel bolts, bronze bushings and special alloy springs are guaranteed. At $10 per set of four, the W & C leads its class. Ask your dealer for full particulars, or write us direct.

Dealers: Here is the best constructed, handsomest and fastest selling shock absorbers for Fords—without exception. Every set you sell convinces five new customers. Wire or write for proposition today.

The Auto Graphite Lubricator

$6

To Energetic Dealers and Distributors—

Here is your opportunity to build up a new, profitable, high-class trade, selling The Auto Graphite Lubricator. This device employs dry Motor Graphite as its lubricating medium and is a radical departure from former less efficient methods of lubricating motor cylinders. For years the value of dry graphite as a lubricant has been known throughout the engineering profession, but no method heretofore existed for its use in cylinder lubrication.

The Auto Graphite Lubricator is attached to the intake manifold and the graphite is automatically fed into the cylinders. Dry Graphite withstands a higher temperature than any other known lubricant and as a result it provides a permanent coating on cylinder walls, piston rings and valves, preventing carbon from adhering, building up compression and saving fuel.

The Auto Graphite Lubricator is not a fly-by-night device, but fills a definite need on the part of every motorist. It is being advertised to retail at $6, allowing you a substantial margin of profit. In addition we offer you a well-defined, business-building co-operative service. We want live representatives in every town—so get in touch with us today.

The Graphite Lubricator Co.
328 Diamond Street, Pittsburgh, Pa.

The Largest Gasoline Cars in the World are fired by Splitdorf Plugs

The 300-H. P., self-propelled, McKeen gasoline rail cars are used for most difficult service in Austraiia, Mexico and the United States. The high efficiency of these great gasoline cars is another testimonial for the

SPLITDORF SPARK PLUG

With the Green Hexagonal Jacket

Ninety per cent. of all engine troubles are due to faulty ignition. Seventy-five per cent. of them can be remedied at once and forever by the use of Splitdorf Plugs.

These plugs are practically indestructible, positively gas and oil tight. They are as nearly soot-proof as a plug can be. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motorcycle, motor truck, motor boat, aeroplane, tractor, and stationary gasoline motor. Write for Splitdorf Directory which tells which plug to use in *your* motor.

Splitdorf Plugs sell for one dollar everywhere. If you can't get them from your dealer, send to us for them.

HIGH CONDUCTIVITY BRUSHES

SPEER Composition-Metallic Brushes have compelled recognition of a carrying capacity far above the limits of carbons and graphites with the minimum of brush and commutator wear.

Our grades KKK and KKKK have a range between 6 and 40 volts and are capable of 110 and 150 amperes respectively per square inch.

Grade Metal B is composed almost wholly of metal and represents the highest attainment in the production of a composition-metallic brush. This brush stands alone in the sphere of electric starters and is capable of current densities as high as 200 amperes on continuous load and will take care of 100 per cent overloads on intermittent service.

These brushes are a necessary factor in obtaining the highest efficiency in generators and motors for high speeds and high current densities.

HORN and FAN Combined

Oakes Gets the Roads

No gears, motor, batteries or wires to give trouble. Gives warning signal by merely pushing the button at driver's seat. Increases efficiency of fan and motor. Keeps radiator cool. Never fails to sound. Long life. Is easily interchangeable with fan on any Ford in a minute's time. Most reliable and safest horn. Write for dealer's proposition.

Also Oakes Kranklock 50c. and $1.00

FOSTER OWL LIGHT

NOW ONLY $5

A Necessary Safeguard—Not a Novelty

Ordinances compelling the dimming of headlights make the OWL Light today an indispensable part of every up-to-date car's equipment.

No motorist who values the safety of his car or the safety of others can afford to be without an OWL Light at the new price—$5. One night smashup or accident averted—and the OWL Light has paid for itself.

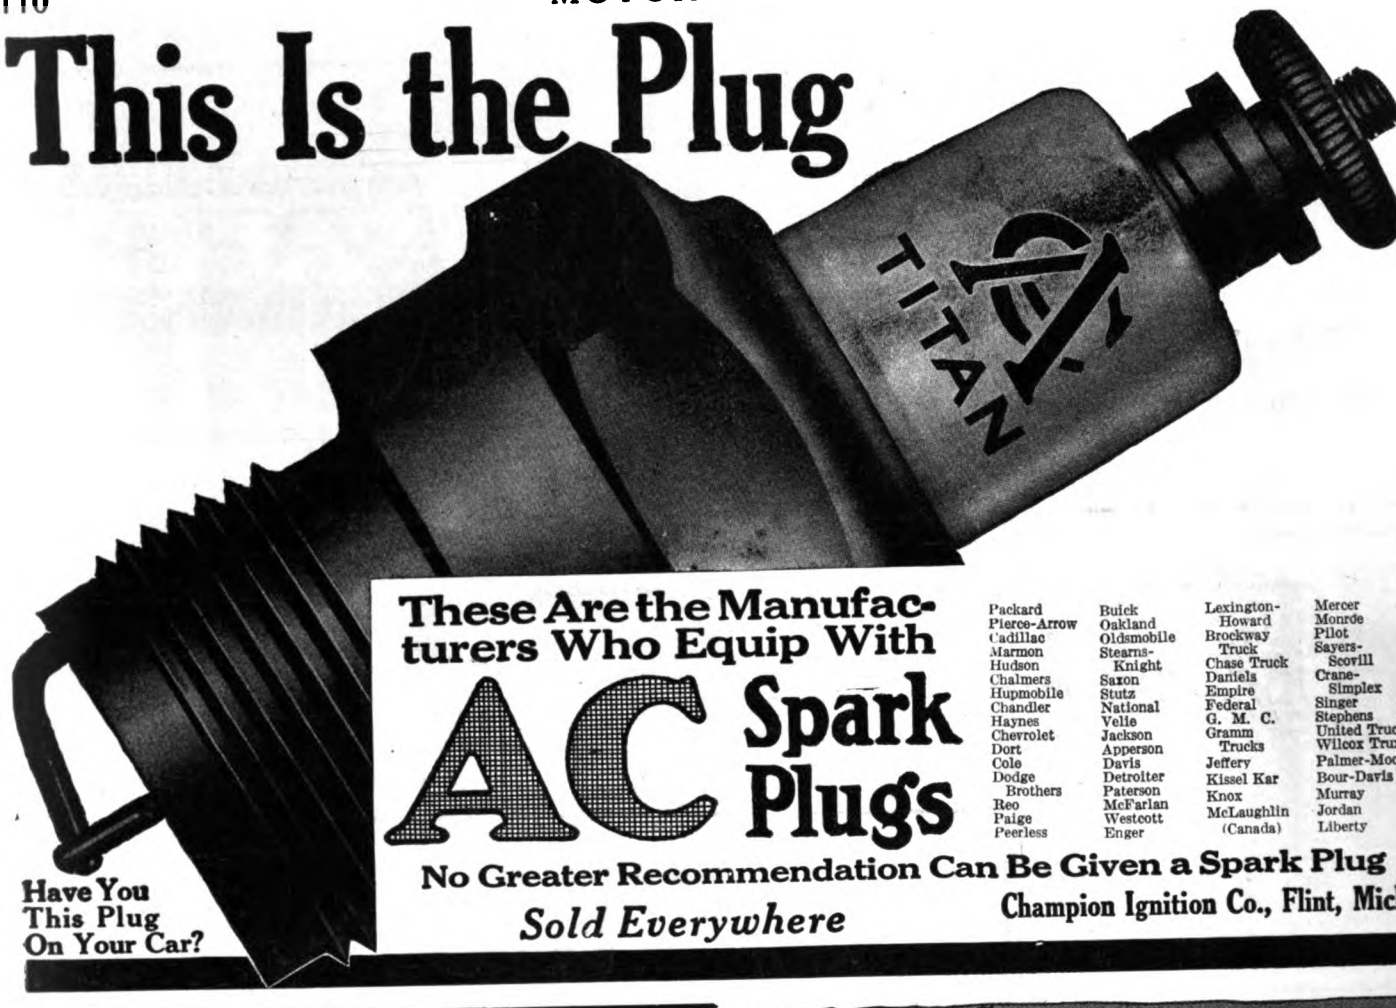
Consider that the new OWL Light at the new price is in many respects a more powerful, if not a more handsomely finished searchlight than the $7.50 model which last year set the quality standard in the searchlight field.

Constantly increasing demand, coupled with a resultant increase in production, make possible the reduction in price to $5.

Send for FREE Booklet illustrating many different uses for the OWL Light

The OWL Light adds to the appearance of any make of car. By means of its clean-cut, positive action swivel the OWL Light *stays* in any position you put it. *This patented FOSTER Universal Swivel cannot be obtained on any other searchlight.* Look for this exclusive feature—demand it. OWL Lights can be obtained from the highest-grade dealers everywhere.

In ordering, state make and model of car, also battery voltage.



DEALERS: The OWL Light is the pioneer quality searchlight. The demand for it at the new price has quadrupled. Wire or write for interesting proposition today.

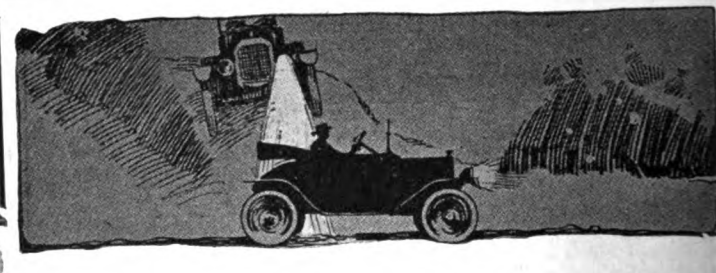
"Forbes" System

Patent Pending

A LONGER CHASSIS
A STRONGER CHASSIS
A BETTER CHASSIS



results from applying the "Forbes" system to Ford cars, lengthening the chassis for commercial purposes without reducing the simplicity and efficiency of the original construction.

The "Forbes" system is an addition to, not an alteration of the chassis. Each side of the Frame is trussed throughout its entire length, brackets for ends of truss rods clamp to frame, making unnecessary any additional holes in frame.

We use only the highest grade material obtainable and positively guarantee results.

We have a very interesting proposition for distributors. Send for it today.

WALTER J. FORBES 243 COLUMBUS AVE. BOSTON, MASS.

A Safe, Certain, Bright Light at Slow Speeds for FORDS

The VAN SICKLEN Concentrator assures such a light at slowest engine speed, when you need it most.

At 5 m. p. h., 10 m. p. h. or 15 m. p. h. with a VAN SICKLEN Concentrator you always have sufficient light for every driving purpose. $2.00—the price of the Concentrator—is a very small price to pay for so necessary a convenience.

$2

VAN SICKLEN AUTOMATIC **HEAD LIGHT CONCENTRATOR FOR FORD CARS**

The VAN SICKLEN Concentrator at all speeds below 15 m.p.h. automatically disconnects the right headlight, shunting double current into the left headlight. At 10 m.p.h., for instance, the left headlight burns as brightly as it ordinarily would at 20 m.p.h. Above 15 m.p.h. the regular Ford 2-lamp system automatically re-asserts itself.

Price, $2.00 complete, ready to put right on. Easily installed. Full instructions with each order. Installed under hood on dash. Guaranteed not to injure magneto or bulb. Neat, compact, handsome.

Obtainable from most good dealers or sent prepaid direct upon receipt of price.

Dealers: Some desirable territory still open. Over 600,000 prospects. 40,000 sold in last two months. Wire or write.

CEDAR AUTO PARTS CO.
490 Cedar Ave. - Cleveland, O.

From Obscurity to Dominance

From an obscure position a few years ago to dominance in the field of supplying repair and service parts for automobiles, is the history of the Puritan. We have purchased over 100 complete automobile companies and have in stock over two million repair and service parts.

We can supply practically any part for any car, in many cases at less than the actual cost of manufacture.

Below is a partial list of Orphan cars for which we render prompt and efficient service:

CARTERCAR WARREN ABBOTT KRIT MICHIGAN SPEEDWELL

Anhut	Elmore	Queen
Barnes	F. A. L. Car	Rainier
Benham	Grabowsky	Reliable-Dayton
Century	Havers	Scripps-Booth
Crescent	Keeton	Cycle

KRIT

Special Offer Number Two

Perfected Noiseless Timing Gear

If you own one of the Krit models in which noise has developed in the timing gear, now is the time to remedy it at a surprisingly low price.

We will supply you with a correctly designed timing outfit including a main timing gear built much wider, together with a perfected cam gear and drive gear, which will absolutely eliminate noise from the front end of your motor.

You can easily install this noiseless timing gear outfit yourself in a few moments' time. Simply remove the front plate from the timing gear case.

The price is so low that you can easily afford to make this big improvement in your car immediately. Price complete

$7.20

Order this or any other repair part you need direct from the main office. This is important.

Krit Motor Car Company
DETROIT, MICHIGAN

IMPERIAL OWNERS

The Imperial Automobile Parts Company have now brought their service organization to a point where we can positively promise deliveries and shipments on all repair parts orders within twenty-four hours from the time of receipt, except in very rare cases where a complicated order is received.

Please remember to address all of your communications to the main office.

Long Distant Telephone, 1027 Circle

MICHIGAN

Axle Shafts at a Special Price

Many Michigan owners will be interested in knowing that they can now replace their old axle shaft and flange assembly at a very reasonable figure.

One of the few weak spots developed in the Michigan car was the axle shaft.

It proved too light to keep pace with the extra strength found in the other parts of the car.

This assembly which we are furnishing is heavy enough and strong enough to stand up under every possible condition. In fact, it is guaranteed against defects and breakage for one year. And we will make replacements without charge or without question.

With the ever rising cost of material this special price can only be guaranteed for immediate delivery.

$7.50 for a single shaft or for a pair

$15.00

Michigan owners will please bear in mind that they should order all repair parts direct from the main office.

MICHIGAN MOTOR CAR PARTS COMPANY
DETROIT, MICHIGAN

MOTOR BARGAINS

Don't try to buy parts for that old motor. We can sell you one to replace at much less money than you would pay for the parts to put it in running condition.

Used motors thoroughly overhauled put in perfect condition by the manufacturer as follows:

35 H.P. with carb. and base for mag	$ 95.00
50 H.P. with carb. and base for mag	95.00
85 H.P., new, with carburetor and base for magneto	120.00
80 H.P., new, without carburetor and base for magneto	115.00
35 H.P., new, with U. S. starting and lighting outfit, carburetor and Connecticut distributor	180.00

RADIATORS

We manufacture **genuine square tube Honeycomb radiators.** This type we guarantee will give more cooling surface than any radiator made. Prices on application.

Write for advance spring catalogue on carburetors, horns, tops, bearings, steering gears, magnetos, coils, and other parts and accessories.

MOTOR EQUIPMENT COMPANY
1438 Michigan Ave., Chicago, Ill.

KRIT OWNERS

We furnish quick service on all engine, clutch, transmission, differential, front and rear axle, steering gear, wheels, steering knuckles and cones, fenders, frames, and body parts, from original Krit Stock. For all models from 1909-1915 inclusive.

MOTOR CORPORATION 1309 Race St., Philadelphia, Pa.

STOCKED BY ALL JOBBERS

When you bring in a wrecked car you need this Truck. In a moment you raise the car with this lever, then strap the Tongue in place, and away you go. Hundreds of garages are now equipped and the way they bring in their customers is a great surprise. One truck for front or rear. Let us send you our literature. You need it.

HOLMES Wrecking Truck

Pat. Nov. 10, 1914

ROBERT HOLMES & BROS., Danville, Illinois

Stop the Spring Breakage

It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING." Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

Studebaker

Opportunities

"I've got a dandy" —says California

IT'S the kind of an opportunity that means a lifetime of success for the man who wins it, and will make intelligent use of the tools that Studebaker will put into his hands to build up a permanent business.

There it is right on Frisco Bay, about 10 miles from the Exposition city, with a population, according to the latest census figures, exceeding 52,000. Foundry and machine shops furnish employment for the majority of workers, while the production of soaps, linseed oil, starch and fertilizers help to rank the city as fifth in industrial importance in the state. Water and rail transportation facilities are excellent — no less than 3 railroads passing through the city.

Before the month is out this opportunity will be awarded. Perhaps it will be you. At any rate write for the facts and see.

What 1,000 Cars a Day Make Possible

This latest Overland development again emphasizes the enormous economy of enormous production.

No one has ever before made 1,000 a day of cars of this size and class—nor half that many.

1,000 cars a day enable us to use materials of a much higher quality and not only permit but actually enforce an accuracy of workmanship impossible with a smaller production of cars.

1,000 cars a day make possible better, larger, much more comfortable cars than have ever before been possible at anywhere near the price.

This newest Overland is the largest Four ever offered for so low a price.

Note the longer wheelbase—112 inches.

The famous Overland enbloc 35 horsepower motor is continued—but perfected even more.

Shock absorbing cantilever type rear springs are a big improvement.

The gasoline tank placed in the rear is another improvement. The vacuum system insuring a steady, even gasoline flow at all times is still another improvement.

The complete Auto-Lite starting and lighting equipment is furnished. Electric control switches are on the steering column—right within reach.

The artistically designed streamline body with one piece cowl makes this car one of America's most attractive models.

Yet the price of this, our greatest four cylinder value, is less than any car of its size ever sold before.

The New Four

The tractor exhibit at Dallas was housed in a long street of tents which

Introducing

Mr. Tractor Dealer

THE motor car dealer in the Great West is becoming the tractor dealer. As MOTOR WORLD *has for a long time pointed out he is the logical avenue for distributing the tractor, and now* MOTOR WORLD'S *special representative at the tractor demonstrations finds that the car dealer and garageman are already entering the tractor field.*

By Stanley P. McMinn

Motor World staff correspondent with the Tractor Circuit

DALLAS, TEX., July 20—Motor car dealers and distributers, as predicted long ago in Motor World, are taking an intense interest in the farm tractor. At the First National Tractor Demonstration here this week, the motor car men are present in great numbers.

Not only are they displaying their interest by their presence, but they are entering into the business itself. Some of them have taken distributing agencies for entire States. In the minds of the dealers themselves there seems little doubt as to who will be the farm tractor merchandiser of the future.

Farmers by Thousands

Farmers are here by thousands and they watch closely while the vapor-eating horses chug their way over the thousand-acre farm that has been set aside for this great Southwestern event. The dealers watch the tractors, too—but they also watch these thousands of farmers.

The great throng of land tillers is one of the most impressive factors in the situation. Each farmer present means an interested man, a possible purchaser of a tractor. And to the dealer in cars the word "possible purchaser" means nothing except sales—and profits.

And while some of the tractor manufacturers seem plainly uneasy as to which way to jump in this matter of distribution—as between car dealer or implement man—it seems certain that when service is considered the manufacturer must of necessity look to the garageman and dealer in cars.

Next Week

Motor World will carry a story on the Second National Farm Tractor Demonstration, at Hutchinson, Kan. A special staff representative, who has made a study of the tractor question, will analyze the conditions and problems that are revealed at this event. The subject will be

Tractor Service

Also there seems no question regarding the method that will be adopted in the distribution of tractors. Every manufacturer with whom I have talked has made plain that he will stick out for a straight automobile proposition, which means, of course, a cash proposition. Some manufacturers will make contracts with distributers on a basis of 25 per cent discount, expecting the distributer to make a deposit on the contract, another deposit on the order, and accept his tractors with a sight draft attached to the bill of lading.

The manner in which the distributer will operate is, perhaps, not quite so settled. One manufacturer will insist that his distributers be fully equipped to give every kind of service that the user may require. Another will have his distributers do business with dealers on a 15 per cent commission where the dealer is equipped to give service and on 10 per cent where the dealer gives no service—and service is where the automobile man excels.

Demand Business Methods

Distributers are frankly admitting that they are not particularly interested in the manner in which the dealer handles his business so long as it is run on a business basis. That is to say, though they naturally prefer that the dealer do a cash business, they have no objection to the dealer taking a down payment for one-third or one-half the price of the tractor and notes for the balance. But the distributers do not expect to extend any assistance to the dealers in the handling of such paper. This is strictly up to the dealer, who is expected to make suitable arrangements with his local banker, or, if he is able, to carry the paper himself to maturity.

Digitized by Google

Looked for all the world like a state fair avenue. Note the absence of coats

During the week a large number of contracts have been signed, and though few manufacturers care to make public the names of new dealers and distributers, they have no hesitancy in saying that wherever it is possible *they invariably prefer to do business with the motor car dealer or the garageman.*

An illuminating case in point is that of the Frawley Motor Car Co., Reo distributer in Texas. The Denning company has signed up with the Frawley company for the whole State of Texas and also Oklahoma. The Frawley company immediately turned around and signed up with the Stapleton Motor Sales Co., Oklahoma City, Okla., for the State of Oklahoma. And the Frawley company has let it be understood that in every case where it is possible it will contract with its own Reo sub-dealers to handle the tractors. The Stapleton company will do the same. Those tractor makers who have not yet signed up are figuring on doing so this week.

Some of the Tractor Dealers

The Ford Tractor Sales Co. has closed these dealers: Elliott & Millsap, St. Louis, to handle half of Missouri and half of Illinois; Herron & Cullum, Farmersville, Tex., an automobile dealer; Walker Bros., Salesville, an implement dealer; Hunter & Sons, Cresson, and Ward & Son, Detroit, Tex. The makers of the Waterloo Boy tractor have closed eighteen contracts and many of these are with motor car men. The Standard-Detroit Tractor Co. is ready to close with an implement dealer for the State. The Parrett Tractor Co. has a deal on and the Moline Plow Co. already has closed a number of dealers.

The accessory exhibit is one of the most interesting tents on the grounds. And, incidentally, in the accessory end of the business is one of the most important reasons why the motor car man should be the tractor man.

That there is a market, and a big one, for accessories, there can be no doubt, for, from the engine back to the transmission gear, *there is not a great deal of difference between the tractor and the motor car.*

The tractor will use spark plugs, wire, petcocks, greases and oils, water hose, piston rings, and a hundred and one other things that some one eventually—nay, even right now—must be prepared to sell the tractor user.

Naturally, the tractor user is at present looking to his garageman for such supplies, and it is almost a foregone conclusion that he will continue to do so. At least it will require only very gentle pushing on the part of the accessory dealer to bring this business to himself. And it is going to be a tremendous business.

As an example in point, take piston rings. The McQuay-Norris Mfg. Co., which is exhibiting, has increased its business on tractor size piston rings 500 per cent up to June of this year. And none of this is factory business. Every bit of it is replacement business and in every case every ring is sold through a local dealer.

Every day during the demonstration the McQuay-Norris booth was thronged with really interested farmers. These farmers know what piston rings are. They know that the sand and the grit plays hob with piston rings and that if they are to get the maximum power out of their engines they must have efficient rings. They have had experience. So they come not as mere sightseers or curiosity seekers, but as actual potential buyers of this equipment.

And it is so with the other accessories that are on view. The farmers do not stand around and ask foolish questions about the fire extinguishers. No, indeed! They know how disastrous fires are. They dig right down into their jeans and pull out a roll of bills that would do credit to a Wall Street banker and peel off enough to pay for an extinguisher and take the device away with them.

Not much imagination is required to visualize the possibilities of this field for the sale of accessories. Who is going to get it, the implement dealer or the motor car man?

The answer is not difficult. The motor car man can have it if he wants it. And by the looks of this demonstration, he wants it.

How the Demonstrations are Conducted

Each Tractor Gets a Certain Area of Land and Is Required to Plow It All Without Stopping

By Stanley P. McMinn

DALLAS, July 20—What is undoubtedly the greatest aggregation of gasoline and kerosene farm tractors that has ever been brought together was assembled at the first National Tractor Demonstration, which was formally opened on Tuesday of this week and which will close on Friday night. Accurate figures on the attendance are not available, but estimates place the total at more than 75,000 persons.

Not all these visitors were farmers. A large percentage of them were motor car dealers, garagemen and repairshop men from all over the State of Texas. In fact, in a notable number of instances these men came from Oklahoma and from Arkansas for their first sight of a public demonstration of power farming engines and implements that most of them believe are to play such an important part in their lives in the very near future.

Digitized by Google

The farmers of Texas have flocked to the demonstration in numbers that have truly astounded those who expected a big attendance. It was predicted that the first demonstration on the circuit might perhaps equal in attention-compelling value the demonstration at Fremont, Neb., last year, which was the largest held in 1915. But that the attendance already has exceeded Fremont has been established. The traction lines have been hard put to it to accommodate the visitors and the hotels are crowded to overflowing.

The demonstrations this year are being run in an entirely different manner from those of years gone by. The competitive spirit is entirely lacking, and instead the whole affair is a demonstration in the purest sense of the word.

As an exhibition it is not unlike a great motor car show, except that in every instance all the tractors are operating on gasoline and kerosene. Each exhibitor has a big tent; few of them have provided sawdust. And in each tent there is from one tractor to a half dozen.

Start at 8 A. M.

Each day the machines are started running about 8 o'clock in the morning, and few of them are stopped, except occasionally to replenish fuel, until 6 at night. Even during the plowing demonstrations the exhibition machines are permitted to run, often without attendance of any kind.

In this respect it is a tribute to their designers that in spite of the terrific heat, which during the first part of the week was as high as 103 deg., none of the machines evidenced any inclination to steam. Motor cars of all makes were spouting steam all around them.

The public demonstration is started each day promptly at 1 p. m. At 12.15 all of the tractors leave their respective tents, and, towing the implements that will be demonstrated, make a great, noisy procession to the demonstration field, which is perhaps half a mile from the tents.

The demonstration is being held on what is known as the Caruth farm, a great tract of land giving about 1200 to 1500 acres on which to manipulate the tractors. Each tractor manufacturer has allotted to him each day a strip of land, the size of the strip being proportioned by the size of the tractor to be demonstrated and the number of plow bottoms he will pull.

Start on Signal

Every tractor operator must start his machine at a given signal and continue to plow until all his land has been finished. This, of course, promotes some friendly rivalry.

With regard to the fuel that is used: No restriction is placed on the kind. A maker may use gasoline, kerosene or distillate, though up to to-day only one maker has been doing any plowing with the latter. But each maker must procure his fuel from a designated source, so that there may be no doubt of its gravity.

Most of the machines in use have been burning kerosene. On the first day, when there were some forty-four machines on the field at the same time, twenty-seven of them were operating on kerosene as against seventeen operating on gasoline.

The fuel problem does not appear to worry the farmer greatly in Texas. Gasoline is at present selling for 19 cents per gallon, but he can get kerosene from 7 to 10 cents. Even those manufacturers who have been plowing with gasoline, however, are preparing to plow on subsequent days with kerosene, and those that cannot now do so are perfecting kerosene-burning attachments.

The tractor demonstration field looks like a big fair ground with its chugging motors and its busy, coatless men. It was hot!

Following is a complete list of the various tractors that were plowing during the first day of the meet. In most cases these same manufacturers had other machines out the other days, the rules permitting a manufacturer to have only one machine of one size doing the same kind of work at once:

Waterloo Gasoline Engine Co., Waterloo, Ia.—24 hp. kerosene; drawing one 10-ft., 10-disk harrow with one 10-ft. grain drill.

Standard-Detroit Tractor Co., Detroit—10-20hp., gasoline, drawing one 4-gang Sanders disk plow.

Simplex Tractor Co., Minneapolis—10-20, gasoline, drawing one 4-gang La Crosse Plow.

Rock Island Plow Co., Rock Island—10-20, gasoline, drawing one 4-gang Sanders disk plow.

Peoria Tractor Co., Peoria—8-20, kerosene, drawing one 4-gang Sanders disk plow.

Parrett Tractor Co., Chicago—12-25, gasoline, drawing one 4-gang Sanders disk plow.

Nilson Farm Machinery Co., Minneapolis—24-35, gasoline, drawing one 4-gang La Crosse plow.

Moline Plow Co., Moline—6-12, gasoline, drawing two 14-in. moldboard and two disk plows.

Twin City Tractor Co., Dallas—15-30, kerosene, drawing 6-gang Sanders disk, 40-60, kerosene, drawing 18-gang Sanders disk; 15-30, sub-soiler, drawing 32 12-in. spades and 3-gang Sanders disk plow.

Bates Tractor Co., Lansing—13-30, kerosene, drawing 4-gang Sanders disk plow.

International Harvester Co., Chicago—15-30, Titan, kerosene, drawing 6-gang Sanders disk; 12-25, Mogul, kerosene, drawing 5-gang Sanders disk plow; 1020, Titan, kerosene, drawing 4-gang Sanders disk plow; 8-16, Mogul, kerosene, drawing 3-gang Sanders disk plow; 8-16, Mogul, kerosene, drawing an Osborne disk harrow with tandem attachment; 10-20, Titan, kerosene, drawing two Kentucky 10 x 7 grain drills; 12-25, Mogul, kerosene, drawing 3 Webber wagons.

Holt Mfg. Co., Peoria, Ill.—25-45, gasoline, drawing 12-gang Sanders disk plow.

Happy Farmer Co., Minneapolis—8-16, gasoline, drawing 3-gang Sanders disk plow.

Hart-Parr Co., Charles City, Ia.—15-30, kerosene, drawing 3-gang La Crosse disk plow; 18-35, kerosene, drawing 8-gang La Crosse disk plow; 30-60, kerosene, drawing 10-gang La Crosse disk plow.

Emerson-Brantingham Co., Rockford, Ill.—12-20, Model L, kerosene, drawing 4-gang disk plow; 12-20, Model Q, drawing 4-gang disk plow; Big Four, 20, distillate, drawing 7-gang disk plow.

Denning Tractor Co., Cedar Rapids, Ia.—10-18, kerosene, drawing 3-gang Sanders disk plow; 10-18, kerosene, drawing John Deere pulverizer and harrow.

Sandusky Tractor Co., Dallas—15-35, kerosene, drawing 6-gang La Crosse disk plow.

J. I. Case T. M. Co., Racine—9-18, gasoline, drawing 3-gang Grand Detour disk plow; 10-20, kerosene, drawing 4-gang disk plow; 1225, kerosene, drawing 6-gang disk plow; 20-40, kerosene, drawing 10-gang disk plow.

Wallis Tractor Co., Racine—26-44, gasoline, drawing 8-gang Case disk plow.

Bull Tractor Co., Minneapolis—7-20, gasoline, drawing 3-gang Sanders disk plow.

Avery Co., Peoria—510, kerosene, drawing 2-gang Grand Detour disk plow; 8-16, kerosene, drawing 4-gang John Deere disk plow; 12-25, kerosene, drawing 6-gang Rock Island plow; 18-36, kerosene, drawing 8-gang Rock Island disk plow; 25-50, kerosene, drawing 12-gang Rock Island plow.

Avery & Sons, B. F., Louisville—10-20, gasoline, drawing 2-gang Avery disk plow.

Allis-Chalmers Mfg. Co., Milwaukee—10-18, gasoline, drawing 3-gang John Deere plow.

Advance Rumely Thresher Co., La Porte—30-60, kerosene, drawing 14-gang Sanders disk plow; 15-30, kerosene, drawing 8-gang Sanders disk plow; 12-24, gasoline, drawing 3-gang moldboard plow.

Ford Tractor Sales Co., Minneapolis—8-16, gasoline, drawing 3-gang Sanders disk plow.

Standard Tractor Co.—22-24, gasoline, drawing 6-gang P. & O. disk plow.

Western Tractor Co., Dallas—8-15, gasoline, drawing 3-gang P. & O. disk plow.

The following accessory exhibitors were not included in the list of entries that appeared last week in Motor World. They are late entrants:

Avisco Oil Co.; L. Sonneborne & Sons; McQuay-Norris Mfg. Co.; Pyrene Mfg. Co. of Texas; Gulf Refining Co.; Eisemann Magneto Co.; Hyatt Roller Bearing Co.; Domestic Engineering Co.; Sumter Electric Co.; Kingston Electric Co.; Byrne-Kingston Co.

Why Texas Needs the Tractor

The Gas Horse Can Work Wonderful Benefits to the Lone Star Farmer

By Stanley P. McMinn

IT is easy to figure out why Texas needs the farm tractor—nay, why Texas must have the farm tractor if her agricultural development is to progress, or even to keep pace with the demand now being made for Texas products.

The farm tractor has made Texas what she is to-day. Here are great areas, almost totally devoid of any impediment to power farming, and already the tractor has made a showing that is making farmers in other States sit up and take notice. Great credit is due those Texas farmers who have pioneered this land with animal power. But the pioneering has been done at a tremendous sacrifice. What with climatic conditions and insect life, which during the summer months is a serious trouble, the success that has been won by those farmers who are really successful has been won only at the cost of horseflesh.

Texas Now Has 8300 Tractors

And it is right here that the tractor will come into its own. During the past year some 1700 farm tractors were put in the Texas territory. During the past three seasons, some 3300 tractors were put in. And for 1916, conservative estimates place the total sales at at least 5000 machines.

This will give a total of only 8300 machines, distributed among 417,770 farms, according to the 1910 census, which is the latest figure available. But, of these farms, 123,698 are of less than 90 acres. In other words, there are 294,072 farms in Texas large enough to be worked efficiently with the farm tractor. Dividing this total by 8300 gives us only one tractor to about every 35½ farms.

As nearly as can be ascertained, 52 per cent of these farms are occupied by tenants, though this figure is being reduced quite rapidly.

Unexcelled Power Possibilities

With exceedingly few exceptions, Texas land is the finest land in the United States to farm with power; this because of the great areas where there is neither stick nor stone to hamper plowing or cultivation or bother the farmer. Take the great Panhandle country, which is known as the Llano Estacado, or Staked Plain, for example. Here is undoubtedly one of the biggest unobstructed areas of farm land in the country. Wheat and alfalfa are grown here, and as an indication of the size of the tract it may be pointed out that fully 60 per cent of the Texas crop of 17,000,000 bushels of wheat comes off this land.

Again, there is a great belt of land stretching from Brownsville to Orange, a distance of upward of 600 miles and 120 miles in width. This plain is absolutely devoid of any obstruction to power farming. This is probably the richest land in Texas. It embraces the three principal varieties of soil—Victoria clay, Victoria loam and Victoria silt. On it are grown corn, rice, melons and cotton.

The Vastness of the State

Few persons realize or can imagine the true vastness of the State. From Point Isabel on the Gulf Coast to Texline is approximately 1100 miles—200 miles less than the distance between New York and Chicago. The man in El Paso is nearer to Los Angeles, Cal., than he is to the eastern line of his own State. And it is farther from Texarkana to El Paso than it is from Texarkana to Chicago.

Truly, the Lone Star State is the garden spot of the world, for here we have every range of climate from tropical to extremely temperate. Texas soil will grow almost any crop. Is it any wonder then that the farm tractor is coming into its own here?

PROPER Farming the Big Need

If you talk with farmers from every corner of Texas, as I have done, they will tell you, almost without exception, that what Texas needs most is PROPER farming; they will tell you that almost without exception the ground is improperly tilled; they will tell you that the ground never will be properly tilled—and here I am leaving out of consideration those isolated cases where farmers have adopted what may be styled heroic methods and plowed properly without regard to sacrifice of animals—until it is tilled with power.

What Texas needs most is farm power. She has the land; her farmers are among the best in the world, in spite of the handicap of climate under which they work. But horseflesh cannot stand the strain.

In Central Texas there is a belt of land 175 miles wide and running clear to the Gulf that is probably the most fertile in the State. It will grow any crop from corn and oats and wheat to peanuts and cotton. *But the farmers are not more than scratching the surface.* This belt is known as "black land" and is the hardest there is to work.

The Farmer Wants To Improve

The Texas farmer knows that he is not farming his land in the way it should be farmed. He realizes fully the limitations imposed on his work stock by climatic conditions. He wants to break his land when it ought to be broken and to break it as deeply as it should be broken.

But he cannot do it with horses or mules. The farm tractor is his only salvation. For cotton, the Texas farmer uses what is styled a "middle buster," or a lister. This is a sort of double plow that throws the earth both ways. But he can plow with this only about 3½ to 4 in. deep. And for other crops there are few farmers who are plowing more than 6 or 7 in. deep. Agricultural experts will tell you that *they ought to plow* 11 *or* 12. *in. deep.* ONLY THE TRACTOR WILL DO THIS.

Two Crops a Year

Again, on most Texas land two crops can be raised without any difficulty—provided the land can be broken at the proper time. If the land is broken in the spring, it does not soak up sufficient moisture to raise a good crop. If the land is broken in the fall, it still does not soak up enough moisture unless the plows sink in deep. The way they get two crops off the land is this: They first sow wheat, which is harvested early in June. Then the land must be plowed, disked and harrowed, and either corn or peanuts can be put in. Then when these are harvested, the land should be deep plowed again and left for the winter rains to soak in and break up the soil for spring planting.

This virtually means that the heaviest plowing must be done during the hottest weather. But the work stock cannot stand the strain. The farmer must fall back on the tractor.

The farmer wants the tractor, all right. For 20 years some Texas farmers have been using steam tractors, and the gasoline tractor has been in use for 6 years. Everywhere the tractor is used the farm-

(*Continued on page* 37)

What Tractor Will Do

1—*It will permit the soil to be broken deeper.*
2—*It will permit the soil to be broken at exactly the proper time.*
3—*It will furnish a means of activity irrespective of climatic conditions and insect annoyances.*
4—*It will facilitate harvesting, which is impossible without the speed the tractor gives, and thus promote the practice of growing two crops a year.*
5—*It will increase the quality and the quantity of the yield.*
6—*It will give the farmer confidence and thus promote industry.*

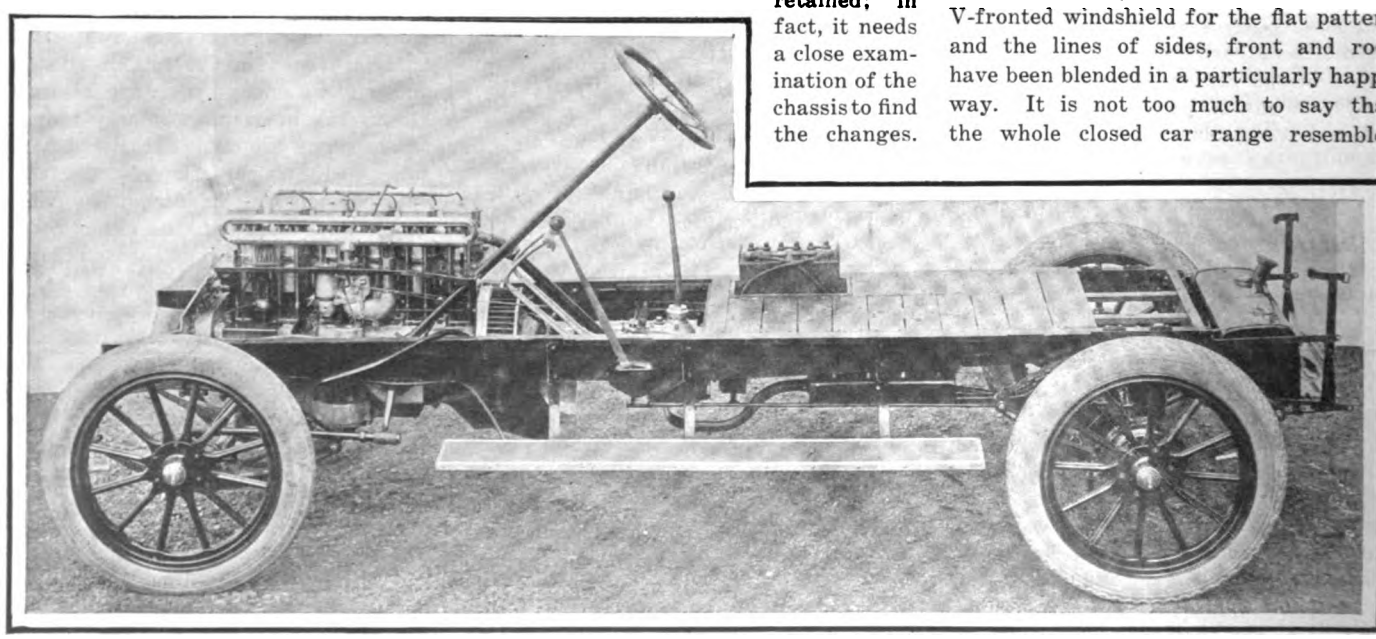
New Franklin Better Looking—More Economical

Weight Cut 400 Lbs.—Motor Smaller—Car More Comfortable and Easier to Control

THE announcement of the new series Franklin is of unusual interest. It is 400 lb. lighter than its predecessor; it has a completely redesigned body, with unbroken lines from front to rear; it has a smaller but more powerful motor, and the new car is more comfortable, easier to control and easier riding than the previous model, good as the latter was.

The new Franklin has been generally accepted as the lightest comfortable touring of its capacity in the world, this low weight being obtained by scientific design, careful choice of material and elimination of every superfluous pound of metal. That as much as 400 lb. could be trimmed off it without depreciating performance or comfort was a surprise even to the Franklin engineers, but this has been done and both performance and comfort are improved thereby. This large amount of weight has been saved without making the car smaller. The new engine is lighter, being a trifle smaller in the bore; the gearset has had several pounds cut out, and both axles are lighter. All the petty details have been examined with a microscope, so to speak, and ounces cut here and there, more forgings and fewer castings are used, and aluminum takes a bigger part than ever.

The general lines of the chassis remain almost unchanged. The air-cooled engine, now 3¼ x 4 in., is externally similar to the old 3⅝ x 4 in.; the wood frame, full elliptic springs front and rear, and the amidships gearset are all retained; in fact, it needs a close examination of the chassis to find the changes.



The new body is an entirely new design with unbroken lines from front to rear

SPECIFICATIONS OF THE 1917 FRANKLIN SIX

Price—	
Touring	$1,850
Roadster	$1,800-$1,850
Limousine	$3,000
Brougham	$2,700
Sedan	$2,750
Cabriolet	$2,650
Color	Brewster Green
Make of Motor	Own
Number of cylinder	Six
Shape	I-head
How Cast	Singly
Bore	3¼
Stroke	4
S. A. E. horsepower	25.3
Ignition	Atwater Kent
Carbureter	Own
Engine Starter and Lighting System	Dyneto
Clutch	Disk
Gearset	three-speed
Wheelbase	115 in.
Tires	32
Type rear axle	Semi-floating

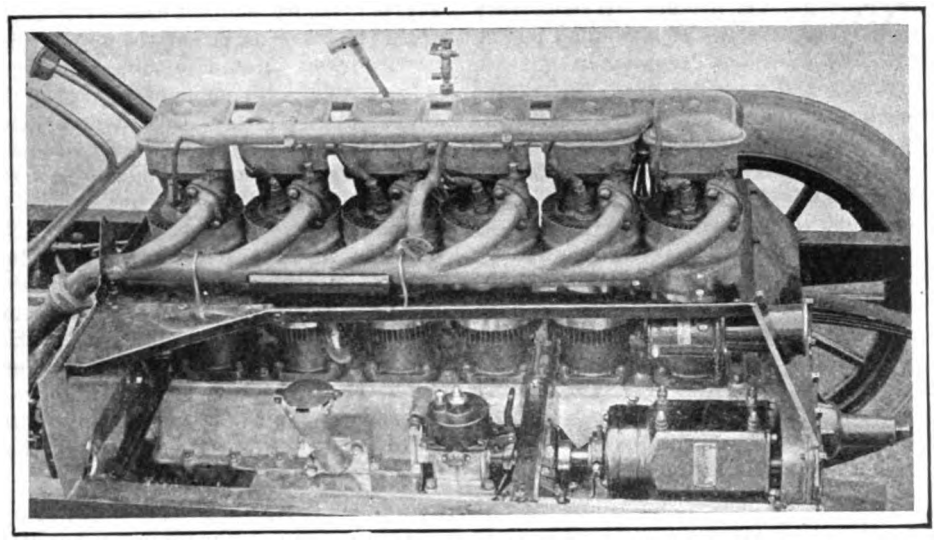
Externally the finished car has been improved in appearance very greatly. The sloping hood has had rounded corners substituted for the square ones, and it is wider, making a flush joint with the cowl all the way around. The bodies have also been rendered smoother and every one in the whole range of types is as good-looking as another, the closed styles being, perhaps, especially distinctive. Also a new design of four-passenger roadster, which is not a clover-leaf, is likely to prove popular, as it has all the close-coupled effect and is much easier to enter. There are divided front seats and a back seat in just the same relationship as in a clover-leaf, but the doors are almost double as wide as usual. Thus opening the door allows entrance to be made to either front or rear seat. Still easier entrance to the rear seat can be had if desired by tipping the front seats, both of which are hinged so as to fold forward.

The sedan and brougham bodies have been altered by the substitution of a V-fronted windshield for the flat pattern and the lines of sides, front and roof have been blended in a particularly happy way. It is not too much to say that the whole closed car range resembles

The characteristic motor and wood frame, as well as other Franklin features are retained. The emergency brake is now on the left

Digitized by Google

the best class of custom bodywork. Great care is taken with the detail finish of all the bodies and one noticeable point is the solid way the doors close; in fact, the bodies all give the impression of weight and massiveness; it needs an examination of the unfinished shell to realize how very opposed to the truth this impression is actually.



Eight Different Cars

The principal car of the Franklin series is, of course, the five-passenger touring, which sells for $1,850. The four-passenger roadster costs $1,850 also, and there is a two-passenger roadster at $1,800, this car having a very big boot under the rear deck which would hold enough baggage for a 3-months tour. The sedan costs $2,750 and the brougham, which is merely a smaller sedan, $2,700. In addition to these cars there is a limousine for $3,000 and a very smart town car at the same price, and the eighth model is a cabriolet, selling at $2,650.

Franklin expects to make 10,000 cars in the next 12 months, of which about 7000 will be the touring car and 1400 roadsters for two or four. Of the sedan 1000 will be made, and the other closed types will complete the schedule. It is thought probable, however, that the demand for the four-passenger roadster will exceed this estimate, judging by the orders now being placed by dealers.

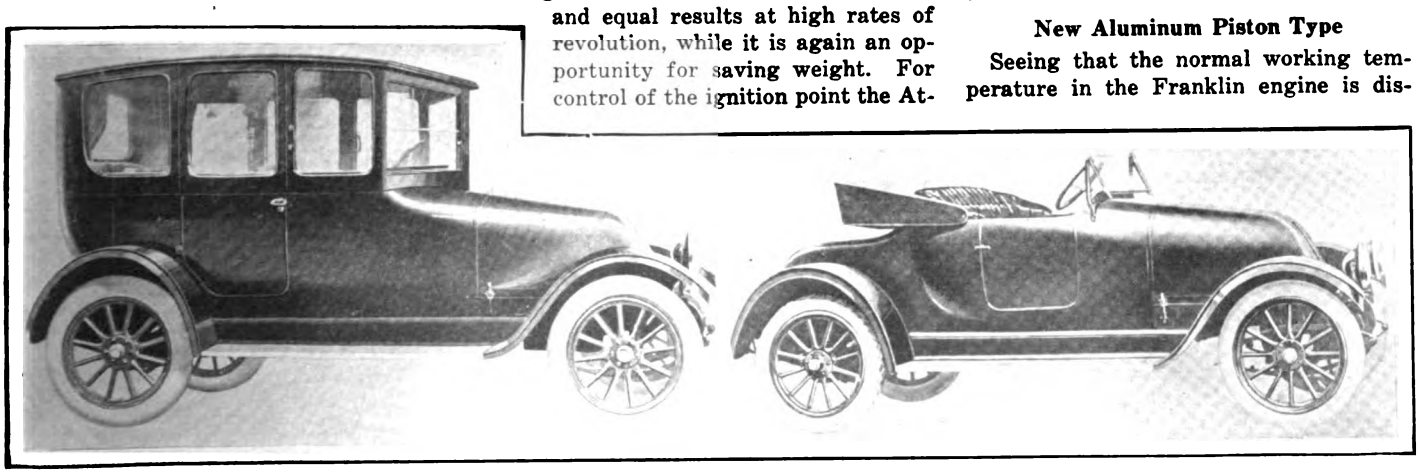
Engine Not High-Speed Type

Although it produces its maximum of 31 hp. at a higher speed than the maximum of the older motor, the new engine is hardly a high-speed design, the peak of the power curve coming at about 1700 r.p.m. The maximum torque is 112 lb. and occurs at a little over 1000 r.p.m. It is a small engine, the 3¼ x 4-in. dimensions for the six cylinders making the total piston displacement 199 cu. in., and the formula horsepower is 25.3. On high the gearing is 3.9 to 1, the wheels being 32 in., which means 1950 revolutions of the engine per mile, or a total displacement of just under 390,000 cu. in. per mile. Since the weight is under 2300 lb., this gives a large ability, which

Motor showing cooling arrangements, motor-generator and tire pump

is evidenced on the road by rapid acceleration on high. The maximum speed of the car is 50 m.p.h. or over. That is to say, 50 m.p.h. is reached easily and more under favorable conditions.

The engine is 150 lb. lighter than the old power plant, but apart from the reduction in bore it is little changed. The air-cooling system is exactly as before save that the flywheel, with its multiple blade blower construction, is now an iron casting instead of being built up. Vertical steel fins are made integral with the individual cylinder castings by having the iron poured around the strips of steel and very light aluminum jackets guide the air draught downward from the heads of the cylinders.



The overhead valve mechanism has been lightened in detail, so that there is less inertia in the operating parts, and the point of contact with the rocker on the valve is so shaped that the action of the rocker cannot put any side stress on the valve stem, so causing wear on the guide.

The most marked change in the engine is the substitution of Atwater Kent ignition for the magneto. The Franklin engineers consider that the battery system gives better results at low speeds and equal results at high rates of revolution, while it is again an opportunity for saving weight. For control of the ignition point the Atwater Kent automatic advance is used, there being no spark lever on the steering wheel. Lighting and starting are performed by a Dyneto single unit machine, driven by silent chain, and located at the front right end of the engine; it is very accessible, and the wiring is also simplified to the last degree. All the important junctions, fuses, etc., are carried on a panel in the cowl board, and the spare bulbs for the lamps are also held in sockets on the same panel, so that they are perfectly protected and always accessible in a hurry.

The carbureter is the standard Franklin design, with which the various economy runs have been made. It has been raised considerably and now has a Stewart vacuum feed from a rear tank. Incidentally, it is stated by the manufacturers that the new model with its reduced weight will be able easily to break all previous economy records and that the average man using the car in the average way, without taking any special care for economy, ought to get well over 20 miles per gallon. This, of course, being a minimum and not a maximum. In other words, the economy is improved in the same proportion as the weight is decreased.

New Aluminum Piston Type

Seeing that the normal working temperature in the Franklin engine is dis-

Left—The feature of the sedan is the pointed front glass. Right—This runabout model seats two; there is also a four-passenger

Digitized by Google

tinctly high, the makers were not very ready to believe in the aluminum piston, but they have now adopted it as stock practice and consider that the better mean effective pressure of the new engine is largely due to the improved piston cooling obtained. At first there was a little trouble from wear on the skirt; it was difficult to get a close enough fit to insure absence of slap without abrasion. The trouble was overcome completely by turning a shallow, square groove of screw thread form from the bottom of the skirt to just beneath the lower ring. This holds oil securely and allows a smalltr clearance than is possible with a plain piston.

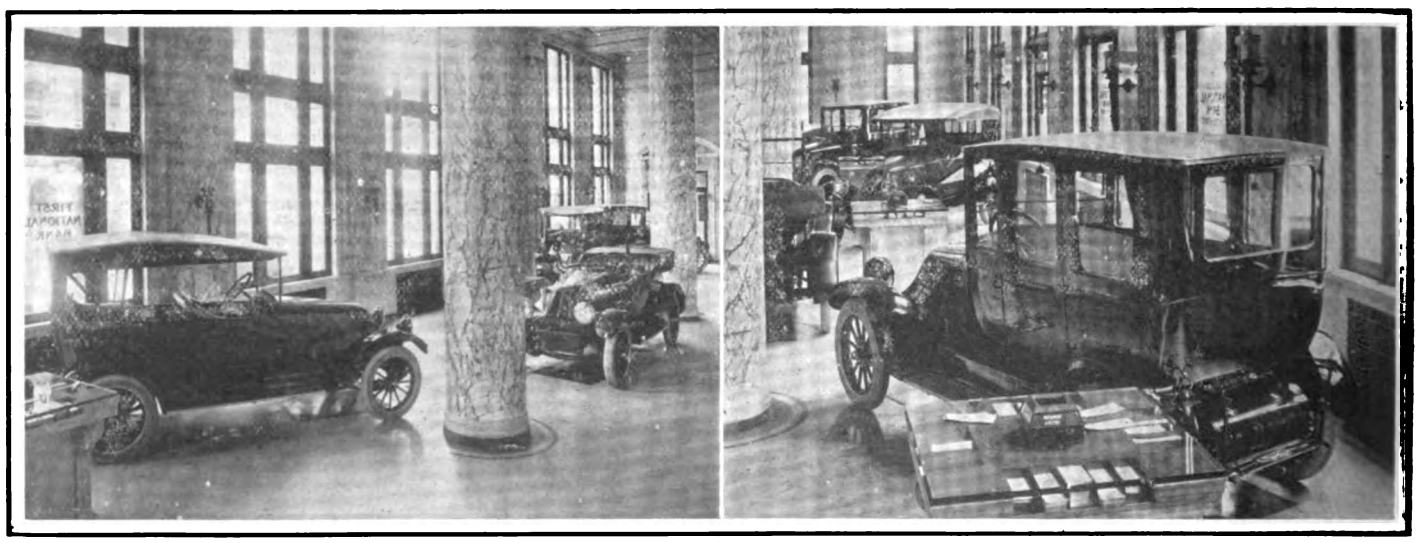
There is an interesting lubrication system employed, individual oil supply being sent to every point. The oil pump, which is a conventional gear pattern, is mounted on a large plate and the delivery from the pump is distributed to a number of oil leads by means of passages in the plate. The plate is die-cast aluminum, with distributing grooves, and these grooves are made into closed passages by putting a piece of thin sheet copper over the face. This gives direct pressure feed to all bearings on the crankshaft and to various other points. Bearings and details on the under part of the engine are now more accessible, because the boot or under cover has been abandoned, the sides of the crankcase being now joined to the frame sills by sheet aluminum guards, leaving the bottom of the crankcase exposed.

Gear Shaft Location Changed

The previous Franklin gearset appeared remarkably light, but the new design is still lighter. Instead of being side by side, the shafts are one above the other, and the square shaft has been replaced by a splined one. Three speeds are provided and it is noteworthy that the second gear is very quiet in operation, probably owing to the stiffness caused by the short shafts and very compact case. The gearshift lever is housed on the top of the case, working in an adjustable ball joint; it is a tube with solid ends brazed in, thus being very light though stiff The emergency brake lever has been removed from its central position and is now on the frame at the driver's left, where it lies well forward and out of the way. It does not obstruct the entrance from the driver's side, and its absence from the middle position makes more foot room. There is no intermediate linkage for this brake, as the pull rod goes direct from the lever to the rear axle. The clutch is unchanged, and the foot brake is still on the back of the gearbox, operating with great power and smoothness.

Unsprung Weight Much Smaller

Despite the smaller weight, and also despite the fact that the springs are shorter, the new car rides much better than the last series. A really rough railroad crossing can be taken at 20 m.p.h. without shaking a passenger off the seat. The explanation of this is in the axles, whence a large amount of weight has been taken. From the rear axle 25 per cent of its original weight has been removed, and from the front axle 30 per cent. This is due to the use of finer forgings and the elimination of some redundant parts.



Another effect of the small weight is to make the car so easy to steer that the first impression on taking the wheel is that something has come undone. The effort required to move the wheel is so slight that a child could steer the car easily and a woman could drive all day without any arm tiring. There are no cars made anywhere in the world that steer more easily and extremely few that are as light to handle. The facility of control extends to the clutch, brakes and gearshift, all of which move without effort.

Dealers at Franklin Factory See New Models in Marble Display Room

SYRACUSE, N. Y., July 22—In many factories there is little opportunity for displaying a range of new cars to advantage, and it is unquestionable that a well-arranged show is of assistance to the visitors at a dealers' convention. Realizing this, the H. H. Franklin Co. has inaugurated something new by taking the floor of the spacious National Bank, where there is floor area enough to display a dozen cars in the surroundings of a splendid salesroom. The white marble pillars and the massive furniture of the bank make a splendid setting for a range of finely-finished cars.

From July 17 to to-day, about 200 dealers from all parts of the country have seen this display of the finished product, and have also seen a show at the factory at least as original. In the office a big floor space was available, and this has been utilized to lay out every part of the car to the last detail. Along the walls are dozens of weighing machines, each loaded with some part which is a result of the Franklin scientific lightweight construction, and on the next scale, in each case, is the corresponding part from either an earlier Franklin model or from some other car of similar size. The visitors are asked to weigh the parts themselves and see where Franklin trims 50 lb. or 100 lb., as the case may be.

The company has found the dealers very pleased by the improved appearance and the better performance with a smaller engine.

Handsome surroundings of new Franklin models ready for inspection of dealers, both old and prospective

Brown Five-passenger and Delivery Bodies on Same Chassis

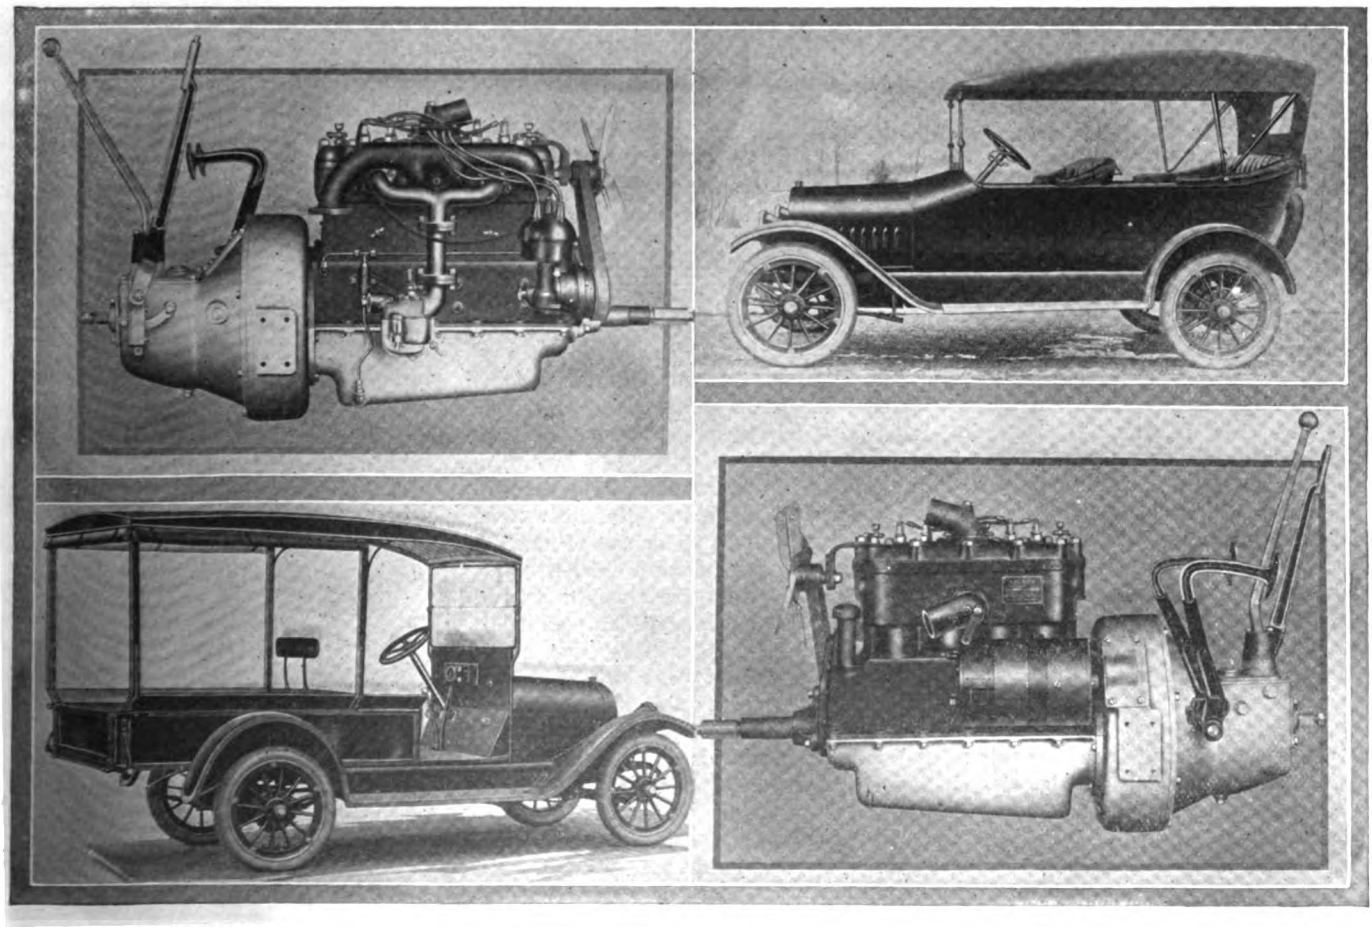
Four-cylinder—Standard Parts Used—Three Delivery Bodies—1,000 lbs. Capacity—Price $670 to $735

A LINE of passenger and business cars has just been brought out by the Brown Carriage Co., Cincinnati. This is an assembled product, incorporating parts made by specialists, among which may be mentioned the Le Roi engine, Walker-Weiss axles, Allis-Chalmers starting and lighting, Atwater Kent ignition, Kingston carbureter, U. S. L. storage battery, etc.

There is a five-passenger touring car at $735, a delivery car with 1000-lb. capacity at $675, a rear door delivery at the same price, and a general delivery open body at $670, including canopy.

The LeRoi power plant is a unit construction, incorporating motor, gearbox and clutch in a single housing. All four cylinders are cast in a block and are of L-head shape with a bore and stroke of 3⅛ x 4½.

Lubrication is by combined pressure and splash system, with the oil delivered at either end of the motor by an oil pump and with the bearings taken care of by splash. Ignition is by the Atwater Kent system, with automatic spark advance and in connection with the U. S. L. storage battery.



THE BROWN FOUR

Price—	
Touring	$735
Delivery	$670-$675
Make of motor	Le Roi
Number of cylinders	Four
Shape	L
How cast	Block
Bore	3⅛
Stroke	4½
S. A. E. horsepower	15.6
Magneto	Atwater Kent
Carbureter	Kingston
Motor-generator	Allis-Chalmers
Clutch	Disk
Gearset	3-speed
Wheelbase	105
Tires	30 x 3½
Wheels	Wood
Type rear axle	¾ floating
Equipment: Demountable rims and one-man top, etc.	

The Allis-Chalmers motor-generator is used. With this system the instrument becomes a generator when the motor is running at speeds sufficient to charge the battery and becomes a starting motor when the gasoline engine is stopped and the starting switch closed. The characteristics of the engine are such that under ordinary conditions the motor is cranked at more than 130 r.p.m.

A multiple-disk clutch is used, lined with Raybestos. It is provided with six coil springs, which insure perfect contact. A selective type gearbox has three speeds and transmits the drive to a three-quarter floating Walker-Weiss rear axle. This is geared 4.25 to 1 on direct. The gears are of nickel steel with chrome-nickel driveshafts carried on Hyatt high-duty roller bearings. The springs are of chrome steel with full-elliptic rears. The front springs are conventional semi-elliptic. The wheelbase is 105 in. and the tire size is 30 x 3½, with non-skids front and rear. Demountable rims are used and one extra is provided on the touring car. Both Batavia and U. S. rubber tires are used.

Full equipment is provided with the car, the top being a one-man mohair. The fenders are crowned and the running boards are covered with linoleum and are bound with aluminum.

Upper—Unit power plant. The engine is a Le Roi
Lower—Open express body selling for $670

Upper—The touring car seats five comfortably
Lower—Left side of power plant showing motor-generator

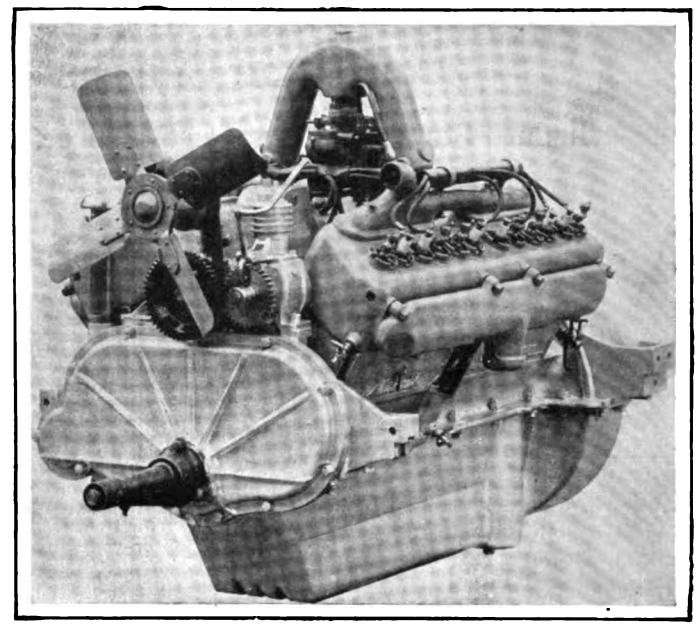
Better National Twelve at Higher Price

Seven-passenger Touring and Four-passenger Clover-leaf—Bodies Roomier—Chassis Unaltered

A NEW series of National Highway twelve-cylinder car is just going through production in the Indianapolis factory, and incorporates several changes over the model marketed last season. This is a companion car to the National Highway six, which is being continued.

Following the general trend, prices are higher this year on the twelve-cylinder model than last, the increase being $130 per car, making the price now $2,150. This includes extra seats, however, while last year they were sold at $30 extra.



A number of detail improvements have been made throughout the entire car. In the first place, the touring body has been increased in size and now, instead of being a six-passenger job, it has a full seven-passenger capacity. Although the improvements throughout are quite numerous, the same general chassis layout on the 128-in. wheelbase will be adhered to. Instead of an option of 34 x 4½ or 36 x 4½ tire, the regular equipment will be 34 x 4½, which was the choice of the majority of buyers during the last season.

Probably the most notable change on the new National Highway twelve is in the seven-passenger touring body design. Although the chassis is the same length, the new body is 3 in. longer. It has a center cowl and there is an aisle between the two front seats. In the tonneau under the center cowl are two locked package compartments. The front seats are larger in every dimension and there is also more room in the driver's compartment. The body is wider than in the former series, and there is more carrying capacity under each of the three seats. In addition, there is a tool compartment in the left front door, as on the former models.

The new Highway twelve cars are furnished with five different body styles. In addition to the seven-passenger touring car, there are a four-passenger touring car, a four-passenger roadster, a five-passenger all-weather sedan of the Springfield type and a three-passenger coupe. In the open models there is a new design of side curtains opening with the doors.

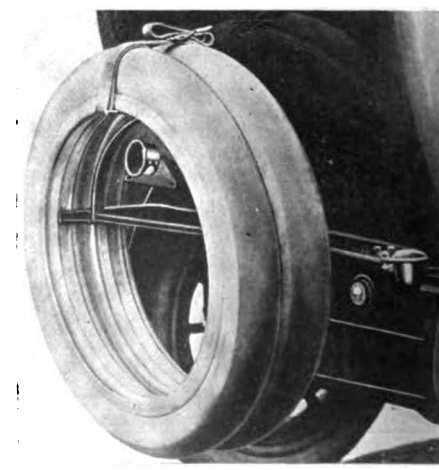
The arrangement of the extra seats has been carefully worked out so that the tonneau floor is smooth and the folding seats and their supports are fitted flush with the floor when the seats are folded.

A new and specially designed tire-holder in the rear has the advantageous feature of requiring but one strap, and provision is also made so that the spare tires can be locked if desired. Another feature of convenience is that the gasoline tank filler has been moved over to the right side near the fender. It is now provided with a hinged cover, which is held in place with a wing nut. This gasoline tank cover cap is easier to open than the old one, and by being hinged it is impossible to lose it. A change which alters the appearance of the car somewhat from the older model is that the radiator has been altered so that it is now 2 in. narrower and 2 in. higher than before.

The feature of the motor is the location of the valves on the outside for accessibility

SPECIFICATIONS OF NATIONAL TWELVE

Price—	
Touring	$2,150
Roadster	2,150
Make of motor	National
Number of cylinders	Twelve
Shape	L-head
How cast	Six en bloc
Bore	2¾
Stroke	4¾
S. A. E. horsepower	36.3
Magneto	Splitdorf
Carbureter	Rayfield
Engine starter	Westinghouse
Lighting System	Westinghouse
Clutch	Cone
Gearset	3-speed
Wheelbase	128
Tires	34 x 4½
Type rear axle	Floating



A study of the exterior of the car will reveal some other minor differences. The fenders are an inch wider and of new design in the rear; the windshield is slanting; the body sides are straight instead of tumble-in, as formerly. In equipment also a few alterations have been made, particularly on the dash, where a new oil-pressure gage with a unique dial design has been installed and also a new combination ignition and light switch which is locked by a special key. The keys are not interchangeable.

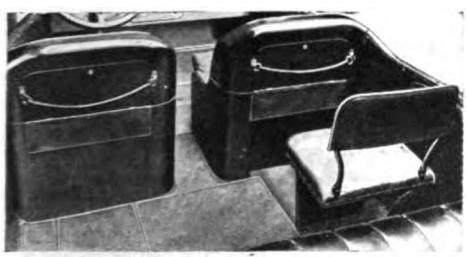
The clover-leaf design, marketed last year as a three-passenger, has now been made into a full four-passenger job. This has been accomplished by increasing the body all around and by moving the rear seat back 4 in. The back of the rear seat is higher, making it fully as comfortable as the front seats.

The motor is a product of the company's own shop. It has a piston displacement of 338½ cu. in. and a bore and stroke of 2¾ x 4¾. It is a high-speed type throughout, and is particularly distinguished by the use of outside valves. The electrical apparatus and other motor accessories are located between the arms of the V, where they can be easily reached.

Two separate blocks of six cylinders each are used, both L-head type and with two independent camshafts. No effort has been necessary to install synchronizing means for the two valve actions, as they are altogether independent. The timing gearset is quite similar to that used on the ordinary T-head motor, and the drive for the auxiliary apparatus in the center of the V is taken off the right camshaft by a silent chain.

In the lubricating system the feed is practically all under pressure and is sup-

New tire holder which requires only one strap



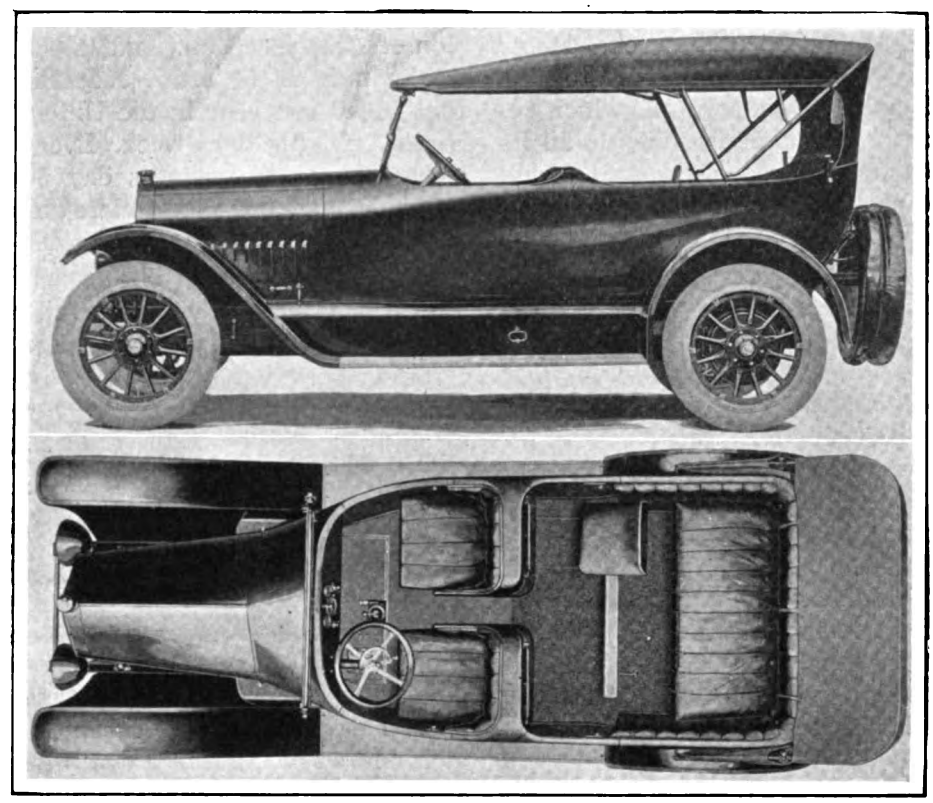
Digitized by Google

plied by a gear pump. There are no dip troughs, as the crankshaft is fully drilled and the oil from the main bearings finds its way to the connecting-rod lower ends.

Separate pipes lead to the timing gears and to each of the camshaft bearings, while the piston pins are oiled by an inversion of the usual method of fully forced lubrication systems. As a rule the connecting-rod serves to carry the oil to the wristpins and then to the cylinders, but here the oil feeds to each cylinder at a point about 1½ in. from the bottom and reaches the wristpins through tiny holes drilled in the aluminum pistons. The latter have a V-groove cut near the bottom, which is used to lift oil into the cylinder, as the absence of splash troughs in the body of the crankcase cuts down the amount of spray present. As to the oil pressure, this is not very high; the relief valve blows off at 25 lb. per square inch. When the engine is idling the pressure is about 10 lb., and it rises gradually with the speed till the limit is reached.

There is only one water pump, but this is duplex internally, the rotating member carrying two sets of vanes. One set feeds directly upward into the block of cylinders on the right, and the other half of the pump delivers through a passage cast in the aluminum of the crankcase to the left block. This cuts down the piping material and makes for efficiency and simplicity.

A few other facts about the engine that are interesting may be given, as, for instance, the weight of the piston, which is 8 oz. without rings. The valves are 1 5/16 in. in diameter and the lift is ⅜ in., giving quite a large opening, while the mushroom tappet provides a quick lift and descent, giving a slightly better valve diagram than the roller type. It is probable that the fan has some effect as a damper to the crankshaft, though it is doubtful whether any such aid to elimination of vibration is needed.

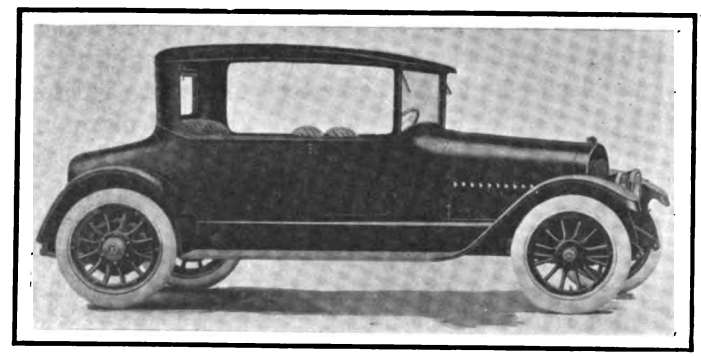


Close-up of seven-passenger showing aisle and fold seats

Unique tool compartment in left front door

The clutch is an aluminum cone with leather face, and the unit gearset provides three forward speeds, all shafts therein running on annular ball bearings. The propeller shaft is tubular and bears two universals, and the rear axle is floating. A flat cantilever rear suspension is employed. The center bracket has the swivel pin located beneath the springs instead of above it, as is more usual. The springs are 51 in. long and 2½ in. wide, with eight leaves each, and their action is extremely satisfactory. The front springs are 38 in. long by 2 in. wide. Special precautions have been taken in laying out the steering, and the use of large ball thrust bearings for the front axle swivels makes the control very ready.

Throughout the rear axle taper roller bearings are used; and the type is floating, very strong steels being used so as to cut the weight as much as possible.



Two views of new seven-passenger car with roomier body than formerly

Elgin Off; Chicago Wants Date

CHICAGO, July 24—Now that the Elgin road races for this year have been called off it is practically certain that racing fans of the Central West will have an opportunity to experience the thrills of speed on the date set for the Elgin road races, Aug. 19. David F. Reid, president of the Speedway Park Association, has asked the American Automobile Association contest board for the Elgin date, when the local speedway will stage the American Speedway Grand Prize, and it is practically certain that the request will be granted, as such a promise is said to have been made by the contest board in case the Elgin races did not materialize.

COLE NOW HAS A TOURSEDAN

The Cole Motor Car Co., Indianapolis, has just added this new type of body, which is styled a Toursedan, and sells for $2,195. In addition there is a Tourcoupe at $2,195 and a Towncar at $2,495. The body is a Cole-Springfield and the roof is permanent. Removable glass windows, housed in padded compartments, permit the car to be entirely closed in

THIS STORY IS ABOUT YOUR

Backbone

FOR the idea in the cartoon on page 5 this week, Motor World is indebted to the Thomas B. Jeffery Co., which recently sent a similar idea to all its dealers. It is so good that it should be passed on to EVERY dealer.

The idea is that the discount-seeking prospect is a PEST. The biggest pest in everyday life is the fly, so Motor World has used the fly to represent this pest, and the swatter is BACKBONE, the only thing that can exterminate the discount pest.

And backbone CAN exterminate him. And let it be added that BACKBONE is the only thing that can exterminate the pest.

HAVE you ever seen a fly crawling in a refuse heap, in a barnyard or over the maggotty contents of a garbage pail? And haven't you seen the fly—one of these same flies from the refuse heap—crawling over the dining table, over the sleeping baby's face and lips and strewing disease and death in his wake?

Would it mean anything to you to see each day at nightfall thirty innocent little babies laid out in a row on slabs in a death-house? Would it mean anything to you to see this done day after day, as regularly as the days come around?

That, readers, is what has been happening in the great city of New York, with its thousands of cases of infantile paralysis. Do you wonder that the ten millions of people in and near New York are working and trembling—and SWATTING THE FLY? And the fly is no more deadly than the discount pest.

WOULD it mean anything to you to see a man sitting with his head in his hands, his back bowed in sorrow and his business a failure? Would it mean anything to you to see 16,000 such men, their hopes of the future blighted, cleaned out?

Sixteen thousand is the population of Atchison, Kan., and 16,000 is the number of retail concerns that failed last year in the United States. That is 300 a week. Every week 300, every business day 50 every business hour six dealers and other small business men going down to failure.

And why did all these men fail? Why do motor car agencies change hands so often? Why are there so many new faces bobbing up on the Motor Rows of thousands of towns and cities? Why do the old faces—here yesterday, gone to-morrow—stay so short a time? Why is the death rate in business so high?

IN the motor car trade the reason for the business death rate is that those who failed didn't make money. One great big reason why many didn't make money is that they GAVE IT AWAY.

To whom?

To the discount pest.

Why did they do it?

Because they didn't have the backbone to stand on their own feet LIKE MEN and get a legitimate profit on the goods they sold.

The prospect pleads, argues or fights for a discount, a cut price. The spineless dealer gives it to him and imagines it won't make much difference with the gross business. But the discount pest spreads the news to all his friends and they all have to have discounts because the first man got one.

And soon there is a swarm of discount pests—like death-spreading flies—feasting upon the legitimate profits of the business and dragging it down to business death. And the dealer becomes one of the 16,000 failures.

PROBABLY all of us at some time have worked for, say, $2 a day. But did any of us ever go back to the boss at night and hand him back 25 cents out of the $2 so he wouldn't fire us? Foolish question, isn't it? We probably quit him because he wouldn't give us any more. And rather than give us any more he let us quit. That's backbone!

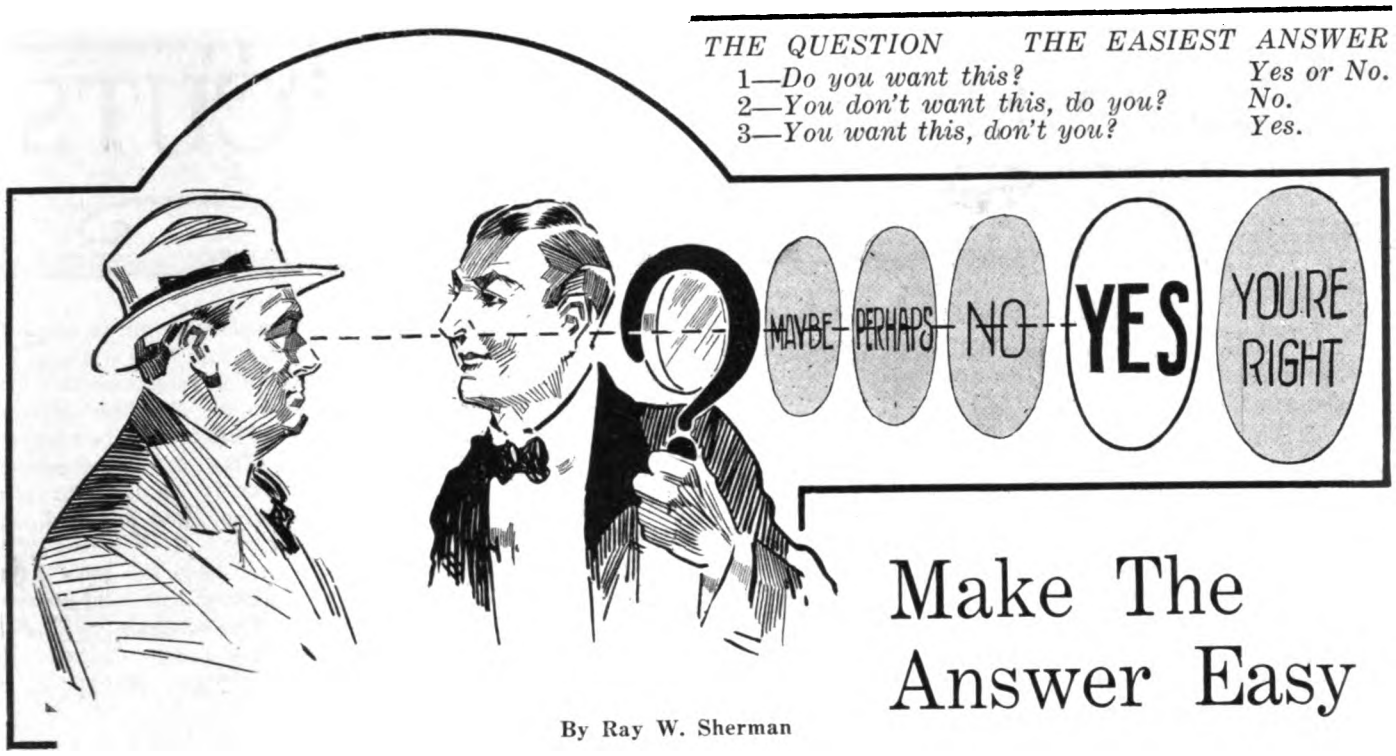
Yet what is the difference between this case and that of the dealer who is entitled to a fair profit on his Buick or his Overland or his Studebaker or some other car and who hands to the prospect part of what is absolutely needed in the dealer's business?

WOULD you snatch $100 out of your wife's hands and say: "You can't have this! I'm going to give it to Mr. Prospect. You may need new clothes or new furniture or a vacation, but you can't have the hundred!"

Maybe you wouldn't do it just that way, but that it what is being done in reality by every dealer who hasn't the backbone to get what belongs to him.

Maybe your family has all the luxuries it needs. Maybe you live in plenty. Perhaps you have money enough to give discounts with abandon. If so you are merely contributing to the existence of the pest. You are taking bread and butter from other dealers who try to meet you, or who imitate you, and who can't afford it.

And the odd part of it is that, while the dealer may think he is a good fellow when he cuts prices, the prospect, as soon as he is outside the door, LAUGHS AT THE DEALER. He talks with BUSINESS men and they smile and consider the dealer a JOKE.



Why?

Because he is such an *easy mark*.

Have backbone.

Be a MAN.

Make The Answer Easy

By Ray W. Sherman

REILLY and Tommy Trumbull, the junior salesman with C. J. Reilly, Inc., were making a periodic call on Chester Bement, the Sennett dealer in Hill Valley. Bement had to be called on every so often to be reminded that he was selling cars and not running a repairshop.

"I have worked pretty hard on sales, Reilly," asserted Bement, "but, somehow or other, selling seems to be hard work for me. I'd rather work in the shop."

"I know you would," shot back Reilly, "and that's just the reason you ought to work harder on sales. You can make a salesman out of yourself—and a good one, too—but you've got to work at it, just the same as you have to work at anything else."

"Probably true! Probably true!" challenged Bement. "But I don't seem to be able to get the fine points. I ask a man a question and he gets away from me. I try to lead him and he leads me. I want him to say 'Yes' and he says 'No'; or I want him to say 'No' and he says 'Yes.' I ask him——"

"You don't hold your mouth right when you ask him," laughed the distributer.

"Now you're kidding me."

"Yes, true I was. But just the same, Chester, there's a lot in the way you ask these questions. You ought always to ask a question so that the easiest way for the prospect to answer it is in the way you want him to. There is a certain class of questions which suggest their own answers, and the easiest answer is the answer that is indicated by the question. There——"

"Now you're beginning to say something."

"If I ask you this, 'Do you want to go for a ride, Chester?' what will you say? The easiest answer is 'Yes,' isn't it?"

"Yes."

"And if I say, 'You don't want to go for a ride, do you, Chester?' you are likely to say 'No,' no matter how badly you want to ride, aren't you?"

"Yes."

"Well, that's what I mean by asking questions so that the answer you want is the easiest answer for the prospect to give.

"If you say to a prospect, 'You haven't ever found that your present model wouldn't give you all the speed you needed, have you?' the prospect is more likely to say 'Yes' than if you ask him, 'Have you ever found that your present model wouldn't give you all the speed you needed?' This last question leaves an opening for him to say either 'Yes' or 'No.' And if you ask, 'Haven't you found that at times you needed more speed than this model would give you?' the easiest answer is 'Yes.'

"There you have the same question put in three different ways. The first one makes 'No' the easiest answer, and 'No' is the answer you want.

"The second form of the same question leaves the choice of answers to the prospect. He can say 'Yes' or 'No.'

"The third form makes 'Yes' the easiest answer, and that is the answer you do NOT want.

"In the form that suits your case you have almost put the words into the prospect's mouth and he's got to be somewhat stubborn or set in his views if he won't say what you want him to say. Little things like this, Chester, make your own way easier and actually will make more money for you.

"Supposing a man wants you to take a car in trade. Supposing you don't want to accept his terms. If you ask him a question such as, 'Do you think anyone will pay as much for your car as you want me to give for it?' he may say 'Yes.' But if you ask, 'Don't you think that price is more than anyone would pay for that car if I took it in?' he is more likely to say you are right.

"And if he says you are right he is then on the defensive and you can push him back a trench or two. If he still insists his car will bring what he asks, you could say, 'Don't you think, then, that it ought to sell in a very few days?' He should say 'Yes.' Then tell him you will be only too glad to take it into your place and sell it for him, and that if by chance it should bring less than what he asks he should pay the difference.

"Say to a man, 'Don't you think this or that?' or 'Isn't it true, Mr. Smith, that so and so is the case?' or 'Wouldn't you prefer it this way, Mr. Smith?' If you put the question any other way you are likely to get an answer you don't want, and if you get an answer you don't want your way to the sale is harder. It is a fight of mind against mind, and you must make his mind work your way.

"In every sale you must lead the prospect. If he takes each step you want him to take the succeeding step is easy; but if he is permitted to ramble all over the lot and gets to leading the way himself, it becomes difficult for you to get him back into the beaten path to the sale."

"I'll try it," said Bement, "and see if it won't work."

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 776) STEERING WHEEL PULLER

A simple form of steering wheel puller is shown herewith. It differs from most of those seen in that it is merely a large jaw which fits around the rim of the wheel. It is cheap and easy to make.—Herbert Johnson, Beacon Motor Car Co. (Peerless), Boston.

(No. 777) GENERATOR TESTING BOARD

When a generator gives trouble it is often necessary to remove it from the car and run it at various speeds, using voltmeter, ammeter and cut-out to determine where the trouble is. It is essential to have an apparatus which may be mounted quickly and on which the driving mechanism may be connected with little trouble. The generator is bolted to a board which is hinged to the bench. A pulley is clamped to the generator shaft and a belt is connected between it and the pulley on the motor. The tension of the belt is secured by the adjustment of a roller between the board and the top of the table. The roller is merely a piece of 2½-in. pipe.—Herbert Johnson, Beacon Motor Car Co. (Peerless), Boston.

(No. 778) CONNECTING-ROD MANDREL

A quick way to lap in connecting-rod bearings is to use a mandrel, which is merely a bar the same diameter as the crank-pin and flattened for a distance at the center so that it may readily be placed in a vise. The mandrel is not only more convenient to work on, but has the advantage that the connecting-rod may be removed for inspection without unbolting the bearing cap. If the mandrel is perfectly straight, it may also be used to determine whether the connecting-rod is bent or not by testing it with a try-square.—J. M. MacAlman (Stearns), Boston.

(No. 779) HUB WHEEL PULLER

The difficulty with the ordinary hub type of wheel puller, for removing wheels from semi-floating axles particularly, is that when the wheel is badly rusted to the axle it is not powerful enough to work and some other type of puller must be employed. By a slight modification of the design of this puller, however, the ordinary hub design may be made to meet all requirements. The pulling screw on the device illustrated is drilled through its full length and a hardened steel rod is placed inside of it. The hub of the puller is first screwed into place and then the screw is turned tight. So far, the operation is not different from the ordinary. The next step is to strike the rod inside the screw several sharp blows and this force, added to the pull already exerted by the screw of the puller, is sufficient to loosen the most refractory wheel.—C. E. Bradish, Connell & McKone (Overland), Boston.

(No. 780) WRENCH FOR CLOSE QUARTERS

Occasionally a nut on a car will be so placed that it will be impossible to put an ordinary wrench in place to move it. The space is so cramped that the wrench handle can only be moved a few degrees before a new hold is necessary and this is not far enough for even an S wrench to obtain a new grip. The wrench shown will be valuable under such circumstances. It is designed especially for turning up the packing gland nuts on the water pump on a certain car but there are many other places where it might be employed to advantage.—Herbert Johnson, Beacon Motor Car Co. (Peerless), Boston.

(No. 781) TIMING GEAR PULLER

A special puller for timing gears, that is strong and simple, is illustrated herewith. It is designed to go through the holes in the web of the gear and is then turned to the left as far as possible, so that the three feet of the puller bear against the web and thus draw the gear off when pressure is applied by timing the central screw.

(No. 782) HEADLIGHT FROSTING

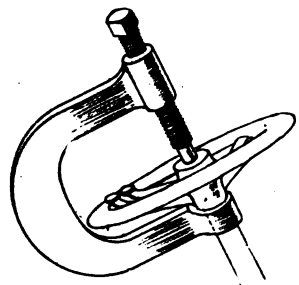
Recently there has been a great demand for frosted headlight glasses, and particularly for glasses in which only the upper half is frosted. This offers a good opportunity for making money, as it is the work of only a few moments to frost a pair of glasses, and the apparatus required is exceedingly simple. Sand and compressed air are the principal things required. In other words, the frosting is accomplished by the use of a sand blast. A box is constructed, as shown, with half of the top of glass and the rest of cloth and the upper half of the front, also of cloth. The sand reservoir is suspended from the ceiling, and from it a pipe runs down to join the compressed-air pipe, which is horizontal. The headlight glass is placed in the back of the box and then all is ready. The sand and compressed air are turned on until a powerful stream of sand is obtained, and this is directed against the glass. If only half of the glass is to be frosted the other half is protected by pasting a piece of heavy paper over it. More intricate designs may be produced by the same method.—Herbert Johnson, Beacon Motor Car Co. (Peerless), Boston.

(No. 783) CYLINDER CALIPER

A device for determining the irregularities in the cylinder surface consists of a short strip of angle iron which bears on one side of the cylinder and supports an adjustable member perpendicular to it which carries the indicating member of the caliper. This is held in contact with the cylinder wall by a spring, and as the device is moved over the surface, the needle magnifies the movement, which may be read on the scale at the end of the instrument.—Herbert Johnson, Beacon Motor Car Co. (Peerless), Boston.

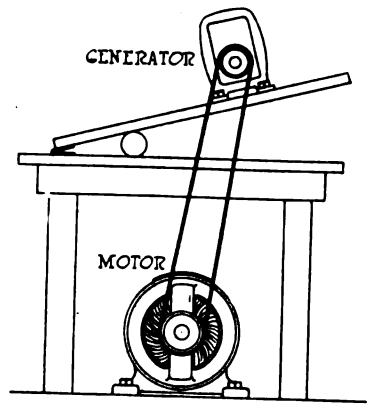
(No. 784) ELECTRIC DRILL PRESS

In a small shop it is not always advisable to buy a drill press; even a small one is a greater outlay than is warranted by the volume of work. A solution of this difficulty is a portable electric drill, together with the device shown, in which it is mounted. This peculiar drill press may be used for all ordinary work, and in addition the electric drill may be used separately.—E. T. Linehan, Cole Motor Co. of Boston (Cole), Boston.



(No. 785) LAPPING TOOL

The accompanying illustration shows a simple lapping tool consisting of a single piece of ¾-in. stock. It may be made in a few minutes by any blacksmith.



(No. 786) OPEN STOCK BIN

The large pans shown herewith and arranged in a suitable metal rack are excellent for storing parts, either carried in stock or from a car being overhauled. Since they are open, the material in them is readily seen and easy to remove. When desired the whole pan may be taken out and carried to the work, which is an added advantage.—C. E. Bradish, Connell-McKone (Overland), Boston.

Scientific Construction

GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

LATTIS-TRUSS ROOF

Fig. 1

McKeown Bros., 4617 Cottage Grove Avenue, Chicago.

A wooden roof truss, Fig. 1, which is said to cost much less than other wood trusses and is lighter. It is claimed that it costs less than a steel truss of inferior strength.

No posts are required even for spans up to 100 ft. or more.

These roofs are built in any part of the United States. One man is sent from the home office and purchases the material, hires any labor, and constructs the roof right at the site of the building. The cost of the work depends on the charge for lumber in the locality.

COMPARATIVE ADVANTAGES OF TWO PLOTS

Figs. 2 *and* 7

Editor Motor World:

We note you publish plans of garages and would like to have you furnish us with plans best adapted to the following plots: We have one that measures 56 x 140, on which we are considering installing a three-story building, with basement. This building would include salesroom large enough for at least four show cars, accessory salesroom and stockroom, office, wash rack, and storage accommodations for from 100 to 150 cars. The repairshop and paint shop would occupy the top floor. This plot of ground is on a corner.

The other plot is an outside lot running from street to street and measures 60 x 200. We figure with this building we would only need basement enough for heating plant and tire stockroom. The shop would be on the record floor and a ramp could be used instead of an elevator.—James R. Cochran, Story Motor Supply, Bozeman, Mont.

Fig. 2 and 7 show plans which may be used on the two plots you have in mind. Which should be used can only be determined after carefully considering the relative advantages of these two locations, as well as their advantages from a space economy standpoint.

It is difficult to compare the two plans just as they stand, for the reason that one has a ramp and the other has not, and this naturally makes a great difference in the number of cars that can be stored. The total floor area of the 55 x 140-ft. building is over 31,000 sq. ft., but subtracting the showroom, accessory store, office and repairshop area, it leaves a net amount of about 26,000. The net garage area of the 60 x 200 building is 30,000, inclusive of heating plant and tire stockroom in the basement. Both designs will accommodate 174 cars, so it is readily seen that the smaller building is more economical, but this is partly due to the fact that elevators are used instead of ramps.

ONE-STORY AND BASEMENT GARAGE AND SHOWROOM

Figs. 3, 4, 5 *and* 6

Editor Motor World:

We are planning to build a garage and showroom on a plot 92 x 102. There will be a salesroom and shop, as well as space for storing cars. The ground slopes back, and we will have a basement.—Reader.

Figs. 3, 4, 5 and 6 show the plans for this building. Fig. 4 has an elevator,

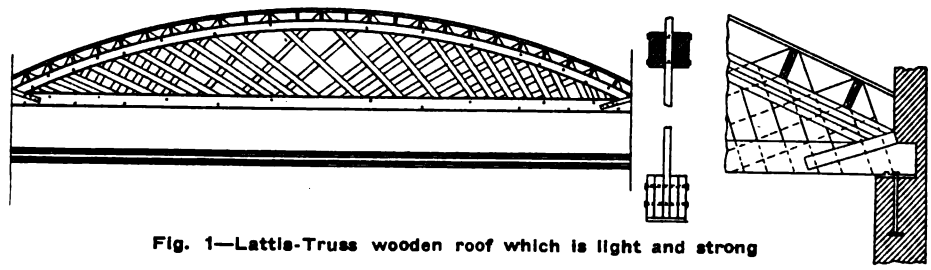

Fig. 1—Lattis-Truss wooden roof which is light and strong

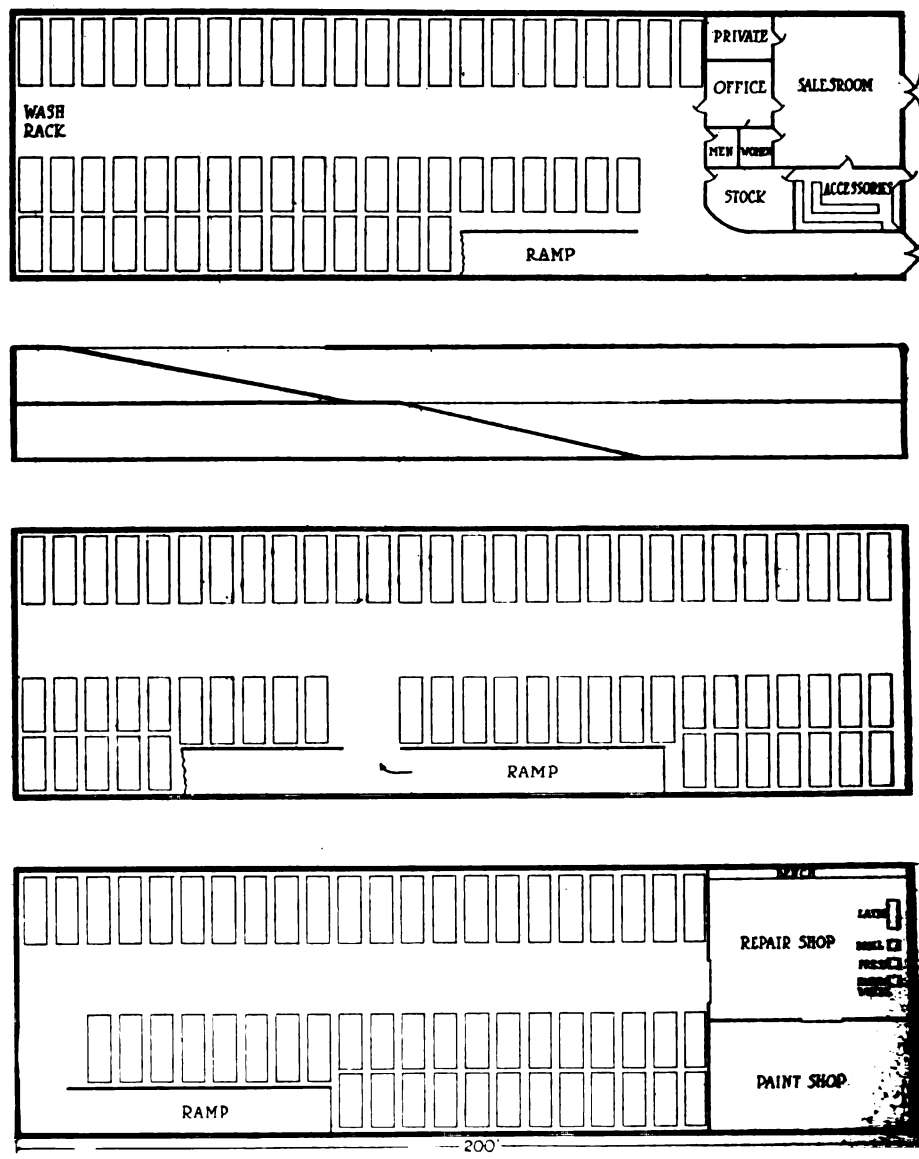

Fig. 2—Three-story building 60 x 200 provided with ramp. Shop on top floor

Digitized by Google

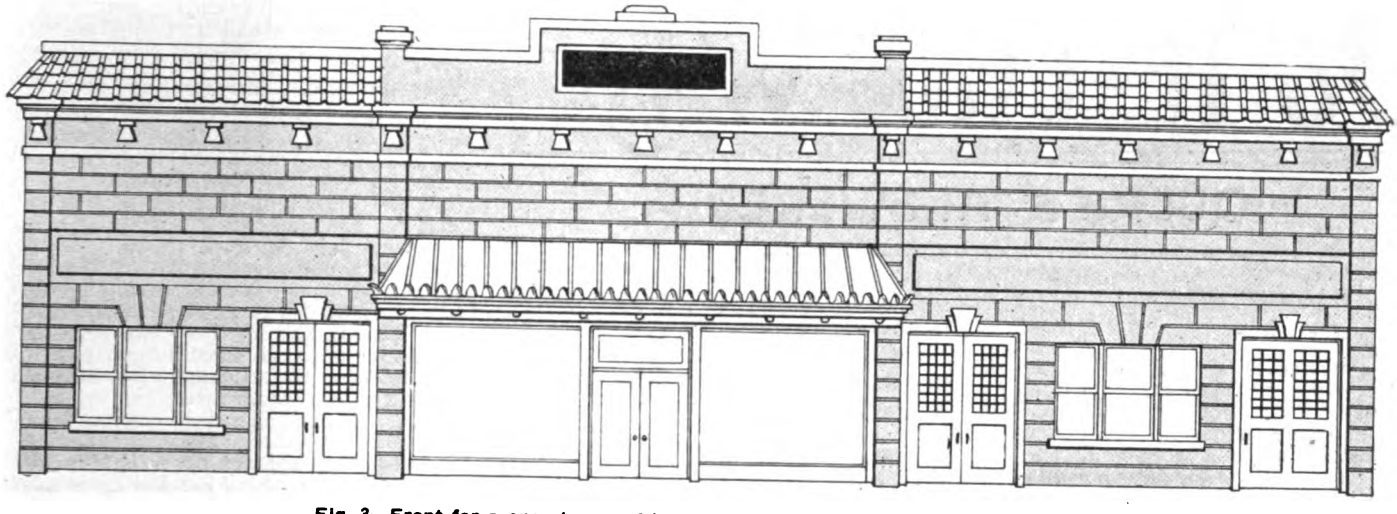

Fig. 3—Front for a one-story and basement building provided with a ramp

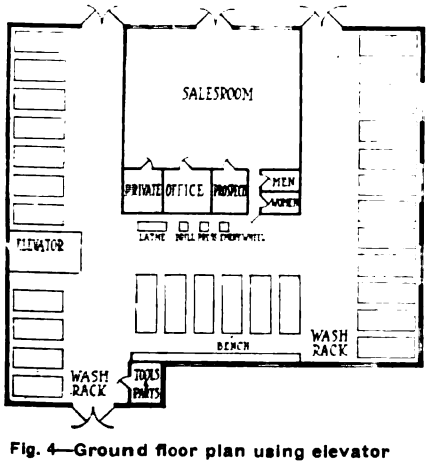

Fig. 4—Ground floor plan using elevator

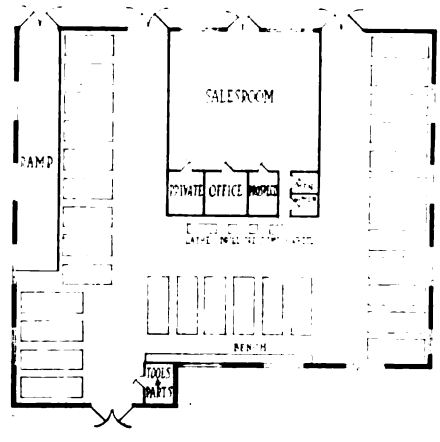

Fig. 5—Ground floor plan using ramp

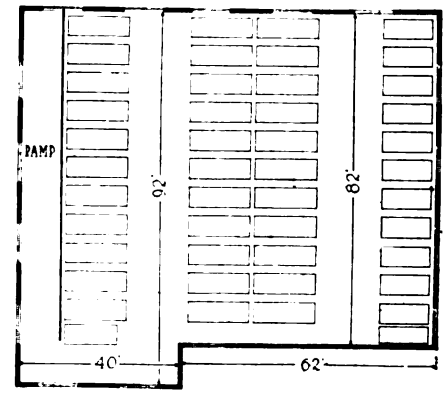

Fig. 6—Basement plan showing ramp

Fig. 5 is similar except that it has a ramp, and Fig. 6 shows the basement when equipped with a ramp. Salesroom, offices and shop are concentrated in the space in the center, leaving the remainder for the storage of cars exclusively.

In many ways a ramp is advisable. It is cheaper to build, costs nothing to operate, and is more satisfactory and convenient than an elevator. However, its presence crowds the layout slightly and unless very short cars, such as Fords, can be stored in the front part of the first floor, difficulty will be encountered on account of the close quarters. The ramp construction also reduces the aisle space in the basement. The construction would be ideal if a few feet more frontage could be obtained.

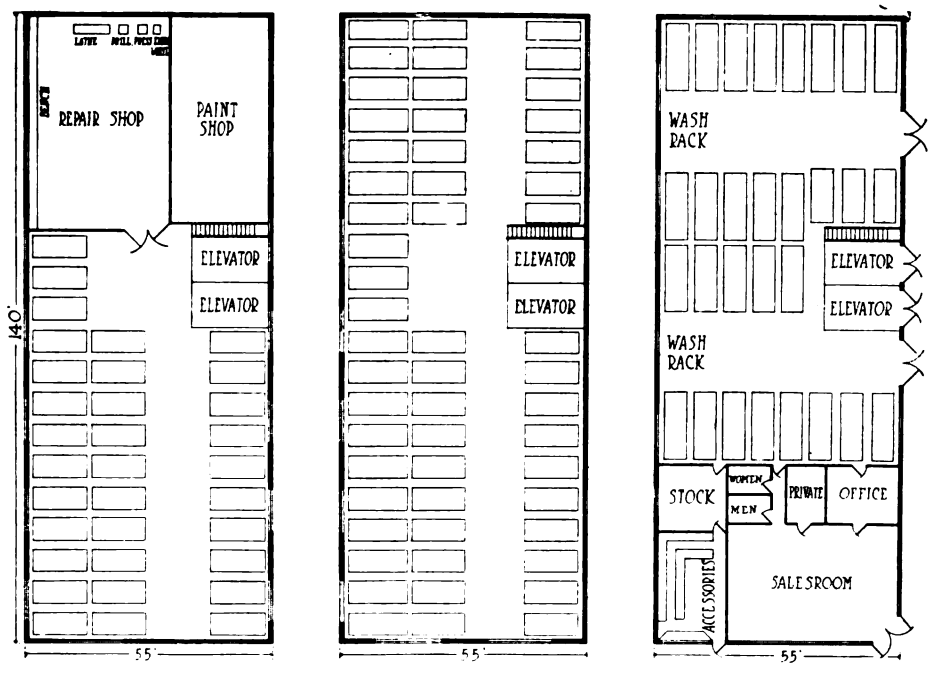

Fig. 7—Three-story garage, showroom and shop with two elevators connecting floors

Big Drive For Safety

BOSON, MASS., July 24—A Statewide movement by the Highway Commission on one hand and the motor clubs through the Massachusetts State A. A. and the railroads on the other, will be inaugurated this coming week to reduce the number of motor accidents on the Bay State highways. For some time the Highway Commission has been at work on the matter of increasing its force of investigators.

F. L. Austin, who has had charge of the examining and investigating department since it was established in 1907, has spent a great deal of time working out the plans. He has now subdivided the State into fourteen districts and investigators will be placed in each one. Last year there were eight such districts. These investigators furnish information which is used to establish preventive measures and which may be used in the construction of safety devices.

Do It This Way

···QUERIES ANSWERED···

MAGNET RECHARGERS

Editor Motor World:

The writer is a constant reader of Motor World, a traveling man, calling on the trade throughout the Pacific Coast. I have had many requests from customers for instructions for making an efficient coil or helix for recharging the magnets of various types of magnetos. I have, in many cases, given my idea of such an instrument and have in some cases constructed a coil for my customer. I wonder if you have in your files anything bearing on this subject and whether you can give specific working plans for constructing a real practical and efficient instrument which will not be dependent on a storage battery or other D. C. current, but which has incorporated in itself a rectifier which will allow the use of the ordinary 110-A. C. lighting circuit?—Truman Northup, Preer Tool & Supply Co., Portland, Ore.

It is impossible to use such a device on alternating current without a rectifier, but this is not as great an objection as you think. Where a direct-current supply is not available a storage battery, or even dry cells, may be used with fair economy. While the capacity of a dry cell is small, very little energy is required for recharging the magnets. The switch is closed only for a short time; it is not the same as charging a storage battery, when the energy must be left on for hours.

How to Make

In Fig. 4 is shown the electromagnet employed in the repairshop of a large taxicab company for the purpose of recharging magnets. It comprises two heavy coils of insulated 20-gage wire, wound so as to give 10,000 amp. turns to the square inch. The windings are around soft cores 1 3/16 in. in diameter. The bottom ends of these cores are secured or embedded in a heavy soft cast-iron base-plate, while rectangular cast-steel pole pieces, countersunk to fit over the top ends of the cores, are provided. These pole pieces are held parallel by two non-magnetic brass strips. This electromagnet is mounted substantially on a wooden stand. The two cores are wound in opposite directions to form a north and a south pole, and the proper magnetizing strength is obtained when a current of 40 volts at 3 amp. is passed through the windings.

The operation of recharging a magnet simply consists in wiping and rocking the poles of the magnet over the pole pieces of the electromagnet, having due regard for the relative polarity of the magnets.

The north pole of the magnet to be recharged should be placed in contact with the south pole of the electromagnet. Ascertain the polarity as follows: Place one end of the magnet to be recharged about ⅛ in. from one end of the electromagnet. If the latter seems to pull the magnet, then unlike poles are facing, for unlike poles attract and like poles repel each other, and consequently the magnet should be reversed.

After the proper polarity has been found, grasp the magnet, as shown in Fig. 2, and brush it back and forth across the electromagnet. After this has been done about twenty-five times lay the magnet on one side, as shown in Fig. 3. Then draw the magnet backward until the ends almost are off the electromagnet, and while still in contact with the electromagnet it should be carried around, as shown by the dotted lines. The operation should not be rapid, but, on the contrary, sliding the magnet over the electromagnet should be done slowly.

A piece of metal cannot be charged too much, for it will hold only a certain amount of magnetism and no matter how long the operation continues after the saturation point has been reached the metal will hold no more. It is safe, then, to get the proper saturation point by sliding the magnet over the electromagnet until the pull is quite intense.

While this coil is designed for 40 volts, it should work on voltages considerably larger and smaller than this. In fact, if care is taken not to leave the switch closed for an unnecessarily long time there is no reason why 110 volts should injure it.

Short-cut No. 75 describes another:

A magnet recharger which will quickly energize any type of magnet and which operates with four 6-volt storage batteries in series is readily made. The cores are 1¾ in. in diameter and 5 in. long, and are made up of bundles of soft iron wire 3/16 in. in diameter. Each bundle is bound together with fine wire and the whole is soldered. Around each core is wound 500 ft. of No. 16 gage copper wire. In setting these two coils up be careful to have them properly connected. With the windings of both coils running in the same direction, the bottom wire of one coil should connect with the top of the other. The magnets may be charged by contact by using the instrument just as it is, but the cores are removable so that the magnet may be placed right in the coils. To charge the magnets the switch is closed three times for 5 sec. each, and the magnets are gently tapped during this period. A keeper should be placed on the magnets as soon as they are removed.—M. R. Potter, Foreman, Wm. Petry, Inc., Hudson, N. Y.

DETERMINING BATTERY POLARITY

Editor Motor World:

Will you please explain how to determine the polarity of a generator? I have instructions that say to send the battery current through the field windings while the generator is idle, but I do not exactly understand how it is to be done. Can the polarity be changed at will? I want to put a new battery on a car and I know what the result will be if it is connected to the wrong terminals.—A Constant Reader of Motor World.

There are several methods of making this test, but the most direct is as follows:

With the engine running, note in which direction the generator is rotated; stop engine and disconnect the generator drive, leaving the generator free to rotate at will. Next connect the storage battery to the terminals of the generator. The generator will run as a motor. The battery connection is correct when the generator runs as a motor in the same direction as it is driven by the engine.

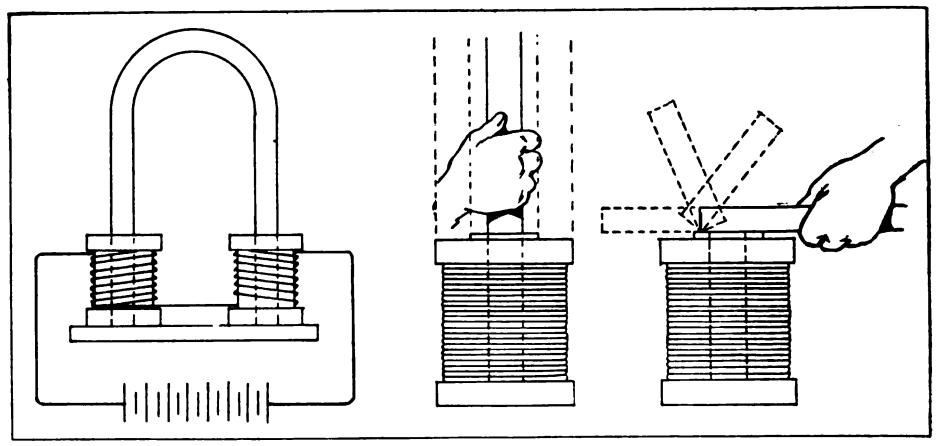

Fig. 1—Left—Diagram showing wiring and method of charging magnets by placing them inside the coils. Fig. 2—Center—First step in charging magnet by direct contact. Fig. 3—Right—Second step. Although a bar magnet is shown the procedure would be the same for any other type

Digitized by Google

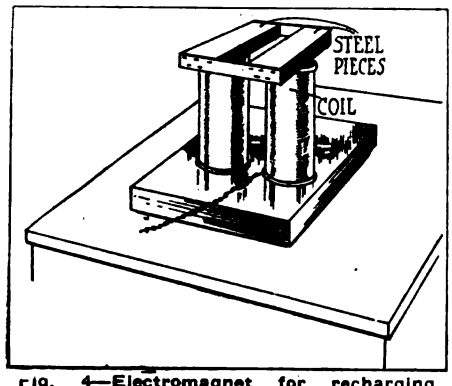

Fig. 4—Electromagnet for recharging magneto magnets

The polarity may also be determined with a voltmeter of the proper voltage. With the generator being driven by the engine, connect the voltmeter to the generator mains. If the needle does not move over the scale but shows a tendency to butt against the stop-pin at the left, reverse the connections. The needle will then give the proper reading and this connection of the generator must be used for the positive side of the battery.

If either of these methods is undesirable a potato may be used. Two copper wire leads should be taken from the terminals of the generator. After polishing the tips of these wires stick them into a potato, with the points parallel 1 in. apart. Start the generator and after a short run the positive terminal wire will have turned brown.

A glass of water may also be used. Place the two terminals of the generator into the water, one on each side of the glass. With the generator running, the greater number of bubbles will be found on the negative pole.

Great care must be taken not to short-circuit the wires while the motor is running.

WHY RADIATORS LEAK

Editor Motor World:

With the exceptions of breaks, what causes leaks in automobile radiators?

What care, other than keeping filled with water, should be given to the radiator and cooling system of an automobile?—B. F. Graves, 501 Spencer Avenue, San Jose, Cal.

Your question is not quite clear, but evidently by breaks you mean actual mechanical injury to the radiator which would be the result of a collision of some sort. The most usual cause of a leak is the result of the vibration of the car and the twisting and weaving of the frame. Unless the radiator is properly supported it is possible that some of the distortion of the frame will be transmitted to the radiator, with the result that some of the joints will eventually loosen up. If the radiator is well made and well mounted a difficulty of this sort should be exceedingly rare.

Occasionally radiator leaks will be caused by corrosion, but not often.

Another frequent cause of leaks is due to allowing the water to freeze, and the remedy, of course, is to use an anti-freezing mixture.

A radiator requires very little care. Every once in a while it should be thoroughly cleaned by flushing it with a hose, and if this is not sufficient it should be filled with a saturated solution of boiling washing soda, which will loosen up all dirt and cut the grease and oil.

APLCO STARTER INFORMATION

Editor Motor World:

The Motor World, Dec. 21, 1911, page 885, gives description, also cut, of Aplco starter, Inter-State car. The writer owns a Speedwell car, model 10-G, No. 1385, equipped with the same system.

Where can I procure all the information there is published, descriptive of this starting and lighting system? The controller box has three positions for lever, Starting, Off and Reverse. I am anxious to know what the reverse is for. Is there any book published describing this system? If so, send name and price. Just traded this car and am completely in the dark about electric system.—John Healy, Bairdstown, Ohio.

Answering your letter of recent date, would say that we are unable to furnish you with any printed matter on this system. The particular issue you mention is out of print and the Splitdorf company has no more instruction books on this model.

The most important thing to know about this system is the operation of the lever on the dash. To start, this lever is pushed over to S, and as soon as the motor is running it is moved to R, which stands for Running position and not for reverse, as you imagine. The motor is shut off by bringing the switch to O, which stands for Off.

BINS AND DRAWERS FOR FORD PARTS

Editor Motor World:

Would you kindly send us the name of the manufacturer of steel stock cases, files, etc., that puts out a special article for the stocking of Ford automobile parts?—M. A. Cory, Central Garage, Medicine Hat, Alberta, Can.

We know of no concerns which manufacture steel stock cases, files, etc., particularly for the Ford car. Possibly the Ford Motor Co. can give you some information on this point.

We are mailing you a list of concerns which make stock cases, files, bins, etc., for all makes of cars, and we believe that you will be able to select what you want from this.

There is no special reason why the Ford should require bins that are different from those required by any other car.

A number of these products were described in the Garage and Equipment number of Motor World, which was published April 26.

WHO MADE KEETON GEARBOX?

Editor Motor World:

Who built transmission for Model L, 1910 Croxton Keeton?—J. H. Miller, the West End Garage, New Philadelphia, Ohio.

We are not sure, but we think that this gearbox was made by the Warner Gear Co., Muncie, Ind.

The parts for this car are handled by the Auto Parts Co., 737 West Jackson Boulevard, Chicago, and although you have not stated it, you probably desire parts, and consequently we are sure you will be able to obtain what you desire from them.

KING WIRING DIAGRAM

Editor Motor World:

Will you please publish a diagram of the electric connections on the King eight?—E. R. Thurber.

Fig. 5 shows the wiring of this car—a 1915 Model D. It is a two-unit, double-wire system with battery ignition. The Ward Leonard automatic lighting and starting system is used, and ignition is by the Atwater Kent system.

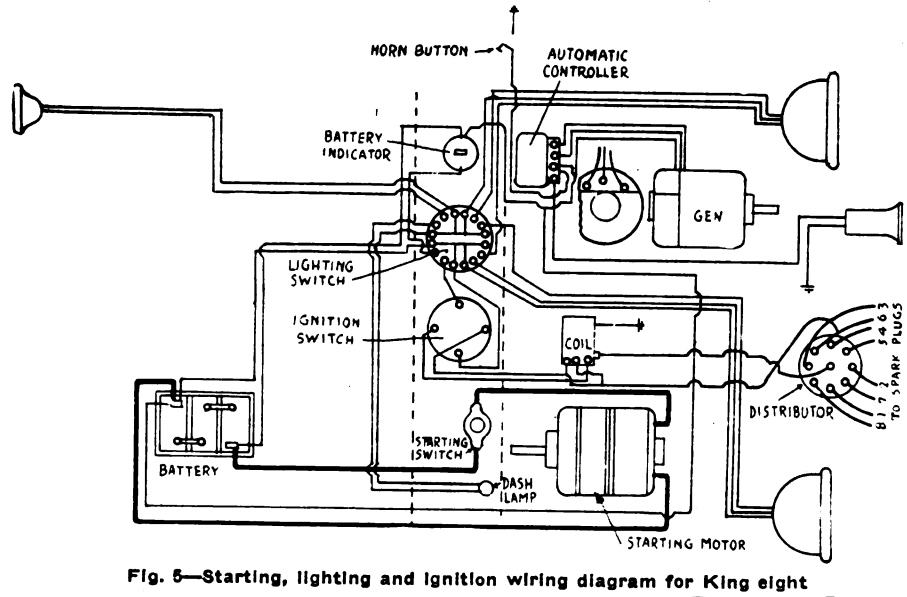

Fig. 5—Starting, lighting and ignition wiring diagram for King eight

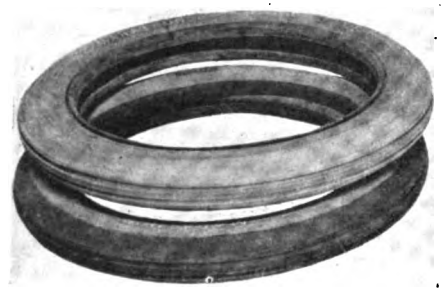
Accessories & Supplies

STROMBERG CARBURETER FOR FORDS

Stromberg Motor Devices Co., Chicago. PRICE, $18; dealers, 25 per cent.

A plain tube carbureter for Fords. In design this carbureter differs from other Stromberg models in many respects, as it is made to fit the requirements of the Ford motor. No springs or valves enter into its construction, yet it is said to give accurate mixtures at all times. The carbureter is supplied with all attachments, cap screws, gasket, steering post control, flexible tubing, hot-air stove, and primer wire. Complete directions come with the carbureter so that anyone can make the installation. No tools other than those in the ordinary kit are required. The parts will fit any model of the Ford motor. Each carbureter is tested and adjusted in the factory on a Ford motor and needs little adjustment after installation. Separate high- and low-speed adjustments are provided. The motor is first adjusted for low speeds by turning the low-speed adjustment nut, and then, with a partly open throttle, the high-speed adjusting is turned until the motor runs smoothly. Increased economy and power are claimed by the makers.



Stromberg carbureter for Fords

ANDERSON STEAM VULCANIZER

Anderson Steam Vulcanizer Co., Worthington, Ind. PRICE, $125, complete with set of tools.

A gasoline-operated steam vulcanizer for repairing tubes and casings. It is equipped with a large sectional mold which will take care of a 16-in. section in 4-in., 4½-in. and 5-in. tires, and a small sectional mold for sections to 15 in. in 3-in., 3½-in. and 4-in. tires. The tube plate has a capacity of four tubes, and seven tubes can be treated at one time, when the section molds are not in use. The normal capacity is three casings and four tubes.

Marathon tires with grooved treads

FORBES EXTENSION FOR FORD

Walter J. Forbes, 243 Columbus Avenue, Boston. PRICE, packed ready for shipment, $100; installed, $135.

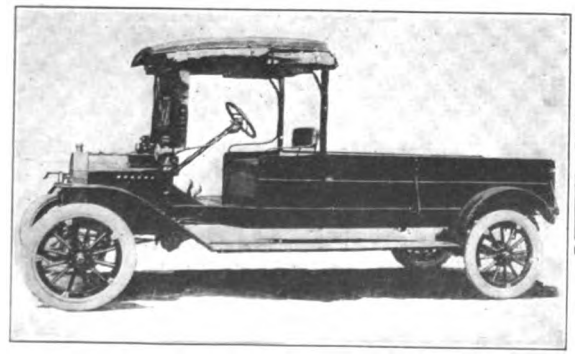
Provides a method for lengthening the Ford chassis 36 in. After removing rear mudguards, body, splash plates, running boards, gasoline tank, muffler and exhaust pipe, both side members of the frame are cut through at the middle of the car with a hacksaw. The frame is then lengthened by hot riveting and swedging a channel into the opened section. Between the lengthwise members of the extended section is a cross-plate of cast steel, so arranged as to carry the thrust of the driveshaft. Each side of the frame is trussed throughout its entire length with steel rods fastened at the ends of the frame to steel brackets. An intermediate driving shaft is supplied, together with brake-rod extensions, longer running boards and splash plates, and all parts necessary to make the installation. The gear ratio is not changed in any way, and the entire rear end is left in its original form. The capacity of the truck is 1500-1800 lb.

SIEVERKROPP STARTER FOR FORD

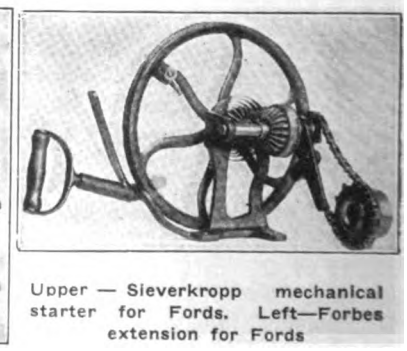
Sieverkropp Engine Co., Racine, Wis. PRICE, $15.

A device for cranking the Ford from the seat. The device is attached to the crankshaft in place of the fan pulley, and is operated through a chain, bevel gears and a cable running over a large wheel to a handle on the dash. A pull on the handle turns the engine over with little effort, it is said, and without danger of backfires. A foot-controlled primer is included.

RESISTOIL AIR HOSE



Brunner Mfg. Co., Utica, N. Y. PRICES: 3/16 in. inside diameter, 16 cents per foot; ¼ in. inside diameter, 18 cents per foot; ½ in. inside diameter, 27 cents per foot.

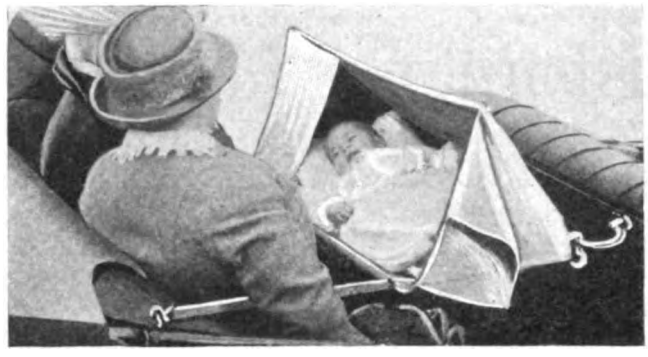


A compressed-air hose having special oil-resisting properties. The walls are made up similar to the common five-ply hose, which it resembles in outward appearance. The interior of the fabric tube is lined with a special compound that is said to resist the action of any oil or oil fumes that may be in the air.

NEW MARATHON TIRE

Marathon Tire & Rubber Co., Cuyahoga Falls, Ohio.

The Runner is a new Marathon tire with a grooved tread. Running around the tread of the casing are two parallel grooves, leaving three ridges in contact with the ground. The continuous hollow tends to reduce suction and dragging, while the ridges tend to protect against side slip. This tire is furnished in a fabric body with a white tread and with a whipcord body with a black tread. It sells at the price of the regular smooth-tread tire.



Upper — Sieverkropp mechanical starter for Fords. Left—Forbes extension for Fords

Rauber - Fien tire pump

Hilton baby hammock

R-F TIRE PUMP

Rauber-Fien Mfg. Co., Rochester, N. Y. PRICE, $15, complete with hose and gage.

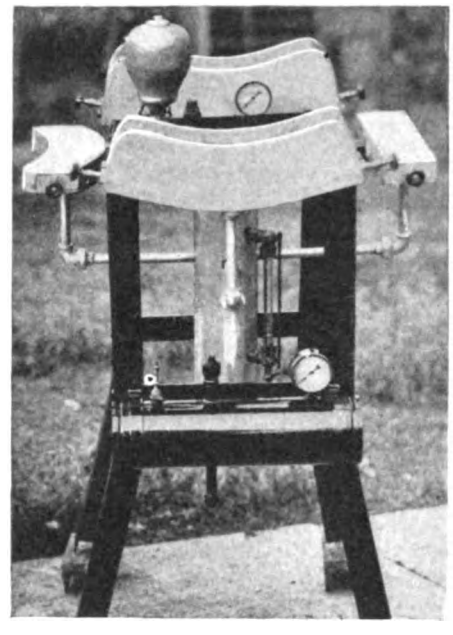
A single-cylinder vertical power-driven pump, 6¼ in. in height and weighing 6½ lb. The cylinder, crankcase and piston are of gray cast iron, the camshaft of forged steel with a bronze eccentric strap, and the piston is fitted with two lap-joint ground rings. The cylinder has cooling fins and a taper valve outlet. Splash lubrication is employed, a felt wiping pad on the cylinder taking care of the cylinder lubrication.

LOCKTITE TIRE PATCH

Locktite Patch Co., Detroit. PRICES: 108 sq. in., $1.60; 54 sq. in., $0.90; 28 sq. in., $0.50.

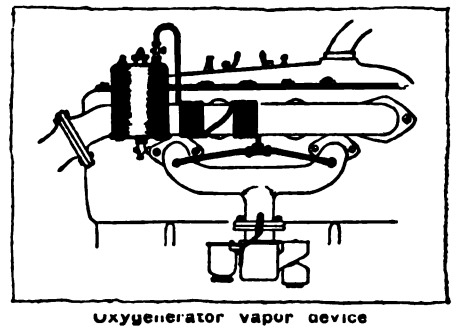
A cementless canvas-backed tire patch. In effecting the repair a piece large enough to slightly overlap the puncture is cut from the sheet. The tube is cleaned with gasoline and roughened with emery cloth, after which the patch is wet with gasoline and applied to the puncture. After working the facing of the patch well into the tube it is removed and allowed to dry. The patch is again applied to the puncture and the tube is ready for use. Outfits are supplied containing cement for casing repairs.

TIREOID PUNCTURE SEALER



The Tireoid Co., 1200 Michigan Avenue, Chicago. PRICES: Four cans for four 3- or 3½-in. tires, $10; for 4- or 4½-in. tires, $13; for 5- or 5½-in. tires, $16. Prepaid.

An automatic puncture sealing compound for tubes. It is a semi-liquid substance, mostly mineral, that solidifies on exposure to air. One can of the preparation is injected through the valve stem of each tube and is kept in circulation by the rotation of the wheel. When the puncture occurs it rushes to the opening, filling and sealing the leak, it is said.

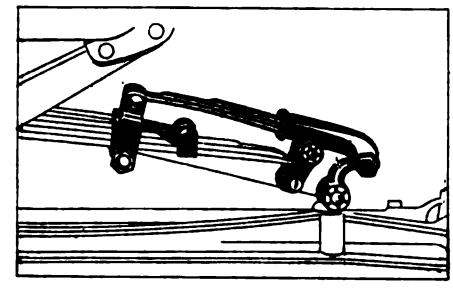


DUPLEX CANTILEVER SPRING

Duplex Cantilever Spring Co., Chicago. PRICE, $15 per set of four.

An auxiliary spring for Fords. One of the springs is fastened upon each end of the front and rear springs. The upper end of the spring is secured at about half the distance to the middle of the standard Ford spring, the lower end under the spring being fastened to the present Ford spring perch. This cantilever spring increases the acting length of the original about 5 in., and is said to promote easy riding and eliminate side sway.

Anderson steam vulcanizer



Oxygenerator vapor device

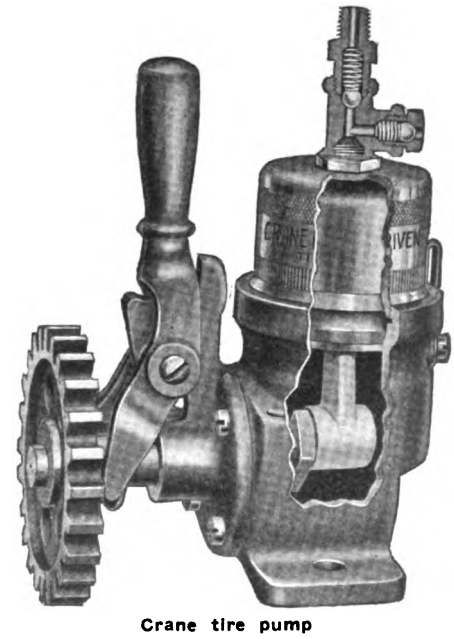
HILTON BABY HAMMOCK

Hilton Hammock Co., Seattle. PRICE, $5, delivered.

A hammock for comfortably carrying the baby in the tonneau. One side is attached to the robe rail by metal clamps, and the whole is suspended over the tonneau by straps extending to the sides of the rear-seat supports. The hammock is not in the way of the rear-seat passengers, and the baby is protected from the wind, dust and sun by a neat canopy. On the underside are pockets for milk bottles and change of raiment for the baby.

Duplex cantilever spring for Fords

CRANE TIRE PUMP



Bay State Pump Co., 275 Congress Street, Boston. PRICE, with hose and gage, $8.

A single-cylinder engine-driven tire pump. By the use of a special alloy packing ring in the place of piston rings it is claimed that no oil can be pumped into the tire. The pump can be supplied for any make of car and the installation may be made by the car owner. No drilled holes or machine work are required, as the brackets are designed to be attached to bolts or studs already on the engine.

Oxygenerator Vapor Device

The Oxygenerator Co., 1919 South Michigan Avenue, Chicago. PRICES: $10 on four- and six-cylinder; $12.50 on all V types.

This device introduces slight quantities of water vapor into the manifold. The reservoir is secured to the exhaust pipe and the water vapor generated there is sucked out through a coil which wraps around the exhaust manifold, and thence into the intake manifold. The heat absorbed in passing through this coil breaks the vapor up into its constituents, it is said.

Crane tire pump

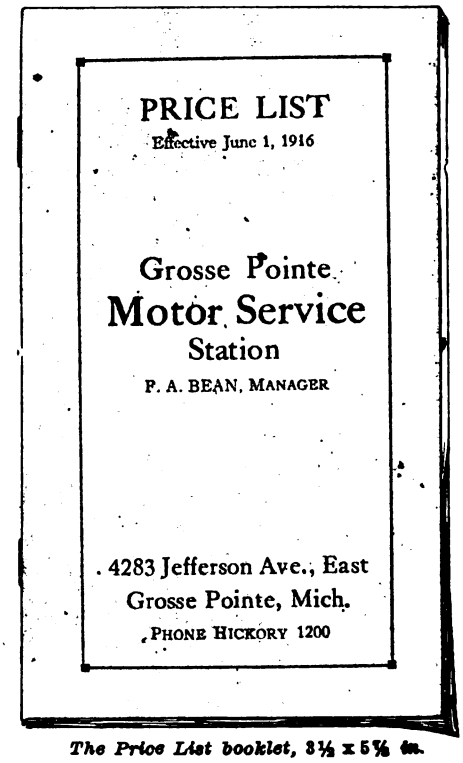
Telling the Customer Why Prices Rise

The story of how Fred A. Bean sold his car owners on increases in the prices in the Grosse Pointe Motor Service Station, Detroit, Mich.



WITH prices rising all around in every business, Bean saw it was necessary to raise prices in his garage if the business was to continue to pay. He raised.

Then he realized he must SELL his customers on the new prices, so he issued the booklet that is illustrated herewith. In this he told the story of how labor and materials have risen in price, and at the same time he told of the excellent service his garage can give.

The booklet is a complete catalog of his prices, and Bean says he believes EVERY garage should have a schedule of prices so it may always know what to charge and assure the customer of a square deal and no chance for argument.

Not only is the booklet interesting in that it shows Bean's complete price schedule, but it is an exceedingly high-grade piece of garage literature, well written and well printed.

Last week in MOTOR WORLD *was printed the story of Bean's service booklet. It is an able twin to his price booklet. The story in the price booklet follows:*

The Price List booklet, 3½ x 5⅝ in.

OUR PRICES

THE issuing of new prices usually creates comment. Changes are made necessary from changing mercantile conditions, and from new methods of operation.

The commercial agencies show a greater percentage of failures among garages than almost any other line of business. Why? It is generally conceded that the answer is, because very few garage owners know what it actually costs to deliver service. It is also conceded that any business whose prices are figured from an actual cost basis plus the proper proportion of the overhead plus a fair percentage of profit will (except through gross mismanagement) have only an honest price list, and will not be in bad standing with its creditors.

The prices now offered are the result of a very careful analysis of a cost accounting system which we have had in operation for a period of thirty months. There is not a single guess-work price. We shall be very glad at any time to explain the details upon which any price is based.

The reductions, of which there are a number, are due to an increased volume of business and more efficient methods of delivering the service.

The increases are caused in a great measure by the data given herewith, which shows percentage of increase since July, 1913 (date of last price list).

This means an increased yearly cost of maintenance and operation of approximately $3,000.

Probably the most radical departure is in regard to electrics. We have long considered the current used in charging an electric to be fuel, the same as gasoline in a gas car, and should be charged for in proportion to the quantity used.

Heretofore we have had a flat rate of $40 for the service and charging. In several instances under the old lists the owner paid the full amount even when the car stood idle and he did not use current amounting to more than four or five dollars.

The new lists provide for a rate for storage and service (exclusive of charging) which is the same as a gas car of the same general type. The current will then be charged for as actually used.

We have not arranged a flat monthly rate for the charging of the various types of electrics, as we trust that our patrons will be glad to avail themselves of the many advantages of the metered system.

We pay rent, telephone, all insurance premiums, and similar items in advance; nearly all supplies, coal, gasoline, all repair parts, etc., are paid for upon delivery.

We are confident that you will agree with us when we say we do not believe we are unreasonable when we ask that storage and general service bills be paid in advance. It is not a reflection on your credit in any sense. It will mean a small amount to you for a period of 30 days. To us it means the carrying out of a sound business policy.

Supplies, etc., will be on the same basis as heretofore, payable on the tenth of the month following delivery.

Reduced cost to us means reduced prices to you.

You appreciate it, when as a result of good management, we can reduce prices to you.

We have several large items of expense due on the tenth of each month, upon which the discounts are large. The receipt of your check promptly on the tenth of each month will help very materially to cut the costs.

Since July, 1913

Salary Increases

Washers	30.1%

Soap	126.6%
Coal	13.3%
Stationery and Printing	21.4%
Tools	28.3%
Paints	160.0%

TERMS AND CREDIT

All repair work, supplies, etc., are cash except to regular boarders and such others as make satisfactory credit arrangements.

Digitized by Google

Storage and regular service accounts are payable in advance.

All other accounts are payable on the tenth of the month following delivery of material or service.

Accounts not paid on the first of the month following that in which they are due, will have interest added at six per cent per annum.

If you have credit with us and are in trouble in any part of the city, we will be glad to secure credit for you at any garage which is a member of the Detroit Automobile Trade Association, or we will assume the bill and add it to your next monthly statement.

Regular boarders of other garages in the Association will be extended emergency credit upon proper identification.

LIABILITY

We assume no responsibility for damages to cars from fire or accident, either in the garage or while being delivered or called for, or for loss of jewelry, packages, etc., left in the cars.

Our insurance does not cover your property.

Cars are accepted only with this understanding.

We, however, assure you that we will use every precaution to see that your property is protected at all times.

Our employees are required to furnish a surety bond and are forbidden the use of liquor at all times. Other rules for their government are equally strict.

INSPECTION SERVICE

Our Inspection Service consists of a thorough examination of the car. All bolts and nuts are tightened, steering gear and brakes looked over. All wires gone over for shorts or worn insulation, and the carburetor drained. Entire car oiled, including the filling of all grease cups. All working parts carefully examined for wear. In gasoline cars the fuel and water lines are examined for leaks and minor adjustments made. With Electric cars battery care is given at this time and without extra charge. If chain drive, the chains are cleaned and oiled.

Each regular boarder with an Electric will be assigned one morning, when his work will be done. To do this satisfactorily, the car must be held until noon.

Gasoline cars belonging to regular boarders will be inspected and oiled at night. Each car having a night assigned for this purpose.

Any car which is called out, or kept away from the garage during its regular inspection period will have missed this service until the next regular inspection day. We can not break up our regularly established schedule without making an extra charge.

Monthly Storage and Service

Type of Car	Full Service A	Limited Service B	Semi-Weekly Service C	Weekly Service D	Cleaning Service E	Live Storage F	Dead Storage G

Delivery of cars outside of ½-mile circle, each additional half mile or fraction thereof, per month, $1.50.

Any car coming in under any class of service and remaining seven consecutive days or less in any calendar month will be charged for at transient rates. When in over seven days or less than twenty-five days, they will be charged pro rata at the class rate for the number of days they are in plus 10 per cent. Twenty-five days will be considered a full month. Cars changing from one class to another will be charged for in the same manner. Any service not included in the class contracted for will be charged for at transient rates.

All storage and service charges are due and payable on first of the month in advance.

The Table Above Gives the Class of Service and the Prices. The Tables That Follow Tell What Each Class Includes:

"A" FULL SERVICE

Storage space—7 foot stall.
Daily wash and metal polished.
Daily cleaning of windows and inside.
One delivery and call for each 24 hours in half mile circle.
Two inspections and oiling of car per month. (If Electric, battery care is included.)
Tires kept inflated.
Radiator kept filled.
Storage battery kept flushed.

"B" LIMITED SERVICE

Storage space—7 foot stall.
Daily wash and metal polished.
Daily cleaning of windows and inside.
Two inspections and oiling of car per month. (If Electric, battery care is included.)
Tires kept inflated.
Radiator kept filled.
Storage battery kept flushed.

"C" SEMI-WEEKLY SERVICE

Storage space—7 foot stall.
Wash and metal polish twice a week.
Cleaning windows and inside twice a week.
Two inspections and oiling of car a month. (If Electric, battery care is included.)
Tires kept inflated.
Radiator kept filled.
Storage Battery kept flushed.

"D" WEEKLY SERVICE

Storage space—7 foot stall.
Car washed, metal polished, windows and inside cleaned once per week.
One inspection and oiling of car per month. (If Electric, battery care is included.)
Tires kept inflated.
Radiator kept filled.
Storage battery kept flushed.

"E" CLEANING SERVICE

Storage space—7 foot stall.
Dust off and clean inside and windows daily.
Tires kept inflated.
Radiator kept filled.
Storage battery kept flushed.

"F" LIVE STORAGE

Storage space—7 foot stall.
Car may be moved at will.

"G" DEAD STORAGE

Storage space—6 foot stall.
Car cannot be moved but is placed on jacks and covered.

The Garageman's Creed

AND TEN COMMANDMENTS

1. My business is a part of the world's greatest and newest industry—THE AUTOMOBILE. By nature of its characteristics I come in contact with men who lead in all lines of human endeavor, therefore I will strive to keep my business above criticism.
2. I will avoid poor and careless bookkeeping methods that result in selling service and merchandise at a loss.
3. I will avoid over-stocking with unsalable goods and avoid poor merchandising methods.
4. I will try to avoid losses from depreciation of merchandise due to improper attention and will strive for frequent turn-over of stock.
5. I will endeavor to keep up collections and avoid losses through the extension of credit where not justifiable.
6. I will endeavor to discount all bills when due.
7. I will discipline my employees to render courteous, pains-taking and efficient service.
8. I will keep my business clean and sanitary in keeping with the dignity of this industry.
9. I will carry sufficient protection against loss from fire and accident.
10. I will strive to advance the sale of accessories and supplies, using honest and ethical merchandising methods and to patronize my home jobber whenever possible, as so doing is an economic factor in building up my town, community and state.

Salesmanship a Science

THAT, briefly, is the object of the World's Salesmanship Congress that was formed 2 weeks ago in Detroit and which aims for "Better Business through Better Salesmanship." The idea is worthy of support. Salesmanship has long been in need of betterment and it is obvious that the improvement of this profession will work benefits for industry and the individual salesman as well.

The man who wishes to become a lawyer may in schools learn the fundamentals of that profession. He may learn things in school that he will never apply until he is out in the world of law.

The man who wishes to become an engineer can find schools wherein he may draw upon a great store of technical data that has been accumulated and classified by scientists. He may go to a fountain of comprehensive information, because engineering is a science.

A science is nothing but classified knowledge.

But the man who wishes to become a salesman has no such fount of knowledge to which he may go. There are a few sales schools, it is true, but the sales school has not reached the desired foundation. As far as it has gone it has done well, but that much remains to be done is evidenced by the fact that there are no real text books that adequately cover selling as other sciences are covered. There are books that cover certain phases of selling and a few purport to cover the whole science, but many of them consist of only a few good points buried in a pithy covering of verbosity and opinionated assertion.

The few good points in existing books, with the good points in other books and in the minds and experiences of salesmen, all collected and classified, will constitute a science. And then the man who would enter sales work may find a concentration of classified knowledge that will give him the foundation of a career.

To-day the sales beginner may be taught by one sales executive. This executive is limited in his knowledge—because no one man can accumulate all the knowledge there is by himself—and so the teaching of the executive is limited, and likewise the learning of the student.

The Congress recommends sales courses in universities and colleges. There is no reason why every worth-while university should not include a College of Sales, or a College of Applied Psychology, or call it what you will. Psychology has been taught for years, but the teaching of how to use it has been neglected. A College of Applied Psychology would go a long way toward the realization of the ideals of the new movement. A College of Sales would go further.

It is a thought for every university executive who is anxious that his institution approach its maximum of value to the world.

The Dealer and the Farm Tractor

EVERY man engaged in the motor car business would do well to pay close attention to the farm tractor situation, and it is suggested herewith that Motor World readers study the farm tractor articles that are appearing in description of the tractor demonstrations. There are eight of these demonstrations at different points throughout the West, each lasting about a week.

All along there has been speculation and discussion as to whether the car dealer or the implement man would handle the farm tractor and there is excellent opinion among the tractor people that the car dealer is the logical man. It certainly is an analogous line and the profits that would ensue would be welcome.

There may be some dealers who do not care to go into farm tractors, but every up-to-the-minute man in this industry should at least inform himself on the subject. Preliminary knowledge on any question is invaluable. It equips the man to meet the occasion should it arise.

There is no question but that the farm tractor is going to assume prominence. There is going to be considerable business in making and selling them. No matter what the dealer thinks of the tractor now he should follow it closely and keep posted at every step. Don't let it be discovered at too late a day that a big industry has developed and that he knows little about it.

ANGLES OF THE LAW

By George F. Kaiser

HOW many times we all have argued about the law! And how little we really knew about it! Any doubt on a legal point is always best referred to an attorney. To settle such questions this department is at your service.

Can Standardize Prices

Editor Motor World:

I read the article in Motor World of Jan. 21 with regard to the Atlantic City, N. J., association having decided to post in a conspicuous place, and near their membership cards, the schedule of prices charged for labor, etc.

Now, I would like to ask what the difference in the law is in New Jersey from the law in the State of Iowa on this particular point.

We have wanted to do something of this kind ever since we have had an organization, but I have advised the boys to stay away from it for the reason that it appeared to me the moment we put up a uniform price list in several places it would be used against us to prove that we were in a combination to control prices, and then we would run foul of the Sherman law.—N. T. Miller, Des Moines.

As I presume the business of the dealers who are members of your association is local in character and not an interstate business, you need not worry about the Sherman law or any other United States statute which deals with interstate commerce; it is not necessary to set out at length a comparison of the decisions reached in New Jersey and Iowa on this particular matter.

What you wish to know, as I understand it, is, Can your members adopt a uniform schedule of rates and post this up?

A Theoretical Case

I have no hesitancy in saying that you can do this. If A, B and C are in the same business in the same town or city, and A decides that he will charge a certain amount for labor and certain prices for specified articles of material, and does charge these amounts, there is no prohibition on B or C in any law, either State or Federal, which prevents him from adopting a like schedule. Of course, if there were a combination in restraint of trade the matter would be different; but, acting independently, each dealer can charge just what he pleases, and the mere fact that some other dealer is charging the same amount is no hindrance to his doing so.

I would not advise that any contract be drawn up or entered into among the members of your association regarding the fixing of prices if the members control all except a very small percentage of that business in your territory, as you might then be assumed to have a monopoly. If your members do nothing more than adopt uniform prices they certainly need fear nothing.

Insurance and Brokers

ONLY a few days ago a dealer laid the following case before me and asked for my advice:

He had procured fire insurance on his plant in a well-known company through a broker with whom he had dealt for a number of years. When the broker rendered a bill for the insurance the dealer sent a check and considered the incident closed.

Some time later, greatly to his surprise, he received a notice from the company advising him that unless the premium on his policy was paid the company would cancel.

The dealer called up the broker and told him the facts. The broker said that the matter was all a mistake; that he would immediately see that the premium was paid.

A few days later the dealer consulted me and wanted to know what he could do. I had to advise him that the only thing he could do, if he wished insurance from that company or any other company, was to pay the premium again, but that he could proceed against the broker and have his license revoked if he wished.

It appeared, on investigation, that the dealer had made the check payable to the broker personally instead of to the company. This is always a dangerous thing to do, as the broker simply indorses it and deposits it in his own bank and if he does not send his check for the insurance the person who has the policy must pay the amount over again.

It is far better to make the check out to the company direct. I have even known cases where this was done in which the broker has cashed the check; but when he does it when the check is so made out he makes himself liable to punishment for forgery and the chances are that he will make speedy restitution when he finds out that his theft has been discovered.

Dealers should remember, when placing their insurance, that it is a very important thing for them to place their insurance through an honest broker. The broker is not the agent of the company, according to the law; he is the agent of the party who procures the insurance; and for that reason the company is not liable for any of his misdeeds and the other party must stand responsible for them.

The other important thing for the dealer to remember is not to make any checks for insurance premiums payable to the order of the broker, but to make them payable to the order of the company.

Those Familiar "Notices"

WHETHER or not notices such as "All agreements made contingent upon strikes, fires, accidents or causes beyond our control," "All prices are subject to change without notice" and "All contracts and orders taken are subject to the approval of the executive office at New York, N. Y." are valid and binding has been asked.

This very matter has been given attention in a most recent New York case, and the New York Court of Appeals, which is the highest court in that state, has decided that when an offer, a proposal or a contract is expressed in clear and explicit terms, any writing which is not in the body of the instrument or is not referred to therein but appears in small type at either the top or bottom of the stationery, where it is not easily seen, need not be considered as a part of the contract. Judge Seabury, in writing the opinion of the court, said:

> The language of the proposal is clear and explicit, and this provision which is printed in small type cannot be allowed to change, alter or modify it unless it was a part of the proposal. It was not incorporated in the body of the proposal or referred to in it.

And, further, the court said:

> When an offer, proposal or contract is expressed in clear and explicit terms, matter printed in small type at the top or bottom of the office stationery of the writer, where it is not easily seen, which is not in the body of the instrument or referred to therein, is not to be considered as a part of such offer, proposal or contract.

Under this decision, if the meaning of a contract can be clearly ascertained, the mere fact that it is written upon a printed billhead which contains a notice or notices will not cause it to be altered. —Sturtevant Co. vs. Fireproof Film Co., 216 N. Y., 199.

The RETAIL NEWS

PACIFIC COAST

W. W. Crawford, Albany, Oregon Ford agent for the past 10 years, has erected a garage opposite the Oregon Electric Depot.

The Ralston Electric Supply Co., Albany, Ore., has secured the agency for Gould storage batteries and Michelin tires.

Hoyt & Lash, Tacoma, have opened a general repairshop, 1115 Tacoma Avenue. A specialty will be made of repairing Studebakers.

Chanslor & Lyon, Seattle, have leased 5,000 ft. additional floor space for use of their car department.

M. G. Farnsworth, Seattle, has taken the distribution of the Abbott-Detroit for Washington, Oregon and northern Idaho.

John Geissler, Tacoma, proprietor of the Square Shop, has been named distributer of Miller tires.

A. C. Smith, Endicott, Wash., has been named Chalmers agent.

Albert Steen, Spokane, has located at N. 2603 Monroe Street. Will handle the Abbott-Detroit.

H. F. McDonald, Spokane, has purchased an interest in Enterprise Garage, Wilbur, Wash. Hudson and Dodge cars will be handled in Wilbur territory.

Smith & McGreevy, Tekoa, Wash., have taken the agency for the Chalmers.

E. B. McCarthy, Winchester, Wash., has taken agency for Hudson line.

Ecker & Johnson, San Diego, Cal., have been appointed representatives of the Electric Equipment Co. of Los Angeles and will operate a service station and handle U. S. L. storage batteries, Eisemann magnetos, Mea magnetos, Disco electric starters, North East electric starters, Jijur electric starters, Detroit electric starters, Ward Leonard electric startes, Eeco magnet chargers, Eeco magnetmeters and Klaxon horns in San Diego.

E. C. Habel, Portland, Ore., who has for some time past been employed as salesman by the Dulmage-Manley Auto Co., has been made assistant manager and acquired an interest in the business.

Couchman & Sullivan, Portland, Ore., have recently established a motor livery, a fleet of Maxwells having been put in service. Headquarters are at the City Garage on Tenth Street.

A. E. Neate, Portland, Ore., formerly of Neate & McCarty, has purchased a half interest in Bolton's Service Station, Portland, Ore.

Harrison Sons Co., Portland, Ore., has taken the agency for the Crow-Elkhart.

Charles W. Noble and **Hal V. Cadwell,** Ontario, Cal., have established the Ontario Auto Supply Co. at 218 West A Street. The new concern does not do repairing. Motor cars are not sold by the firm, but everything for the automobile in the accessory and supply line is handled.

The Garford Motor Truck Co., Inc., Seattle distributer of the Garford truck, in the Northwest, Western Canada and Alaska, has opened salesrooms and a service station at 1726 Broadway, Seattle. A. W. McKenzie is district sales manager and Charles A. Eastman will have charge of the Seattle branch.

F. T. Carleton has moved from Everett to Seattle and will hereafter conduct Carleton's Tire Shop at 714 East Pike Street, Seattle. The premises have been remodeled and consist of an attractive salesroom and completely equipped vulcanizing and retreading department.

F. W. Knapp and **W. T. McNiece,** Seattle, doing business under the firm name of Auto Supply & Service Co., have erected a brick building at Olive Street and Westlake Avenue, especially designed as a showroom for accessories and supplies.

The Seven Seven Co., Spokane, distributer of the Dodge Bros., will build a one-story brick addition to its present quarters, 50 x 60. The addition will house a portion of the garage and repairshop.

The Ahlberg Bearing Co., Chicago, has opened a branch at 325 Davis Street, Portland, Ore.

The Northwest Buick Co., Seattle and Spokane, Wash., has secured the distribution in the State of Washington of the Warner auto trailer.

A. R. Dawson, Seattle, formerly of California, has been made manager of the newly organized Overland-Pacific, Inc.

A. W. McKenzie, Seattle, the Northwest representative of the Garford Motor Truck Co., who recently opened a branch for that factory at 1726 Broadway, Seattle, to cover Washington, Oregon, Idaho, Utah and British Columbia, has completed an attractive salesroom. The walls are of dull oak, and the floor is painted a light green.

SOUTH

The Bailey Garage, Stamford, Ky., has been incorporated at $1,800. Incorporators: H. L. Bailey, J. H. Warner and R. L. Collier.

The Martin Motor Co., Louisville, Ky., has been incorporated at $5,000. Incorporators: W. C. Martin, Ophelia Martin and A. G. Martin.

MIDDLE WEST

Charles Sweet, Leslie, Mich., is erecting a new garage.

Pape & Hunt, Battle Creek, Mich., is the new name of the Finley Garage, West Main Street, distributer of several cars. Rowland Finley, former proprietor, has sold his interest in the garage to go to Detroit.

Britten & Fohey, Howell, Mich., have leased a new building, 50 x 160, which is being erected on Grand River Street.

The Main Garage, Midland, Mich., has been sold by W. F. Valliere, who has been the proprietor for the past year, to George Venner, a well-known resident of that city.

Frank A. Sealand, manager of the Detroit Winton branch for the last 4½ years, has resigned to become general manager of the Cleveland-Cadillac Co., the Columbus-Cadillac Co., and the Toledo-Cadillac Co.

The New Southern Michigan Garage, Coldwater, Mich., has been opened by E. A. Biddelman.

Wetherald & Zimmerman, Davison, Mich., have recently taken possession of a new garage.

The Wisconsin Magneto Exchange Co., Milwaukee, will succeed to the partnership business conducted at 511 Broadway, Milwaukee; capital stock, $11,000; incorporators, Adolph Grauer, August D. McIntyre and Nomene McIntyre.

Fred Riley, Battle Creek, Mich., one of the partners in the Riley-Newman Auto Agency, has disposed of his interest.

The Andrews Motor Sales Co., Saginaw, Mich., Studebaker distributer, gave a luncheon a few days ago to its subdealers. This company takes care of the Studebaker business in Saginaw and surrounding territory.

The Opera House Motor Sales & Garage Co., Pontiac, Mich., has been incorporated at $10,000.

The Demers Auto Exchange, Saginaw, Mich., Maxwell dealer, has increased its territory, having secured the distributing agency for twelve Michigan counties. The company has contracted for 800 Maxwells for the 1917 season and is now establishing subagents in all of the counties in its new territory.

Nank & Priehs, Mount Clemens, Mich., have become distributer of the Buick and have opened a salesroom at 51 North Walnut Street.

The Rapson Garage, Bad Axe, Mich., has opened for business.

Fred Burt, South Lyons, Mich., has opened a garage.

Charles Doust, Ann Arbor, Mich., has purchased the repairshop of E. D. Chipman.

F. E. Hines, White Cloud, Mich., is now occupying a new garage.

Albert O. Braun, Muskegon, Mich., has been appointed sales manager of the Ideal Garage & Machinery Co., which concern will open a new two-story garage, 50 x 112. The company has secured the agency for the Maxwell.

N. Wendell, St. Johns, Mich., is erecting a new garage at Spring and Highan Streets.

The H. S. Moore Sales Co., Cleveland, has secured the distribution of the Stewart truck.

The Columbus Cadillac Co., Columbus, Ohio, central Ohio agent for the Cadillac, will erect a modern two-story salesroom and service station at Broad and Sixth Streets.

R. W. Pharis, Columbus, Ohio, who has been connected with the Pharis Tire & Rubber Co. as secretary and manager of the Columbus office, has resigned to accept the management of the International Tire Co., 187 East Gay Street.

The Mahoning Motor Co., Youngstown, Ohio, has been incorporated at $10,000 to deal in motor cars, by R. H. Rogers, Myron DeVenne, A. O. Fleming, P. H. Stambaugh and Louis S. Baldwin.

The Ollar-Overland Co., Toledo, Ohio, has been incorporated at $10,000 to deal in motor cars by Howard Lewis, Elizabeth H. Watson, S. A. Carter, Frank S. Lewis and Frank M. Hackett.

The Master Motor Car Co., Cleveland, Ohio, has been incorporated at $10,000 to deal in cars and accessories by Charles W. Rush, William G. Radcliffe, L. E. Yaggi, Helen M. O'Boyle and R. E. Kouba.

The Ford Motor Co.'s Milwaukee branch has made a number of changes. Herman A. Netter, head of the retail selling force at Milwaukee, has been promoted to manager of the branch in Duluth, Minn. C. C. Signer goes to Grand Rapids, Mich., as assistant manager. E. C. Schumann is transferred from Milwaukee to St. Joseph, Mo., as assistant branch manager. A banquet was tendered the three men and A. W. L. Gilpin, manager at Milwaukee, was toastmaster. On July 9 the 1400 employees of the Ford company in Milwaukee were entertained at an outing at Waukesha Beach, Wis.

Ronald and **William Keefe,** Mosinee, Wis., have opened a motor livery and repairshop in the former Keefe livery stables, which have been remodeled for the purpose.

The Rider Motor Co., Algoma, Wis., intends to take occupancy of its new garage and repairshop at Fourth and Fremont Streets this week.

Wallace Poe, 905 Copeland Avenue, Beloit, Wis., has opened a used-car and parts store and shop and will specialize in dismantling old cars and selling parts.

Alex Bock, Black River Falls, Wis., has opened an exclusive motor car repairshop and tire store in the garage building until now occupied by Hogg & McManners.

Hogg & McManners, Black River Falls, Wis., have moved into their new fireproof garage on First Street.

Digitized by Google

The General Welding & Mfg. Co., 330 Oregon Street, Milwaukee, will erect a 35 x 35-ft. addition to its plant, to be ready Sept. 1.

The Geuder, Paeschke & Frey Co., Milwaukee, sheet metal works, which recently opened a division for supplying motor car manufacturers, is adding 55 x 130 ft. to its main shop building.

D. G. Bennett, DeForest, Wis., is making an installation of oxy-acetylene welding and cutting apparatus.

Roy and **Adolph Klement**, Fort Atkinson, Wis., have taken possession of their new garage on South Third Street, West. The building is 50 x 100, two stories and basement. The repairshop on the second floor is connected with the other floors by a large electric elevator. Storage for seventy-five cars is provided.

The Overland-Madison Co., Madison, Wis., has purchased a site at King and East Wilson Streets and will at once erect a new fireproof garage and showroom, 66 x 80 ft. The company is a consolidation of the Park Motor Co., Madison, and the Roe Motor Co., Stoughton, Wis., and on July 1 contracted to sell 1500 cars in ten counties in western Wisconsin.

The Pell Garage, Bloomer, Wis., is adding a two-story shop, 36 x 68, to its garage and will have a building 64 x 138 when the improvements are completed. The concern handles the Maxwell, Grant and Chandler.

The Terwilliger Garage Co., Clinton, Wis., has made several important changes. Jerome Terwilliger has taken over the sales and agency department and Edwin J. Terwilliger becomes sole owner of the repairshop and service station. Jerome has taken W. H. Hughes as a partner and will handle the Dodge Bros. and King in Walworth and Rock Counties. Edwin has taken Roy Osborn as a partner and in addition to acting as service station for Terwilliger & Hughes, will do a general line of machine work in the present quarters.

A. F. Fuerst, A. W. Rickaby and **R. B. Ricaby**, New London, Wis., have formed a partnership with the Oestreich Bros., New London, to handle the Maxwell. A. F. Fuerst will be sales manager. The Oestreich Bros. have been operating a garage in New London for several years.

F. W. Abenschein and **George E. Sande**, Neenah, Wis., have severed their connections with the J. P. Stroebel Hardware Co. and will establish an implement and motor car agency. Temporary quarters will be leased at once and later a garge and warehouse will be erected.

Demars Bros., Washburn, Wis., owners of the Service Garage, have made a large installation of steam vulcanizing and other tire repair equipment.

The Olson & Pauly Automobile Co., Manitowoc, Wis., has sold its garage on Commercial Street, Manitowoc, to Behnke Bros., Whitehall, Wis., who take immediate possession. Olson retains an interest in the company and will devote his entire time to the State agency for the Ross. The Behnke concern will specialize in the Olds and Chevrolet. The Olson & Pauly company has opened a showroom and service station at 443 Jackson Street, Milwaukee.

Harlow & Herrell, Whitehall, Wis., is the name of a new garage and agency firm established in a new fireproof garage building recently completed on Scranton Street, Whitehall. The concern is agent for the Allen and Velie. The garage is 36 x 90 and equipped with power machines for repair and machine work.

Charles E. Marks, Madison, Wis., has taken the Dane County agency for the Haynes and will open a garage and service station at once. A definite location has not yet been selected.

The Monroe Auto Co., Monroe, Wis., sustained a loss of $2,000, fully covered by insurance, by fire last week. It is believed the blaze originated from a defective vulcanizing mechanism. Repairs are under way and the business is suffering only slight inconvenience.

Palmer & Beacham, Poynette, Wis., have taken occupancy of their new fireproof garage and service station, erected at a cost of $8,000.

SOUTHWEST

The Chevrolet Motor Co. of Texas will purchase a 7-acre tract of land, situated west of Trinity Park and south of Arlington Heights Boulevard, as a site for its proposed automobile assembling plant. The erection of the new plant will be started in the near future, it is announced.

G. S. Loomis, formerly employed at the Packard factory at Detroit, and for the last 2 years general manager of the Southern Motors Co., Louisville distributer of the Packard, has resigned to accept a similar position with the Packard-Missouri Motor Co. of St. Louis.

The Robinson Motor Car Garage & Repair Co.'s. St. Louis property was destroyed by fire July 11. Loss, about $20,000. Robinson, head of the company, was formerly head of State Anti-Saloon League and said his property had been threatened on that account and he has asked police inquiry.

J. D. Cathey, St. Louis, has been named manager of the uptown depot of the Chevrolet Motor Co. of St. Louis. This building, with 150 ft. of show window space, fronts on the Locust-Lindell cutoff, made expressly for motor traffic, and will be opened Aug. 1. It will be the city salesrooms and service station, the latter having all of the second floor space and needed first floor shop. The warehouse space will be in the basement. Cathey formerly was president of the Regal Buggy Co., which was sold to Russell E. Gardner, president of the Chevrolet company, while the latter was president of the Banner Buggy Co. Cathey and Gardner have been business associates and rivals for 25 years.

The Hudson-Phillips Motor Car Co., St. Louis, opened new showrooms on the Locust-Lindell cutoff July 17.

The R. L. Cameron Automobile Co., Dallas, has been made North Texas representative for the Allen. Cameron also handles the King and Lozier.

Hudson-Phillips Automobile Co., St. Louis, has leased 100 x 150 ft. at 3308 Washington Avenue for repair yard. On the lot is a three-story residence, which will be fitted for living quarters for yard employees.

I. R. Watts, Clay Center, Kan., has sold his automobile business to Homer Harner of Green, Kan. Watts will build a garage for storage and repairs.

W. N. Thielen, Peirce City, Mo., who will occupy his new garage shortly, has secured the agency for the Chevrolet.

J. C. Duncan and **Oakley Sitton**, North Lincoln, Mo., have opened a repairshop.

Paul Spurlock and **Loyd Lumpee**, Versailles, Mo., will soon open a garage, where they will handle accessories. Lumpee is an electrician as well as a car repairman.

The Independent Garage, Home City, Kan., is being rebuilt and enlarged.

The Albany Equipment Co., Albany, Mo., Ray Webb, proprietor, has opened for business.

W. H. Reynolds, Sedalia, Mo., has leased quarters for a salesroom and garage; he will install accessory and repair departments; he has secured the agencies for the Chalmers and Briscoe.

The Holzmark Motor Co., Kansas City, Kan., Overland dealer, will open a branch in Leavenworth, Kan.

L. E. Fawver, Cassville, Mo., has secured the agency for the Ford, formerly held by Chandler & Black.

J. C. Dickinson, Odessa, Mo., formerly in the repair business in Kansas City, has purchased a half interest in the Colvin Garage; the name of the firm is now Colvin & Dickinson.

Noah Hudgess, Newburg, Mo., has nearly completed a new garage.

Hogeboom & Thompson, Goodland, Kan., will take possession of a new garage about Aug. 1.

The Riverside Garage & Machine Shop, Dodge City, Kan., is enlarging its quarters and adding to its equipment of machinery. Frank Gingrich and Paul Elgin are proprietors.

Linn & Danielson, Clyde, Kan., have bought the Ford Garage from Phil Lapaille and are now in charge.

C. F. Grant, Eureka, Kan., has leased the Jackson Garage and purchased the equipment; he formerly lived in Marseilles, Ill.

W. E. Knabe, Milan, Mo., has opened a repair department in his new garage.

Wilkinson & Allyn, Albany, Mo., have succeeded the firm of Webb & Allyn, Clarence Wilkinson being the new member, taking the place of Webb. Their repair and livery business is located in the Wilkinson Garage.

J. S. Stover, Lincoln, Kan., has bought the R. E. Curtis Garage, taking over also the Ford agency; Rex Stevens continues in charge of the garage.

C. S. Gatchel, La Plata, Mo., will move next month into a building being remodeled for his garage.

F. R. Plummer, Coats, Kan., is now occupying his new garage and repairshop.

The Stafford Motor Car Co., Kansas City, Mo., Twenty-second and Campbell Streets, is still making parts for Stafford cars and giving service to the 500 cars now out in the Middle West and the Pacific Coast. The plant, which discontinued making cars 2 years ago, is now employed in repair work on all kinds of cars. C. W. Winkler is assistant manager to Stafford.

The Springfield Overland Motor Co., Springfield, Mo., has been organized with $10,000 capital to distribute the Overland in twenty-five counties of southern Missouri and northern Arkansas. It is planning a brick and concrete building, 36 x 150, having temporary headquarters at the Haskett-Mace Garage. The company consists of C. W. Lehnard, Monett, Mo., president; J. C. Hastie, local manager, and G. F. Wiltse, assistant manager. A. F. Williams will be territory salesman. Lehnard is also interested in the Overland agency in Joplin. Hastie has managed the Dodge Bros. and Ford agencies in Springfield. The new company will be a branch of the Overland factory.

J. A. McDaniel, Dallas, has been appointed representative for Dallas territory of the Commerce Motor Car Co.

W. L. Bayha, Kansas City, Mo., for 7 years manager of the Ajax Kansas City branch, has established the Bayha Tire & Rubber Co. and will distribute these tires locally. The district headquarters of the tire company is with this local office, at Fourteenth and McGee Streets.

EAST

The Electric Storage Battery Co., Philadelphia, Nineteenth Street and Allegheny Avenue, has purchased forty-four dwellings in the vicinity of the plant, and after tearing them down will start operations for a number of additional buildings.

William H. Ryan, Wilmington, Del., has taken the agency for the Paterson car.

Mack's Auto Sales Co., Buffalo, has changed its location to 1474 Main Street, opposite Woodlawn Avenue.

Digitized by Google

White Bros., Wilmington, Del., have just established a service station for the Dort, Bell and Metz.

The H. J. Koehler S. G. Co., Newark, N. J., has appointed these dealers: H. J. Crumley, Farner, Tenn.; Cadillac Sales Co., Knoxville, Tenn.; W. S. Straus, North Adams, Mass., and Juanita Auto Co., Mifflintown, Pa.

Edward W. Burnshaw, Jr., Philadelphia, recently in charge of the wholesale department of the Girard Automobile Co., 2314 Chestnut Street, distributer of the Peerless, has been promoted to general manager.

William P. Herbert, Philadelphia, Chandler dealer, at Broad and Race Streets, has incorporated the business with the addition of Ralph W. Cook and Walter G. Herbert. Herbert is president, Cook vice-president and general manager, and Walter G. Herbert secretary and treasurer. An effort will be made to exceed 600 cars for the current year.

The Eastern Top & Body Co., Philadelphia, has been incorporated by William J. Beury, Charles E. Beury and A. L. Hastings, to manufacture tops and bodies.

The Philadelphia Motor Service Corp., Philadelphia, is in process of formation and will operate a number of garages. The company was incorporated at $75,000 by H. Bonsall and R. M. Cook of Philadelphia, and J. M. Frere of Wilmington.

MOUNTAIN

The Automobile Sales Corp. Denver, Studebaker and Franklin distributer in Colorado and Wyoming, has moved from 1509 Cheyenne Place to 1520 Broadway.

The C-B Auto Service Co., Denver, has opened a Moore distributing agency for Colorado at 1439 Cleveland Place.

Woodbury & Davis, Parker, Col., are building a $2,000 brick garage. It will be 45 x 75, and one story high.

The Maines-Hough Motor Co., Denver, Chevrolet, Monroe and Mitchell distributer, with sales and service station at 439 Broadway, has given up the Mitchell and is handling the other two lines exclusively.

J. M. Scoville, Fort Morgan, Col., has secured the Chalmers agency for Morgan County.

The Denver Tire Service, Inc., Denver, United States tire distributer for Colorado and Wyoming, with salesroom and service station at 215-217 Sixteenth Street, is now managed by John A. Payment, formerly manager of the Quick Service Tire Co., distributer of Quaker tires.

The George H. Estabrook Auto Co., Denver, Briscoe and Hollier distributer, has secured the McGraw tire distributing agency for the same territory. The general salesroom is located at 1646 Broadway.

The Chamberlain-Woods Motor Sales Co., Denver, the new firm name of the Hupp Motor Sales Co., Hupmobile and Locomobile distributers, has added the Dort agency.

F. P. Van Sickle, Denver, has opened a Colorado, Wyoming and Utah distributing agency for the Aurora demountable truck at 1608 Broadway.

Willys-Overland, Inc., Denver branch, Denver, is the name of a factory sales and service branch just opened at Fifteenth Street and Cheyenne Place to handle the Rocky Mountain territory. The new concern will be managed by Calvin C. Eib, formerly general manager for J. W. Leavitt & Co., San Francisco, Overland and Willys-Knight distributer for the entire Pacific Coast. The new branch will supply all of Colorado and part of Wyoming, Utah, Idaho and New Mexico.

The Colorado Motor Car Co., Denver, Cole, Saxon and Reo distributer, has given up the Cole and Saxon and is arranging to move the Reo headquarters from 1520 Broadway into another location.

H. Grant Wimbush, Denver, formerly vice-president of the Motor Sales Co., a time-payment concern for Ford buyers, has secured the Mitchell distributing agency for Colorado and Wyoming and opened a salesroom in the new Fisk Building, Broadway and East Twelfth Avenue.

The Automobile Sales Corp., Denver, Studebaker and Franklin distributer, has given a two-day exhibition of the Studebaker golden chassis, which attracted a great deal of attention.

The Cole Motor Sales Co., Denver, is the name of a new Cole distributing agency for Colorado and Wyoming just opened at 17 East Colfax Avenue by H. P. Federspiel, formerly manager of the Colorado Motor Car Co.

The Mid-West Auto Sales Co., Denver, King, Wichita and Wichita truck distributer for Colorado and Wyoming, has given up the King and secured the distributing agency for the same territory for the Patterson light six and the Ross eight, and the Colorado territory for the Twin Bed Trailer.

George A. Duggan, Denver, recently sales manager for the J. S. Morrison Auto Co., has taken a position with the Continental Oil Co. as district salesman in Salt Lake City.

The Overland Auto Co., Denver, for several years Overland distributer for Colorado and Wyoming, has given up this agency on account of the new Willys-Overland factory branch just established, and has secured the King and Saxon distributing agency for the same territory, with headquarters at 1200 Broadway. The concern will continue to operate under its established name, at least temporarily, with W. J. Carter as president and treasurer.

The J. S. Morrison Auto Co., Denver, Oakland distributer in Colorado and Wyoming, has taken on the Allen distributing agency for the same territory. The salesroom is at 1528 Broadway.

The National Motor Co., Denver, National and Elgin distributer in Colorado, Wyoming and western Nebraska, has added the Weston distributing agency for the same territory and has just placed its first demonstrator in its salesrooms at 1616 Broadway.

The Quick Service Tire Co., Denver, dealer in Quaker tires, which was formerly managed by John A. Payment, is now handled directly by the Boss Rubber Co., 1548 Broadway, which has added the Quaker to its Kelly-Springfield tire distribution for Colorado, Wyoming and New Mexico.

CANADA

The James Walker Hardware Co., Montreal, is opening an accessory department.

The Montreal Motor Sales Co., Montreal, has just been appointed representative of the Chalmers in addition to the Dodge Bros.

NORTHWEST

G. H. Martin, Lenox, Ia., has sold his repair business to L. E. Neely of Sharpsburg, Ia.

Cochrane & Lardell, Stockville, Neb., has been dissolved, Cochrane buying his partner's interest and continuing the business.

Charles Hindes, Minatare, Neb., has sold his interest in the Ford Garage to Harry Leafgreen.

F. H. Roland, Beaver Crossing, Neb., has bought the Watts & Owen Garage and taken possession.

L. A. Newman, Auburn, Neb., has opened a new garage.

William Robertson, Cozad, Neb., has sold his garage to Frank Corpenning and A. Duval.

A. Sinamark, Nickerson, Neb., and C. W. Jordan, Morse Bluff, Neb., have leased a building in North Bend, Neb., which will be remodeled for a garage and salesroom.

The Wilson Garage and Motor Co., Thermopolis, Wyo., has been incorporated by Chester W. Wilson, Theresa O. Wilson, L. Lilly and G. A. Ukensky, with capital stock of $10,000.

Mohr & Ehlers, Culbertson, Neb., will be the firm to have charge of the new Hein Brothers' garage when completed.

A. C. Fogelsong, Tulare, S. D., has bought the W. H. Plakett Garage.

Edward Stanton, Martin, S. D, has leased the C. S. Allen Garage.

Joseph Mitchell, Hamburg, Ia., has bought the interest of his partner, Halbert Martin, in the Standard Garage.

J. S. Messer, Hartley, Ia., has bought out his partner, Edward Johnson, and the firm has been dissolved.

The Nelson Motor Co. Garage, Ringsted, Ia., has been bought by N. H. Hendricksen.

Dorf Bakke, Essex, Ia., has opened a garage.

C. S. Prime, Oxford, Neb., has purchased the interest of his partner, A. J. Archer, in the Ford Garage, which he will conduct alone.

Chester Joy, Franklin, Neb., has bought the garage business of his brother, Guy Joy, who retires.

The Stump Garage, Falls City, Neb., has been bought by H. J. Prichard.

Graham & Co., Bridgeport, Neb., have bought the garage business of Clawges & Nelson.

Joseph Harbaugh, Humboldt, Neb., has sold his garage to Edward Uhri, Falls City, Neb.

F. A. Plummer and **Earl Wheeler**, Chadron, Neb., have converted the old bottling works to a garage and begun business.

William Howell, Auburn, Neb., has bought the interest of Dudley Leeper in the Leeper Bros.' automobile supply business.

The Schee Motor Co., Des Moines, will build a new Studebaker service station at West Seventeenth and Grand Avenue, to cost $20,000.

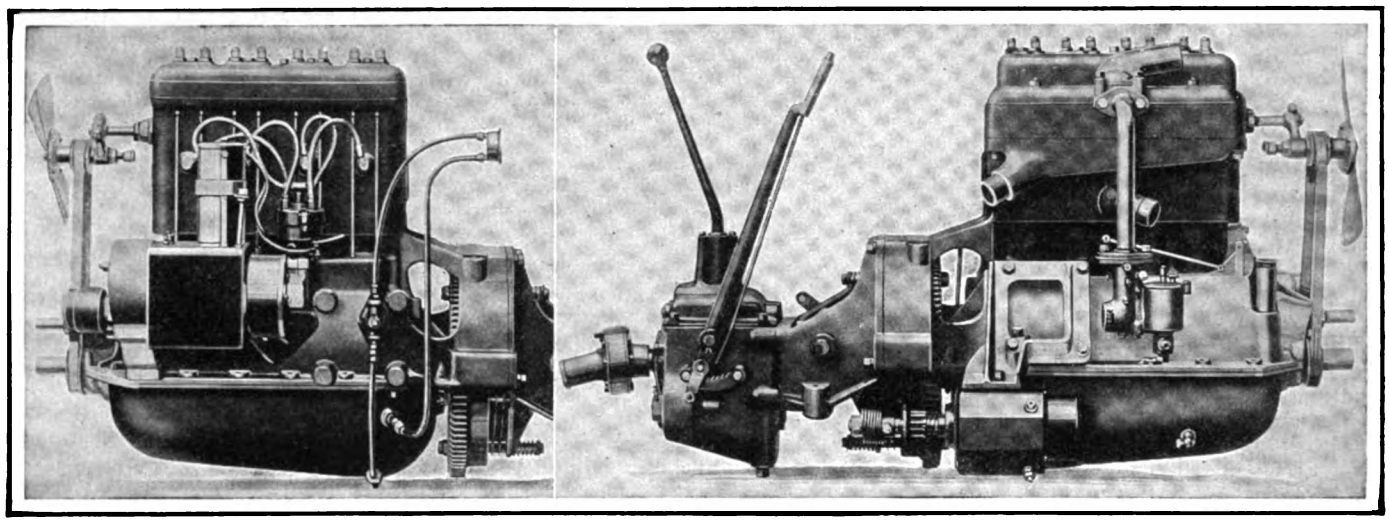
C. Van Oosting, Kanwha, Iowa, has let the contract for a new garage on South Main Street. The building is to be completed Aug. 10.

TIRE REPLACEMENT ORDER

9802 Ossining, N. Y.,

To

GENTLEMEN:—



We have shipped by for replacement:

Mileage
Car
Wheel
Received from you
Delivered to customer
Owner
Remarks:—

Yours truly,
OSSINING GARAGE CO.,
Per

WHEN the Ossining Garage Co., Ossining, N. Y., returns tires to the factory for adjustment, one of these printed slips goes with each, properly filled out, of course. The slip saves correspondence and gives the information the tire company wants.

Fully inclosed rocker arms are a feature of the new motor. Starting and lighting units are separate

Many Monroe Improvements Include New Motor

Disk Clutch—Crowned Fenders—Muffler Cutouts Are New Price Now $565

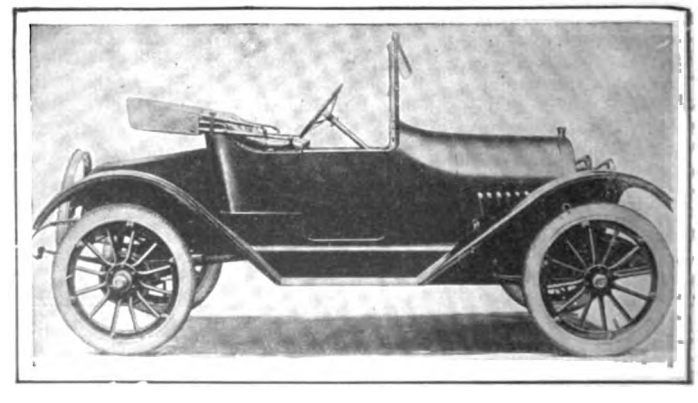
THE Monroe Motor Co., formerly located at Flint, Mich., but now at Pontiac, Mich., is now ready with its 1917 roadster, the only type of machine which it is making at present. Looking somewhat the same as the previous model, the new car, which is designated as Model M-3, has a number of improvements over the model it replaces.

The price has been raised $70—from $495 to $565—this partly due to the added cost of materials and partly to the considerable added equipment and improvements in design and construction.

Chief among the changes over the preceding Monroe is the adoption of an entirely new motor to replace the 3⅛ x 3¾ in. engine that was used last year. The new power plant is designed by the Brush Engineering Association, Detroit, and has the same overhead-valve construction with outside adjustments that characterizes most of the engines Brush now lays out. This new engine has a bore of 3 in. and a stroke of 4¼ in. and is of the block type with gearset in unit.

Along with the motor change, a multiple-disk clutch takes the place of the previously-used cone type. The frame has been lengthened 3 in. at the rear to accommodate the longer rear deck now fitted, and the ratchet foot pedal that controlled the emergency brake heretofore has given way to the standard method of emergency control by a hand lever. In front of the radiator a sheet metal piece has been fitted between the frame rails. This helps to send the air to the radiator and also acts as a mudguard for the radiator.

Crowned fenders have replaced the flat variety of last year, and they do much to enhance the outward appearance. This, together with the lengthening of the body back of the seat, suggests a larger vehicle even though the wheelbase remains unchanged at 96 in.



Considerable has been added to the equipment. Demountable rims have replaced the clincher type, and in the rear the tires are nonskids instead of smooth. A muffler cut-out has been put on, a feature which a great many drivers will appreciate. Then, a sight oil feed has been put on the dash; a lock switch for protection against theft of the car has been added, and there is also a Stewart-Warner speedometer, no speed indicating instrument being furnished as standard equipment previously.

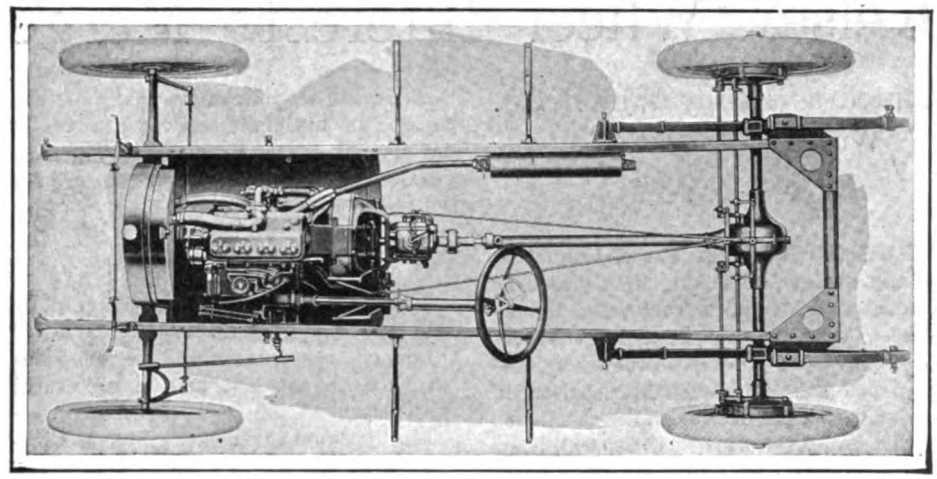
Looking more closely at the details of the motor, it will be noted that the cylinders and upper half of the crankcase are cast in one piece, a construction very often employed where the cylinder-head is made removable, as it is in this case. The rocker arms and valves are carried in the head unit, being entirely inclosed within a single cover plate that bolts to the top of the cylinder-head. Protruding through the top of this cover plate are the adjusting nuts, which, after the lock nut has been loosened, can be turned by hand until the proper clearance between the end of the valve stem and the rocker is obtained. Thus, it is possible to secure an adjustment of the valves simply

MONROE, MODEL M-3

Price—Roadster	$565
Color	Blue
Make of motor	Own. Brush design
Number of cylinders	Four
Shape	Overhead-valves
How cast	Block
Bore	3
Stroke	4¼
S. A. E. horsepower	14.4
Ignition	Connecticut distributor
Carbureter	Zenith
Engine starter	Auto-Lite
Lighting system	Auto-Lite
Clutch	Disk
Gearset	3-speeds selective
Wheelbase	96 in.
Front tires	30 x 3
Rear tires	30 x 3, non-skid
Wheels	Wood
Steering	Left
Control	Center
Type rear axle	three-quarters floating

Equipment includes: Top, side curtains and dust cover, windshield, electric horn, demountable rims—one extra, lock switch, Stewart speedometer, muffler cut-out, set of tools, tire repair kit, jack, tire pump, sight oil gage.

Crowned fenders are found on the new model



Digitized by Google

and accurately. The valve push-rods run up to the rockers on the left side of the motor and the spark plugs enter the cylinders between the two rods of each cylinder.

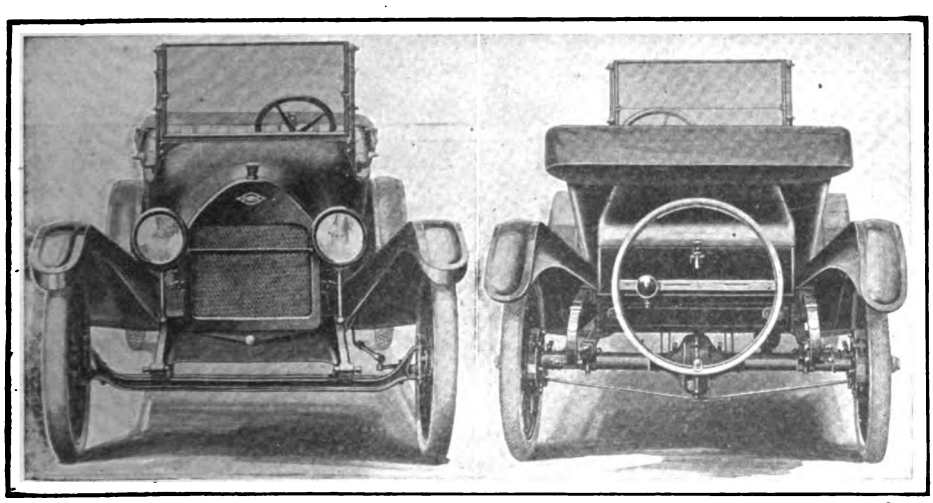
Manifolds are on the right side, the intake having but a single connection to the carbureter pipe at the center of the head casting. Hung from a bracket, attached to the right rear side of the upper crankcase, is the Auto-Lite starting motor, which is geared to the flywheel by means of the Bendix automatic starter drive. On the left and driven through gear connection with the camshaft is the generator, also an Auto-Lite unit. This generator has mounted on its top the ignition coil, and its rear end carries the vertical Connecticut ignition distributor which connects to the armature of the generator by helical gears. The flywheel is only semi-inclosed, due to the use of a form of bell housing which extends back from the crankcase and integral with it, until it meets the forward extension at the gearbox. Thus the lower half of the flywheel is exposed, as well as a portion of the upper part, where the crankcase extension is cut out to reduce the weight without affecting the strength.

Rocker-Arm Details

Peculiar to the Brush type of overhead valve motor, the rocker arms which transmit the upward motion of the push-rods into a downward motion on the valves, are not carried on rocker shafts, as is usually the case. Instead, the rockers, which are steel pressings, have formed at their centers a socket which rests on a pivot and allows the same rocker motion that would be possible if the conventional form of shaft were used. The pivot is simply a threaded pin which seats in the body of the head, and its end protrudes through the top of the cover plate as already mentioned. Thus adjustment of the rocker is obtained by screwing this pivot in or backing it out, as the case may require. The valves are quite large for a motor of this size, having a diameter of 1¼ in., and being operated by a two-bearing crankshaft of generous proportions, the bearings of which measure ⅞ in. in diameter by 2 7/16 in. long. It is driven from the crankshaft by helical timing gears, which are completely inclosed in a compact manner.

Plan of chassis. The frame members are straight-sided, slightly tapering

Realization of the fact that a great deal of the smooth running of any motor depends upon the sturdiness of the crankshaft and its support, the motor has been fitted with a main shaft that is also of good size, having two main bearings, the front measuring 1 9/19 x 2 15/16 in. diameter and length respectively, and the rear of the same diameter, but 3 3/32 in. long. Although a moderately high-speed engine, it is fitted with a comparatively heavy flywheel, whose diameter is 12 in.



Lubrication of the motor is accomplished by the use of a conventional splash system, with troughs supplied by a plunger pump drawing its oil from the reservoir in the motor base. Each rod end dips into its trough and splashes the oil onto the several bearing surfaces in the customary manner. Simplicity is also obtained by the use of thermo-syphon cooling, which is advantageous to a motor of this size. The head casting carries the water outlet to the honeycomb radiator, and water enters the cylinder blocks at the center of the right side. A fan driven by belt from a pulley on the crankshaft is used, this having provision for adjustment of the belt tension by means of an arm attached to the forward end of the cylinder-head.

From the motor the power passes through a simple dry-plate clutch, having six disks, alternately Raybestos and steel. Three selective speeds are afforded by the compactly designed gearbox, which is mounted in unit with the motor, in the manner already described. The gears are of double heat-treated nickel steel, with the teeth of the stubby variety to resist driving strains and sudden shocks. The gear shafts are carried on ball bearings. A ball and socket control lever is positioned on top of the gearbox proper, and the emergency brake lever attaches to the right side so as to play over a ratchet sector, also carried on this side.

Rear Construction

Back of the gearbox there is a well-inclosed universal joint, after which the driveshaft enters a torsion tube, which incloses it the rest of the way back to the rear axle. Thus the drive is taken through the rear springs, while the torque is provided for by the propeller shaft housing. The rear axle is a three-quarter-floating type that affords a ratio of 4¼ to 1. Axles and pinion shafts are mounted on Hyatt roller bearings in conjunction with ball thrust bearings that take care of any end thrust. The axle tubes, which carry the car weight, are riveted into the two halves of the differential housing, and as a strengthening factor a truss rod passes below the housing from one brake drum to the other.

The new Monroe is painted a royal blue as a standard color and is said to be capable of speeds ranging from 3 to 50 m.p.h. on high gear. Tires are 30 x 3.

Front and rear views of the Monroe runabout

Kelsey Wheel Interests Merge

United as Kelsey Wheel Co. With Capitalization of $13,000,000

DETROIT, July 22—The consolidation of the Kelsey Wheel Co., with plants at Detroit and Memphis, Tenn.; the Kelsey Wheel Co. of Windsor, Ont., and the Herbert Mfg. Co., Detroit, practically has been completed, the new corporation to be known as the Kelsey Wheel Co., Inc., with a capital stock of $13,000,000, composed of $3,000,000 of 7 per cent cumulative preferred and $10,000,000 common.

John Kelsey is to become president of the new corporation, but the rest of the officers have not yet been determined. Control of the new organization will remain with Kelsey and the others already associated with him in the several companies entering the merger. Kelsey is the leading figure in the several companies above mentioned, and it is largely due to his genius that these enterprises have grown to their present great size.

Few realize the enormity of the Kelsey interests, both here and in the South. At the main Kelsey plant in this city twenty-five sets of wood wheels are produced daily, complete with rims. In the making of automobile rims the Kelsey company now ranks at the top, and utilizes 150 tons of steel per day for this product alone. The Herbert Mfg. Co. makes 500 automobile bodies per day, besides finishing and trimming a large proportion of them. This plant is also a very large producer of a variety of steel stampings required in the manufacture of motor vehicles.

The Memphis, Tenn., plant of the Kelsey company represents an investment of $500,000 and is the factory at which the hickory used in the manufacture of the wheels is concentrated. It is here worked into spokes and felloes, the completed wood wheels then being sent to Detroit, where they receive their steel rims. The Kelsey company located in Windsor, Ont., is a separate corporation, but includes most of the same stockholders. It is the Canadian car manufacturers' main source of wheel supply. The Detroit Kelsey company has an authorized capital stock of $1,500,000, all of one class, and $900,000 of this is outstanding.

The preferred stock of the Kelsey combination is underwritten by Sachs, Goldman & Co., New York bankers, and the common is said to have been oversubscribed. In the organization plan there is provision for retiring the preferred stock at the rate of $90,000 per year. It is proposed to make the consolidation effective from Jan. 1, 1917.

There are no immediate plans for expansion of the plant nor for changes in the several companies entering the merger. Each will operate as heretofore for the time being.

De Palma Wins $2,500

KANSAS CITY, July 22—Marred by only one accident, an injury to Eddie O'Donnell, the Duesenberg driver, Kansas City has at last held a successful speedway meet.

Ten thousand enthusiastic Kansas Cityans this afternoon saw Ralph De Palma, in his cream-colored Mercedes, win the 100-mile grind after a thrilling contest with O'Donnell. The Italian's time was 1 hr. 42 min. 54 sec., an average of 58.48 miles per hour.

After cheering O'Donnell for his game fight in the 100-mile event, the crowd saw the clever little driver hurtle through the fence on the first turn of the track in a 25-mile event which followed the first race. He was badly hurt, but the mechanician was uninjured. A broken steering knuckle caused the accident.

The first four cars which finished came across the tape in the following order:

De Palma, Mercedes, 1 hr. 42 min. 54 sec.; average, 58.48 m.p.h. Prize, $2,500.

O'Donnell, Maxwell, 1 hr. 45 min. 6 sec.; average, 57.02 m.p.h. Prize, $1,000.

George Buzane, Duesenberg, 1 hr. 49 min. 42 sec.; average, 52.98 m.p.h. Prize, $600.

Art Klein, Kleinart, 1 hr. 54 min. 56 sec.; average, 53.29 m.p.h. Prize, $400.

Others who started were: Eddie Rickenbacker, Maxwell; Charles Devlin, Duesenberg; Pete Henderson, Maxwell; Billy Chandler, Crawford; Dave Lewis, Crawford; Andy Burt, Ogren; W. W. Brown, Duchesneau.

W. W. Brown (Duchesneau) probably gets first money, $600, in the 25-mile, and Art Johnson (Crawford) second, $400. The race was stopped after O'Donnell's accident.

O'Donnell Recovers

KANSAS CITY, MO., July 25 (Special Telegram)—O'Donnell will be out of the hospital in two weeks. The speedway association plans strengthening the track and holding a meet Oct. 7, the last day of the American Royal Live Stock Show.

Fire in Gibson Plant

INDIANAPOLIS, July 22—Fire which was caused by defective electrical wiring last night burned out the third floor of the Gibson Co.'s plant. This contained motor car parts and some accessory stock. The loss is approximately $85,000. Business, however, was not at all delayed. The company opened as usual this morning, adjusted itself to conditions, and its service system continued to operate as usual. Manufacturers assisted the jobbing company greatly by expressing a duplicate of the stock that was damaged, and this, with the reserve stock in warehouses, served to overcome the difficulty.

Aubrey and Mechanician Killed

TACOMA, WASH., July 24 (Special telegram)—Ulysses Aubrey, driving a Tacoma special, and his mechanician, Frank Lake, were instantly killed in the Australian pursuit race on the Rose City Speedway to-day. A series of accidents marred a good race program with record attendance. F. M. Penticost, driving the Schnieder special, went through the fence but was unhurt. M. J. Moosie of Los Angeles, in the Gandy special, plunged 300 yd. and his car jumped 22 ft. in the air with a broken steering knuckle. The 50-mile race was won by Omer Toft of Los Angeles; time 49 min. 27 2/5 sec. The 20-mile race also was won by Toft in 20 min. 29 1/5 sec. The fastest lap of the mile dirt track was made by Rea Lenz, in the Ramono special, of Seattle.

Where Is Russell?

NEW YORK, July 24—The Postal authorities are anxious to learn the whereabouts of Charles A. Russell, who is charged with having used the mails to defraud. The charge is that he operated at 56 Murray Street, New York, under the name of John J. Treacy, and by circular letter, sent out in April, offered spark plugs, tubes and headlights at prices which are said to be far below the best quotings of the manufacturers on any occasion.

It is charged that he received $3,100 in 10 days' time for goods and failed to deliver any merchandise. He was apprehended in York Village, Me., but escaped custody, although the authorities succeeded in holding Frank A. Boyle, who is said to be Russell's chauffeur and who is charged with having operated with him. There is a John J. Treacy formerly engaged in the supply business, but he has, it is said, been on the Pacific Coast for about 2 years and his name was used without his knowledge.

Russell is said to be known to all the jobbers as far west as Denver and his description follows: Forty years, 6 ft., 175 lb., wavy gray hair, well built, good chest and shoulders, thin legs, good looking, scar on one jaw or cheek, dark clothes, watch chain from one lower to opposite upper vest pocket.

Some of the prices he quoted are: Champion plugs, ½ in., 17 cents; Champion regular, ⅞ in., 19 cents; Bosch, ½ in., 35 cents; Bosch, ⅞ in., 45 cents; Sootless, ⅞ in., 28 cents; Goodrich 33 x 4 safety tread tires, $8.50; Goodrich 33 x 4 gray tubes, $1.95; Raybestos lining, 2½ x ¼, 22 cents; E & J headlights, 10 in., $2.85 per pair; E & J No. 23, tail lights, 3 in., 40 cents each.

Tractor Demonstration on In Hutchinson, Kan.

Second Event of National Circuit Arouses Great Interest—Conditions Different

HUTCHINSON, KAN., July 24—The second in the circuit of National Farm Tractor Demonstrations opened to-day on a farm near this city. The demonstration gives promise of being fully as valuable in its results as that held last week at Dallas.

Agricultural conditions in this section are slightly different than in Texas; and whereas practically all of the tractors drew disk plows at Dallas, most of them will draw mold board plows here because of the difference in soil. There has been no rain here for a month, and dry soil will test the tractors severely. The accessory exhibit here is much larger than in Dallas. Several tractors not shown in Dallas have appeared here. Their manufacturers are:

Sweeny Tractor Co., Kansas City; Gray Tractor Co., Minneapolis; Kansas City Hay Press Co., Kansas City; Pioneer Pony Co., Winona, Minn.; Russell & Co., Massillon, Ohio; Waite Tractor Co., Chicago; C. O. D. Tractor Co., Minneapolis; Bullock Tractor Co., Chicago; Buckeye Tractor Co., Anderson, Ind.; Commonwealth Tractor Co., Ludington, Mich.; Dayton Dick Co., Quincy, Ill.; Interstate Engine & Tractor Co., Waterloo, Iowa; Killen Strate Co., Appleton, Wis.; John Lauson, Port Washington, Wis.; McIntyre Tractor Co., Columbus, Ohio.

Why Texas Needs the Farm Tractor

(Continued from page 9)

ers are enthusiastic about it. There is no doubt but what it brings a better crop.

Agricultural experts tell me that even an unpracticed eye can distinguish quite easily those wheat fields which have been tractor plowed and cultivated. We don't have to assume that the farmer wants the tractor. This is known. So, then, it only remains to demonstrate that the farmer has the wherewithal to buy the tractor.

Look At the Cotton!

Let us take the cotton crop, for example. Last year Texas ginned 3,175,000 bales of cotton, and cotton was then selling for 7 cents. The crop was worth $850,000,000. This year she will equal this crop, but cotton is now selling for 14 cents. What the price will be in the event of peace being declared in Europe, thus throwing open the world's markets, few care to predict, though some optimistic spirits have no hesitancy in putting the figure at 18 or 19 cents, and a few, still more optimistic, look for 25-cent cotton.

Furthermore, there is absolutely no hold-over cotton. There cannot be the depressing effect of a big reserve supply to hold prices down.

Another thing: Cotton-seed pressing mills are now contracting for seed at the record price of $42.50 to $45 a ton. *With cotton at 15 cents and seed at $45 a ton, cotton farmers of Texas will have more money than they ever had before.*

Already the Federal Reserve Bank reports that the available credit of Texas is greater than ever before—that there is more actual cash on hand. West Texas has already cleaned its slate, is completely out of debt. East Texas will clean its slate this fall.

There has never been, may never be again, a more propitious time to push tractor sales than right now.

Yellowstone Tour Is On

MEDORA, N. D., July 25 (Special Staff Correspondence)—Twenty cars of motorists, representing nearly as many States, spent yesterday here. It was one of the most unusual sights most of them ever witnessed, for a typical Wild West round-up with broncho-busting acts was staged by real cowboys. The party was the sociability tour which left St. Paul July 20, bound for the Gardiner entrance to Yellowstone Park over the National Parks Highway.

The event which the cowboy stunts commemorated was the dedication of the $18,000 motor bridge over the Little Missouri River. This bridge completes the last link of this transcontinental motor passageway. The first five days of this sociability tour, unique in the annals of American motoring, have been delightful. Participants vote it a wonderful tour from every standpoint, and the highways over which it has passed have proven their worth. In fact, entrants declared that it has paved a new way for motor travel to the Pacific Coast.

In the Hardware Store

Customer: Have you Champion spark plugs?

Clerk: No, most of our customers chew fine cut.

Plan to Standardize Ratings of Tractors

Committee Named By National Gas Engine Association—Olney is Chairman

WICHITA, KAN., July 24—The National Gas Engine Association has appointed a tractor ratings committee, which will seek to standardize methods of rating farm tractors, both as to drawbar pull and belt horsepower. The drawbar rating favored is in pounds pull with the time element incorporated. The belt power will be in terms of horsepower. The committee will endeavor to evolve a method which will be satisfactory to all manufacturers.

The chairman of the committee which was appointed, following the recent convention of the National Gas Engine Association in the Twin Cities, the personnel just having been made public, is Raymond Olney, editor, Gas Power. Other members are Fred Glover, vice-president, Emerson-Brantingham Implement Co.; C. M. Eason, Hyatt Roller Bearing Co.; George T. Strite, president, Strite Tractor Co.; H. C. Buffington, chief engineer, Minneapolis Steel & Machinery Co.

Plan Dallas Fall Show

DALLAS, TEX., July 24—At a meeting of State fair directors this week plans will be completed for the 1917 automobile show, Oct. 14 to 31, inclusive. The event will be in connection with the State fair, the event itself being one of the most important during the exposition. Some new features in this connection are planned this year.

A 3-day race meet, in which prominent drivers will take part, will be given. The racing will be on Oct. 17, 22 and 29. The fair management is spending $10,000 on the infield racetrack, and it is on this 1-mile circuit that the races will be staged. Within a few days a list of purses and drivers will be announced by Secretary Stratton of the State fair. These racing events will be the most important in Texas this fall.

Overland 85 Six 3¼ x 4½

The stroke of the Overland 85 Six is 4½ in., instead of 3½ in., as stated in the July 12 issue. The bore is 3¼ in. On the 85 Four, the bore is 4⅛ and the stroke 4½, and not 3¼ x 4½.

Jordan in Cleveland

The Jordan Motor Car Co. is located in Cleveland, Ohio, and not in Detroit, as stated last week in the description of that car.

Digitized by Google

Dealer Opens Office in Detroit

Botterill, of Denver, Wants to Be Close to Factory—Hood Has Bureau

DETROIT, July 24—A new wrinkle as regards having permanent representation in Detroit so as to insure prompt shipment of cars, materials, accessories and other supplies has been worked out by at least two parties, one being Tom Botterill, distributer of Hudson cars for Utah and Colorado, with headquarters at Salt Lake City and Denver, and the other is the recently formed Wallace C. Hood Service Bureau.

The former differs from the latter mainly in the fact that Botterill's establishment of a Detroit office was done to seek closer touch with the Hudson factory only, while the Wallace C. Hood bureau is organized to help any manufacturer, jobber or distributer acting as his representative in securing prompt shipments, following orders through production at any factory, and, in fact, assisting automobile manufacturers or distributers who have been working at a disadvantage through lack of representation in Detroit and Michigan.

Botterill has opened an office here, with A. S. Broadhead, his distributing manager, in charge; and while the move is merely an experiment, it is thought that if it works out satisfactorily the office will be made permanent. It will save traveling expenses back and forth from the West to the factory. The first-class fare alone is about $30 one way, and it takes from 40 to 45 hr.

Wallace C. Hood, at one time general sales manager of the Chalmers Motor Co., the Everitt Motor Car Co. and also of the Empire Automobile Co., has associated with him several well-known men in the industry in his new kind of business.

The office opened in the Dime Bank Building has been arranged as a convenience to visiting dealers and to manufacturers' representatives while in Detroit. It is the plan of the service bureau to maintain close communication with these manufacturers and distributers and facilitate the management of their business by attending to their most necessary work in the manufacturing centers of Detroit, Michigan and the surrounding country.

The bureau has been established for the purpose of taking up the work which is ordinarily done by representatives sent to Detroit at a big expense to look after deliveries of goods and to secure parts, accessories, etc. The bureau will cover every angle of the business which the distributer or manufacturer is called upon to transact at the expense of time and of money for traveling. From the Detroit office business will be looked after in Toledo, Cleveland, Indianapolis, Jackson, Flint, Lansing and at all other points where automobiles are manufactured.

The service bureau will also operate a public accounting and auditing department, which will be in position to install accounting systems for either distributers or manufacturers.

Martin-Evans Company Holds Outing

BROOKLYN, July 24—The Martin-Evans Motor Accessories Co. employees held an outing at Witzel's Casino, College Point, L. I., Sunday, July 16. The feature of the day was a lively ball game between the married and the single men, in which the single men came off victorious. A field day took up the balance of the afternoon, and after a late dinner in the casino the party motored home. About seventy-five were present, and bronze medals were awarded to those winning first and second places in the field-day events.

Studebaker Day in Iowa

DES MOINES, IOWA, July 24—"Studebaker Day" was celebrated here when over fifty of the three hundred Studebaker dealers of Iowa were the guests of the Studebaker Corporation of Detroit for one day. The dealers were the guests of Des Moines representatives of the factory at automobile races and at a dinner served at the Des Moines Club. G. L. Willman, assistant general sales manager from the factory, and J. A. Haskell, Des Moines branch manager, were the official hosts.

Want Lower Speed Limit

DALLAS, TEX., July 24—The next legislature, which convenes in January, will be asked to repeal the speed limit law of 15 miles per hour in rural precincts. Efforts will be made to get a speed limit of 20 or 25 miles. The question came up several weeks ago and has been made an issue in the political contest now being waged. The plan originated with the Dallas Automobile Club.

Price War in The Dalles

THE DALLES, ORE., July 24—Motor car owners of this city are watching with considerable interest the progress of a merry price-cutting war being waged by the local dealers' association against a recalcitrant former member.

The association members are reported to have pledged themselves to maintain the retail price of gasoline at 24 cents, but the rebellious member, it is said, insisted that 22 cents offered a sufficient margin of profit when the wholesale cost was 18½ cents, and not only refused to enter the combine but at once cut the price to 19 cents.

In what appears to be an endeavor to bring him to terms the associated dealers are permitting one of their members, whose place of business is opposite that of the seceder, to sell gasoline at 17 cents and are "chipping in" to cover the deficit. With gasoline selling at 17, 19 and 24 cents, the high cost of fuel is a negligible problem to the motorist of The Dalles.

Hall Leaves the Oldsmobile

LANSING, MICH., July 25—Jay Hall, general sales manager and associate executive of the Olds Motor Works for the past 3 years, has resigned. No disclosure is made as to his future plans.

The greater part of Hall's career has been spent in the service of Oldsmobile, with which he started as a salesman in Pittsburgh years ago. Later he was appointed branch manager for the Olds Motor Works in Cleveland, opened a new branch in Pittsburgh, and finally became branch manager for the company in Chicago. In 1913 he was appointed general sales manager at the factory.

Hall is generally credited as being largely instrumental for the change which in 1914 lifted the Olds Motor Works from the ranks of the small producer. The Olds Motor Works next year will produce and market more than 20,000 cars.

Saxon in Coast-to-Coast Relay

DETROIT, July 21—Fifty-two Saxon six cars will relay from New York to San Francisco by way of demonstrating what can be done with a motor car as the bearer of messages over long distances. They will race at top speed for stretches of about 75 miles each.

Starting to-morrow morning from New York City, a Saxon car will enter the Lincoln Highway, which leads from coast to coast, and will travel the first lap of the journey. A message from Mayor Mitchel of New York to Mayor Rolf of San Francisco will be handed the driver just before the start, which will be passed along the line and eventually delivered at the Golden Gate.

An observer from the Saxon factory will make the transcontinental journey. There will be no waits between legs of the race. Before each car reaches the end of its lap another will be ready to start out. Every effort will be made to clip time from other transcontinental records, and speed and endurance of the cars will be the only things asked in the contest, speed being the slogan of the race. Stops along the various laps will be made only in cases of emergency.

Association News

St. Louis to Entertain Jobbers

ST. LOUIS, July 22.—L. E. Allmon, recently installed president of the Motor Accessory Trade Association of St. Louis took the first steps toward entertaining the National Association of Automobile Accessory Jobbers at the July meeting, held this week. The National Association meets here in October. Mr. Allmon will serve with the following committee to provide entertainment during the convention: Fred Campbell of the Fred Campbell Auto Supply Co.; William L. Niekamp, Beck & Corbett Iron Co.; W K. Norris, McQuay-Norris Manufacturing Co.; John F. Shuford, Phoenix Auto Supply Co. All of these firms are members of the National Association.

The following were appointed chairmen of permanent committees: Credit Bureau, Wiley R. Comstock of Fred Campbell Auto Supply Co.; Entertainment, Roscoe C. Buckley, Bittel-Leftwich Tire Co.; Finance, A. C. Bauer, A. C. Bauer Oil Co.; Athletic, W. E. Finney, Goodyear Tire & Rubber Co.; Legislative, E. S. Marvin Imperial Oil Co.; Resolutions, Dr. E. L. Epperson, Neustadt Auto & Supply Co.

The meeting was held at Kammerer's Grove, several miles from town and special arrangements were made to take all members there in cars. A boxing match preceeded the dinner. Three new members were admitted and J. I. Case of the J. I. Case Co. was named chairman of a committee to co-operate with the company giving the traction show here.

Montreal Show in January

MONTREAL, July 24—The Montreal Automobile Trade Association has selected Jan. 13 to 20, inclusive, as its show dates, thus avoiding a conflict with the Chicago dates as in the past few years.

Ohio State Is Gaining

COLUMBUS, OHIO, July 22.—Considerable activity is shown in the affairs of the Ohio Automobile Trade Association, despite the extreme warm weather which has made it difficult to get dealers and garagemen to attend meetings. F. T. Price, president and acting secretary of the organization, has a number of local organizations about ready to affiliate with the state organization.

A meeting was held recently at Springfield, Ohio, when steps were taken to bring the Springfield Automobile Trade Association into the state organization. H. S. Fritz is president and P. T. Rathbun is secretary. The membership is quite large.

The Chillicothe organization will soon affiliate with the state organization according to Walter C. Barrett, its president.

The state organization has several men working to get individual members and their work is bringing in quite a few. Considerable interest in the organization is shown in practically every part of the state.

Milwaukee Plans Booster Tour

MILWAUKEE, July 22.—The Milwaukee Automobile Dealers, Inc., this week completed the work of mapping out the route of the second annual "booster tour", a five-day sociability run which has as its primary object the promotion of publicity for the big motor show to be conducted by the M. A. D. in connection with the Wisconsin State Fair. Not only the show is advertised, but the fair proper is given state-wide publicity of the most direct kind.

The tour this year will start Monday, August 28, and continue until Friday, September 1, as at present outlined. The route is now being scheduled from data obtained this week by Pathfinders B. J. Ruddle and W. W. Rowland. From now until August 28, the entire state will be flooded with literature advertising the fair and motor show, which will be held during the week of September 10.

The M. A. D. has again obtained the exclusive right to the use of the mammoth concrete Machinery hall in the state fair grounds at West Allis, about six miles from the city hall, and will put on a car and truck display rivalling the annual Auditorium show in size and quality. A small admission fee is charged, and this year the receipts of a certain day will be turned over to the newly formed Good Roads Association of Wisconsin to swell the fund being raised to promote the construction of continuous trunk highways across Wisconsin.

The state fair motor show is in charge of a committee of the M. A. D., comprising Edgar F. Sanger, Stearns-Knight and Hupmobile, chairman; W. L. Rafter, manager of the Winton branch, and Harry Newman, Chalmers.

St. Louis Plans 3 Shows

ST. LOUIS, MO., July 22.—St. Louis dealers discussed three exhibit weeks at the meeting of the St. Louis Automobile Manufacturers' and Dealers' Association Thursday afternoon.

One was the Automobile Show, probably in January, second the Locust Street Automobile Carnival during the Veiled Prophet Festivities in October, the date of former automobile shows, and third exhibits at the Maxwellton Fair, which is an old fashioned agricultural fair promoted by the Business Men's League. H. F. Fahrenkrog was named chairman of a committee to arrange for the dealers to take part in the Fair if it is held.

The other two exhibit weeks are certainties. Notice was given that all firms that will be entitled to share in a refund from the automobile show must become members of the Association by August. Three new members were admitted. William O. Hardin, secretary for two years, resigned. R. E. Lee, secretary of the Motor Accessory Trade Association, is spoken of as Hardin's successor. The directors will fill the vacancy.

To Hold Another Truck Run

LOS ANGELES, July 22.—Southern California is to have another commercial car reliability tour. Frederick Pabst acting for the Motor Truck Dealers' Association of Los Angeles, has made application to the Contest Board of the A. A. A. for a sanction for a commercial car run Oct. 22 and 23.

The success of the run from Los Angeles to San Diego, staged last week under the auspices of the Motor Truck Dealers' Association has assured the success of the next run, which is to be a much harder and longer run. It is planned to have the trucks leave Los Angeles and go out across the desert to Palmdale, then to Victorville and Barstow, the first day, making Barstow the night control. The second day the run would be from Barstow to San Bernardino and then into Los Angeles over the boulevards.

This run would be approximately 400 miles and the course would include every road condition to be encountered by the motor truck in operation in the Southwest.

Tippecanoe County Organizes

LAFAYETTE, IND., July 22—The Tippecanoe County Automobile Dealers and Garage Owners Association has been organized and has affiliated with the National Automobile Trade Association. The officers are: President, Forest Stockton; vice-president, John Opp; secretary, Clinton Anderson; treasurer, Carl Rhyan. Directors, John Opp, Charles Shambaugh, Earl Martens, William Kann and Walter S. Crowe. The next meeting will be held July 28. The membership is composed of the Columbia Tire & Auto Co., William Kann & Son, D. R. Craig Garage, Auto Tire Shop, Main Street Auto Co., Charles Shambaugh, Peter Anderson & Son, Lafayette Welding Co., West Side Auto Co., Auto Company Stand, Paige Auto Agency, Lafayette Auto Co., Gibson Co., Morgan, Torrenga & Snoddy, and the Opp Hardware Co.

Falls Motor Reincorporates

MILWAUKEE, July 22.—A well-defined report from Sheboygan Falls, Wis., says that the Falls Machine Co., Sheboygan Falls, a large manufacturer of small, high speed gasoline engines for car builders, has passed into the control of a syndicate represented by Andrews & Co., bankers, Chicago. It is stated further that the company will be reincorporated as the Falls Motors Co., under the laws of Virginia, with a capital stock of $1,500,000. The company has made extensive additions during the last eight or ten months and at this time is still further enlarging the capacity. One of its largest contracts is that for all motors for the Grant six, Findlay, O.

New Buildings for Oakland

PONTIAC, MICH., July 17.—The Oakland Motor Co. plans to expand its plant and operations will begin as soon as the buildings on the old Studebaker site have been removed.

In addition to the four-acre site, formerly a part of the old Studebaker works, negotiations have just been completed for the annexation of the solid block extending from Oakland Avenue to Howard Street, fronting on Baldwin. The new buildings will be occupied by a machine shop and additional assembly departments. At the close of business July 1, the Oakland company was several thousand cars ahead of the last fiscal year.

Miller Employees Have Holiday

AKRON, OHIO, July 22.—The employees of the Miller Rubber Co. held their annual outing and picnic at Silver Lake July 15.

Resta Far in the Lead

NEW YORK, July 24—The 150-mile race at Omaha on July 15 was the sixth event selected by the contest board of the American Automobile Association to count in its designation of the 1916 champion automobile race driver. Dario Resta now leads his nearest competitor, De Palma, by 730 points. Eddie Rickenbacher is third, 900 points behind De Palma. The standings follow:

Driver	Points
Dario Resta	2400
Ralph De Palma	1670
E. V. Rickenbacher	770
Ralph Mulford	595
J. Christiaens	540
W. D'Alene	510
Pete Henderson	432
J. Devigne	320
John Aitken	320
Thomas Milton	260
Ira Vail	220

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

William L. Colt of the Colt-Stratton Co., New York, has been made eastern district sales manager of the Cole Motor Car Co., Indianapolis. Colt will retain the presidency of the New York company. Capt. Harry Stratton, who has been associated with Colt, will now assume the duties of general manager, formerly exercised by Colt.

Don M. Ferguson has resigned as consulting engineer for the General Motors Co., Detroit. His future plans have not yet been announced. Previous to his connection with the General Motors, Ferguson was chief engineer for the Studebaker Corp.

Frank L. Newton, who has been assistant sales manager of the Jackson Automobile Co., Jackson, Mich., for the past 5 years, has severed his relations with that concern to become general sales manager for the Lewis Spring & Axle Co., Chelsea, Mich., manufacturer of the Hollier eight.

E. B. Jackson, who left the Packard New York branch to go with the new Willys-Overland branch, has been made assistant to C. A. Earl, vice-president of the Willys-Overland Co.

George H. Bowler has been appointed sales and advertising manager of the H. A. Lozier Co., Cleveland, Ohio.

T. S. Johnson, for the past two years branch manager for the Oakland Motor Car Co. branch in Philadelphia, has been appointed eastern distributer by the Monroe Motor Co., Pontiac, Mich., with headquarters in Philadelphia.

E. E. Thompson, at present connected with the branch of The Maxwell Motor Co., San Francisco, will return to Detroit in September to assume the duties of sales superintendent of the Maxwell Motor Co. for the Pacific Coast.

A. J. Pennington, six years general superintendent of the Lee Tire & Rubber Co., Coshocton, Pa., has been made factory superintendent of the Brunswick-Balke plant at Muskegon, Mich., which will make tires.

Fred H. Ayres, who has been with the Fisk Rubber Co., Chicopee Falls, Mass., for 13 years, and manager of the New England territory for several years, has been appointed general supervisor of all districts.

James Joyce, Jr., special representative of the George W. Houk Co., Buffalo, has resigned.

E. T. Backus has been appointed manager of the branch of the Ford Motor Co. in Baltimore, Md., which will be opened August 1.

H. G. McComb has resigned as engineer of the General Vehicle Co., Long Island City, to take up private engineering work and has opened offices at 1414 Times Building, New York City.

Clarence O. Sacks, for several years identified with motor car and accessory advertising, has organized an agency to be known as The Sacks Co., Inc., with offices at 171 Madison Avenue, New York. Until May, 1913, Sacks controlled a similar company, but sold his interests to accept the position of advertising manager for Gray & Davis, Inc., Boston.

A. A. Martin, vice-president and sales manager of the Burd High Compression Ring Co., Rockford, Ill., and who organized this company, will retire from that concern Aug. 1.

Ford Holidays for 30,000

DETROIT, July 20.—Notices are being given out to the workmen of the Ford Motor Co., that most of the 30,000 employed in the Detroit factories will not be required to be at work from July 25 to August 7, during which period a complete inventory of property valued at approximately $100,000,000 will be taken. The company's fiscal year ends July 31.

Monroe Body Growing

PONTIAC, MICH., July 20.—Work is about to begin on two new buildings for the Monroe Body Co., an office building and a pressed steel plant. The office building will be a brick structure 28 x 56 and one story.

The new factory building will front on the Michigan Air Line tracks a distance of 156 ft. The greatest depth will be 82 ft. The capital stock of the Monroe company has been increased to $150,000.

Jacox Gets New Building

SAGINAW, MICH., July 19.—The Jackson-Church-Wilcox Co., manufacturer of the Jacox steering gear, will erect an addition to its plant on North Hamilton Street. The addition, which will be of brick, one-story, and 208 x 120 ft., and will practically double the output. Eight hundred men will be given employment. With the proposed addition the next year's production of the company is expected to reach the half-million mark.

New Departure Needs Room

BRISTOL, CONN., July 24.—An addition is to be made to the factory of the New Departure Co., 300 ft. long and U shaped. This will be known as the ball department when it is completed. The company has acquired considerable other ground for enlargement of the factory.

Western Spring and Axle Enlarges

CINCINNATI, July 22.—Additions are now being made at three plants of the Western Spring and Axle Co. At the Hess Spring & Axle Co. plant, Cincinnati, a large new building will be used for automobile axles and spring making. At the J. B. Armstrong Mfg. Co., Flint, Mich., a new building will be used for heat treating and fitting and at the Cleveland-Canton Spring Co.'s plant, Canton, a large addition will be used for a stock room and finishing department.

C. A. S. Booked for Year

COLUMBUS, July 22.—The new plant of the C. A. S. Products Co., recently formed with a capital of $100,000 to manufacture the Foster gear, an invention of a Columbus man, has booked orders to keep the plant to capacity until June, 1917. C. D. Cutting of Detroit is president and general manager and A. W. Tyler is secretary and superintendent. The plant has 50,000 feet of floor and additions and extensions have been started. More than 150 men are employed.

Factory for Ford Truck Device

ECORSE, MICH., July 24.—The Robinson Machine Co. has purchased ground west of Mill Street, where a factory will be erected to manufacture its new Truckford, a device whereby a Ford is turned into a one-ton truck. Fifty men will be employed when the new factory is completed.

Suit Against Faw Dismissed

NEW YORK, July 24—A patent infringement suit for a bulb reflector, brought by Nelson J. Quinn against J. H. Faw, Inc., has been dismissed in the United States District Court. The patent is No. 1,099,715. The construction in question is that of half the bulb being covered by a silver coating. The Faw device, the Lennon protector, is a detachable metal covering, and not a coating upon the glass. The element of adjustability also entered into the question.

Stewart-Warner Profits for 6 Months $1,275,000

CHICAGO, July 20—The Stewart-Warner Speedometer Corp. has declared regular quarterly dividends of 1½ per cent on the common stock, payable Aug. 1 to stock of record July 22. The corporation reports net profits of $1,275,000 for the 6 months ending June 30, a new high record. The net profits in the last quarter totaled $703,254, against $571,873 in the first quarter of the calendar year.

The balance sheet shows assets as follows: Real estate, buildings, machinery, etc., less depreciation, $1,720,774; patents, trade-marks and good-will, $9,096,967; inventories and receiveables, $3,454,008; deferred charges, $154,158; total assets, $14,425,908.

Liabilities: Preferred stock, $724,400; common stock, $10,000,000; current liabilities, $420,317; surplus, $3,281,191. Surplus includes $307,463 set aside to retire the preferred stock.

To Make Vulcanizers

GRAND RAPIDS, MICH., July 18—F. A. Whitten, Charles Palmer and Abe Lewis have organized a company in this city for the purpose of manufacturing vulcanizing machines.

Wichita Falls Plans to Expand

WICHITA FALLS, TEX., July 24—The Wichita Falls Motor Co. has increased its capital stock from $100,000 to $400,000. It has met with much success in manufacturing motor trucks at its plant here and it is stated that it plans to greatly enlarge the industry.

Sells Out Ziola Carbureter

MADISON, WIS., July 24—Henry A. Ziola, Madison, Wis., an inventor of electrical and carbureting devices for internal combustion engines, has sold all rights to the Ziola kerosene carbureter to a syndicate of St. Louis capitalists, headed by James B. Lloyd. It is said that Ziola received $30,000 for his patents. He is the inventor of an X-ray machine now being manufactured at Madison, and will devote his attention to that business hereafter.

2000 Canadian Chalmers For 1917

WALKERVILLE, ONT., July 24—Following the opening of the plant of the Chalmers Motor Co. of Canada, it is stated that the company will build 2000 cars its first year. The officers are: General manager, Harry S. Lee; sales manager, Louis Logie; eastern representative, R. C. Miquelon; western representative, E. J. Parker; production manager, Hugh W. Buchanan; service manager, Mossom I. Reid; chief accountant, Egbert S. Jackson.

Factory News of the Week

Canadian Ford Earns $5,000,000

WALKERVILLE, ONT., July 24—The net earnings of the Ford Motor Co. of Canada, Ltd., for the current fiscal year of 10 months ending July 31 show approximately $5,000,000, which would be equivalent to about $70 a share on the $7,000,000 outstanding capital. From these earnings, however, will be deducted the Canadian war tax.

The company has spent $2,750,000 in erecting four new assembling plants and other extensions to the Ford, Ont., plant, which additions give 160,000 sq. ft. more floor space.

The new Canadian assembling plants are located in Montreal, Toronto, London and Winnipeg.

The net earnings have increased from $1,065,000 in 1912 to the estimated net of $5,000,000 this year.

No dividends have been declared on the present $10,000,000 capital, which reached its present size by the declaration of a $6,000,000 stock dividend late in 1915.

The estimated Canadian production for the next fiscal year has been placed at 60,000 cars.

Sewell Wheel Enlarges Service

DETROIT, MICH., July 18—The Sewell Cushion Wheel Co., this city, shows an increase in business for the first quarter of its fiscal year of 300 per cent over the same period last year.

Plans are now being formulated for establishing service stations in connection with the company's branches in Buffalo, Boston, New York City, Philadelphia, Baltimore, Minneapolis, Rochester, Cleveland, St. Louis, Pittsburgh, Los Angeles, Seattle and Chicago. A service station is maintained at the factory.

Westcott Moves to Richmond

SPRINGFIELD, OHIO, July 24—The Westcott Motor Car Co. has removed its office and factory from Richmond, Ind., to Springfield, Ohio.

Alvin Forms Truck Company

JOLIET, ILL., July 24—Forrest J. Alvin, in the accessory field for a number of years and who has more recently been president of the New Era Engineering Co., has organized a truck company in Joliet to market a truck of light capacity.

Grossman Salesmen in Conference

BROOKLYN, July 22—The annual sales conference of the Emil Grossman Mfg. Co. was held last week. The meeting included several sessions and a dinner at Brighton Beach. The product and policies for the coming season were formulated at this early date in order that information may be given to jobbers by Oct. 1, a recommendation made at the Hot Springs meeting of the National Association of Automobile Accessory Jobbers.

Argo Is Now Hackett

JACKSON, MICH., July 24—The Argo Motor Co. has been changed to the Hackett Motor Car Co., following the entry into the business of Mansell Hackett. The car will be called the Hackett, and the new Hackett four, to be brought out soon, will sell for less than $1,000.

Stromberg Incorporates in New York

NEW YORK, July 24.—The banking interests which recently incorporated the Stutz Motor Car Co. are interested in an incorporation in New York state of the Stromberg Carbureter Co. of America. Representatives of these interests decline to state whether any mergers are intended. The banking interests are headed by Allan A. Ryan & Co. The directorate of the new company includes William Rand, E. F. Meniken and K. R. Howard, the first two being connected with the law firm of Jerome, Rand and Kresel, 37 Wall street. The company has issued 50,000 shares of stock of no par value and will do business on $250,000. The stock has been listed on the curb and when traded in last Thursday on a "when issued" basis, changed hands at 42. Before the close of trading, it was announced that the stock had been oversubscribed.

Standard Welding Not In?

CLEVELAND, July 24.—Failure of interested parties to agree on terms of sale has, it is said, resulted in a breakoff of negotiations to sell the controlling interest of the Standard Welding Co. to the United Motors Corp., of New York. Negotiations have been going on for several weeks. It is understood that a difference of $7,000,000 stood between the prospective purchaser and the Standard's price when negotiations were first opened.

Sulzberger Becomes Wilson & Co.

CHICAGO, July 22.—Sulzberger & Sons Co., packers, which has developed a considerable business in Wilson's sterilized curled hair for automobile upholstery, has changed its name to Wilson & Co. Thomas E. Wilson is the new president. B. H. Blocksom continues in charge of the curled hair department.

Firestone Holiday Next Saturday

AKRON, July 24.—The annual employees outing of the Firestone Tire & Rubber Co. will be held Saturday, July 29, at Silver Lake Park. It is expected that 25,000 will attend.

Wayne Pump Increases Capital

FORT WAYNE, IND., July 24.—The Wayne Oil Tank & Pump Co., has increased its capital from $500,000 to $700,000. Among the plant additions, will be a factory building nearly 400 ft. long.

Invents Six-Wheel Automobile

PATERSON, N. J., July 20.—W. A. Arnold, a silk dyer, and W. H. Fletcher, both of this city, and R. A. Greene, of Passaic, have purchased all the rights of M. A. Mackay, a Maine backwoodsman, to an automobile chassis he has invented. This chassis has three axles, six wheels and a 200-in. wheelbase. It will make a complete turn in a space of 32 ft. Both front and rear wheels are controlled by the steering gear and the center wheels are fixed.

Ford Takes Over St. Joseph Dealer

ST. JOSEPH, MO., July 24—This place becomes a more important distributing point for Fords through the taking over by the Ford Motor Co. of the Farmer Auto Co., formerly dealer under the Kansas City Ford branch. E. C. Schumann, formerly manager of the branch in Milwaukee, has been made manager of this new branch. S. R. Farmer, formerly president of the Farmer Auto Co., continues the independent companies of which he is president, the Diamond Motor Co., agent for the Dodge Bros. and Hudson, and the Farmer Auto & Supply Co., dealer in accessories. The Farmer Auto Co. had been agent for the Ford in St. Joseph since 1908.

New Ford Branch in Dallas

DALLAS, TEX., July 24—Aug. 1 Fort Worth will become a distributing point and direct factory branch of the Ford Motor Co. for all the territory included in mid-northern Texas. This will open a new field for the Ford branch at Fort Worth, as heretofore these supplies have been furnished out of Dallas. Fred H. Jones will continue as manager. F. H. Johnson of Dallas will become his assistant.

Dealers Protest at Fees

SPRINGFIELD, MO., July 24—Dealers and garagemen have filed a protest against the license fees exacted of them. They have to pay $12 a year for handling the specialties of the business, whereas hardware dealers and others who handle many lines, including accessories, pay only $13 a year. The complaint of the dealers was presented to the City Council by Granville P. Evans, president of the Evans Motor Co.

Newman Adds Tire Service

MILWAUKEE, WIS., July 24—Harry Newman, Inc., Milwaukee, Chicago and Springfield, Ill., since July 1 one of the largest distributers of Chalmers cars in the country, has established tire service departments in the three branch houses, and Chalmers owners will not only get car service through the Newman organization, but all tire service will be handled through the house. The service department of the Newman organization is one of the main features of the development of the business.

Oil Developments in Texas

HOUSTON, TEX., July 24—That The Texas Co. plans to build another oil refinery here or make extensive improvements of some other character is indicated by its recent purchase of a tract of 29 acres of land, situated within the city limits and fronting upon the International & Great Northern Railroad. According to one report, the company intends to build large machine shops upon the land for the purpose of manufacturing and handling its own field equipment.

The Sour Lake oil field has been given a new lease of life by the discovery and development of the deeper producing sand. The area of the proved producing district has been widened considerably since the days of its boom. The daily production of the field is now about 15,000 barrels, and this promises to be greatly increased during the next few months. One of the largest developments will be upon an 80-acre lease, in which the Gulf Production Co. recently purchased a one-half interest for $200,000 cash. The other one-half interest in the lease is owned by the Humble Oil Co. At present there are nine producing wells upon this tract. Adjoining this land is an 800-acre tract that is under oil lease to the Texas Co.

The "12" Is a Complete Success

—and the dealer who does not yet realize it is only cheating himself.

The Six was popular—the Twelve is a landslide. The V-Type Twelve was inevitable. If there was any doubt in your mind last year it gives away today to irrefutable conviction.

National built America's first Stock Sixes. National was a Twelve pioneer. National sales increased last year 300%. Merit did it.

The Twelve is basically correct. It out-performs on hills and straightaways; for quick getaway; thru mud; in congested traffic; in emergencies.

This Season National Highway Twelve and National Highway Six-cylinder cars will be furnished with distinctive styles of open touring cars and roadsters, also with luxurious closed coupe and convertible touring sedan bodies.

Highway Six $1750. **Highway Twelve $2150.**

SIXTEENTH SUCCESSFUL YEAR

National Motor Vehicle Co. Indianapolis.

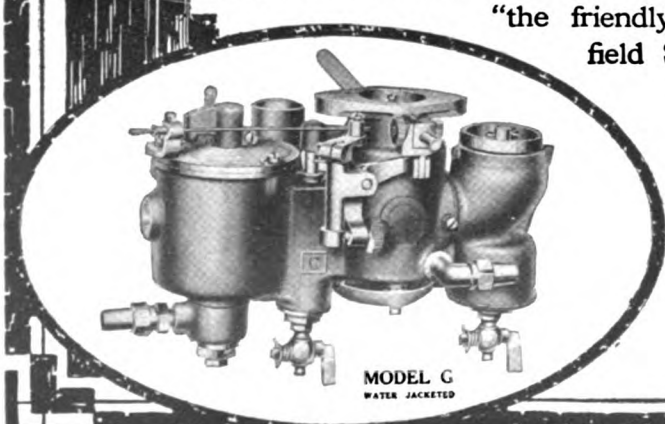
RAYFIELD CARBURETORS

Economy and efficiency have so characterized Rayfield performance that motor owners generally have automatically and universally classified it as

"The World's Best Carburetor"

From the car owners' standpoint its value is fixed and appreciated for its guaranteed saving of from 20 to 50 per cent in fuel cost;—its power and high efficiency.

It is a common custom for informed owners to substitute a Rayfield where it is not included in regular equipment.



In demonstrating and service cars dealers have found it advisable also to substitute Rayfields as a measure of economy, as well as for better service.

"Absolute satisfaction or money back" is assurance for every buyer.

THE FRIENDLY SIGN

Tourists and motorists generally are familiar with "the friendly sign" indicating Rayfield Service, and competent general service as well. They are found wherever good roads lead.

"Is there a clock on this car?"

The automobile salesman is asked this question every day. If he is forced to answer "no"—and then explain—he has cause to feel uneasy. He knows that his most successful competitors call a car "completely equipped" only when it carries an automobile clock.

Waltham
—the only
Automobile Clock
that keeps accurate time all the time

There could be no better proof of the Waltham's accuracy and beauty of appearance than the fact that these cars include it in their regular equipment:

Brewster	Franklin	Marmon	Rauch & Lang
Cadillac	Haynes	Owen Magnetic	Rolls-Royce
Cole	Locomobile	Packard	Simplex
Crane	Lozier	Pierce-Arrow	Stearns

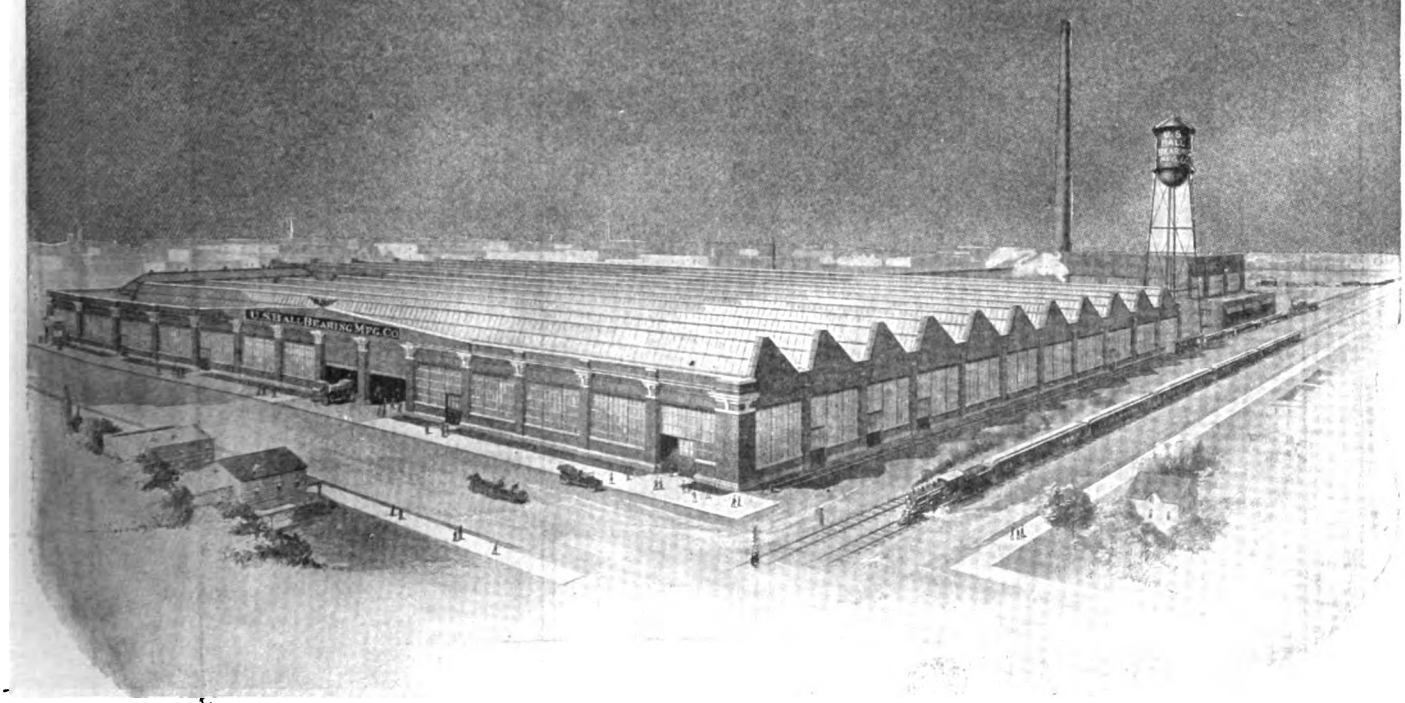
BALL BEARINGS

In Four Years

It has taken just about four years of actual manufacturing and selling to bring the U. S. Ball Bearing Manufacturing Company from an obscure concern to one of the largest manufacturers of high grade ball bearings in the country.

Back of this four years of rapid and comprehensive growth, however, lies four more years of experimentation and investigation before the first U. S. Ball Bearing was produced.



Illustrated, herewith, is our new factory, just occupied, which has a manufacturing capacity of more than 10,000 high quality ball bearings per day.

Attention is called to the fact that the product of the U. S. Ball Bearing Manufacturing Company is "quality" only, and no cheap bearings either in design or construction are produced.

U. S. Ball Bearing Manufacturing Co.

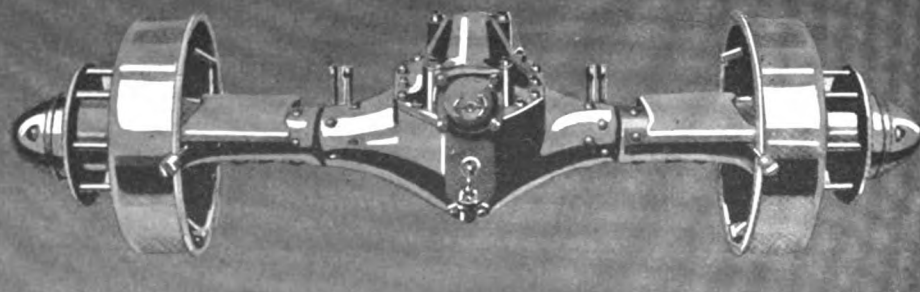
SHELDON

Ninety-three truck manufacturers are using worm drive. More than half of 1916 trucks are worm driven. Nearly half of all 1916 models are worm driven.

¶ The worm gear axle manufacturers cannot begin to meet the demand. In fact, it is the overflow demand for worm gear driven axles that has supplied a great many orders for other types of final drive.



¶ There is nothing surprising in this situation, for from the standpoint of efficiency a worm gear type of drive represents the highest development yet recorded in truck manufacturing practice.

¶ The operator of a worm gear driven truck will get the lowest ton mile haulage cost, in so far as his drive and rear system are concerned, that is possible of attainment—much lower than is possible with any other type of driving axle.

THE SHELDON AXLE AND SPRING COMPANY

Manufacturers of Springs and Axles for more than 50 Years

HOW IS YOUR TIRE BUSINESS? ARE YOU GETTING FULL RETURNS OUT OF IT? ARE YOU FREE TO PUT YOUR FULL STRENGTH BEHIND IT—AND DOES IT PAY YOU?

"CARSPRING" DISTRIBUTORS ARE FREE AGENTS—THEY ARE BUILDING UP THEIR OWN BUSINESS—AND BUILDING IT TO STAY—FOR THEIR OWN GREATER PROFIT, NOW AND IN THE FUTURE.

¶ "CARSPRING" methods are doing the trick. They are putting the Dealer on the highest plane of business independence and individuality. They are giving him poise and confidence. They are making him a Winner and giving him what he has won.

¶ We want MEN to represent us—not automatons, or names or stores—men of individuality, independence, and even acquisitiveness—we like you to want money and to want it for yourself—and we see that you get it.

¶ If your vision reaches beyond your own front door and beyond the confines of your own narrow street—if you are one of those who wants to be known far and wide as the most successful business man in his vicinity—we are here to help you realize on that idea.

¶ Come in with us, appoint your own subdealers, enjoy the latitude in making adjustments and serving your customers which will best promote your own business and reputation.

¶ "CARSPRING" Tires will actually live up to the reputation you make for them and instantly respond, in additional profits and growing good will, to every blow you strike in their behalf.

If you are not already a "CARSPRING" Dealer, we advise you to wire or write us at once to see whether or not your territory has been allotted. Applications are coming very fast.

Every Motorist Needs a Vulcanizer to Stop Tire Troubles and Increase Mileage

Every Shaler Vulcanizer You Sell Sells Others—Increasing Sales and Profits

Every Shaler user boosts the use of a vulcanizer and makes more business for the dealer. Vulcanizing is more or less of a mystery to one who has never tried it, and when he finds that it is a success he brags about it to his friends, and many of them buy, too.

SHALER Vulcanizer

They are made in a great variety of sizes and types—Electric, Gasoline, Alcohol and Steam, for every requirement of public and private garages. Shaler Tube-Kit (for vulcanizing tubes), $2. Ford-Kit (for Ford owners), $2.75. Vul-Kit (to carry in tool box for roadside repairs to tubes and casings), $3.50. Electric equipment for private garages, $12.50. Public Garages and Repair Shops, Electric or Steam, $60.

They will repair any cut, rip, tear or hole in either casing or tube, in a few minutes, and make the repair the strongest part of the tire. The Shaler is the only vulcanizer that has Automatic Heat Control. Impossible to undercure or overcure a tire.

Tire Luxury—at a popular price

IN performance this new *"Speedway Type"* tire is distinctly better than other tires at anywhere near the price.

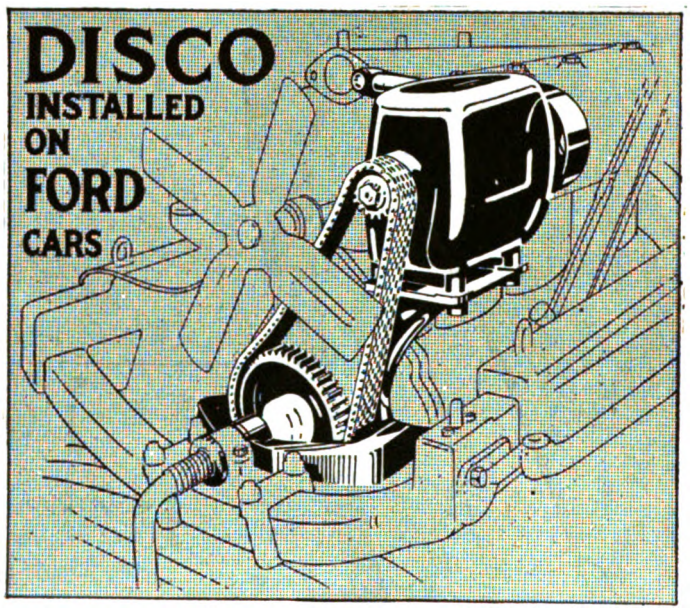
This is a broad statement to make—it includes a great many different makes and kinds of tires.

Yet it is a claim convincingly proven by the universal experiences of the small army of motorists who have tried them.

Say what you will in type about the merits of any tire, performance alone is the acid test of its real merit.

And REDWALL tires outstrip other tires in performance and all round satisfaction regardless of the moderate purchase price involved.

We were right, months ago, when we predicted that there would be a tremendous demand for this new tire, for at no time since its introduction have we been able to catch up with deliveries.



This is soon to be remedied, for within another 60 days the huge addition to our present plant, which has been under construction for over six months, will be in operation.

In the meantime we would urge dealers and jobbers who have commenced to consider their next season's requirements to test out a few of these tires in actual service—to put our claims to the acid proof of performance. We have an exclusive proposition much better than the ordinary to offer. Details forwarded upon application.

NATIONAL RUBBER COMPANY, Pottstown, Penna.

The Patented FOSTER Universal Swivel is an Exclusive Selling Feature

We Are Swamped With Orders at the New Price

A stampede to the OWL LIGHT followed the announcement that it had been reduced in price from $7.50 to $5.00. A steady stream of orders and re-orders have been pouring in from OWL LIGHT dealers in all parts of the country.

FOSTER OWL LIGHT

Always a leader, always the searchlight that the man who knew most about searchlight construction wanted, the OWL LIGHT now at $5.00 not only outclasses but is outselling any searchlight on the market.

The Foster OWL LIGHT today is a QUALITY searchlight selling at a quantity price. In many respects it is superior constructionally to the famous $7.50 model.

It still retains the patented Foster Universal Swivel Bracket—an exclusive feature which made the OWL LIGHT famous. Remember the OWL LIGHT is the only searchlight which can use this remarkably effective swivel construction. And consider that car owners can obtain this Universal Swivel only through purchasing the OWL LIGHT of an OWL LIGHT dealer.

This swivel sells OWL LIGHTS and keeps them sold, for it is guaranteed to hold the searchlight in any position you put it. It turns in any direction, prevents the searchlight from toppling over just when you need it most—will not rattle, loosen nor bind.

The new OWL LIGHT at the new price is the most powerful searchlight made. A new and specially designed reflector enables it to outdistance even the most powerful headlights.

These features, coupled with the tremendous increase in demand for the OWL LIGHT at its new price, makes our dealers' proposition exceedingly interesting. Wire or write today for full particulars. Address

The Allen Classic

A handsome, distinctively finished, well built motor car

"*Beautiful*"—with emphasis. That's what everybody say when they see this car.

And then, when they have finished admiring its *outward* appearance, they find equal satisfaction in its mechanical construction and performance.

While the Allen Classic was primarily designed with an idea of producing a strikingly handsome car, at the same time bear in mind that in this instance, beauty is more than skin deep.

The same chassis, the same powerful motor, the same long underslung rear springs, the same simplicity and sturdiness that have made an enviable name for the Allen 37, are embodied in the Allen Classic.

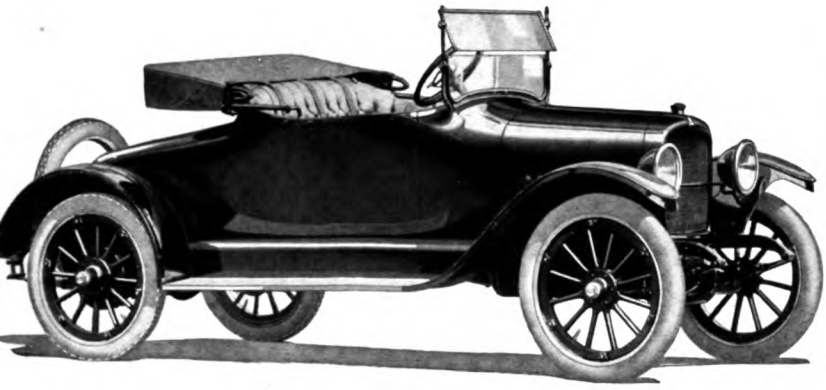
Beautiful, comfortable, efficient
The height of motor car value

F. O. B.
Fostoria, Ohio



$850

While beauty in a motor car is a great source of satisfaction, it cannot be complete unless there be an abundance of comfort and uninterrupted service.

And in *these* days, to have comfort it is not necessary to buy high-priced cars. Scientific balancing of parts, proper spring suspension, correct body building and upholstering, have most to do with comfort.

In the Allen Classic you find these essentials combined in an unusually efficient manner, with the result that comfort is a big part of the value in this splendid car.

Digitized by Google

The Allen Classic Roadster

Low-priced roadsters with good body lines are few. Just a glance at the Classic Roadster is sufficient to establish it as a car sure to find favor among professional men and others to whom a good roadster is a necessity.

The gracefully curved rear deck is provided with a long door hung with concealed hinges and flush water-proof joints, giving an unusually neat appearance. The compartment has plenty of room for two or three extra casings or suit cases.

Summing it all up the Allen Classic possesses in full measure: Distinctive beauty, abundant power, unusual comfort, ample room, exceptional economy, light weight, sturdiness and durability, and is backed by a strongly financed company of twenty-five years' standing and high credit rating.

The Allen Classic is now being delivered to Allen dealers throughout the country. Due to our recent big increase in production, there is an opportunity for a few more live dealers to secure the Allen line where it is not already represented.

MAKE MORE MONEY

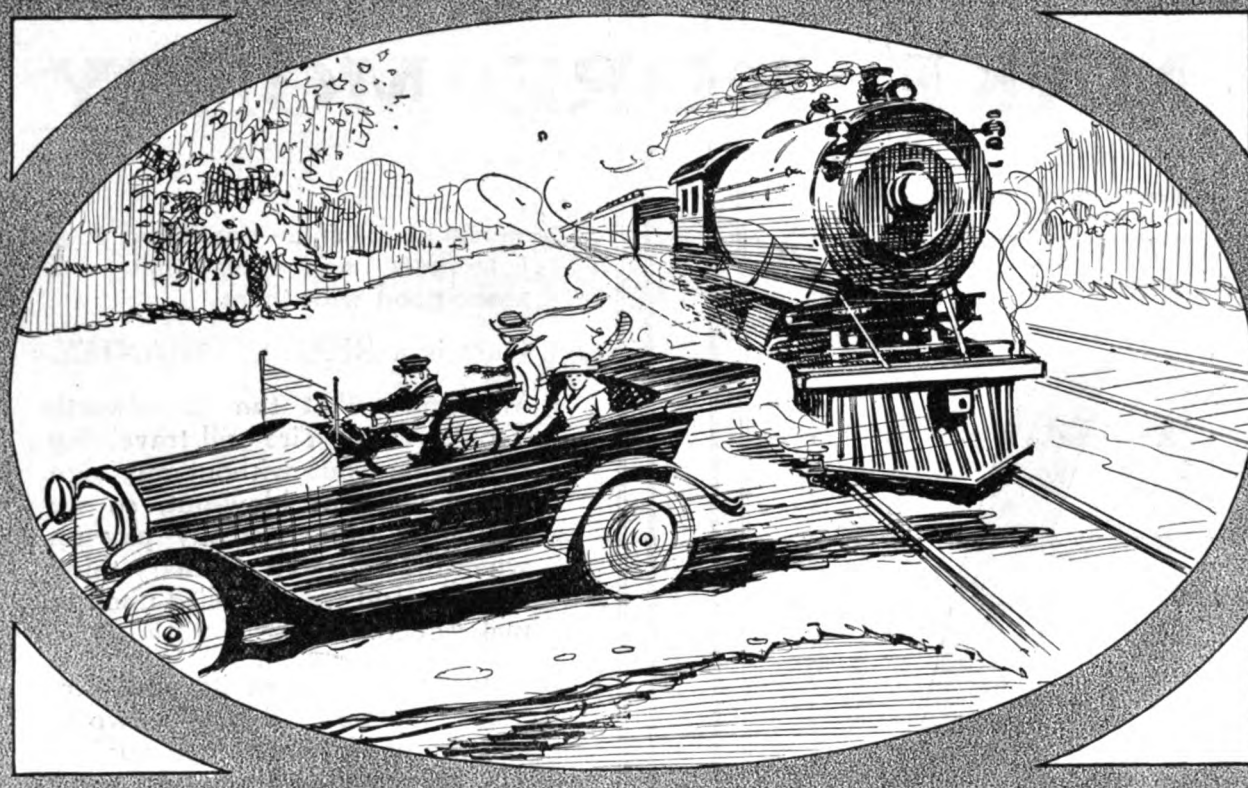
Woodworth "Live Long and Serve Well" Tubes are made of tough, elastic, live rubber, of the highest quality. There are none better made.

—and at the same time hand your customers something that will **make good with them.**

Ours is a REAL GUARANTEE.

We know that the Woodworth Trouble-Proof Tire will travel day in and day out without any sign of puncture or blow-out, so we **promptly and cheerfully pay up** when the very extraordinary thing happens and we are called upon to make good.

Entirely apart from its puncture-proof addition, the Woodworth is a tire of extremely high quality. The finest material is used, expert workmen are employed and the greatest care is exercised in its manufacture.



WOODWORTH TROUBLE-PROOF // TIRES //

The Woodworth is not a freak—it's qualities of general wear and resiliency are equal or superior to those of any other tire on the market—and the puncture proofing is provided by a strip of non-heating chrome leather, placed on the inner side of the casing **after the tire proper is finished.**

Our Dealer Proposition will vitally interest you. Write for it at once while some good territory is still available.

PALMER SERVICE PM DEPENDABILITY MOORE TRUCKS

The Light Truck with the Heavy Sale

The Palmer-Moore Truck is **specially adapted** to the service it is called upon to perform. Built and engined in accordance with the lessons taught by years of experimentation, it now holds first place as the standard light truck.

No effort has been spared to attain the highest degree of strength, endurance and ease of operation, in the Palmer-Moore.

Each unit of its make-up spells Quality:

Buda Motor	Parish & Bingham Frame	Borg & Beck Clutch
Bosch Magneto	Ross Steering Gear	Covert Transmission
Spicer Joints	Sheldon Front Axle	

Celfor Internal Gear Drive Rear Axle

In addition to its general excellence and harmony of design, the Palmer-Moore has an **Exclusive Rear Spring Suspension** which insures perfect and continuous traction for the rear wheels, saves wear on the tires, safeguards the most fragile load, and positively prevents the rear of the vehicle from springing up and bouncing its load off the floor.

This special adaptability and general excellence is recognized by merchants everywhere who are expressing their appreciation of its worth in large and rapidly-increasing orders. Dealers throughout the country are cashing in on this rare opportunity which exists for you right now.

Not only are Truck Dealers profiting by this; but Pleasure Car Dealers are finding in the Palmer-Moore the ideal vehicle for their successful entrance into the truck field.

We desire to assist live dealers in progressive communities to grasp and profitably follow up the opportunity now at hand, and should be pleased to correspond with you toward this end.

WE HAVE A SPECIAL OFFER TO MAKE TO A FEW GOOD DEALERS

SPECIAL OPPORTUNITY COUPON

It is the same remarkable offer we have been making during the last six months—the same offer which has established hundreds of dealers in one of the newest, biggest and most successful branches of the automobile accessory business.

For instance, a number of W'RIGHT dealers who never sold more than a dozen old style piston rings in their life until they heard of the W'RIGHT special offer are now selling from 300 to 500 sets of W'RIGHT Compression Tight Piston Rings a month—at exceedingly interesting profits. They had a gold mine in their shop and didn't know it.

Our dealers report that W'RIGHT Alloy Aluminum Pistons are another selling sensation.

Motorists everywhere are equipping their old cars with W'RIGHT Alloy Aluminum Pistons—putting them in the up-to-date class, ensuring greater power, economy, quicker pickup and all 'round motor efficiency at exceedingly nominal cost.

W'RIGHT Alloy Aluminum Pistons fitted with complete sets of W'RIGHT Compression Tight Piston Rings are unquestionably the most popular addition to the accessory line made in the past year. Dealers report a record-breaking business from all quarters of the country.

W'RIGHT Pistons are adapted to Ford, Overland, Maxwell, Studebaker, Chevrolet, Hupmobile and other makes of cars. We can convince you by referring to the records of the average W'RIGHT dealer that if you are not handling W'RIGHT Products you are overlooking one of the really worth-while accessory lines. ACT NOW. The coupon will bring you a proposition that will surprise you. No offer similar to ours has ever been made.

"W'RIGHT" ALLOY ALUMINUM PISTONS

These dealers have no real competition in the piston ring field. They get the volume of trade because W'RIGHT Piston Rings cost the user just about half what other multiple type piston rings cost. At the same time, W'RIGHT Piston Rings are guaranteed to excel the best piston rings on the market, regardless of price—to be not only better made, but to make for far better results in the hardest usage over extended periods of time. Any piston ring is efficient when new, but it takes the W'RIGHT to retain its initial efficiency throughout years of service.

Our advertising in leading motor car publications is having a marked influence in directing sales the W'RIGHT dealer's way.

"W'RIGHT" COMPRESSION TIGHT PISTON RINGS

At unparalleled prices we have also a line of spark plugs, shock absorbers, equalizing springs, power tire pumps, electric starters and generators, storage batteries and annular ball bearings, every one bearing the Longaker guarantee.

If you are the kind of dealer who can handle a high-grade line of accessories, we want to get in touch with you. Use the coupon for special offer—today.

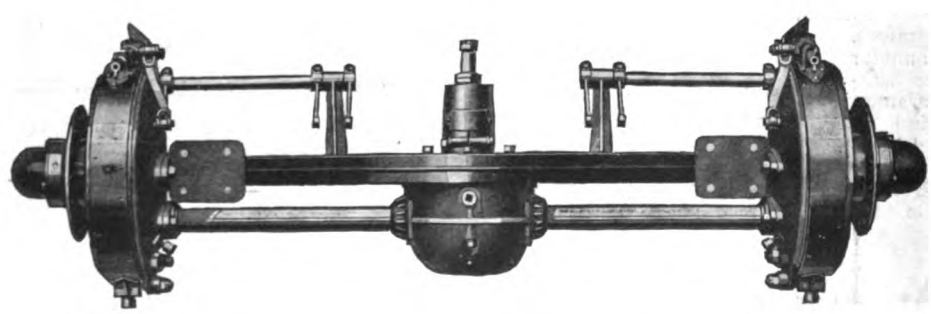
Logical Construction Has Won Marvelous Increase for Internal Gear Drive

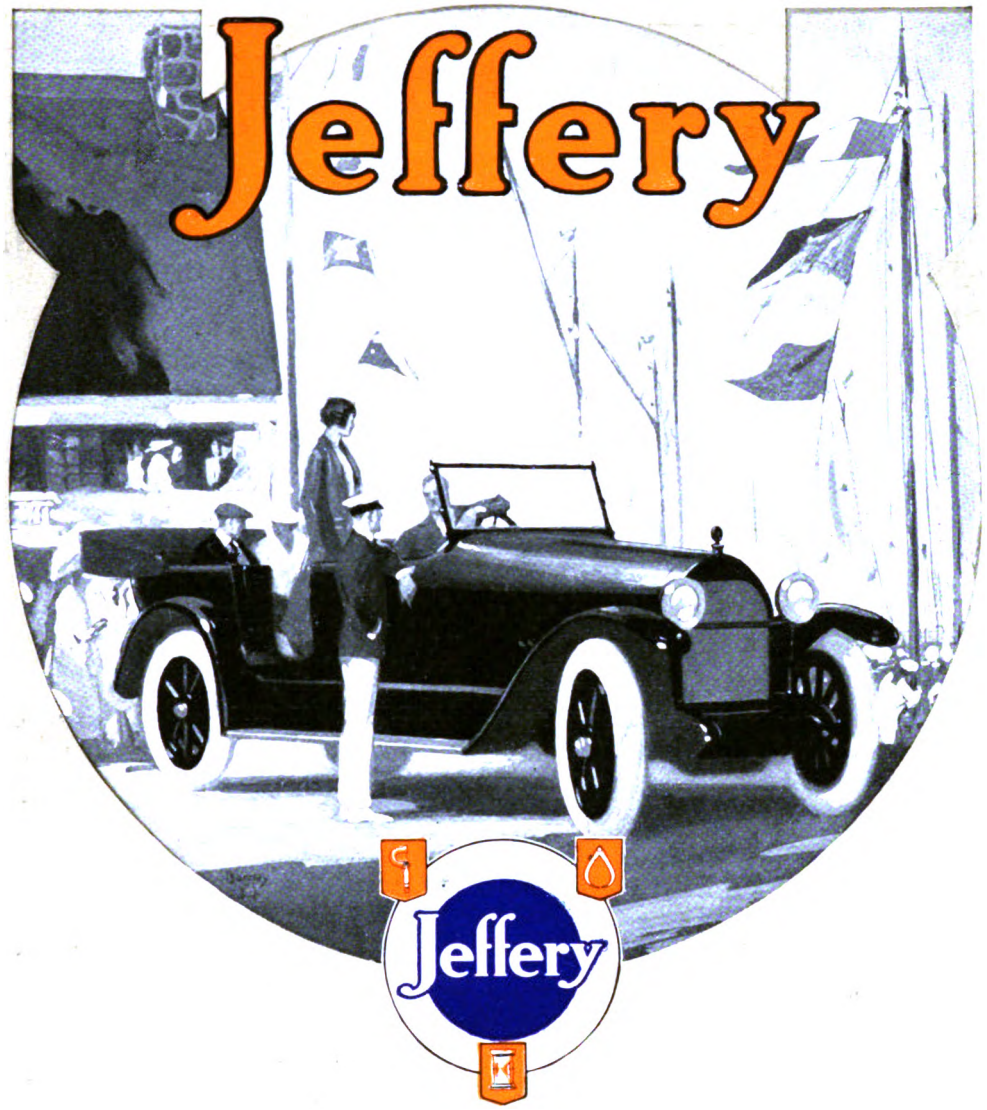
The giant strides made by Internal Gear Drive—its eager adoption by manufacturers and dealers throughout the country—stand unparalleled in the history of the truck industry.

Speaking editorially in the issue of May fifteenth, The Commercial Car Journal estimates that out of the total number of trucks built this year, **25.9%** will be equipped with Internal Gear Drive.



TORBENSEN DRIVE

This Journal—standing in the truck field as an undisputed authority—says further, "The Internal Gear Drive has made a remarkable advance during 1916—undoubtedly the most rapid increase in the use of any one type of final drive made this year."



The most successful manufacturers in the industry are incorporating Torbensen Drive in their vehicles. And the success of these manufacturers can but be the reflection of the success of the dealers who sell trucks equipped with Torbensen Drive.

From the manufacturers', dealers' or users' standpoint Torbensen Drive is the logical form of rear drive for all commercial cars. Full information will be sent on request.

Announcing the New Jeffery Six

A Triumph of Precision and Exquisite Performance

In this new Jeffery Six are crystallized the ideals and traditions of two generations of accuracy.

Like its predecessors it embodies those refinements of design and construction which mark it as a car of exceptional merit.

Its dominant features are a long, low, hammock-swung body and amazingly smooth performance.

The lowness of the body with its underslung springs, gives the car a phenomenal ability to cling to the road at high speeds.

The oversized, inherently balanced crankshaft, with extra large bearings, is chiefly responsible for the fact that the motor is absolutely free from vibration at ALL speeds.

A beautiful car. The new, low, graceful lines and superb finish mark it as the greatest achievement of Jeffery coach builders.

The simplicity of the chassis and the performance of the motor are in a class by themselves.

Yet the price is lower by $85.00 than that of its spectacular predecessor — the direct result of increased production and the Jeffery policy of manufacturing rather than assembling its cars.

$1365

The New Jeffery Symbol

Upon each new Jeffery Six there appears the Jeffery device, shown above. It is more than a hall-mark—more than a trade-mark. It is the symbol of mechanical precision and refinement. It tokens the ideals of accuracy of the Jeffery organization. And as such it is the owner's guaranty of inherent worth, just as is the hall-mark upon the finished product of a maker of instruments of precision.

(Continued on other side)

Digitized by Google

(Continued from previous page)

While other makers are compelled to meet raised costs in parts buying, the Jeffery Company, which makes its parts themselves, is in a position to offer a greater value than ever at a lower price.

The wheel-base is 125 inches—it looks a foot longer. Running board only fifteen inches from the ground—yet with ample clearance. Rear springs are underslung, and extra long and flat. Drives through rear springs, eliminating torque and radius rods. Emergency brake on propeller shaft. This Jeffery construction means the absence of parts which rattle and detract from the complete joy of motoring.

Extremely low gasoline consumption and a remarkable economy on tires.

Jeffery built through and through. More than a fine automobile—the embodiment of a high ideal.

A Motor Without Vibration at ANY Speed

The inherently balanced, oversized crankshaft—an exclusive development of Jeffery engineers—is largely responsible for the wonderful softness of the New Six motor. It makes possible, to an even greater degree, the liquid-like speed modulations which have always delighted the Jeffery owner. This remarkable motor, without vibration at *any* speed, is the result of the company's home-construction policy which actually confines 93 per cent of parts-building to the Jeffery factory.

Dealer Co-operation

The Jeffery policy always has been to see selling problems from the viewpoint of the dealer. Which means that Jeffery co-operation with the dealer is a real factor—always.

To the Jeffery Company, shipping and billing a car to a dealer does not constitute a sale. Jeffery interest goes far beyond this—it extends to the actual sale of the car to the user.

We do not believe in "hurrah" methods which only load down dealers. We indulge in no "mob" sales. Each dealer decides for himself. We show him the car and the contract. He takes his own good time in deciding what is best for him.

He must *sell himself* on the Jeffery. After he has done that he will continue to be sold—on the car itself as well as on the helpful co-operation which is always his. When a dealer signs a Jeffery contract he becomes a real and active part of the Jeffery organization.

Territory Allotment

The Jeffery Company uses the utmost care in the selection of dealers who will handle the Jeffery car.

The demand for Jeffery cars, helped by an aggressive sales and advertising policy, is such that only a limited number of dealers will be added this year.

As a result, and because of doubled production, every Jeffery dealer is assured ample delivery.

Dealers must be up to the Jeffery standard—live business men capable of giving the high-grade representation the car deserves.

If you come within this classification write today for further particulars of the Jeffery dealer co-operation plan.

Or, better still, wire!

Marshalltown, Iowa,
June 28, 1916.

Sunderman Corporation
Detroit, Michigan

Dear Sirs:

Carburetor received Saturday, and am more than pleased, and it is more than I expected. I have had several different makes on my Ford, but the Sunderman Safety has them all beat. I never would believe that a Ford engine could develop so much power till I used the one I have on now.

Everybody is interested in it and I believe I could sell quite a few in this County, so please send me your County right proposition.

Yours for an immediate reply.

Yours truly,
(Signed) N. J. Rodennel,
108 East Webster,
Marshalltown, Ia.

SIZE F

Dimensions 4½"x2½"x1⅞".
Suitable for any engine up to 45 H. P.
Subject to different size nozzle according to bore and stroke of motor.
Weight: 1¾ lbs.

A Sunderman Safety Carbureter properly installed and adjusted increases the mileage of any car, of any make, of any number of cylinders

Can be installed within an hour.

"Ford" installation can be made within 30 minutes.

Will decrease your gasoline bill from one-third to one-half.

Has no wearing part, thereby saving all troubles of replacements.

Simplicity itself. Composed only of 24 parts, while all other carburetors have from 50 to 140 parts.

Produces a pure dry gas, leaving no carbon deposit, eliminating valve grinding, gas pound and foul spark plugs.

THIS IS A CARBURETOR, NOT AN ATTACHABLE GAS OR AIR RECTIFIER.

PALMETTO WAGON WORKS

The right name—

Important!

The right tonnage—

Vital!

The right name plus the right tonnage

Garford

A manufacturer's known integrity and experience are among his dealers' biggest assets. They are the best warranty that his product is right.

And we are increasingly proud of the fact that Garford reputation for business stability and success is an important factor in Garford sales.

But here's another point—and one that's most important.

The best one-ton truck in the world is the worst truck in the world for the business that actually needs a vehicle of two or three tons' capacity. The opposite also is true.

The wrong truck means greater operating cost or faster depreciation—heavy gasoline bills or heavy repair bills—one or the other, sure.

Our knowledge of traffic problems is gleaned from the experience of many years in the motor truck business.

And the practical, scientific application of this knowledge—combined with engineering foresight and skill—has resulted in the completeness and unusual adaptability of the present Garford line.

There is a Garford Motor Truck exactly suited in design, capacity and power to the needs of any American business, large or small. There is a Garford that any business can use with economy and profit.

Garford dealers are not forced to sell a prospect a truck of any one size—whether it fits or not.

Our complete line of styles and sizes assures easy sales—contented and enthusiastic owners.

We have room for good wide-awake dealers. Wire or write us to-day. Please address Dep't. 104.

The Garford Motor Truck Company, Lima, Ohio

Manufacturers of
Trucks of 1, 1½, 2, 3½ 5 and 6 ton capacity
Tractors of 5, 7, and 10 ton capacity

STRENGTH—ECONOMY—SERVICE

These three words constitute the pledge the Saxon Motor Car Corporation makes Saxon owners.

They are to this corporation all that "*his word of honor*" is to a man of fine character.

They typify the essential characteristics of Saxon Cars. They epitomize the Saxon idea—the idea that brought the Saxon Motor Car Corporation into being, and that is the cornerstone of its success. It is not merely an advertising slogan but a business ideal—an ideal that is given concrete expression in Saxon cars.

The word, STRENGTH, implies not alone the ability to carry a certain load but the ability to carry it indefinitely under all conditions and with ease. It embraces the quality of endurance.

ECONOMY, as used here, refers to both first and last cost. In the case of the former, the latest manufacturing and marketing methods, the ablest engineering skill, and the advantages of big output have been combined to bring the first cost of Saxon cars to the lowest limit compatible with their character.

In the case of the latter, skilled design and fine quality materials have produced a car which will give the greatest number of miles of safe and comfortable travel at least expense.

SERVICE means day in and day out availability to the owner. It means square dealing on the part of the Saxon Motor Car Corporation and every dealer in its organization. It means absolute satisfaction to the man who pays his money for a Saxon. No car can give more. No car can give less and long retain the respect of the motor car purchasing public.

Saxon "Six" Touring Car, $815; Saxon "Six" Roadster, $815; Saxon "Four" Roadster, $395.

SAXON "SIX"

A big, roomy, lightweight, 5-passenger touring car, yacht-line design; lustrous finish of lasting newness; 112-inch wheelbase; light-weight six-cylinder high-speed motor, of Saxon design manufactured to Saxon specifications by the Continental Motor Company, of marked power on minimum gasoline consumption; 2⅞-inch bore x 4½-inch stroke; 32-inch x 3½-inch tires; two-unit electric starting and lighting system by Wagner; Timken axles and full Timken bearings throughout the chassis; Rayfield carburetor; helical bevel gears; linoleum covered, aluminum bound running boards and floorboards; demountable rims; and a score more of further refinements.

SAXON ROADSTER

A handsome, rugged, powerful roadster; stream-line design; 96-inch wheelbase; 28-inch x 3-inch tires; 15 h. p. L-head, high-speed motor of unusual power, smoothness, quietness, flexibility, operative economy and coolness under all conditions; four cylinders cast en bloc; crank case integral; 2¾-inch bore x 4-inch stroke; 40-inch seat; three-speed sliding gear transmission (only standard roadster under $400 with three-speed transmission); Timken axles; Hyatt quiet bearings; honeycomb radiator; dry-plate clutch; ventilating windshield; signal lamps at side; adjustable pedals; vanadium steel cantilever springs; and fifteen additional improvements.

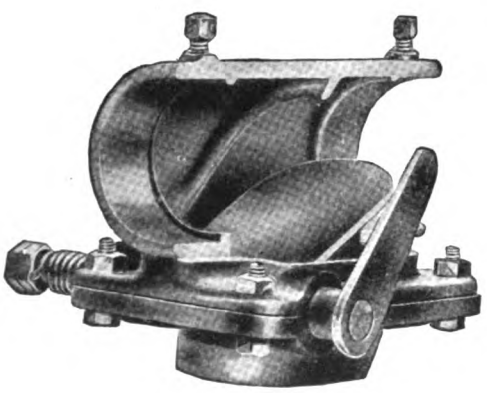
G-P Muffler Cut-Out *"Tells The Motor's Secrets"*



Patented June 24, 1913

The smooth, quiet operation of the modern, high-speed motor makes a muffler cut-out a necessary economy.

Without a G-P Muffler Cut-Out on his car, even an expert finds it almost impossible to tell whether his motor is hitting on all cylinders.

Every miss means a cylinder full of gas wasted. Rather costly today!

To say nothing of the irreparable harm that may be done by running with one or more cylinders missing. The G-P Muffler Cut-Out, when opened, absolutely cuts off the muffler.

Sectional View

It deflects the exhaust gases freely, without even the suggestion of back-pressure. This results in immediate and complete relief to the motor, with a distinct and intensified sound of each explosion.

An attractive shelf article—packed in individual wood boxes. Why not sell the best?

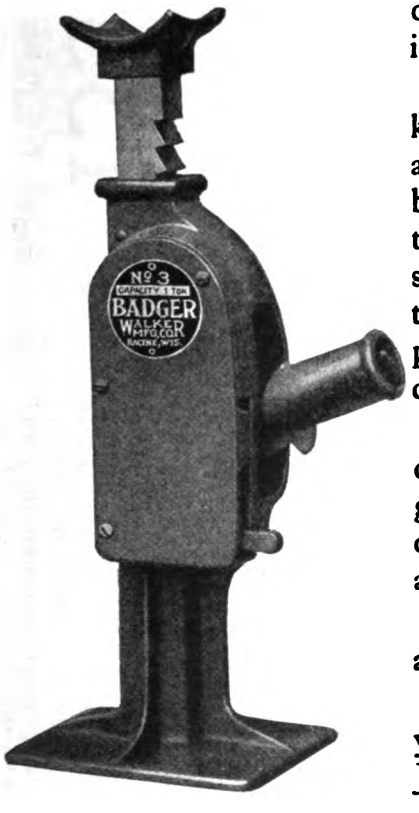
The Badger Jack Family

They're a lively crew, this Badger Jack Family.



You never saw eight youngsters with more "pep" in them.

They're itching for something to do, all the time.

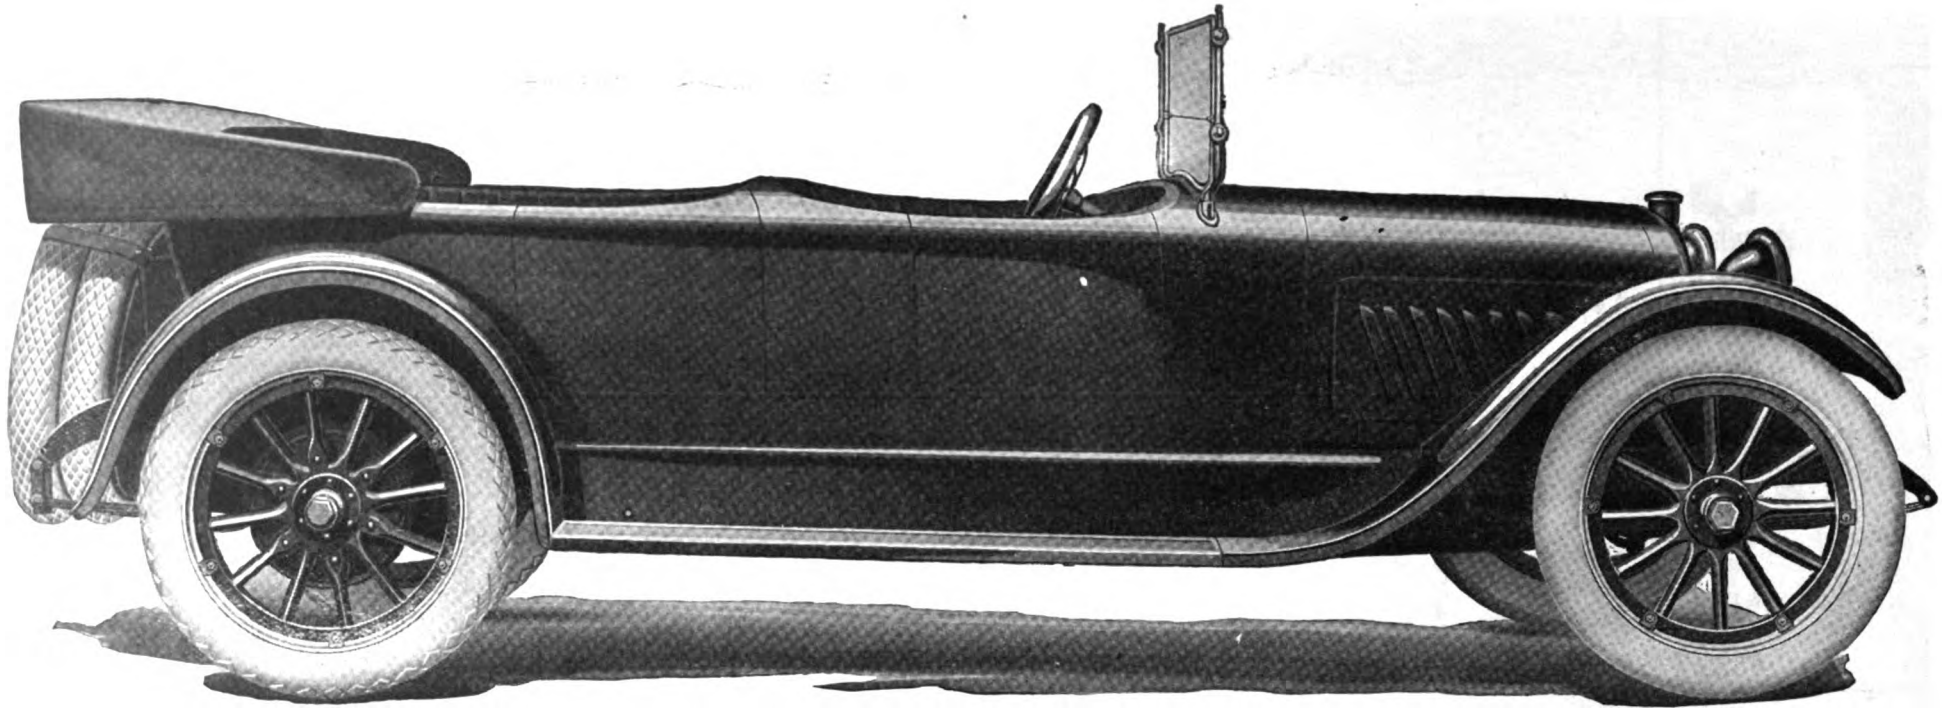
They'll tackle anything from a built-for-two bicycle car to a five-ton truck. The tougher the job the better they like it.

You can't make a Badger Jack whimper. He'll stand up under any load you want to put on his stiff, sturdy shoulders. If he can't, he's got a big brother that can.

And he doesn't leave much work for you to do, either. All he asks of you is a place to put his foot, a fair chance at your axle, and he'll hold your car on three legs till doomsday, if you don't let him know, by a kick on the reversing lever, that you're through.

Badger Jacks are cheery-hearted, well-knit lads, made of the soundest kind of iron and steel. There's been no skimping in their bringing up. They're made to be useful. And they go through a course of training on a special machine before they leave home that's three times as hard on a jack as anything life puts them up against. It would crumble the ordinary junk-jack like half dried mud.

So you can't blame them for having a certain pride in themselves and for being glad that they've put 200,000 junk-jacks out of business in the last year. There won't be a junk-jack left in a few years more.



Junk yours now, and begin life over again with Badger Jack.

There is a book about this family that you'll find worth reading—"The Story of a Jack." Send for it.

ROSS EIGHT

$1350

F. O. B. Detroit

Manufactured by

ROSS AUTOMOBILE COMPANY

DETROIT, MICHIGAN

WHEN you consider that the Ross Eight has an eighty-two horsepower, eight cylinder Herschell-Spillman motor—the finest type of eight cylinder construction extant—

And that it has a wheelbase of 130 inches, providing the length that means maximum ease of riding and unusual roominess of body for seven passengers,

And, that in spite of its high power and luxurious roominess, it weighs only 3180 pounds, you begin to have a rough mental outline of the qualities that entitle this car to your careful consideration.

We might go on and enumerate *all* the details but, you know that any manufacturer with twelve years' experience building good cars is going to see that every detail of construction is in harmony with this brief outline.

There is no better way to get a positive, concrete idea of Ross Eight ability, Ross flexibility, Ross uniqueness of quality for the price, than to get a ride in the Ross Eight.

Dealers who ponder over the four facts mentioned, the high powered motor, the long wheelbase—the light weight—the generous roominess of body—and the price, $1350, must inevitably conclude that here is a car whose value is so clearly and distinctly apparent that it will sell on sight—and it does. Write at once to ROSS AUTOMOBILE CO., Detroit, Michigan

Ease of Operation

The Detroit Gearless Tire Pump takes the last bit of hard work out of motoring. The pump is carried in the tool box with tube and gauge attached. It is attached to the crankshaft when it is to be used and this operation requires but a half minute.

The pump is strongly and sturdily built, and can't get out of order. It is made like your motor, the downward stroke of the piston drawing in the air, and the upward stroke forcing it through the tube to the tires.

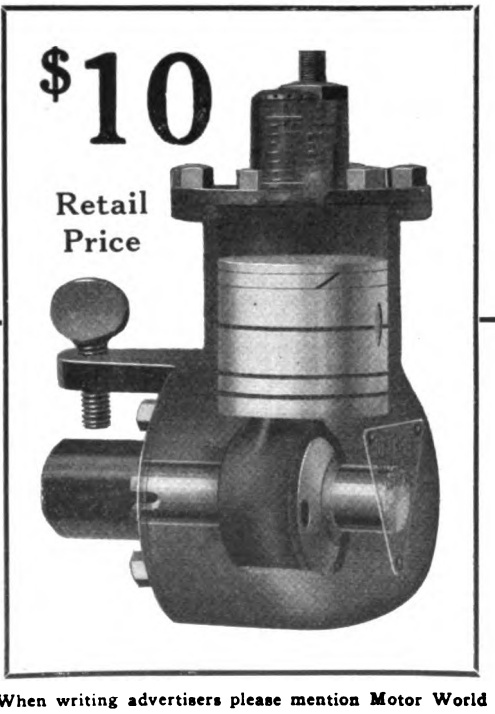
It is recognized as standard in the trade, and is unqualifiedly endorsed by the engineering department of every company to whose product it can be attached.

GEARLESS DETROIT MOTOR-DRIVEN TIRE-PUMP
PATENTED AUG. 24, 1915

Offers the dealer maximum profits with minimum labor. If you sell a gear-driven pump your profits are eaten up in the labor costs of installing it.

But with the Detroit Pump, you simply hand it over the counter and pocket your profit on the sale.

An important fact is that one sold makes money. We have many letters from dealers who say that one pump sold in a neighborhood leads to other sales.



Order one, at once; try it out and then show it to your trade. You'll be surprised to see how easy it will be to sell a large number.

Ready for Reo, Chandler, Saxon Six, Dodge Brothers, Studebaker 1914-1915-1916, Overland 75-83-84, and Hudson Super Six.

Detroit Accessories Corporation

519 Hillger Avenue **Detroit, Mich.**

Note—Beware of pumps infringing the basic patents of the Detroit Gearless Pump.

Harry McCullough
J. H. McCullough & Son

These are the men who sent in the largest number of Profit Sharing Certificates during 1915, that were completed. We expected to be able to make this announcement in February, but the large number of Agreements coming in at the last moment made it impossible to make a correct tabulation sooner.

The hundred names we print below are those who were next in rotation up to 100, who receive McClure's Magazine free for one year, as a result of their work and to show our appreciation of their activities.

The location of the winners in this contest shows the wide-spread distribution of Champions.

We congratulate the winners and the firms who employ this bunch of live ones.

How do you stand in the 1916 Profit Sharing Contest?

Digitized by Google

PROTECTION for the car and for the people who ride in the car, protection for the dealer and for the owner—this is the basic idea that underlies our business. You must pay a big premium for protection from fire, burglary, accident and liability. But you secure protection from wear and tear and rapid depreciation at very low cost when you buy

WARNER AUTO UPHOLSTERY COVERS

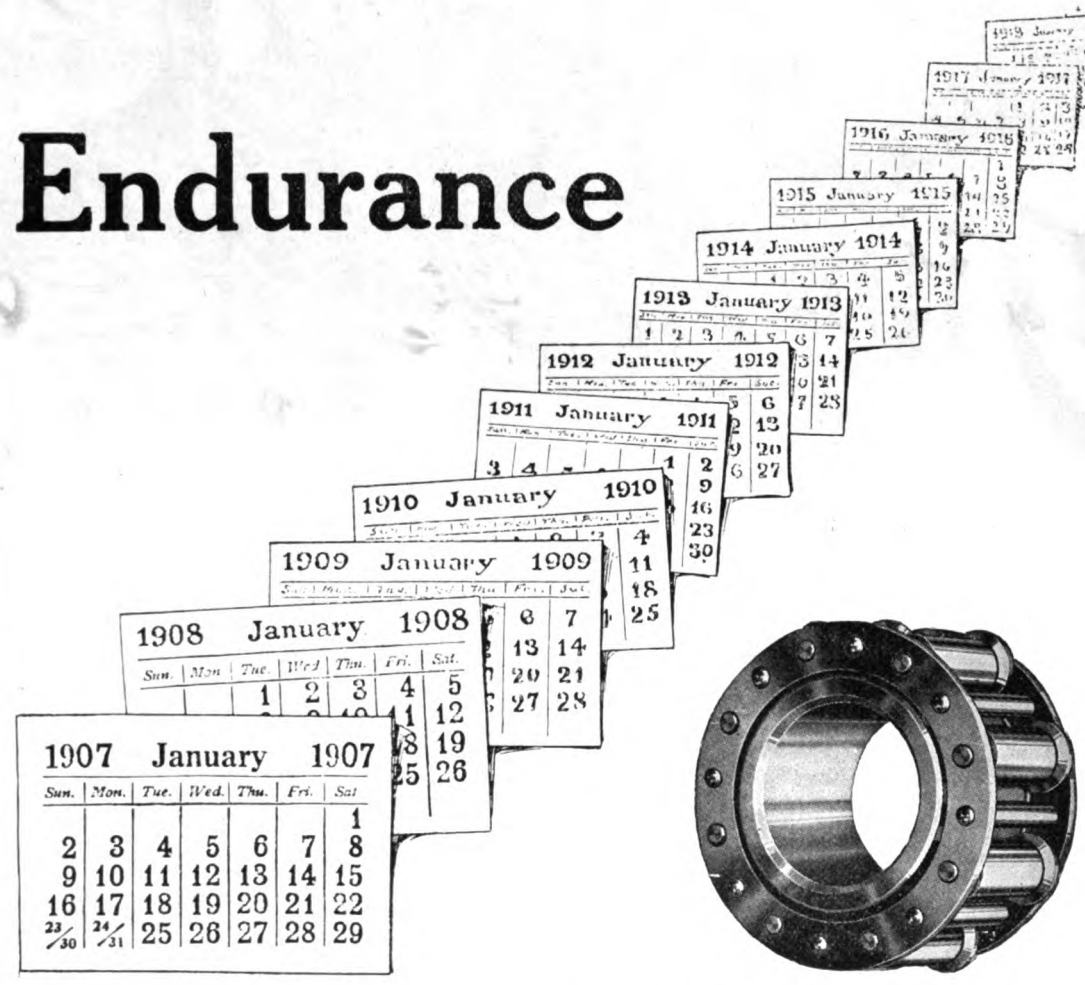
FIT LIKE A GLOVE

DUST-PROOF WEAR-PROOF

We honestly believe that there are no auto upholstery covers manufactured in America that represent better values, better materials, fit and workmanship than those which we manufacture and sell under our own name. You will realize the truth of this assertion from the moment you snap a set of these covers over your automobile seats. They are especially designed for the car you drive, and are readily attached by means of instantaneous fasteners.

We know that our proposition is better for the dealer because we manufacture exclusively **for** the trade, and sell exclusively **through** the trade; our list prices are fair, our discounts are liberal, our service is prompt and reliable and we guarantee price protection to September first, 1916, to all dealers under contract with us.

The cost of everything that enters into the manufacture of Warner Auto Upholstery Covers is advancing by leaps and bounds. If you have not already received our catalog, price-list, swatches, display hanger and dealer contract, write today.



THE WARNER AUTO TOP COMPANY

1640-1644 Central Avenue **Cincinnati, Ohio**

Endurance

The construction of Bower Roller Bearings assures extraordinary endurance. They consist of a cylindrical roller with a flanged head at one end. The flange takes care of the end thrust. The constant radial load is supported along the whole length of the cylindrical roll. Bower rollers and race-ways are always parallel. Therefore, a maximum diameter of roll can be used. The bearing is moreover self-aligning and with proper lubrication will last indefinitely.

"FRACTO"

SUNLIGHT ON THE ROAD—STARLIGHT TO THE EYE

"FRACTO" is making big money for dealers. Your customers will buy it in increasing numbers and our liberal policy assures generous profits.

"FRACTO" does not waste one ray of light—it simply directs them in the ways they should go to accomplish the purposes most desired—a full, clear light on the road, a soft, glareless light in the eye, sufficient illumination of overhead obstructions to make them easily distinguishable and avoidable. It is a 2-oz. glass, cup-shaped lens, attached under the bulb. It is easy to attach, strong, durable and steady—will not break the bulbs.

$2.75 PER PAIR

Write at once for our liberal proposition.

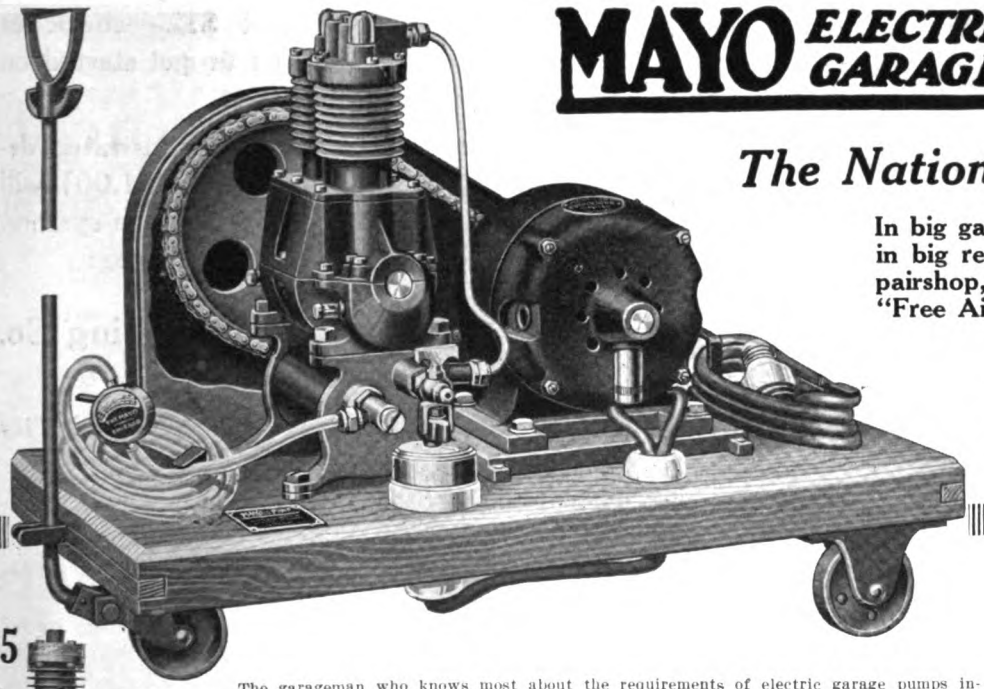
Alliance Tire "Adjectives"



After you have read all the rest of the tire ads—after you have devoured the "Good," "Better," "Best," "Superior," "More Mileage" and all that sort of stuff—come back to the ALLIANCE "adjectives," reproduced herewith, and consider which you think means more money for the dealer.

ALLIANCE 5000 MILE Traction Tread Tires

back up their dealers with advertising of this kind in the name of the local dealer. The dealer is not required to pay for it, or for half of it, or for any of it. The Alliance Rubber Company pays for it and reaps its benefit in the prosperity of its individual dealers.

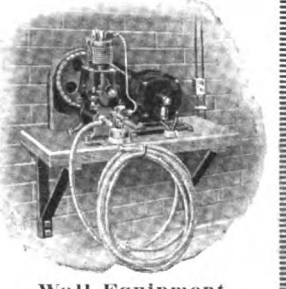
MAYO ELECTRIC GARAGE PUMP

The National Standard

In big garage and little garage, in big repairshop and little repairshop, you will find MAYO "Free Air" equipment dispensing satisfaction to customers who patronize only the garage or repairshop offering the up-to-datest service.

$25

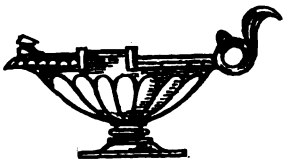


Mayo Air Compressor

The garageman who knows most about the requirements of electric garage pumps invariably chooses a MAYO against the field. Due to material, construction and an international reputation of years' standing for all that is best in design and structure, MAYO "Free Air" garage equipment has become recognized as the standard of the motor car trade.

The MAYO Electric Garage Pump—either portable or wall type—at $60 is the most popular electric garage pump on the market. It bears the MAYO Guarantee, and is sold on 30 days' trial.

This pump is exceedingly economical of current. In ordering state current and voltage used. Send for free folder.



MAYO Air Compressor at $25 is especially made for tire filling purposes, meeting with wonderful demand. It delivers pure, clean air only to the storage tank. Pressure 200 lbs. guaranteed. Send for full particulars.

Wall Equipment

"The Light That Failed"

Many dealers and garage owners throughout the United States have suffered defeat in business, because they did not adopt some adequate accounting system to direct them into profitable channels, and take them from the broad and too easily traveled path of loss—at the end of which was failure.

How much did you make in June?

Maybe you think so—but do you know?

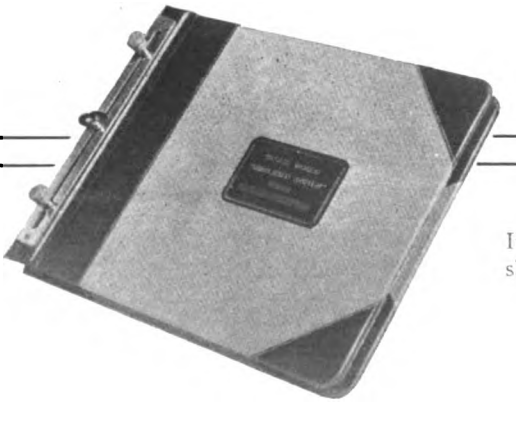
How much will you make in 1916?

Does your repairshop gain or lose?

How much do you make when you charge a customer for an hour of labor?

How do your May and June collections compare?

If you don't know these things you are not on the road to business success. You should have an accurate and timely record of all parts of your business. You should have a simplified and easy to operate accounting system that will light up the dark corners of your business—that will make your business road safe to travel.



Motor World has devised such a system. It costs $12 complete. Everything in one book. We advise you to get SOME kind, whether it is Motor World's or some other. But if you want this one (which is designed by experts who have made a careful study of the various problems of YOUR business) send $12—check or money order—and plan to get started on the right track August 1st.

Booklet with a complete illustrated description of the system (price $1.00) will be sent complimentary with each system. Send your order at once. Address:

The Motor World Publishing Co.

System Department

239 West 39th Street New York City

This is the only book required—size 11 x 14 inches—canvas, leather corners.

Have You This Plug On Your Car?

Sold Everywhere

So with tires—the tires that are on a new car the car manufacturer selects.

When a car owner buys tires he selects them himself.

Nearly every Kelly-Springfield tire used is selected by the car owner.

Kelly-Springfield Automobile Tires—Hand Made

THERE is an important fundamental principle involved in this tire selection. You ought to understand it.

Few users buy Kelly-Springfield tires until after they have had experience with other tires. And fewer, having once used Kelly-Springfield tires, voluntarily discontinue their use. There is a reason for both conditions.

The reason few users try Kelly-Springfield tires first is that the initial selection of their tires is made by the manufacturer who equips the cars which they buy. And Kelly-Springfield tires cost more.

The manufacturer must put tires on the car he sells, but need not put on tires which give excess mileage. He is only obliged to equip with tires which yield the mileage most tire manufacturers guarantee. That is all the car buyer expects.

If the car manufacturer equips with a tire which gives a greater mileage than this, he has to pay the additional cost out of his own pocket—and why should he?

Considering proper manufacturing economies, he equips with tires which cost him least and yet give reasonable satisfaction. He equips his car with higher-priced tires only when he buys advertising value for his car, as well as tires.

Now we cannot meet the manufacturer's price requirements. Hand-made tires cost more to make and yield excess mileage. We cannot compete on price when the excess mileage doesn't count. So we rarely sell tires to car manufacturers.

Kelly-Springfield tires are sold almost exclusively to car owners who pay higher initial prices because they know they receive excess value. At present the demand is far in excess of our production.

The demand has been so great that owners order tires before they need them to get them when they need them.

It is important to you to know these conditions and to know true tire economy.

THE MANLEY "EVERY WAY" ENGINE STAND

supports the motor perfectly, while allowing the workman to reach every portion of it with ease and accuracy.

The "Every Way" can be adjusted to every position in a circle—100 positions if desired—but the three most convenient are the Horizontal Position for working on valve mechanism and generally around the engine; the 45-degree Position (shown in cut) for cleaning carbon, grinding in valves, etc.; and the Inverted Position for taking up crankshaft, connecting rod, bearings, etc.

In each position the engine is locked rigidly by two side braces. The "Every Way" supports the engine solidly. It will never become shaky, and should last a lifetime without repairs.

For the Factory motor assembly department no other stand has been brought out that can be compared to the "Every Way" for efficiency and convenience.

The Largest Gasoline Cars in the World are fired by Splitdorf Plugs

The 300-H. P., self-propelled, McKeen gasoline rail cars are used for most difficult service in Australia, Mexico and the United States. The high efficiency of these great gasoline cars is another testimonial for the

SPLITDORF SPARK PLUG

With the Green Hexagonal Jacket

Ninety per cent. of all engine troubles are due to faulty ignition. Seventy-five per cent. of them can be remedied at once and forever by the use of Splitdorf Plugs.

These plugs are practically indestructible, positively gas and oil tight. They are as nearly soot-proof as a plug can be. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motorcycle, motor truck, motor boat, aeroplane, tractor, and stationary gasoline motor. Write for Splitdorf Directory which tells which plug to use in *your* motor.

Splitdorf Plugs sell for one dollar everywhere. If you can't get them from your dealer, send to us for them.

Splitdorf Electrical Co.

Newark, New Jersey

Quality, Service, Price

—are the distinguishing features of our methods, as well as our output.

Dealers make satisfied customers and steady profits by handling VULCAN SPRINGS.

Years of steady, unremitting effort have concentrated in

VULCAN QUALITY SPRINGS a Quality of material and workmanship seldom equalled.

Our recognition of the value of complete stocks, prompt deliveries and courteous treatment, has led to the development of a constant, unerring Service.

Our determination to divide fairly with dealer and consumer alike has fixed our prices at the lowest level commensurate with good business practice.

Write us today for liberal proposition in territory still open.

IMPERIAL

Owners now have a SERVICE Organization back of their cars which has few equals. Parts Orders, except in unusual cases, will be shipped within twelve hours after receipt.

Bear in mind particularly, however, that in order to take advantage of this efficient service, you must send all orders and requests for advice directly to the main office.

Imperial Automobile Parts Co.
DETROIT

KRIT OWNERS

We furnish quick service on all engine, clutch, transmission, differential, front and rear axle, steering gear, wheels, steering knuckles and cones, fenders, frames, and body parts, from original Krit Stock. For all models from 1909-1915 inclusive.

MOTOR CORPORATION 1309 Race St., Philadelphia, Pa.

KRIT

Special Offer No. 3

Extra light pistons at small cost

We give Krit Owners the opportunity of bringing their motor right up to date by equipping it with extra light, extra strong pistons—the same as are now being put into practically all the 1917 models.

We know from accurate tests that these pistons will increase the power of your motor from ten to fifteen per cent.

The list price on these pistons with the piston pins and piston pin bushings would be $4.55 each or $18.60 for the set.

We are making a special price on this set for immediate delivery of..... **$11.80**

Send all orders direct to the factory.

Krit Motor Car Company
DETROIT, MICHIGAN

Long Distance Telephone, 1027 Circle

MICHIGAN

Owners of Models R, S, and J.

These models of the Michigan car were unfortunately designed without proper bearings in the rear hubs. The ball bearings became worn and caused trouble.

We are now prepared to correct this difficulty by furnishing you with high-grade correctly designed roller bearings at a special price.

The list price on these bearings was $18.75 each. For a limited time we will offer them for $16.80 each, or for a pair

$25.00

Order all parts direct from the factory. We carry no stock of parts elsewhere.

The Automobile Catechism Price Cut in Half $1.25

"THE AUTOMOBILE CATECHISM" (de luxe edition) is a complete course in automobile instruction—each subject discussed and illustrated so that YOU will grasp every point worth while—every subject is made as simple as A B C. You are interested—you are instructed—you are directly benefitted. Its information is final. It's a handsome piece of book work—splendidly printed, with 101 illustrations; flexible black leather binding, rounded corners and gold-edged pages—beautiful, while being intensely practical.

We want every reader of Motor World to have a de luxe copy of "The Automobile Catechism." To make our offer irresistible we have decided, FOR A LIMITED TIME ONLY, to CUT THE PRICE IN TWO. This half price ($1.25) will prove the best investment you ever made. Remember, this is the de luxe edition—264 pages—every page full of real, money-interest value. ***Send for this today***

will be sent upon request to all dealers in Automobiles, Automobile Supplies or Repair Shops or Garages.
Full stock at all times insures service—quality—price. Write at once as prices are advancing.
Chicago Automobile Supply House
1349-53 Michigan Ave. Chicago, Ill.

Stop the Spring Breakage
It's poor policy to risk repeating the annoyance of a broken or weak spring—and the delay—by saving only a very little in buying or selling a *cheaper* spring instead of a "NEW ERA *BETTER* SPRING." Don't replace a broken spring with one no better. Wise dealers sell only the best. New Era "BETTER" Springs are the oldest and largest used line for replacement—at same price as from car factories. Made for all cars. GUARANTEED one year against breakage or sagging, graphited between leaves for two years' lubrication. Write for complete lists, discounts—or state requirements and class of business.

New Era Spring & Specialty Co.
879 Woodward Ave., Detroit, Michigan

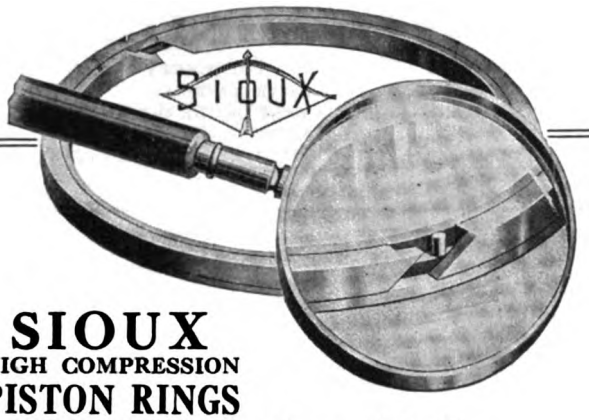
The Universal Automobile Record Book

MOTOR WORLD
239 WEST 39th ST.
NEW YORK

THE object of THE UNIVERSAL AUTO RECORD BOOK is for the Owners of automobiles to keep an accurate account of all costs pertaining to the operation of their machines in a simple, compact and accurate form.

Through THE UNIVERSAL AUTO RECORD BOOK, if the record is correctly kept, the exact expense of all items can be easily arrived at and any leakage in expenses be corrected.

Through THE UNIVERSAL AUTO RECORD BOOK provision is made for the separate listing of different items of expense, also records of tire mileage, motor trips, etc.



The convenience of keeping the record of the mileage is well worth the price of the book.

THE UNIVERSAL AUTO RECORD BOOK can be carried in a convenient place in the car, either in a door pocket or under the seat or will easily fit into the coat pocket on account of the fact that the book is only 5¼" wide and only 7¾" deep.

There can be no question but that the keeping of a Record Book along the above lines would prove not only of real interest to every car owner, but will also add pleasure to the operation of the machine, and at the same time will afford a saving in the cost of operation.

THE UNIVERSAL AUTOMOBILE RECORD BOOK will be sent postpaid to any address upon receipt of 50c.

LEWIS VALVES Toledo

Conserve Power

There are certain heat treatments valves must go through to keep them from warping.

All Lewis Valves are heat treated so that metal strains are taken out—making Lewis Valves last longer and give better service.

Don't overlook the valve question. It's a big factor in gas engine building—doubly important with the present heavy grades of gasolene.

Ask Lewis about Valves—we specialize on valves exclusively.

Lewis Electric Welding & Mfg. Co.
TOLEDO, OHIO

If You Could See Twice as Well Out of One Eye

—if by closing one eye the power of vision of the other were doubled, you would have a good idea of the principle on which the **VAN SICKLEN** Headlight Concentrator operates.

VAN SICKLEN
AUTOMATIC
HEAD LIGHT CONCENTRATOR
FOR FORD CARS

At all engine speeds below 15 m.p.h. the **VAN SICKLEN** Concentrator automatically short-circuits the right headlight, shunting **double** current into the left headlight. The right headlight remains non-operative. The left headlight supplies sufficient light for every driving purpose.

Order through your dealer. If he cannot supply you, the **CONCENTRATOR** will be sent you direct, postage prepaid, on receipt of price. **DEALERS:** Over half a million Ford cars need this little device. Selling at a tremendous rate everywhere. Some desirable territory open. Wire or write.

ONLY **$2**

Combination Tires

You're tired of tire boasting, aren't you? "Biggest" and "Best" have been worked to exhaustion, and there are no unused superlatives left to describe a really great tire.

We are not the "biggest;" we are too modest to say, boldly, we are the "best"—but to make a better tire than

Combination Tires

is a task that daunts both "biggest" and "best"—because we have made Sea Island cotton, pure rubber and tire-making skill do team-work that others have found impossible.

We've handled the cotton so as to get the last atom of strength in use—

We've so compounded rubber as to generate unheard-of "bounce" and "toughness"—

And we've put them all together to make a tire that sets another and higher standard.

The "Hold-on" Tread

OUR SELLING POLICY is as great as our tire, and its **exclusive territory clause** offers to distributors who can deliver some volume of business

Mitchell MID-YEAR MODEL

$1325 F. o. b. Racine

What Do You Hear?

What do you hear about the latest Mitchells, built by John W. Bate?

They are talked about everywhere, you know. We are spending $500,000 in advertising on the Mid-Year model only. More than 10,000 of our 1916 models are now in the hands of owners.

What do they say?

What We Hear

We hear the greatest praises we ever have heard in our 13 years of car building.

We hear from noted engineers who say, "You are right. That car is a mechanical marvel." And 37 of them — men of nation-wide fame — have already bought this Mitchell.

We hear of one Mitchell which has covered 218,000 miles. We hear of six which have averaged 162,372 miles each, or over 30 years of ordinary service.

We hear of one—in Buffalo—which has run for 150,000 miles at a cost of $8.90 for repairs. And today it covers from 16 to 20 miles per gallon of gasoline.

$100,000 Books

Mitchell dealers have books of letters from owners. One of these dealers has letters from owners who paid $100,000 for their Mitchell cars. He calls it his $100,000 book. Others have smaller books.

We cannot believe that any other car in all history has had so many good things said about it.

John W. Bate Made Good

John W. Bate, the efficiency engineer, has worked here for years in silence. We never told what he was doing until it was done.

He built this mammoth model plant. He cut our factory costs 50 per cent. He made 700 improvements in the Mitchell car. He established big margins of safety. He made oversize parts, used a wealth of Chrome-Vanadium steel. In the latest Mitchell there are 440 parts which are either drop forged or steel stamped. There is hardly a casting left.

He worked for economical production, for economical operation, and for a lifetime car.

He worked for a complete car. The latest Mitchell has 26 features which other cars omit.

Men who know the Mitchell will tell you that John W. Bate made good. And when you know the car he builds we believe you will want to sell it.

Ask us for the facts.

STUDEBAKER dealer connections are based on something more than a general agreement as to territory and yearly quota of sales. The requirements involved are rigid and exacting, but once the relationship is established, every proved method of cooperation is employed by the Studebaker Sales and Service Departments that will tend to build prestige for the dealer and increase his profits.

That both the products and policies of the Studebaker Corporation are particularly liberal in their benefits to the dealer is evidenced by the extreme satisfaction voiced by over 6700 men who represent Studebaker in all parts of the country — many of them for a period of years. The reasons they regard their association with Studebaker as such a strong ASSET may be of interest to you.

The Best Reason in the World Why

You Should Choose

AC Spark Plugs

Proven supremacy in every-day performance under severest tests, is the best reason in the world for the enormous and ever-increasing demand for AC Spark Plugs.

AC Plugs permit extreme spark advance without knocking. That means cleaner, sharper explosion, greater speed on the same throttle opening; cooler motor; greater mileage for each gallon of fuel and reduced motor wear.

Absolutely gas-tight under all conditions, AC Titan plugs typify the infinite and painstaking degree of accuracy which warrants the unqualified choice of most of the leading authorities on gas engine combustion.

58 Leading Manufacturers Are Using AC Plugs for Standard Equipment

Overland

What Is Happening in Syracuse

Here is a reproduction of an advertisement written and placed by our dealer in Syracuse, N. Y.

It speaks for itself.

In 1911—just five short years ago—this Overland dealer ordered only 200 cars.

But this initial order has increased year by year—and 1916 already sees a total of 2100 cars.

A gain of 1000 per cent in five years.

Overland popularity increases business for thousands of Overland dealers.

Spizzerinktum Counts!

TRACTOR BUSINESS
TRACTOR BUSINESS
TRACTOR BUSINESS

The tractor field at Hutchinson tried both machines and men. Hot sand threw back the blistering heat of the sun and the all-day chugging of the motors showed up the unenduring physical qualities of the flesh-and-blood horse

Mr. Tractor Dealer and His Tractor Service

WHAT kind of service is needed by the tractor industry? MOTOR WORLD'S special staff representative, at the demonstrations, has found that the only service that will make the tractor industry big, successful and satisfactory to users is the service of the type given by the motor car dealer. And the only one who knows how to give this service is the dealer in cars. He is, for this and many other reasons, the logical tractor distributer.

By Stanley P. McMinn

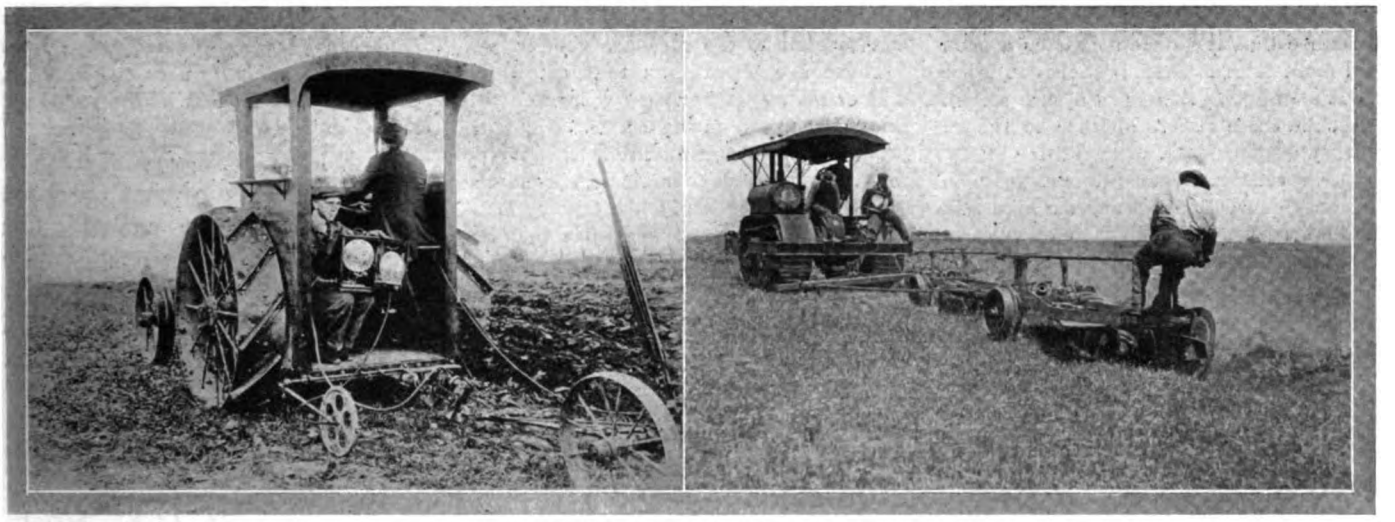
Motor World staff correspondent with the Tractor Circuit

HUTCHINSON, KAN., July 28—Service will play a big part in the tractor business of the future. And the dealers who will be the leading dealers will be those who give the best service.

Also, the dealers who give the best business-building service will be those to whom the tractor manufacturers, once they have thoroughly investigated, will pin their hope for the future of the industry.

What service there has been up to now has been manufacturer-given. The implement man knows no such system as the motor car man terms service. But, despite a lesser need for it, there MUST be service, for the farmer with a broken tractor wants a new part NOW, and not "as soon as I can get it from the nearest factory branch."

The manufacturer needs service—needs it more than he now knows. And the motor car dealer is the one—and only one—who knows how to give it to him.



Some repair and service work is at present going to the garageman and the motor car repairshop. These men are getting a little of it already, and quite likely they will get a lot more in the not far-distant future. In this connection it is significant that one manufacturer is quite frank in his statement that *motor car dealers on his list are far and away ahead of implement dealers, for the simple reason that they are fully equipped to give real service when necessary and because they have spare parts right on their shelves.*

With very few exceptions tractor manufacturers tell me that there is no reason in the world why the garageman and the repairman should not continue their drive for tractor business and get it. You know, human nature is much the same the world over and what holds in the pleasure car field holds also in the tractor field. When a man wants service he wants it quick. And so long as he gets quick service he is not greatly concerned with the cost of the service. *Speed is the primary consideration; price the secondary.* This the implement dealer does not seem to have fully realized as yet. Whether he ever will realize it time only will tell. But in the meantime the motor car dealer, the garageman and the repairman know all about it.

The implement dealer's method of handling service is crude, even though it APPEARS satisfactory. But it is factory service, not dealer service. Practically every factory whose tractors are handled by an implement dealer has a number of branch houses scattered over the country in the principal farming centers. These branch houses each have a certain number of service men. These are not allotted to any particular territory but have their headquarters at the branch.

Immediately some owner telephones or telegraphs that something is wrong one of these factory service men is dispatched to the seat of trouble. Generally he can right the trouble in a short time, after which he gets in communication with the branch house and may be sent directly to some other owner. Otherwise he returns to headquarters and is ready for the next call—but what a cost!

Digitized by Google

The Hyatt Roller Bearing Co. has perfected a hydrostatic tester for measuring the pulling power of tractors. The pull is measured on the dials held by the man seated on the driver's platform. The device also records variations in pull

These men invariably are experts on their respective tractors. They are expected to be able to make any repair, from replacing a petcock to pouring a bearing or putting in a new crankshaft. In one case these service men are something more besides. They are missionaries and also salesmen. When they fix up a farmer's tractor they go to see his neighbor, who may be a prospect. If possible they close a sale on the spot, and at least they do valuable missionary work. For the most part, however, service men are nothing else.

The Difference Is PARTS

The one big difference between car-dealer and implement-man service is in the handling and supplying of parts. *Implement dealers seldom, if ever, carry any spare parts whatsoever.* If they need parts they must go to the nearest factory branch, which is the one under which they operate. At first this may seem hard on the tractor owner who may go to his dealer in a hurry for a part. But this is not the case, although it may be hard on the manufacturer who finds this representation inadequate. There are so many factory branches and they are so well distributed that it would be hard to find a farmer so remotely located that he would have to wait more than 2 days for a part; but this is NOT dealer service as the car man views it.

The implement dealers state that this method of rendering service and stocking spare parts is "quite satisfactory," and, so far as I have been able to ascertain, not one of them has attempted to alter the method or to improve on it. Here and there you find an implement dealer with a very limited stock of parts; but ONLY here and there.

This stock almost invariably is sold him on a cash basis by the factory. One factory will consign a limited stock to a small dealer; but to a bigger dealer, one who may become a competitor, a deal would be made only on a C. O. D. basis.

Contrast this now with the method that is being put in force by those motor car men who have gotten into the tractor business. *These men almost invariably contract at once for a generous supply of spare parts and pay cash for them.* But the amount of cash put into parts seldom is great. One factory states that a stock of parts sufficient for all ordinary needs can be put on the dealer's shelves for from $200 to $300—a comparatively small cost. (This factory produces a small tractor rated at 10-20 hp.—10 hp. at the drawbar and 20 at the belt.) After this stock has been put in the factory will ship parts to the dealer on open account, 30 days, but requires a deposit of at least $500 to guarantee credit.

NEXT WEEK
Tractor Accessories and Their Possibilities

For the most part tractor manufacturers are trying to eliminate the need for service. Many factories operate schools where their purchasers are thoroughly instructed in the care and repair of the machine. Others send factory men into various territories, and these men get communities of owners together and lecture to them.

Some Good, Some Bad

Again, most instruction books that go with tractors are far more complete than similar books issued by motor car dealers. One that I have in mind illustrates with photographs every step in starting the tractor and every step in making such simple adjustments and repairs as may be necessary. Another, however, is as bad as this one is good, for what does it suffice to tell a man who has never run a tractor before to "see that all wires are properly connected" and then fail to give him a wiring diagram?

An interesting feature of the exhibits made by a few of the manufacturers at the demonstrations are boards of parts, with each part carefully labeled and priced. These bring home to the prospect in a graphic manner not only the low price of the parts—and the price really is low—but also their construction and appearance. One manufacturer even went so far as to add beneath the price of each part the location of the nearest branch house where it could be obtained.

Not a Knotty Problem

It has been said that the farm tractor would present an extremely knotty service problem. But actually this is not so. Investigation among tractor users, among implement dealers and among motor car dealers who are handling tractors makes this plain. The tractor owner requires a minimum of service, and there are a number of reasons why this is so.

First and foremost is the fact that tractors are ruggedly and simply built. There is not the influence of the sales department to hamper the designer getting exactly what he wants regardless of appearance. Curves and pretty paint have no place in or on the tractor. In consequence parts are big and heavy, and nuts and bolts are almost elephantine in size, judging by motor car standards. Similarly, there are not many of them.

Secondly, while at first it might appear quite the contrary, tractors are not subjected to the intense vibration that tears at the vitals of the motor car. Jolts that come of plowed fields are big and some of them are quite heavy, but there is little real vibration. The cushioning of the earth takes up some, but the most important reason for the absence of vibration is the comparatively low speed at which the motors run.

Again, they run at almost constant speed and for the most part are carefully governed. There is not the destructive effect that comes of undue racing of the motor. Furthermore, the farmer has come to take good care of his tractor. Time was when he left his implements in the field, and the tractor

Digitized by Google

along with them. But of late he has come to realize that it harms a tractor a good deal more than it harms a horse to leave it out all night, perhaps in a rain storm.

So, all these things operate to reduce service requirements. One tractor manufacturer tells me that all last year he had only one call for a service man and all that service man had to do was to tighten the fan belt.

Of course, there are other conditions which almost, if not quite, counterbalance these. There is the dust problem, with the cutting of bearings, pistons and piston rings; there is the fuel problem and carbon deposits; there are lubrication and cooling troubles, which are more or less foreign to the pleasure vehicle.

These are the things that cause the tractor manufacturer real worry and will impose a burden on the dealer. Breakage of parts is at a minimum. Seldom do replacements have to be made. It may be that in a year or two, when tractor manufacturers attempt to use what they believe to be better material and less of it, that the breakage factor will become higher. But at present this is negligible.

It is replacements because of wear that is making service necessary. Of course, wear in time means breakage, but this is not what I mean.

Breakage in service is a serious proposition, as the loss of half a day may mean, and frequently does mean, the difference between a loss and a profit on a crop.

And here is where the motor car dealer's type of service counts. It is service that satisfies, and since satisfied users are essential to the well-being and growth of the tractor industry, it seems vain to believe that the tractor manufacturer will overlook the one best bet for his own salvation.

Kansas Soil, Hard and Dry, Tries Tractors

Sometimes Three Men Have to Ride the Bottoms to Get Them Down— But Deeper Plowing Means Greater Wealth for the Farmer

By Stanley P. McMinn

HUTCHINSON, KAN., July 27—Kansas soil is provng a difficult test for the farm tractors that have been brought here for the second of a series of eight National Tractor Demonstrations, started July 18 in Dallas, Tex. The Kansas demonstration was officially opened on Tuesday and from then until now the grounds have been thronged. The attendance is, perhaps, not quite as good as it was at Dallas, because there is not as great an area from which to draw and because railroad facilities are not as good. Still, the crowd is an excellent one and has been drawn from the farthermost corners of the State.

Some Sales Already

A fair number of bona fide sales already have been made, though few dealer and distributer contracts have been signed to date. Manufacturers are now signing prospects obtained at the Dallas demonstration, many of them having left men behind for the purpose, so likely much of the business here will be deferred until after the furore of the demonstration has subsided somewhat.

In a measure this is an encouraging sign, for it makes plain that such contracts are not being signed merely on momentary enthusiasm or because of a type of hysteria peculiar to gatherings of the kind. Generally, careful investigation precedes the making of contracts.

That the demonstration will stimulate sales, there seems no doubt. Of late, owing to a long-continued drought and to partial failure of wheat and corn crops, due to too much early rain, implement dealers and motor car men handling tractors have assumed a condition of lethargy which has not augured well for sales. In fact, sales have fallen off quite noticeably since the first of the year and tractor manufacturers look to this demonstration to bolster up the courage of dealers and to inject new life into the trade.

The absence of rain throughout Kansas is having somewhat of a double-barreled effect. In the first place it has retarded the corn crop to such an extent that dealers state that if no rain falls within a short time fully two-thirds of their accounts will have to go over until next spring. And in the second place it has left the ground almost stony hard where uncultivated and given tractor manufacturers the hardest kind of plowing to do.

A supplementary effect, and an altogether important one, is that no one of the tractors has failed to make good in the demonstration. Thus, farmers and dealers who would be impressed by tractor plowing under ordinary conditions are doubly impressed by the good work being done under the present adverse conditions.

It is true that during the first day of plowing many more or less tortuous furrows were plowed, and that in some cases it was necessary to have as many as three men on a gang of three plow bottoms in order to get the plows in and to keep them in. But notwithstanding, this is not held against the tractors, but is rather taken as an indication of their ability, for it is realized that horseflesh could not plow under similar conditions—that is, without at least four horses to a bottom instead of the usual two.

Now Measure Pull

This year, tractor manufacturers and those who view the demonstrations have a definite means of knowing exactly how much work a tractor must do to pull its plows. Each morning, before the plowing is started, dynamometer tests are made to ascertain the average draft per plow bottom in various parts of the field. These figures, obtained with a hydrostatic dynamometer developed and operated by the Hyatt Roller Bearing Co., are then posted at the test furrow where they are obtained.

Knowing the power of the tractor, which is displayed on a sign carried by the machine, and the number of plow bottoms pulled, spectators can then refer to the test draft figures and make allowance, if necessary for the condition of this part of the field. The average draft per bottom on Tuesday, the first day, was 710 lb. However, the draft varied widely over various parts of the field, some spots being almost stony hard and very dry and other parts being quite sticky.

Soil Is Different

The character of the soil is quite different from that in Texas and moldboard plows are used almost exclusively. It is admitted that better results might be obtained, at least insofar as the tractors are concerned, if disk plows were used, but Kansans are wedded to moldboards and they are used in the demonstration for this reason. In Texas it is almost impossible to use moldboard, because it will not scour, due to the sticky soil.

Does Kansas need the tractor? Will the tractor prove a success in Kansas? These two questions are perhaps best answered by referring to the work done a year ago in the demonstration. But first let us examine conditions in Kansas up to about a month or two ago.

There had been exceedingly heavy rains. So heavy were they in fact that in the great wheat belt the land was left soggy and entirely full of water. This naturally retarded the wheat. Subsequently there has been a month-long drought, which has dried out that water very quickly and left the ground very hard. The net effect has been that, whereas Kansas had a banner year last year, getting an average of nearly 30

Digitized by Google

bushels of wheat to the acre, this year's average is expected to be between 6 and 9 bushels an acre.

Now examine into what the tractors did last year.

The field that was plowed last year in the demonstration already has yielded an average of 24½ bushels of wheat to the acre, as against the figure of 6 to 9 bushels for adjoining fields.

What better argument could be wanted for the genuine need of the tractor in Kansas? Why this great difference, you say? Briefly stated, the reason is DEEPER PLOWING.

The Kansas farms which this year are yielding only 6 to 9 bushels of wheat per acre were plowed only 5 and 6 in. deep last year. *The demonstration field that has given a crop of 24½ bushels to the acre was plowed to a depth of 9 to 10 in.*

In short, this has proved a great object lesson on the benefits of deep plowing in Kansas. It has shown farmers and dealers that deep plowing not only provides for excessive rain by permitting the ground to soak it up, but that it provides equally as well for drought by permitting the ground to give up this stored moisture when it is needed.

Not all land can be economically plowed as deeply as this. Where there is a layer of clay beneath the top soil it may prove detrimental to throw this up over the good soil. For example, the United States Department of Agriculture experimental station in Texas has demonstrated that 7 in. is about the proper depth for Texas. This department has compiled figures on nearly every farmed area in the country and these figures are easily available. But they are not always as easily lived up to unless the plowing is done with a tractor.

Kansas grows each year an average acreage of 16,000,000 in wheat and corn, and agricultural experts inform me that at least 40 per cent of this acreage can be cultivated with the farm tractor. In all, there are some 177,840 separate farms in Kansas, according to the 1910 census. Of these, 61,286 are between 175 and 499 acres in extent—almost the ideal size for the small tractor. There are 57,879 between 100 and 174 acres, 10,475 between 500 and 999 acres, and only 3360 over 1000 acres. Of really little farms—under 50 acres—there are only about 18,000.

Practically all of this is gently undulating land, with no great impediment to power farming.

Hutchinson has been admirably chosen as the scene of the Kansas demonstration. Reno County is virtually the center of the great Kansas wheat belt. Within a circle having a radius of 75 miles and having its center at Hutchinson there is grown fully 65 per cent of the Kansas wheat production and 42 per cent of its corn. Also, one-third of the population of the State is in this area.

Reno County itself last year averaged between 20 and 30 bushels of wheat to the acre, but this year the average will fall below 9 bushels, in the estimation of crop experts. Farther west in the State, however, conditions are more nearly normal. Corn has suffered to such an extent that the crop will be from one-third to one-half of last year's.

Kansas is one of the few States which has made a census of its farm tractor users, though the figures are not strictly accurate, owing to the difficulty of getting returns and because of the constant influx of new machines. The census shows that Kansas had about 2500 tractors the first of this year, but that number may have increased to 3500, and in the estimation of quite a few probably has done so.

It is difficult to estimate, or even to guess, how many tractors Kansas will absorb this year.

Gasoline is used here to a slightly greater extent than was the case in Texas. Strictly speaking, however, it is not gasoline, but is better styled naphtha. Gasoline here is defined as having a gravity higher than 58. Gasoline tractors, however, are burning fuel which measures about 57.3 Beaume. This fuel costs 18.3 cents per gallon. Kerosene measures about 44 and is selling this week for 7.3 cents.

The accessory demonstration here is much larger than in Dallas and is drawing a much larger crowd. Except in isolated incidences, dealers are not attempting to sell tractor accessories and few of them are selling them. What business is done generally is direct between the manufacturer of the device and the purchaser. The exhibitors are:

McQuay-Norris Mfg. Co., St. Louis; Cudahy Refining Co., Kansas City; Indian Refining Co., New York; Eisemann Magneto Co., New York; Hyatt Roller Bearing Co., Tractor Bearings Department, Chicago; National Refining Co., Cleveland; Waukesha Motor Co., Waukesha; Sumter Electric Co., Chicago; Domestic Engineering Co., Dayton; Balso Oil Co., Toledo; Vacuum Oil Co., Chicago; Byrne-Kingston & Co., Kokomo; Kokomo Electric Co., Kokomo.

Makers plowing the first day follow:

The Demonstrators at Hutchinson

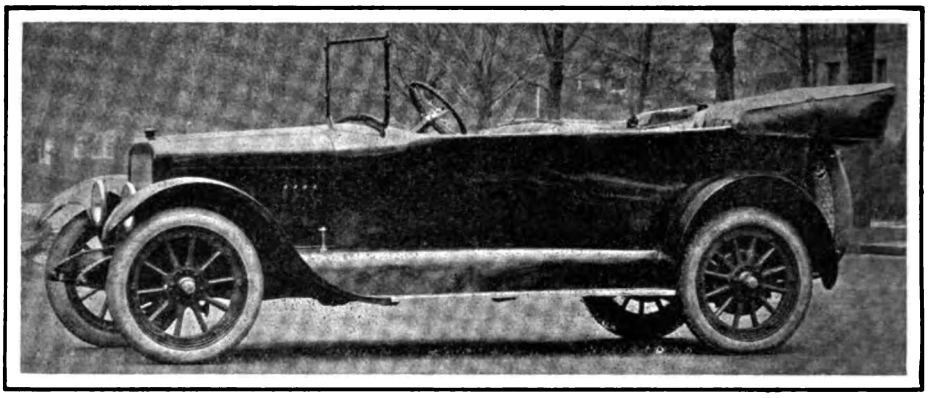
Valve-in-Head H-A-L Twelve Attractive and Powerful

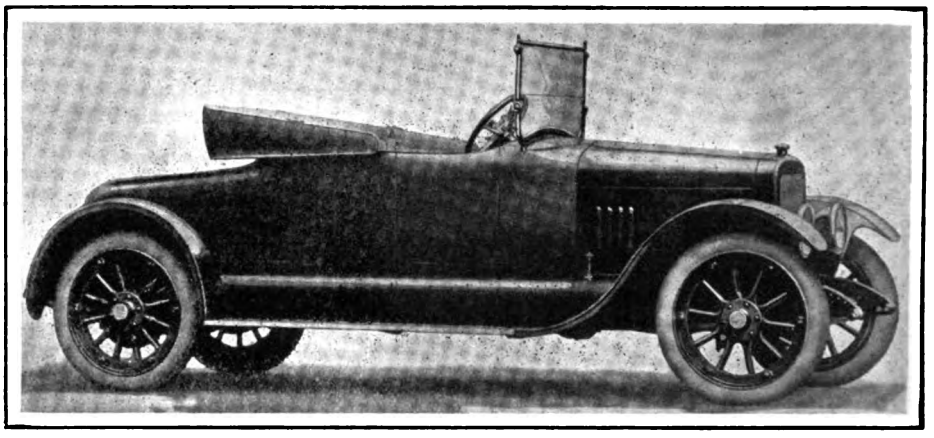
Price $2,100-Runabout and Seven-passenger Bodies-Motor Accessible

HANDSOME appearance and extreme power characterize the H-A-L twelve, which was announced by the H. A. Lozier Co., Cleveland, last winter, but production of which has only now begun. It sells for $2,100, either as a seven-passenger touring car or as a roadster.



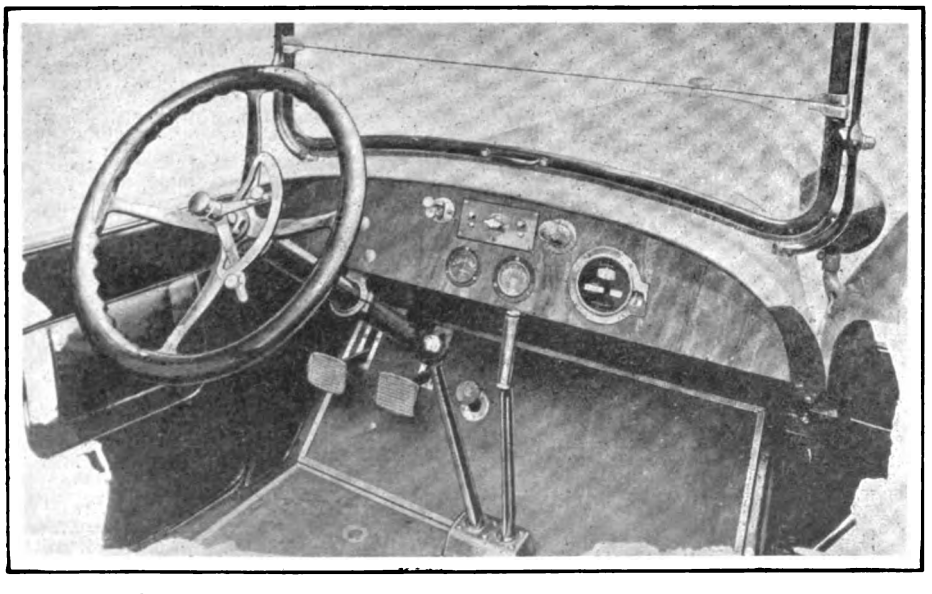
With a motor that is capable of developing 90 hp. and a gear ratio of 4 5/11 to 1, great hill-climbing ability and unusual power of acceleration may be expected. Yet the maximum speed of the motor is so high—more than 3600 r.p.m. —that the car is speedy even with the low ratio.

It has an overhead-valve, twelve-cylinder engine, 2⅞ x 5. The drive is taken through a disk clutch, three-speed gearset and open driveshaft fitted with two universals. The final drive is a Timken floating axle, and the rear suspension is by semi-elliptic springs.



Sturdiness of chassis construction is notable. The frame is a straight tapered design reinforced by four large crossmembers, and the wheel equipment is ample for the car's weight, the tires being 34 x 4½.

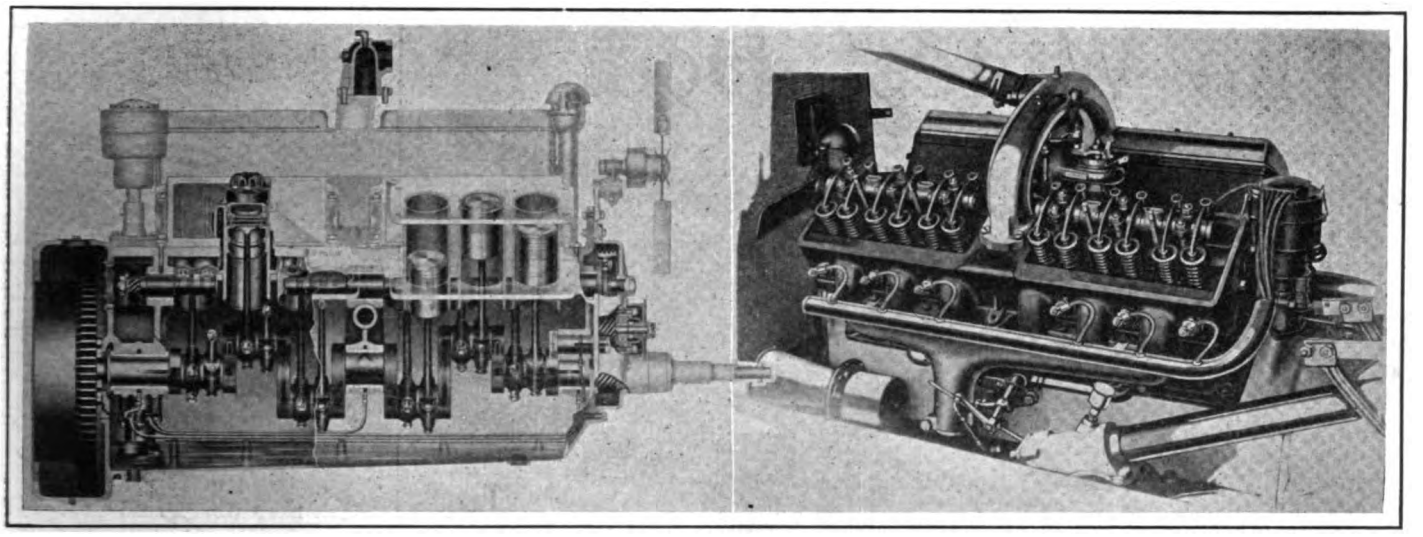
Because of the valve-in-head construction practically the only thing between the blocks is the carbureter, which is a commendable construction. The valves are inclosed by four cover plates.



On the right side of the engine are located the starting motor, the generator and the water pump. Thus only one extra driving gear is required besides the timing gears. The fan is driven by a pulley on the front of the generator and water-pump shaft, and at the rear of the crankcase, just back of the cylinder blocks, is the vertically mounted ignition distributor of Remy make. This is driven from the rear end of the camshaft by a helical gear. The position of these units leaves ample room for the exhaust manifold for the right block, hence the layout seems to provide for every requirement without giving the appearance of having to squeeze any unit in.

Unbroken lines from radiator to tire carrier characterize the H-A-L

The runabout is mounted on the same chassis, and sells for the same price



Neatness is a feature of the H-A-L cowl board and control assembly

Internally the design is very sturdy in every respect. The cylinder blocks are offset 1½ in. so that the pairs of connecting-rods may be placed side by side. The crankshaft is supported on three bearings and has a diameter of 2⅛ in., which, when it is considered that the bore is only 2⅞ in., is an exceptionally large shaft for a motor of this size and one which should minimize vibration. The camshaft is mounted also on three bearings and is directly above the crankshaft, so that it actuates all of the valves directly. Due to the fact that the cylinders are offset, it is possible for each tappet to have its individual cam.

Pistons are quite long and have chamfered heads, which should assist in keeping the oil down out of the combustion chambers, since there is a tendency of the lubricant to ride by the piston head instead of being scraped into the combus-

Digitized by Google

Left—Phantom view of motor with extra long pistons provided with two rings above and one below the wristpin. Right—Arrangement of valves, carbureter, and ignition wiring

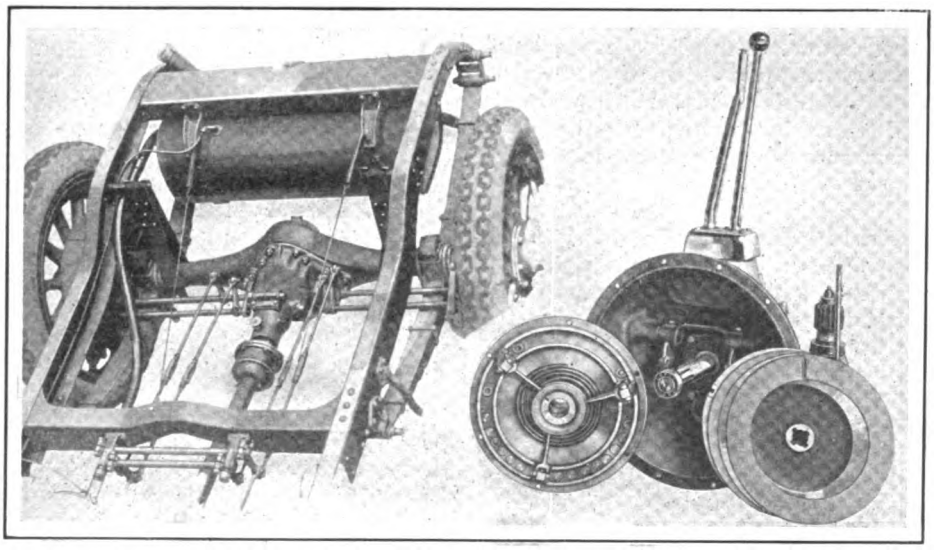
tion chamber, as might be the case if the upper edge of the head were not of this beveled form.

In addition to the two rings at the top, there is one ring near the bottom, which acts as a wiping ring. The pistons are cast iron.

An elaborate oiling system has been provided for the motor, with the oil pump in the crankcase forcing a constant supply through individual pipes to each of the three main bearings of the crankshaft and also to the camshaft bearing. The connecting-rods are oiled from the main bearings through holes drilled in the webs of the crankshaft. There is sufficient oil thrown off from the sides of the connecting-rod lower ends to lubricate the cylinder walls, this oil being virtually a vapor, due to the rapid revolving of the crankshaft. A special lead runs to the timing gears, and the oil breather and filler pipe is mounted at the front of the motor, directly ahead of the left cylinder block, being brought up high enough so that filling is very convenient.

This motor is arranged so that the water outlet connection is combined with the intake manifold, which bridges the gap between the cylinders and from which the carbureter is suspended. Thus the heated water from the cylinders passes around the inner pipe which carries the fuel to the cylinders and good vaporization of the gas results. Besides introducing the water into the immediate block of cylinders, the pump also sends a supply across through the crankcase to the more remote block, and the design is such that each set of cylinders gets equal cooling water. The belt-driven fan is mounted on a bracket attached to the crankcase and there is a simple adjustment for the belt tension.

Electrical units for starting and lighting are Westinghouse make, and these, together with the Remy distributor, utilize a 100-amp. hr. Gould storage battery carried on the right side of the chassis and reached through the floor-board of the front compartment. The location of the distributor is such that the ignition wires running from the spark plugs are quite short; and as the plugs are mounted on the outside of the cylinder block, wiring manifolds are fitted, which prevent the wires falling down on the exhaust pipes below them. The starting motor drive through gear connection with teeth cut in the flywheel rim in the usual way.



H-A-L Twelve

Price—	
Touring	$2,100
Roadster	2,100
Color	Dark blue white stripe
Make of motor	Own
Number of cylinders	12
Shape	Overhead valve
How cast	Two blocks of six
Bore	2⅞
Stroke	5
S. A. E. horsepower	39.6
Ignition	Remy distributor
Carbureter	Stromberg
Engine starter	Westinghouse
Lighting System	Westinghouse
Clutch	Dry disk
Wheelbase	135
Front tires	34 x 4½
Rear tires	34 x 4½
Wheels	Wood
Steering	Left
Control	Center
Make of axles	Timken
Type rear axle	Floating
Options	Wire wheels

Compactly attached to the rear of the crankcase is the multiple-disk clutch and three-speed gearset, the bell housing of which completely incloses the flywheel and clutch mechanism, as well as carrying the brake and clutch pedal shafts. The clutch is of the dry-disk type and is made up of one steel disk and two other disks faced with Raybestos friction material, all three disks being 12 in. in diameter and having a face width of 1¾ in. It is stated that the clutch is so simply constructed that once it is properly adjusted at the factory it requires no further attention.

Gears and shafts in the gearset are made of nickel steel and mounted on S. K. F. annular ball bearings. On the left side of the gearcase is mounted a single cylinder tire pump, which is driven by one of the countershaft gears meshing with the pump gear. To throw the pump into driving engagement there is

The Widest Door

By Ray W. Sherman

"COME on, Reilly!" yelled a big, husky dealer from down-state. "Tell us how you sell all those cars!"

The dealers in convention at the Sennett Motor Car Co.'s factory in Sayanna sat up and took notice. They had been listening to addresses by various dignitaries, and the had-enoughness of the gathering was typified by the irrepressible dealer's remark.

"Yes, Reilly," said Jim, the sales manager. "Tell 'em how you do it."

"Boys," began the champion of all Sennett dealers, who sold more cars in the little city of Callawassa than were sold in several big towns rolled into one, "some folks say salesmen are born and not made; but I agree with Hugh Chalmers that that's mostly bunk and that hard work will sell anything."

"'At a boy!" yelled the down-state man, dripping and moist.

Hard Work Makes Sales

"Selling is mostly work—hard work!" Reilly continued. "But there is perhaps one thing I might say about methods of work that may be of assistance to some of you, and that is the way you start on the prospect who has come or been brought to look at your car.

"We should plan to make our strong beginning appeal to his eye rather than to his ear. They say the eye is twenty times stronger than the ear in its ability to convey impressions to the brain, and, if that is so, why shouldn't we go hand in hand with this stronger organ instead of trying to get to the prospect's mind through the weaker organ? The eye is the widest door.

The Eye the Widest Door

"The eye is so strong that if we become deeply interested in a book or our work the ear sometimes ceases to work at all. We are absorbed and don't hear what is said to us. But an appeal to the eye is seldom subordinated to an appeal through the ear.

"Now, take a prospect who is getting a view of your car. He walks in the door. He sees the car. He is, right then and there, getting what we may call his first impression. He may have seen the car before; but let us call this his first impression.

"What is going on in his mind? He is receiving impressions of the style, finish, color and looks of the car. He has already started to sell himself. And in what way? Through his eyes.

The Logical Method

"What, then, should we do? We should make our sales talk fit in with the demonstration he is giving himself. He sees looks. Then let us talk looks. He sees the color, so let us talk color. He sees and feels the upholstery, so let us talk upholstery. He gets an impression of the style, so why not say something to supplement what he has already found out for himself through his eyes?"

Another "'At a boy!" from the back failed to interrupt Reilly.

"The man walks up to the car. He knows the thing will run, because he knows—if he knows anything at all—that we have been building cars for years and haven't been involved in any motoring-merchandising scandal through the falling down of our cars. So why should we take the time to give him a long harangue on how good the car is?

Why Waste Time?

"He wants a car or he wouldn't have come in, so why waste time telling him what a fine thing an automobile is? He hasn't seen the motor, and maybe isn't interested in it; and if he is, this isn't the place, anyway, to begin telling him about the motor.

"He has seen the car, its good appearance, its general outline, and he knows she's a good-looker. Our job right then and there is to hammer home the very things he can see. Call his attention to the design, the finish, the looks! Sell him thoroughly first on the looks and style of the thing. After that we can begin our story of the rest of the car.

"His eye has taken in at a sweep more than we could have gotten in through his ear in a million years. We never could tell him how good the car looks; but if we tell him it looks well, and by our words draw his attention to the design and style, his eye does the rest. We've got his eye, his most powerful sense, working for us—and he doesn't know it. The only way he can get away from us is to shut his eyes, and he never thinks of that at all.

The Eye All-absorbing

"We shoot another little word in through the narrow door of his ear and then get what we want him to know in front of his eye, and his eye gobbles up another selling point. Before he knows it we can get the whole darned car in through the door of his eye.

"We must remember the story of the blind men and the elephant. The man who grabbed the trunk thought the beast was like a snake. The man who got hold of a leg thought the elephant was like a tree, and the man who felt the sides of the animal said the critter was like a wall, while the man who used no sense but his sight got the whole darned thing at one peek.

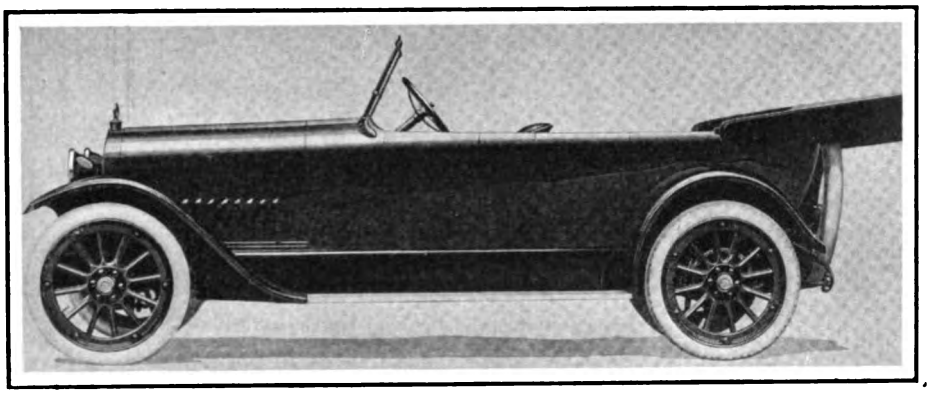
"And that's what we want to do with our prospect. Sell him the sight proposition first. Then, if the man is interested in the motor take him to it and show it to him. Don't mention a single part without getting it in front of his eyes if you can. If you talk small bore and long stroke have a sectional piston or a drawing or something that will take your story in through his eye. Don't leave any more to his ear than you have to.

Play for the Eye

"If you must tell him that the upholstery is fourteen inches deep have a section of it to show him. Fourteen inches—through his ear—doesn't mean any more than four inches, but through his eye he gets the difference with a wallop.

"If you want to go into the story of our fifteen coats of paint it doesn't mean much through his ear. But if we have fifteen four-inch-square sections of the body side, and each one at a different stage of the painting process, the story gets to him through his eye. He can see the whole fifteen coats of paint and can even almost count them on the last section.

"That's what I mean by eye salesmanship. Get in through the widest door and, similarly, fit the right sense to every part of the car. Let him feel the seats by sitting; let him know the convenience of the dash by reaching; let him know the easy clutch by pressing, and simply shove him along and let him sell himself!"



"'At a boy!" yelled the down-stater, as he wrung out his handkerchief.

Digitized by Google

Jeffery Six 7½ in. Lower—Price Reduced $85

Rear Springs Underslung—Motor Balance Improved—Three Body Models

Body lines More Attractive—Greater Comfort for Passengers

Improved Jeffery six which sells for $1,365

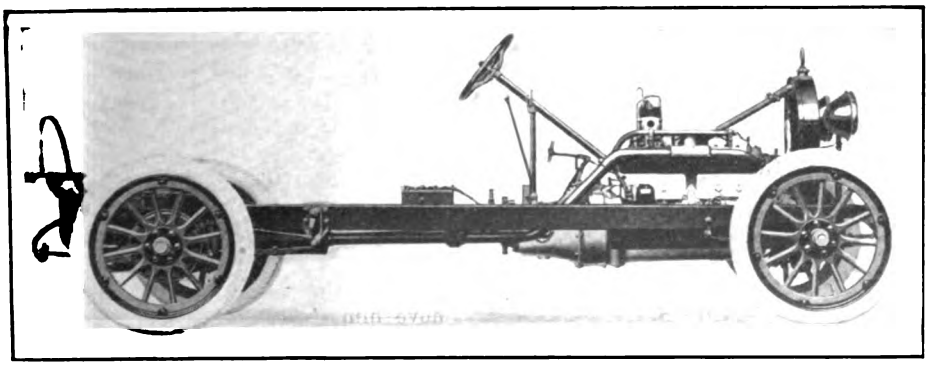
IN addition to the roll edge four, which was announced 2 months ago, the Thomas B. Jeffery Co. of Kenosha, Wis., has brought out a six-cylinder model for 1917 under the series number of 761. The Jeffery roll edge four will be continued without change.

The outstanding feature of the new car, which will retail at $1,365, or $85 lower than the previous six, is its low body and general comfort in seating arrangement. The low effect has been accomplished by re-designing the rear axle so that the springs are now underslung. The line of vision is 7½ in. lower than it was in the previous six. In addition to this improvement a more perfectly balanced crankshaft is used, resulting in a smoother acting engine, so that the two details of body comfort and more quiet engine action, have combined to give a much better performing car.

Floor 3 in. Lower

Summing up the body improvements, the floor of the new six is 3 in. lower than that of the 1916 model. The running board is now 15 in. from the ground, and to add to the long, low appearance, the windshield has been given a pitch of 16 deg. and is now 20 in. in height. Nowhere on the body is there a flat surface, every piece of metal being of double curvature. The upholstery is better and the dimensions of the seats are more liberal. The rear tonneau seat is 48 in. wide and 18 in. deep and the distance from the front of the back to the back of the front seat is 32 in. The auxiliary seats have also been made more comfortable and passengers occupying these are allowed 9 in. knee-room. The seats themselves are 14 in. deep and there is 8½ in. knee-room between the passengers in the rear seat and the auxiliary seats.

SPECIFICATIONS OF THE JEFFERY SIX—SERIES 761



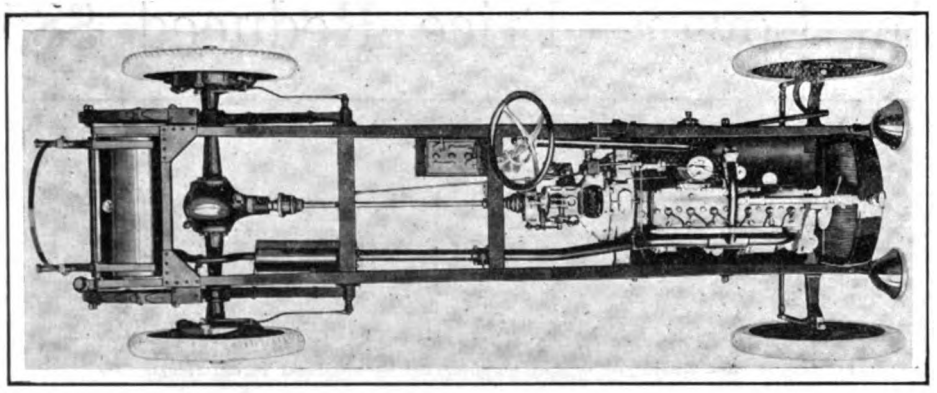
Roadster Price—Touring	$1,365
Roadster	$1,335
Sedan	$1,530
Make of motor	Own
Number of cylinders	6
Shape	L-head
How cast	Block
Bore	3½
Stroke	4⅝
S. A. E. horsepower	29.4
Magneto	Dixie
Carbureter	Rayfield M-3
Starting and lighting system	Bijur
Clutch	Plate
Gearset	3-speed
Wheelbase	125
Tires	34 x 4
Steering	Gemmer
Make of axles	Own
Type of rear axle	Semi-floating

The unit power plant has its six 3½ x 4⅝ L-head cylinders cast in a single block with the upper half of the crankcase integral. It is connected to the pressed steel pan which forms the lower half of the crankcase. The valves are carried on the right side.

In line with present practice the reciprocating weights of the engine have been kept very low. The entire weight of the piston with rings and pins is 1 lb., 7¼ oz. The pistons are of aluminum alloy and weigh but 1 lb. The length of the piston is 3⅞ in. and it is fitted with a wrist-pin having a diameter of 1 5/16 in. The rings are three in number and are of the eccentric type, made from gray iron.

Drop forged alloy steel connecting-rods are used, having a length of 9½ in. The weights of these rods are 3 lb., 2¾ oz., and at the lower ends the caps are fastened by two chrome nickel steel bolts; at the upper end the piston-pin bearing is carried in a phosphor bronze bushing, located in the connecting-rod. The lower end bearings are of die-cast babbitt and have a length of 2 in. The diameter of the crankshaft, which is a drop forging of 0.35 to 0.45 carbon, is 2¼ in., and this is laid out to be inherently balanced. It is carried on three main bearings, the dimensions being as follows: Front, 2¼ x 2 3/16 in.; center, 2¼ x 2⅛, and rear, 2¼ x 3¼.

Mushroom-type followers are used and the camshaft is carried on four bearings. All of these are of liberal size, the shaft diameter being 1 5/16 in. The length of the front three camshaft bearings is 2 1/16 in. and the rear 1 in. The diameters are 1⅛ in. for the center pair, 2 11/16 for the front and 2¼ for the rear. The bearing material is die-cast babbitt.



Elevation of chassis showing unit power plant

Valve Timing Standard

Conventional valve timing is used, with the inlet opening at 8 deg. after top center and closing 40 deg. after bottom center. The exhaust opens 40 deg. before bottom center and closes 8 deg, after top center. In other words, there is a zero lap, since the intake opening and exhaust closure are coincident. A Morse silent chain is used to drive the camshaft, the chain being 1¼ in. in width and operating on drop-forged sprockets with adjustable centers.

Lubrication is by combined pressure

Digitized by Google

Plan of Jeffery six chassis showing Hotchkiss drive

and splash with oil forced to all the main and camshaft bearings and also to the driving chain. In addition, oil is fed to splash troughs, into which the connecting-rods dip, taking care of the connecting-rod bearings, piston and piston pins.

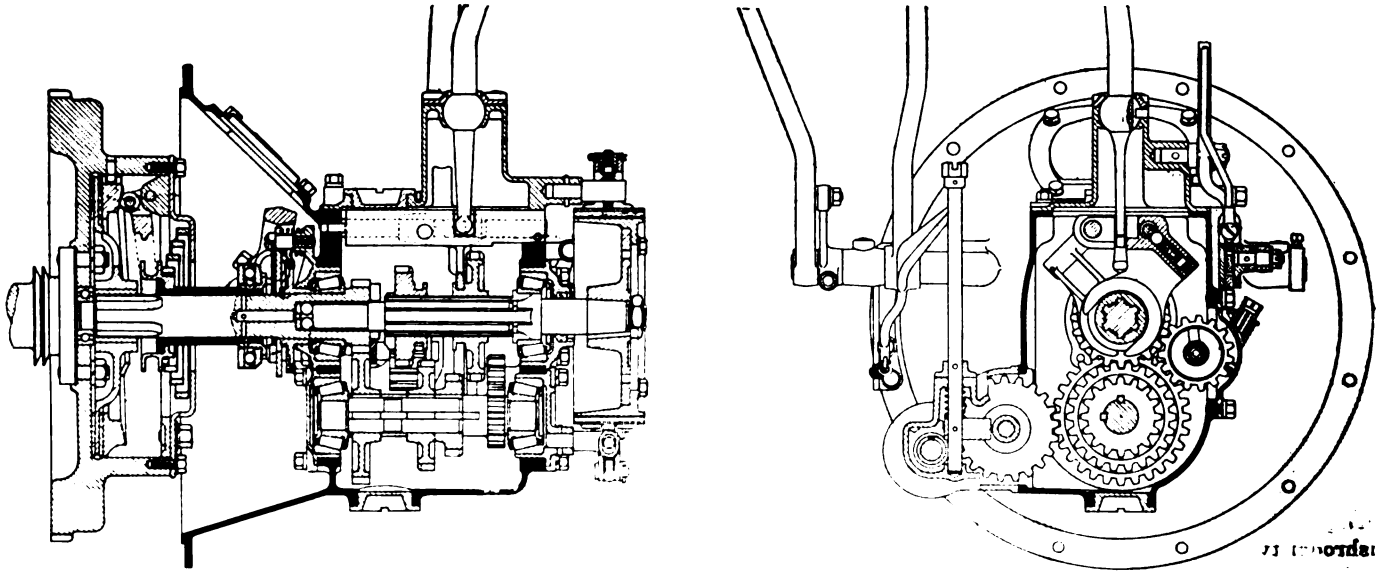
Gasoline feed is from the Stewart vacuum system to a Rayfield Model M-3 carbureter. This is a 1¼-in. instrument, fitted with a hot-air tube. In the intake manifold special care has been taken to give a free passage to the gases, and in fact this has been carried right through to the valves, which have an overall diameter of 1¾ in. with an inside seat diameter of 1 9/16 in. and a lift of 5/16 in. These are the ordinary 45 deg. poppet valves and the material from which they are made is tungsten steel on the exhaust side and nickel steel on the inlet.

Bijur and Splitdorf

Electrically, the car is Bijur for lighting and starting and Splitdorf for ignition. The Dixie magneto is used in combination with A. C. spark plugs, located in the cylinder-head midway between the valves and the cylinder bore. The starting and lighting system is in two units with a 20-lb. Bijur motor capable of turning over the engine at 160 r.p.m. and a generator mounted on the pump shaft. The battery is a U. S. L. 6-volt type of 80 amp.-hr. capacity, weighing 48 lb.

The lamp equipment is by Edmonds & Jones, operating at 6 volts, with 18-c.p. headlamps. Throughout the entire lamp equipment the Ediswan base is used, with single contact.

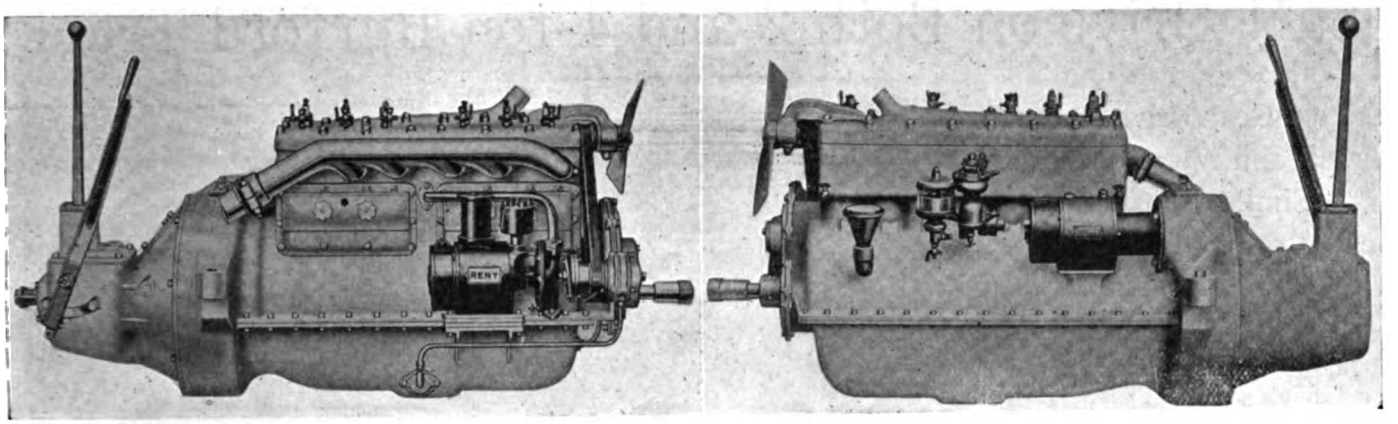
From the engine the drive is taken through a Borg & Beck three-plate clutch to a Jeffery three-speed gearbox. There is one steel disk and two asbestos friction plates in the clutch, which is located in the flywheel. The gearbox is in a unit with the motor and is arranged to provide ratios in the box of 14.6, 8.2 and 4.5 to 1. The width of the gear face is ⅝ in. and the shafts are carried on Jeffery taper roller bearings. There are two shifter rods with a lock made by ball and spring. The driveshaft has six splines and the shaft center distance is 3½ in.



A Jeffery semi-floating rear axle is used, in which the ratio is 4.5 to 1 as regular equipment, although 4 2/14 to 1 and 4 10/11 to 1 can be furnished. This arrangement is secured by a 54-tooth bevel gear with 11-, 12- and 13-tooth pinions respectively. The gear teeth are spirally cut and have a 5 pitch. The differential is a bevel gear design and throughout taper roller bearings are used. In making up the axle housing a malleable iron center is used, with alloy steel tubular ends. Both the drive and torque are taken through the springs by the Hotchkiss drive.

The spring equipment is manufactured by the Detroit Steel Products Co. The rear springs are three-quarter elliptic, underslung, and 53 in. long, with eight leaves in the lower part and seven in the upper. The width of the spring is 2 in. The front springs are 38 in. long, with eight leaves, and 2 in. wide. The front axle is a Jeffery drop forged I-section, with 9½ in. clearance. It is fitted with a Gemmer steering gear of worm and wheel type.

Wire Wheels Extra



Artillery-type wheels are used, with twelve spokes front and rear. The spoke width is 1½ in. The wheels are made from hickory on the standard equipment, although Houk wire wheels will be fitted at additional cost. The rims are Stanweld, of the straight-side detachable type, and designed to fit any straight-side tire. The tire equipment on the standard cars is Goodyear, with plain tread in front and the All-Weather non-skids in the rear. The tire size is 34 x 4 in.

There are three bodies, the seven-passenger touring, selling for $1,365; seven-passenger sedan at $1,530, and roadster at $1,335. Full equipment is included at these prices and all are mounted on the same wheelbase of 125 in. The equipment includes one-man top, Jiffy curtains, rain-vision sloping windshield, rope straps, foot rest, extra rim, complete set of tools, Boyce Moto-Meter, Stewart power-driven tire pump and electrically lighted instrument board with speedometer, ammeter, oil gage, ignition switches and carbureter adjusting device.

Borg & Beck three-plate clutch, and three-speed gearbox with Jeffery taper roller bearings. The tire pump is driven from the reverse idler

Digitized by Google

Both sides of the unit power plant used in the 1917 Madison cars. The engine has a bore of 3⅛ and a stroke of 5 in. The cylinder head is detachable and the valves are inclosed and have easily removable brackets

Madison Six with Two, Five and Seven-Passenger Bodies

Wheelbases 115 and 124 in.—Unit Power Plant—Standard Parts Throughout

FOR 1917 Madison cars will be constructed upon the six-40 chassis model and will be made in two body forms, for five and seven passengers. Alterations in the body lines form the principal changes and these have been made to correspond to the flat cowl line which is in vogue this season. The prices for the five- and seven-passenger cars are $1,050 and $1,150 respectively. The five-passenger car has a wheelbase of 115 in., while the seven-passenger has 124 in. A two-passenger roadster is also made.

A unit power plant is used, the Rutenber motor being direct-connected to a Muncie Gear Works gearset and clutch. The bore is 3⅛ in. and the stroke 5 in., and the six L-head cylinders are cast in a single block and are integral with the upper half of the crankcase. The valves are inclosed and the cylinder-head is detachable.

Three-point suspension is used and the rear support is secured by two arms on the rear of the crankcase casting. The third support is at the forward end of the motor and is flexible, allowing the motor parts to be independent of any weaving of the frame. The pistons are cast-iron and are fitted with three rings, two of which are close to the top and the third located just beneath the wrist-pin.

A drop-forged camshaft is used, the carbon content being 0.20 and the diameter 1⅛ in. The cams are integral with the shaft and are hardened and ground. It is carried in plain bearings at the center and front and at the rear in a double row S. K. F. self-aligning ball bearings. The valves are actuated by mushroom type flat followers, which are offset 1/16 in. to distribute wear.

Two steels are used in the manufacture of the valves, carbon steel being employed for the heads while alloy steel is used for the stems. The diameter of the valve is 1 5/16 in. in the clear with a 5/16 in. width. A feature of the valve construction is that the entire valve bracket, together with the lifting mechanism, can be removed from the engine without disturbing the camshaft. This is done by removing the cover plate and stud nuts and then turning the crankshaft by means of the starting crank until the valves are at their lowest level.

Power is transmitted by means of the Muncie Gear Works dry-plate multiple disk clutch, which is fitted with alternate disks of asbestos and saw steel. Annular bearings are used in the clutch release and these are lubricated by oil which is allowed to enter from the crankcase, since the housing is in direct communication with this part of the motor.

Two universals are used in the drive, the power being taken through the propeller shaft to a floating rear axle fitted with a pressed steel housing and Brown-Lipe nickel steel spirally cut gears. The axle shafts are supported on large annular bearings of heavy duty design and alloy steels are used throughout in the parts carrying the driving and torsion stresses. Hotchkiss drive is used, both torque and propulsion being taken through the rear springs.

Electrically the car is Remy throughout. Starting is by an independent series-wound Remy motor, used in connection with the Bendix drive for meshing the starting pinion with the flywheel ring gear. The generator carries the regulator and automatic cut-out, operating in connection with the Willard storage battery.

The gasoline system is composed of a 16-gal. tank supplied with a gage mounted on the rear of the chassis, a Stewart-Warner vacuum system, and a model M Rayfield carbureter provided with automatic air intake and climatic dash adjustment. Steering is by the T. W. Warner irreversible worm and full gear, used with a steering wheel having an 18-in. corrugated rim. The wheels are artillery type, 34 x 4, provided with demountable rims, and an extra rim is located on the rear for carrying spare tires. The tire equipment is Goodyear, 34 x 4 all around, with the All-weather non-skid tread on the rear. Three-quarter elliptic underslung rear springs are used and the front are semi-elliptic.

Among the accessories provided are a one-man top made from Neverleek top material, electric horn, Stewart-Warner speedometer, ventilating and rain-vision windshield, tire carrier, foot and robe rails, trouble lamp and a full tool outfit.

Upholstering is in long grain black enamel leather with deep Turkish-type cushions. On the five-passenger body a single front seat and rear seat are used, while on the seven-passenger the boat-shaped design is carried out with divided front seats and auxiliary seats which fold against the backs of the front seats entirely out of the way when not in use. The Madison standard body color is Richelieu blue.

THE MADISON SIX—40

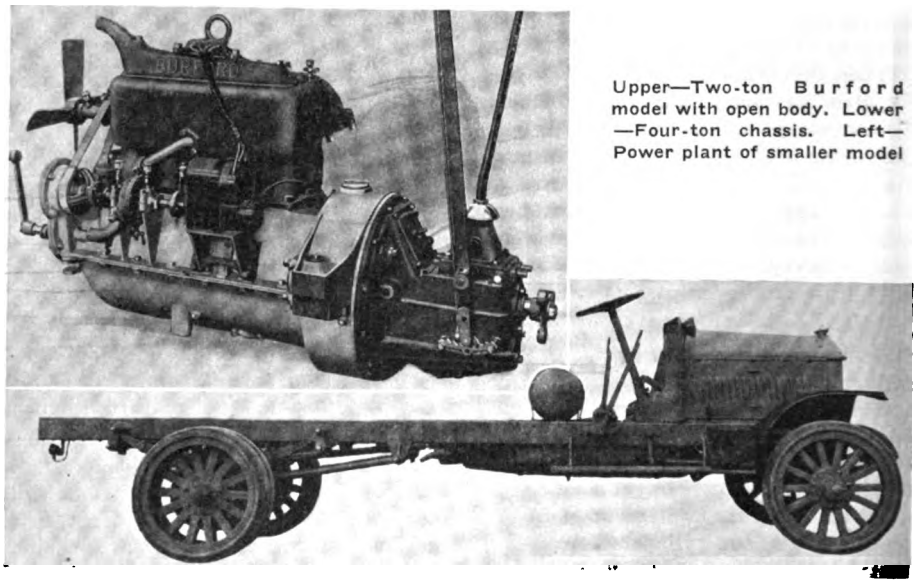
Shaft Drive on Both 2 and 4-ton Burford Trucks

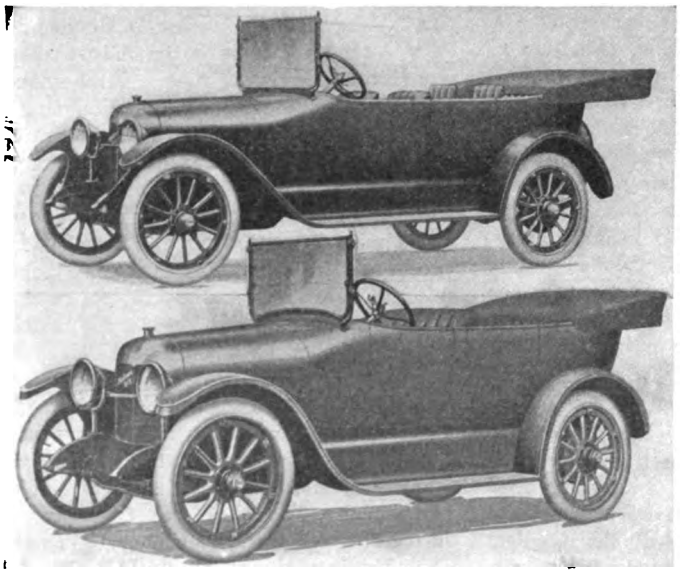
Internal Gear Drive on Smaller Chassis and Worm on Larger—Similar in Design

THE Burford Motor Truck Co., Fremont, Ohio, will have two models for 1917, the smaller rated at 2-ton capacity and the larger at 4 tons. The internal-gear drive is used on the smaller chassis and a worm axle on the larger, the former being a continuation of last year's practice and the latter a change from the chain drive employed previously.



The engines used are similar on both models, though different in size and in the fact that the smaller has block cylinders while the larger has pair castings. Dimensions are 3¾ x 5½ in. for the 2-ton and 4½ x 6¾ in. for the larger model.

Lubrication has been cared for particularly, oil being forced to the main crankshaft bearings by a plunger pump, and also supplied to dip troughs for the connecting-rods. Oil pump and strainer gauze are both easily removable for cleaning.



On the side of the cylinders remote from the camshaft there is a front end gear which drives the water pump, and an Eisemann magneto is coupled to the water pump shaft by a universal joint. The pulley for the fan belt is set on the same line, just in front of the water pump, keeping the belt high up and so well protected from the destructive action of oil and water.

On the 2-ton model the flywheel is contained in a bell housing which incloses the leather-faced cone clutch and supports the three-speed gearset, but the 4-ton type has a separate gearbox mounted independently and giving four speeds.

Upper—Two-ton Burford model with open body. Lower—Four-ton chassis. Left—Power plant of smaller model

Upper—Madison seven-passenger. Lower—Madison five-passenger

This large gearset is of rugged construction, having gears 1½ in. wide with a 5-7 pitch, which makes for great tooth strength. Driveshafts and gearset gears are chrome-nickel steel.

Strength in frame and springs is obtained by the use of high-quality steel and ample proportions. Radius rods are employed on the 4-ton model, but the smaller truck has Hotchkiss drive, the springs taking both torque and load.

There is plenty of load space, the 2-ton being obtainable with either 132-in. or 144-in. wheelbase, and the 4-ton with a wheelbase of 175 in. Throughout both chassis a number of New Departure ball and Bower roller bearings are used.

There is a little difference in the brake equipment, the smaller having the conventional expanding brakes in the wheel drums, but the emergency brake acts on a drum attached to the bevel pinion shaft. This axle is made in the Burford plant. The 4-ton has a Sheldon axle, and uses the Sheldon double expanding brakes.

Tires are 36 x 3½ on the 2-ton, single in front and dual rear, while the 4-ton has 36 x 5 in., similarly disposed. The smaller chassis lists at $2,250 without body or cab, the latter costing $50 extra, and the 4-ton chassis sells for $3,600. Bodies of any kind can be supplied to special order.

ANGLES OF THE LAW

By George F. Kaiser

Sell with Care

Editor Motor World:

We would like to know if a party that buys a car and pays about half of the price to the dealer, can sell that car to another party without paying the dealer in full first; or, could the dealer claim that amount from the second party when the second party has the car? That's in Wisconsin, we mean.

WISCONSIN.

If you sold the car and transferred title and possession to the purchaser without any reservations on your part, the purchaser has the right to sell the car to some third person and you will have no claim against that third person for the amount still due you.

The best way to protect yourself in a case of this kind is to sell on a conditional bill of sale, or to take a chattel mortgage for the remaining portion of the unpaid purchase price. An out-and-out sale of this kind, without any security, is a risky thing.

Can Still Collect

That when a manufacturer of motor cars, on shipping them, omits the price of one of the cars from the draft attached to the bill of lading, he does not part with title to that car, was held in a recent Alabama case.

It was further decided that, as the manufacturer did not part with title to the car, a sale by one of its agents to another person is a conversion for which it can maintain an action.

Three motor cars were to be shipped C. O. D. with bill of lading attached to a draft for the purchase price, and were to be delivered to the consignee upon payment of the draft. By a mistake the price of one of the cars covered by the bill of lading was omitted. This particular machine was then sold by the agent and an action was brought by the manufacturer against him.

The court held that the manufacturer was entitled to a recovery for the car, as it still possessed title when the car was resold by the agent.—Finney vs. Studebaker, 72 Southern (Alabama), page 55.

Freed of Building Default

When a person has obligated himself to build a garage under the terms of a written contract he is not liable for damages for failure to perform his contract if he can show that he was at all times willing to go ahead with his part of the contract but that the other party to the contract made it impossible for him to do so by requiring him to build a garage essentially different from that provided for in the contract.—Ferber vs. Cona, 97 Atlantic (N. J.), page 20.

Delays Don't Count

That mere delay on the part of a person selling personal property in delivering the goods cannot be used as a defense by the person contracting to purchase same in the absence of a showing of injury to him through the delay, is the decision by the Supreme Court of Pennsylvania in a recent case.

A contract was entered into which provided that certain parts should be furnished to be used in the building of motor cars. The payments called for under the contract were personally guaranteed by an individual who was president of the purchasing company.

When suit was started against the individual to recover for the payments which had not been made, it was set up that certain profits had been lost because the contract could not be carried out by reason of the fact of the bankruptcy of the purchaser.

As a defense, it was contended that there had been a delay in shipping the articles to the purchasing company, but no proof was offered to show that the delay resulted in pecuniary damage. In the absence of proof of this kind, it was held that the guarantor would be liable for the unpaid amounts.—Warner vs. Bergdoll, 97 Atlantic (Pennsylvania), page 1085.

Sell to Whom You Will

When can a dealer refuse to sell to some particular person, and under what circumstances, if any, is he obliged to sell to any one who is willing to buy?

In a recent case, Judge LaCombe of the United States Circuit Court of Appeals of the Second Circuit, said:

We have not yet reached the stage where the selection of a trader's customers is made for him by the Government.

In this case the right of a person to refuse to sell was established as a constitutional property right which cannot be taken away by either State or National legislation. The Sherman Act, the Clayton Act and the Anti-Trust Acts were held not to make a refusal to sell an attempt to restrain competition by means of maintenance of prices and in promotion of a monopoly.

When thinking of the various anti-trust acts, and anti-monopoly laws, all the dealer need think about is: Has he a monopoly in any certain kind of merchandise? If he has, then let him be on his guard. If he has not, then let him go on his way rejoicing and sell to one man because he is not red-headed and refuse to sell to another man because he is red-headed, if he so desires.

Back-Crank Defect

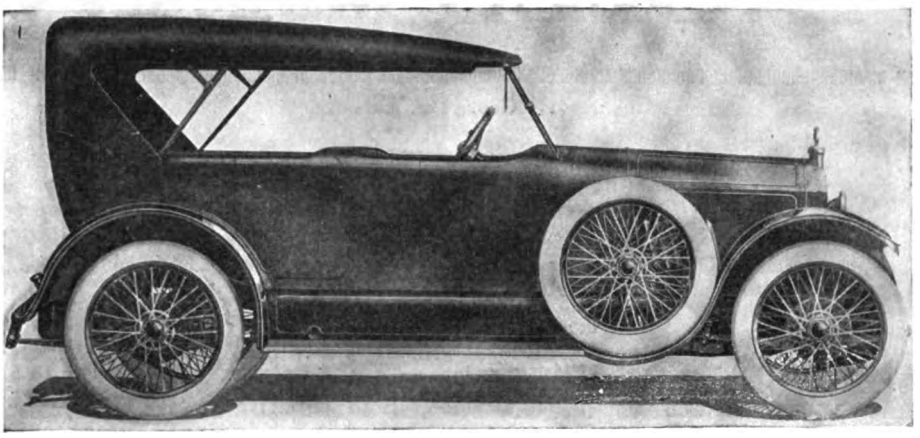
An interesting case in which a chauffeur sued his employer for injuries received while driving a motor truck was recently reviewed by the Supreme Court of Washington.

An employee was engaged as helper to the driver of a motor truck. While the helper was endeavoring to crank the truck it kicked back and broke his arm. Until that time he had never cranked the motor and he had no knowledge as to how to adjust the spark before attempting to start it.

On the day of the accident he had been directed to take the truck to a garage to get certain equipment. While he was backing the truck out of the garage the motor stopped, and while attempting to start it again he suffered the injuries complained of.

It appears that, owing to a defect in the magneto, it was necessary to operate the truck with the spark advanced in order to get sufficient power; that it was also necessary in starting the car, owing to this defect, to keep the spark advanced. To crank the machine with the spark advanced was dangerous, for it was likely to kick back. The car had been in this defective condition for some time previous to the accident; and the employer had been notified of that fact, while the employee had no knowledge of it.

The court held that it was the duty of the master to furnish the man with reasonably safe instrumentalities with which to work, and that the company, having had notice of the defective magneto, was liable for the injuries to the employee.—Collins vs. Terminal Transfer Co., 157 Pacific, 1092.



Firestone Holiday in Des Moines

DES MOINES, IOWA, Aug. 1—The first annual picnic of the Des Moines branch for the Firestone Tire & Rubber Co. was held on the Des Moines River, near this city, Saturday, July 22. A half-holiday was declared for the occasion.

Extreme Efficiency in Sixteen-valve Aland Four

Maximum engine power with minimum weight are the outstanding features. The sixteen-valve aluminum motor, only 3 x 5½, gives 4½ times the S.A.E. rating. Other features of this car, which is to sell for about $1,500, are high-grade material, diagonal braking, wire wheels, and U. S. L. starter mounted in front

Price About $1,500—Rated at 14 H.P.—Develops 65—Aluminum Cylinders—Front Wheel Brakes with Diagonal Braking

FOR the last few months there has been considerable talk of sixteen-valve four-cylinder cars, and the latest of these to be mentioned is the Aland, made by the Aland Motor Car Co., Detroit, Mich. This concern is just organizing and expects to be in a position to start manufacture about the first of December. The company is incorporating under the laws of Michigan with a total capital of $500,000.

The line will be made up of one chassis with several body styles, but production will first be started on a five-passenger touring and a two-passenger roadster. The paramount feature of the design is the use of a high-speed sixteen-valve aluminum engine, and in keeping with the intention to have the weight as low as possible throughout, the car will be characterized by a liberal use of high-tensile strength steel. Throughout the entire design the matter of price will be a secondary consideration, and as a result this has not been definitely fixed, although in all probability it will retail for about $1,500.

While rated at 14 hp. according to the S. A. E. formula, the manufacturer states that the engine will develop more than 65 hp. at 3200 r.p.m. The cylinders are cast in a single block with crankcase integral. This is an aluminum casting and the cylinder walls are provided with cast-iron sleeves, which are pressed into place. The bore of the engine is 3 in. and the stroke 5½, giving a piston displacement of 155.5 cu. in., and, according to the rating of the maker, 1 hp. from every 2.39 cu. in. of displacement. This high efficiency is explained by a careful attention to balance and to the high volumetric efficiency due to the extra large valve areas and the fact that there are four valves per cylinder. Each of these valves is 1 7/16 in. and opens directly into the combustion chamber, being operated by an overhead camshaft which is located in the alley between the valves. One cam operates two valves through double rocker arms, which are provided with roller followers at both ends to minimize friction. The rockers are offset 2 to 1, so that while the cam lifts the rocker but 9/64 in. the valve is lifted 9/32 in.

THE ALAND FOUR

Price—	
Touring	$1,500
Roadster	1,500
Number of cylinders	Four
Shape	Valve-in-head
How cast	Block
Bore	3
Stroke	5½
S. A. E. horsepower	14.4
Starting and lighting system	U. S. L.
Clutch	Disk
Gearset	3-speed
Wheelbase	122
Tires	33 x 4
Type rear axle	Semi-floating

An aluminum alloy casting is also used for the cylinder-heads. It is held in place on the cylinder block with twelve 7/16-in. nickel steel studs placed in such a position as not to interfere with water circulation and to be accessible. This cylinder-head casting contains the valves, springs, guides, brackets, camshaft, etc., and forms a separate unit which can be removed without disturbing any adjustment. This enables the repairman to grind the valves on the workbench. A feature of importance is that the entire valve mechanism runs in a bath of oil and is protected from dust by an aluminum cover which fits over the entire top of the engine block.

Aluminum alloy is used for the pistons, which are provided with three rings, two above and one below the wrist-pin. A groove is cut in the piston below the bottom upper ring, with six small holes drilled into this as an extra precaution against superfluous oil in the combustion chamber, which would cause smoking and fouling of the plugs.

A nickel steel wrist-pin is used and this is free to oscillate in either the connecting-rod or the piston. A small steel ring fits into a groove on either side of the wrist-pin and prevents it from working out to one side and scoring the cylinder wall. The upper end of the connecting-rod is provided with a bronze bushing and the connecting-rods themselves are of the feather-weight tubular type, made from chrome vanadium steel. In manufacture it is purposed to pay particular attention to the balance of these parts and also to make them secure against breakage. Nickel steel bolts are used to hold the cap on the lower end of the connecting-rod, and throughout the sections are such as to provide a good factor of safety.

Three bearings support the crankshaft. This is of chrome vanadium steel, heat-treated and balanced so as to be in running equilibrium at 4000 r.p.m. The shaft is machined all over and at the rear is fitted to a cast-iron flywheel, while in front is the U. S. L. starting and lighting system, which is not in this case a flywheel installation. It is stated that this layout permits this motor to turn up to more than 3600 r.p.m. The unusual installation of the U. S. L. starting and lighting system on the front end of the crankshaft is quite accessible and in this case a stamped steel housing incloses it.

Naturally, with such a high-speed

Digitized by Google

motor, lubrication has been carefully studied. Oil is first pumped from the cast aluminum pan, which has a capacity of 6 qt., to a distributor tube cast integral with the cylinder block. On the top of this tube is located the pressure regulator for the overhead compartment and a small tube delivers oil to the camshaft bearings and other valve parts. A vertical lead directly over the center crankshaft bearing carries the oil back from the overhead compartment to the crankshaft, lubricating the center bearing. In addition, there are adjustable troughs beneath the crank throws which take care of the wearing surfaces within the motor, and the front and rear main bearings are oiled by separate leads from the oil pump distributor. Beneath the troughs and extending the entire length of the crankcase is a strainer, which is readily removable for cleaning.

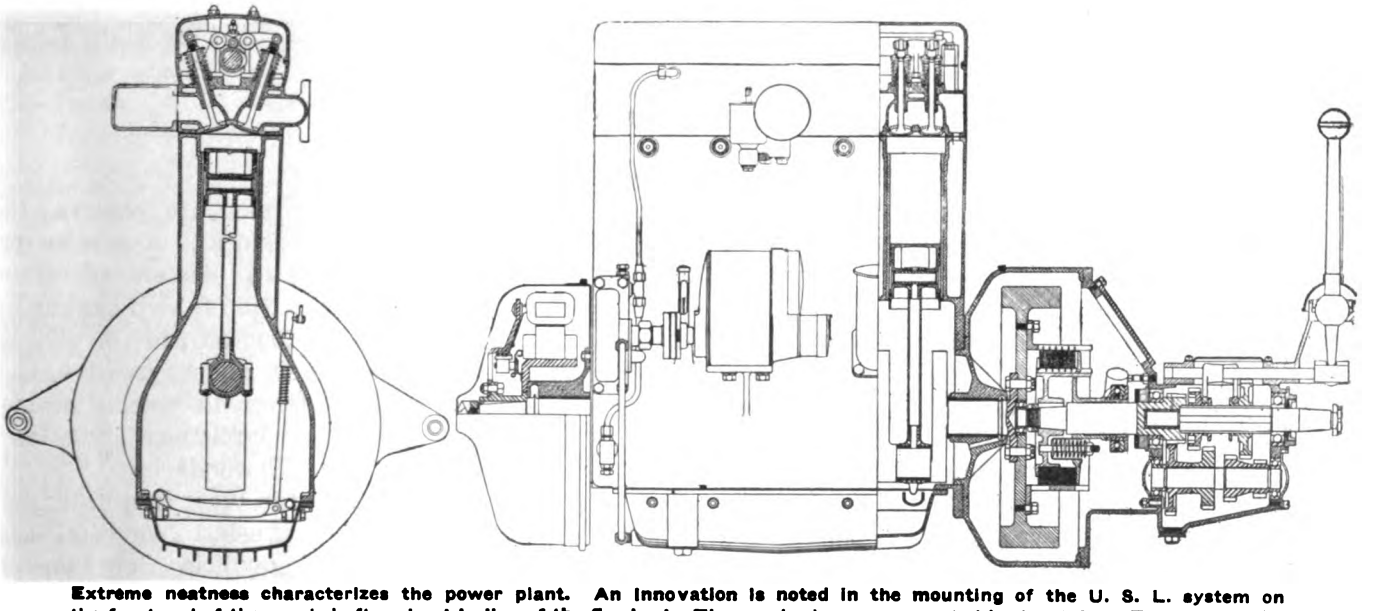
A Raybestos-faced, multiple-disk clutch is used, with alternate disks of steel. The clutch release is provided with a ball bearing, so that only light pressure is needed to release the clutch. The gearbox is three-speed selective, with gears and shafts of chrome nickel steel. The shafts are mounted in large-sized, double-row, self-aligning ball bearings.

From the gearbox, the drive is taken to the rear axle through a large diameter nickel-steel tube with universal joints at each end, both propulsion and torque being taken in Hotchkiss style through the springs. The rear axle is semi-floating and is equipped throughout with Timken bearings. The driving gears are spiral bevel and are made of chrome-nickel steel. A bearing is located on either side of the pinion, giving a substantial mounting and also shortening the pinion shaft and decreasing the amount of axial movement of the rear universal joint in transmitting the torque strains.

A bottle-neck frame is used, allowing a wide rear, which conforms to the shape of the body sills, and narrowed at front to allow for a short turning radius; in fact, the makers state that the car is able to turn about in a radius of 16 ft. 4 in. In carrying out the construction, all the frame cross-members and brackets are hot-riveted in place, the spring horns at both ends being provided with bronze bushings.

The springs are semi-elliptic all around and are designed to be approximately flat under load. They are of vanadium steel and are provided with bronze bushings. The rear springs are 55 in. long and 2 in. wide and are underslung. The front springs are 37 in. long and 2 in. wide. The springs are attached to the frame by forged shackles and these also are provided with self-lubricating bolts. A full set of shock absorbers is provided as standard equipment.

A departure from conventional practice has been made in the brake design, as there is a brake on each wheel, front as well as rear. They are all of equal size and are of the internal expanding type. The left front and right rear are operated by the pedal and are used for service, and the right front and left rear are operated by the hand lever and are used for emergency. The idea of this diagonal braking layout is to eliminate skidding. The brake-operating shaft is designed in such a way as to permit applying the brakes regardless of the angle occupied by the front wheels.



Conventional steering is used, with worm and full gear, and adjustments to take up wear at different points. The steering wheel is an 18-in. walnut nobby grip and the control levers work on a full circle control plate instead of the conventional section.

On this chassis, which has a wheelbase of 122 in., there will be several types of bodies, which will be interchangeable. The five-passenger open touring and the two-passenger touring roadster will be the first in production. The five-passenger design is featured by a deep cowl with a built-in sloping windshield. The body is a double-cowl style and is made of sheet aluminum over a sub-structure of wood. The seats are low and are tilted back to give ample leg-room. A great amount of attention has been paid to detail in equipment and the car is provided with five Rudge Whitworth wire wheels with 33 x 4 tires.

Silence Is Steady Noise

Silence equals continuous noise, says A. Ludlow Clayden, in The Automobile. He explains the statement by saying that in a twelve-cylinder car running at 20 m.p.h. the quiet hum is made up of some quarter million sounds per minute, all blended together, until the conglomeration becomes a pleasing noise, rather than a pleasing quietness. If each of these sounds were isolated, he continues, it would produce an easily recognizable note, whereas that degree of quietness which is generally termed "silence" is produced by the blending together of all these different noises. Here is the way Clayden analyzes the noises from a twelve-cylinder car running at 20 m.p.h.:

	Sounds per Min.
Explosions	6,000
Valves and tappets	24,000
Reversing piston direction	24,000
Braker mechanism	6,000
Timing gear	60,000
Gearset and bevel drive	41,000
Bearings throughout car	56,000
Total	217,000

Extreme neatness characterizes the power plant. An innovation is noted in the mounting of the U. S. L. system on the front end of the crankshaft and not in lieu of the flywheel. The spark plugs are mounted horizontally. The level of the splash troughs is controlled by the throttle

Digitized by Google

Are We Feeding the Goose?

THIS story has been sent to Motor World by the Public Comfort Station Bureau of New York City. Read its beginning:

Under what is called "The American Plan," a nation-wide campaign has just been launched by the Public Comfort Station Bureau, 261 Broadway, backed by the American Automobile Association, National Highways Associaion, National Old Trails Road Association, and other national organizations, to provide roadside stations in cities along all highways like passenger stations along the right-of-way of a railway. The plan was called forth by the urgent need for Public Comfort Stations, and the almost criminal lack of them in this country, which is far behind Europe in that respect.

What does it mean?

It means that a big need has been recognized for travel conveniences, such as rest-rooms, washing facilities, toilet rooms, combs and brushes, clothes brushes, shoe brushes, chairs, towels, mirrors, manicure sets, and a hundred other things.

If this is suggested to the car owner what will he say? Will he greet it enthusiastically or will he say: "We don't need it; we can get all those things in the garages, and we have to stop there anyway."

This is a mighty important matter for the consideration of every member of this industry. It is a BIG thing. Is this movement going to lead the tourist from the garage? Is there going to be made an opportunity for some one to set up little garages and filling stations next door to these comfort stations and grab all the business? Are not these comfort stations the big opportunity everyone has expected for a chain of "United Cigar Stores" garages?

It's about time we all waked up a bit!

Ever since touring began the motorist has patronized the garage. We have all fondly dreamed that he couldn't get away from the garage, that there was no other place where he could go.

This HAS BEEN true. The motorist has patronized the garage and has put up with a great deal of inconvenience. He has found unclean places of business, with nothing in some cases that even approached a comfort station.

Yet he has wanted these comforts and conveniences. He has longed for them, and now this longing is taking the form of a chain of comfort stations in which there are undreamed-of possibilities for harm to the garageman and dealer.

These proposed comfort stations should include emergency hospitals, waiting rooms and a lot more things, which may or may not be practical, but the possibilities are stupendous for actual damage to the garageman.

The car owner is the "goose that lays the golden egg" for the garageman and dealer.

Have we been giving the goose the right feed?

Spizzerinktum Counts

THE cartoon on page 5 this week sets forth a factor that is destined to play an important part in the farm tractor situation insofar as it affects the car dealer and the implement man.

The implement man is of an older school than the motor car dealer and it is generally considered that he is not so aggressive. There are, however, aggressive men among the implement dealers and a canvass of the West reveals that the more aggressive the implement dealer the more quickly has he become a motor car dealer, handling the two lines together.

This, obviously, places these implement men in the ranks of motor car dealers, and they cannot be termed strictly implement dealers.

With two fields of dealers eligible to handle the farm tractor it is obvious that the more aggressive faction will win out; it will investigate the business, take on the distribution of the product and push its merchandising. Too many implement men are passive; they wait for business. A greater proportion of car dealers are active.

The situation is well summed up in the cartoon on page 5. The car dealer, alert and aggressive, is already getting the tractor business while the implement man as a class is still wondering.

Out in the West they roll "pep," ginger, enthusiasm, aggression and all allied qualities into the one word "Spizzerinktum." It is an aggressive word and—it counts.

What Have You to Say to This?

Editor Motor World:

A new evil has arisen in the automobile accessory trade and is rapidly assuming the proportions of a nuisance to car owners and a real menace to the reputations of dealers, jobbers and parts manufacturers.

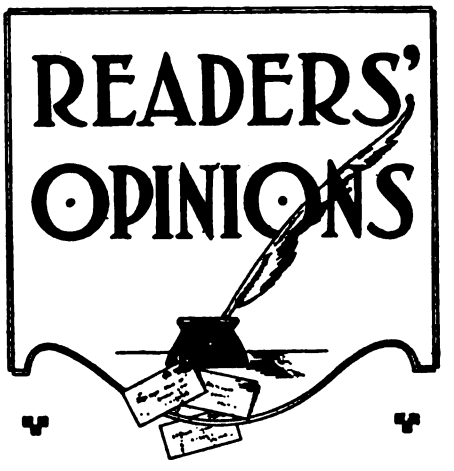
I refer to the distribution and sale of imitation contact points, springs and other wearing parts of standard magnetos, distributors and other electrical equipment of the car.

There are several concerns engaged in the manufacture of these fake or imitation parts and the extent of their dealings is apparently widespread.

Jobbers are supplied with standard catalog pages containing illustrated lists of parts "to fit" (this probably as a concession to the patent laws) Delco, K-W, Atwater Kent, Remy, Splitdorf, Bosch, etc. These fake parts are usually listed at prices much lower than the genuine and this is their only reason for being.

Is It Clean Business?

Now, the question of whether this business is within the law is of little interest to the writer. His objection to the practice is simply one of clean business and the fact that the imitation parts made "to fit" at least one ignition device with which he is familiar, do not perform their function properly and give trouble which the car owner (who does not know that he has bought fake points) blames first on the car, then the ignition system.



As an instance of what I have in mind, take the contact spring, which is a part of a certain well known ignition system. This spring is made of a special grade of steel and its construction is a matter of almost microscopic accuracy. The exact tension of this spring must be carefully limited, and upon this accuracy of tension depends the efficient operation of the whole ignition system—of the whole car!

Causes Trouble

Many cases of trouble have come to the writer's attention which have been traced to the improper tension of this spring, resulting in burning and rapid deterioration of the ignition equipment—and in practically every case this part was found to be an imitation part bought by the car owner either with his eyes open or closed, as the circumstances have varied.

The use by car dealers of these imitation parts jeopardizes the reputation of their cars and the good will of their customers, and makes it impossible for the ignition manufacturer to be held responsible for the service of his product.

The use of cheaper imitation parts by a garage and repairman is just as "bad

business" as stopping a radiator leak with corn-meal and charging for a soldered repair.

The jobber who sells these parts "to fit" instead of the genuine immediately locks the door on a legitimate profit (in dollars, not in per cent on the sale) on legitimate goods.

The manufacturers of these parts are out to pirate the parts business. Price is their only sales argument. They assume no responsibility—the layman cannot tell whether the part is properly constructed or not—can only go by the resemblance between the real and the imitation. The only aim of the imitation part manufacturer is to make something that *looks* like the genuine and sells for less. His methods of manufacture do not permit of accuracy. If they did, his price would of necessity be higher than that of the original manufacturer.

Says It's "All Wrong"

The whole business is wrong because it is based on a fallacy. A car owner buys parts only for replacement—he would not buy or use more of them if he could get them cheaper.

The average car owner realizes the vital importance of his ignition system in the proper performance of his car. Offer him his choice—take a set of contact points in each hand and say to him:

"Here in my left hand I have a genuine contact spring and screw—in my right an imitation pair. The real thing will cost you two dollars, the imitation a dollar and a half."

Would the car owner deliberately risk the performance of his car for that half dollar saved?

No, it is the dealer who seeks to save money on service or who does not realize that even though the points may be of genuine platinum, the part may still be wrong and cause trouble, annoyance and discredit—to the car, the manufacturer who built it and to himself.

Only a few hours before writing this an instance came to light where the owner of a car spent forty-five dollars for additional unnecessary work on his motor after the repairman installed fake contact points, which immediately corroded and caused missing but were not suspected because they had "just been changed."

In another case a number of cars were sold to a taxicab company. The mechanic employed by this concern for personal reasons (?) employed imitation ignition parts for his repairs. The amount of ignition trouble which ensued nearly caused a suit between the taxi company and the car dealer, damaged the reputation of the car in that territory, lost business for the taxi company and discredited the manufacturers of the original ignition equipment.

Asks Your Opinion

The writer has discussed this subject at length and believes that it merits the attention of all interested parties.

He would respectfully ask for a publication of his views and an expression of opinion from jobbers, dealers and garage men, believing that when the matter is given its merited attention by these gentlemen they will act together to correct this evil.

The writer believes that this is a most important issue and would ask for the cooperation and advice of your editorial department in fighting the evil.

Every statement above written is capable of proof and if any of your editorial department would care to see and test for yourself the difference in performance between these genuine and imitation parts we will be glad to demonstrate this beyond doubt.

Aside from its legal aspects—aside from the question of justice to the manufacturer who has built up a reputation for quality which is endangered—the car owner himself should be protected and I ask your assistance in abolishing the evil.

Very truly yours,
ELECTRICAL.

This System Seems Good!

Editor Motor World.

We have a very neat system of timekeeping on repair work. We have provided each mechanic with a cheap watch. When he starts on a job, he simply sets his watch at twelve o'clock and if when he finishes he finds that the watch reads 2:15 o'clock he has put in 2¼ hours on that particular job.

We have been using this system for some time and find it very practical and entirely satisfactory to our customers. If all repairmen would adopt our plan, there would be less disputes about mechanics' time.

Yours very truly,
RAY AUTOMOBILE CO.,
Per T. R. Ray.
Fort Worth, Tex.

REPAIRSHOP SHORT-CUTS

From the MOTOR WORLD Road Man

(No. 787) VALVE SPRING LIFTER

An adjustable valve spring lifter that possesses the added advantage of holding the valve down from the top is shown herewith. It is cheap and easy to make, and may be adjusted to fit many makes of cars.—G. A. Wadman, J. W. Maguire Co. (Pierce-Arrow), Boston.

(No. 788) GENERATOR-BEARING

Inaccessible generator bearings may be easily removed by the device shown. The two halves of the puller are first slipped beneath the overhanging edge of the bearing and tightened by means of the bolts. A screwdriver may then be used to pry the bearing loose.—J. E. Quinn, Studebaker Corp., Boston.

(No. 789) BABBITT HAMMER MOLD

A serviceable babbitt hammer mold may be made from a hardwood block. A large hole is drilled lengthwise through the block and a smaller hole for the handle is drilled at right angles to it. The block is then sawed in two, after the bottom plate has been screwed into place. To use, the two halves are clamped together, with the handle in place, and the mold is ready for the molten babbitt. Care must be taken to have the hold dry, and the babbitt should be poured slowly. In removing gears and arbors, or in any place that there is danger of upsetting the work, the babbitt hammer is indispensable.

(No. 790) ADJUSTABLE PULLER

Time is lost in the adjustment of the jaws of a gear or wheel puller. The work is facilitated by the use of a puller having the adjusting holes cut away to the sides in the manner shown. The jaws may readily be moved from one position to the other, and are securely locked in place when the screw is tightened onto the work. Jaws made thus should be extra heavy, as the removal of the stock tends to reduce the strength.—George Schuster, Henshaw Motor Co. (Dodge), Boston.

(No. 791) CAMSHAFT GEAR PULLER

It is often difficult for a workman to remove the gear from a camshaft alone. The difficulty arises in catching the jaws of the puller beneath the gear and tightening the bolt at the same time. With the puller illustrated, the fixed jaw may be placed beneath the gear and the adjustable jaw caught by turning the thumbscrew. The puller may then be held in place with one hand until the screw is tightened, after which the operation is the same as with the ordinary puller.—J. L. Hall (Jeffery), Boston.

(No. 792) VALVE SPRING TESTER

The valve springs of a motor must have the correct tension, or the motor will not run smoothly. This may be determined by ascertaining the pressure necessary to deflect the spring a given amount. A testing set may be made up from an old valve, mounted in a threaded guide that is secured to the bench by means of an iron brace. The spring is placed on the valve rod and the locking collar tightened down until the spring has the same length as when in the motor. A stirrup is then hooked between the lower end of the valve stem and a spring balance connected through a cable to a pedal. Pressure on the pedal will compress the spring. A notch is made on the valve stem exactly ½ in. below the edge of the seat, and the tension is taken at the time the notch appears. A table of the number of pounds necessary to compress valve springs from the common types of cars should be posted near the apparatus. Reference to this table will show if the spring is all right. The data for the table may be obtained from the car manufacturer.—G. A. Wadman, J. W. Maguire Co. (Pierce-Arrow), Boston.

(No. 793) GENERATOR TESTING SET

Disabled generators can best be tested and repaired by means of a special testing stand. The layout shown permits the generator to be quickly mounted, run at any desired speed, and the trouble located by the resulting instrument readings. A pulley is clamped to the generator shaft and the generator clamped to the carriage. Lateral motion of the carriage governs the belt tension, and the carriage is locked by the same bolt that holds the generator.—J. E. Quinn, Studebaker Corp., Boston.

(No. 794) AUXILIARY JACK

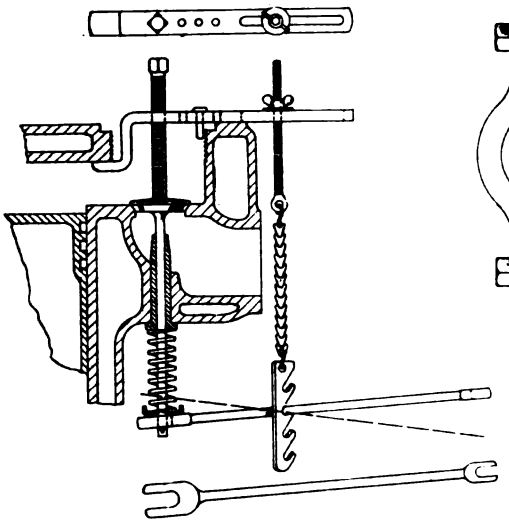
It is oftimes necessary to block a car up and remove the jack for other purposes, and an auxiliary jack offers a ready method. One may be made up from a piece of iron pipe, oxy-acetylene-welded onto a strap-iron base and carrying an adjustable upright of steel turned down to fit the inside of the pipe. Holes are drilled at inch intervals in the upright, and the insertion of a steel pin locks the jack in the required position. A flat piece of steel turned up at the ends offers a rest for the work.

(No. 795) VALVE SPRING REMOVER

A valve remover that may be used on many makes of cars is made up from two pieces of strap iron and a threaded rod. The lower bar is placed between the engine frame and the chassis, and is slotted to permit the lateral movement of the fulcrum. The threaded upright with the two nuts permits up-and-down adjustment, and the plate at the top offers a rest for the lever while prying up the valve washer. Each end of the lever is notched—one large and one small—for different sizes of valves. The set may be made readily by any blacksmith.—J. Guinazzo (Winton), Hyde Park, Mass.

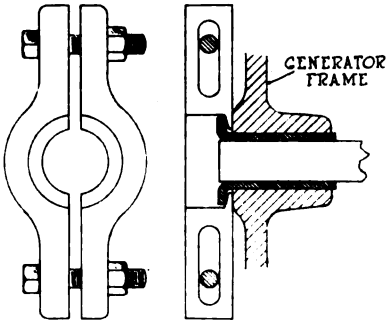
(No. 796) CRANKSHAFT STAND

After removal from the engine the crankshaft is usually placed on the bench or in a box, where there is danger of injury to the polished bearings. The wooden rests shown remove this danger and may be made up in a few minutes.—G. A. Wadman, J. W. Maguire Co. (Pierce-Arrow), Boston.



(No. 797) VALVE GUIDE SWEDGE

Worn pushrod guides may be made quiet and oil-tight by the use of a swedge and swedge block. The upper portion of the guide is placed in the lower swedge block, the upper swedge block placed upon it. Then, by turning the guide with tongs and hammering the upper swedge block, the metal is forced into the hole. The guide may then be reamed to the correct size and replaced in the engine.—G. A. Wadman, J. W. Maguire Co. (Pierce-Arrow), Boston.



GENERATOR BRUSH CARE

The dynamo brushes should be inspected and cleaned about every 2000 miles. Do not oil them. When worn down to about ½ in. long replace with a new set. New brushes should be ground to a perfect seat on the commutator by drawing a piece of sandpaper, smooth side against face of commutator, several times under each brush, at the same time holding brush firmly against the paper. Keep the brush cover tight at all times and avoid soaking the dynamo with water or oil, as this will cause unnecessary trouble. Never install brushes other than those furnished by the manufacturers.—King Instruction Book.

Accessories & Supplies

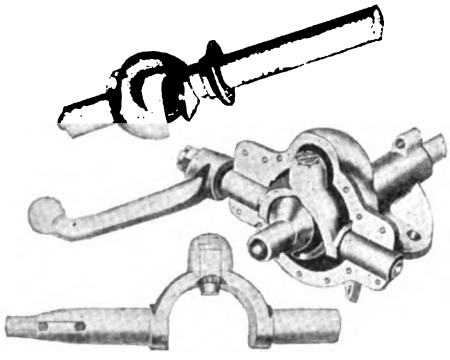
K. P. UNIVERSAL RIM TOOL

K. P. Mfg. Co., 250 West Fifty-fourth Street, New York. PRICE, $2.

A tool for demountable rims of the transversely split type, such as the Baker, Stanweld, Kelsey, Detroit, etc. The rim is locked in a collapsed position while the tire is being removed or replaced. In removing a flat tire from the rim, jaw J is clamped 4 or 5 in. from the split end of the rim that is to be pulled under. Jaw J1 is then clamped as far from J as the handle will permit. With rims of the Stanweld type the joint is broken with a screwdriver and the handle pulled over to the position shown in the illustration, locking the tool and freeing the tire. With the Baker type the handle is pulled sideways until the rim clears the valve stem and lugs. In replacing the tool and locking the rim the tool is capable of forcing the joint together, as is often necessary with an undersize tire. The manufacturer states that the tool will not slip, spring the rim out of shape or throw all the strain on one point of the rim. The tool is very durable, being made of cold-rolled steel, and weighs 3 lb.

K. P. Universal rim tool

WINDSHIELD CLEANER



The Clear-O-Scope Co., 738 Madison Street, Chicago. PRICE, $5.

This cleaner is made of steel wire covered with rubber tubing and is slipped over the top of any standard make of windshield.

STEERING GEAR FOR FORDS

Nash Mfg. Co., 1723 O Street, Lincoln, Neb. PRICE, $12.50.

A steering gear installation for Fords. The operating member is a hollow metal sphere, having a spiral groove cut in its surface. A boss on the yoked shaft carrying the steering arm rides in this groove and is moved, or held, by the metal sphere. The gear works on roller bearings, and is said to be exceptionally easy to operate. It is also claimed to be irreversible and to require but one revolution of the wheel to turn the front wheels of the car from one extreme to the other.

Steering gear for Fords

WATER CIRCULATOR FOR FORDS

Hughes, Bull Co., Detroit, Mich. PRICE, $4.85.

Water circulation is assisted by a centrifugal pump which is combined with the fan and driven through the fan belt. The pump is mounted on the front gear cover in place of the arm which now carries the fan; its installation requires only a few minutes. Its capacity is 10 to 15 gal. per minute and it is guaranteed to prevent overheating.

Evapco air valve

HIGH-SPEED CAMSHAFT FOR FORDS

D. R. Noonan Mfg. Co., Paris, Ill. PRICE, $12.50.

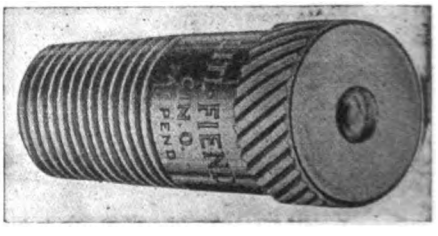
A specially designed camshaft for Ford speedsters. The intake valves are opened 5 deg. before center and closed 40 deg. after center. The exhaust opens 51 deg. before center and closes 18 deg. after center. The valves are lifted slightly higher than with the standard Ford camshaft; and it will be noted that the intake opens before the exhaust closes. With a gear ratio of 3 to 1, a speed of 72 m.p.h. is claimed for a Ford equipped with one of these camshafts.

MISTOKLEEN CLEANER

Crew Levick Co., Land Title Building, Philadelphia. PRICE, $1.25, outfit including filled sprayer and Mistokloth polisher.

A spray cleaner for cleaning and polishing at one operation. It is described as containing only pure mineral oils, scientifically blended, and when wiped off with Mistokloth leaves the surface dry and lustrous. For refilling, quart, 1- and 5-gal. cans are supplied. For a small additional price the gallon can may be had equipped with a spray nozzle for garage use with compressed air.

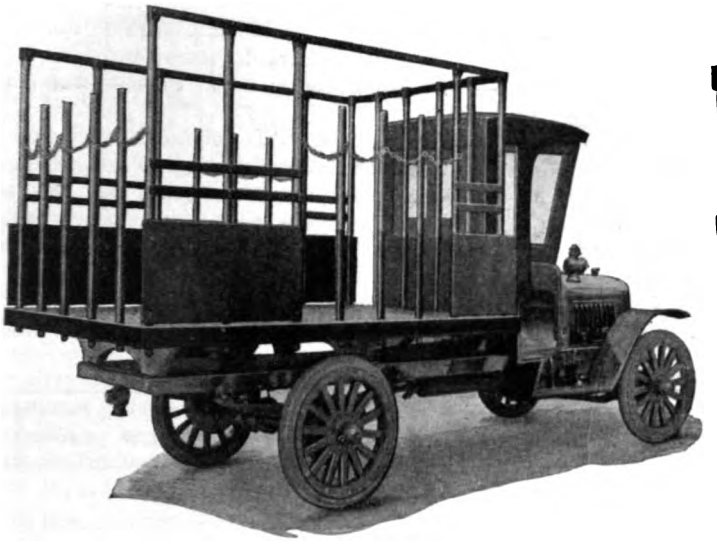
GREASE-IN-TUBES



Crew Levick Co., Land Title Building, Philadelphia. PRICE, three tubes for $1.

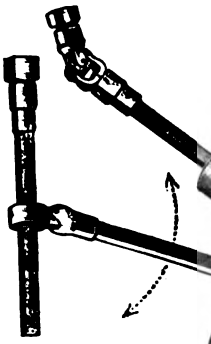
Cup, gear or spring grease, packed in tubes. This method of packing automobile grease is claimed to be convenient, clean and economical. The grease is supplied in cartons of three tubes each. There is a distinct carton for each kind of grease, and one special carton—the Lincoln Highway Kit—which contains one tube of each of the three greases. For ready identification, the tubes are labeled in color—red for cup grease, white for gear compound, and blue for spring grease.

LITL FIEND AIR VALVE

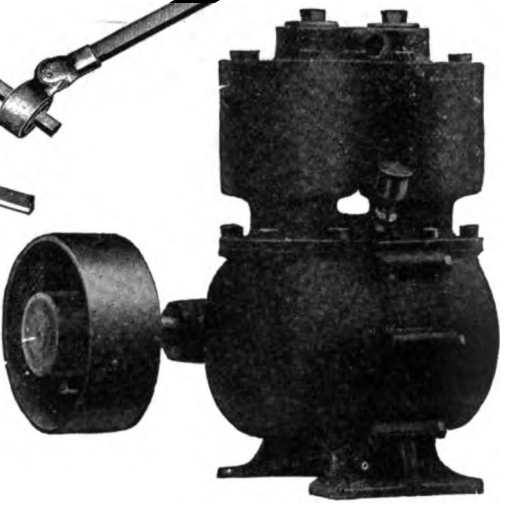


The White Mfg. Co., 619-621 Main Street, Cincinnati. PRICE, $3, prepaid.

This device is screwed into the intake manifold and is a tubular housing, holding an automatic valve at the outer end. At high engine speeds this valve opens and admits air to the intake, while at low speeds it remains closed and sends the normal mixture to the engine, it is claimed. This valve may also be used as a priming cock in cold weather.



Litl Fiend air valve



Digitized by Google

All steel truck bodies are stronger but no heavier than wood

Removable handle socket wrench

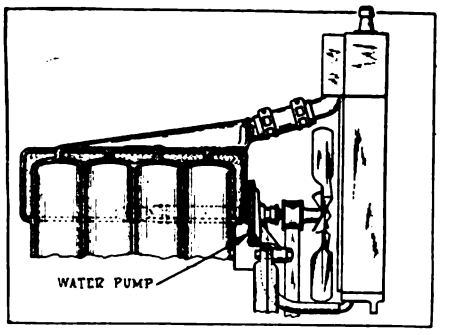
Post twin cylinder air compressor, water cooled

ALL STEEL TRUCK BODIES

Stover Steel Tank Co., Freeport, I.l.

All steel, non-destructible bodies are made in a wide range of sizes and types to suit all needs. They are said to be stronger than wood bodies, yet lighter. In addition to the standard types, bodies are built to order.

REMOVABLE HANDLE WRENCH



C. M. B. Wrench Co., Darwood, N. J.

Combines wrench and socket feature with the additional advantage of a removable handle. The handle is attached to the wrench head by a ball and socket joint, so that it may be made to move up or down to clear any obstacles in the way of its swing in removing nuts or bolts. Many out-of-the-way places can be reached with comparative ease because of this feature. Five different sets are offered, ranging in price from $4 to $9. A feature of the line is the special Ford set which weighs 5 lb. and includes ratchet wrench extension, universal joint and ten sockets ranging in size from ¼ to ⅝ in. square and hexagonal. The price complete in a carrying case is $4. Other sets are listed at $4, $6 and $6.50. The equipment DeLuxe, known as the Silver King, including adjustable handle ratchet wrench, screw driver, spark plug socket and sixteen square, hexagonal and cap screw sockets, ranging in size from ¼ to ⅝ in., sells at $9.

EVAPCO AUXILIARY AIR VALVE

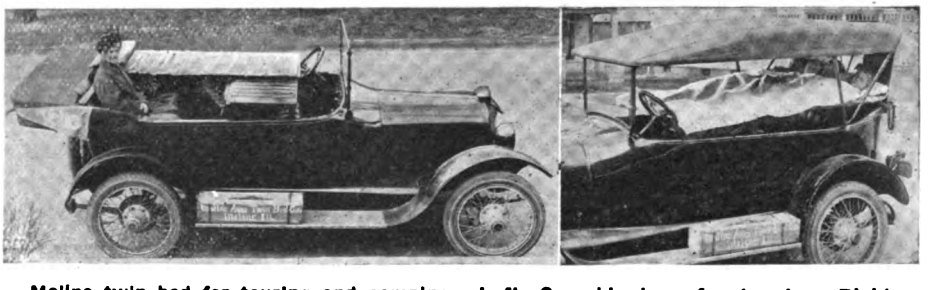
Evapco Mfg. Co., 427 Grand River Avenue, Detroit. PRICE, $5 prepaid.

An attachment for supplying additional air to the intake manifold. It consists of a metal casing, housing an automatic valve, and screwed into the intake manifold. At low speeds the valve is held closed, and the normal mixture is supplied to the engine. As the speed increases the valve opens and admits air in proportion to the speed. The installation

Centrifugal pump attached to Ford motor

is made by tapping a ⅜-in. hole in the manifold and screwing is the valve. No adjustment is required and the valve fits any make of car.

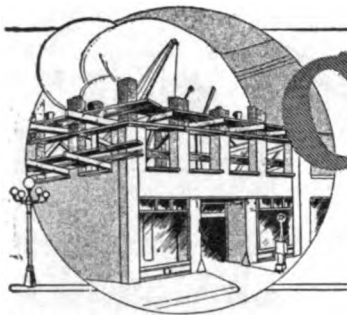
POST AIR COMPRESSOR



Machine Shop Equipment Co., Grove City, Pa.

A twin-cylinder, vertical, water-cooled air compressor with all parts working in oil. All bushings are removable. It is built in six sizes, from 2 x 2¼ to 5 x 6 in.

MOLINE TWIN BED



Moline Auto Twin Bed Co., Moline, Ill. PRICE, $8 to $12; case, $3 to $5.

Designed to meet all the requirements of touring and camping. It is a comfortable, full-sized bed, which is called a twin bed because one side is entirely independent of the other. Anyone can erect it or take it down easily in 10 min. When not in use it is folded and packed into a waterproof fiber case, which is placed on the running board of the car. Its weight, including case, is but 35 lb. The bed and case are made to fit any style or make of touring car. As a full-sized bed it occupies the space above the seats, which gives the advantage of plenty of fresh air, while the curtains of the car can be arranged for ventilation and serve as a protection from wind and weather. The bed is supported on the rear top brackets of the car and legs—connected to the frame with swivel hinges, making them adjustable—rest on the sills of the car, while straps, connecting the cross bars of the bed and the floor of the car, hold the legs firm and secure. Preparations for retiring can be made by one occupant on one side of the car after the half of the bed on the other side is made up. Room is afforded in the front of the car, before the slats of the remaining half of the bed are laid, for the other occupant to undress before entering the bed, after it is completely made up, from the front. All the space in the body of the car is left available for clothing and luggage. By no means the least important feature of the auto bed is that it can be arranged to form a cooking and dining table. The front section turns back, making both the front and rear seats available, and, with the use of the 3-in. slat the table is strong and solid.

Moline twin bed for touring and camping. Left—One side down for dressing. Right—Bed in use

Scientific Construction
GARAGES REPAIRSHOPS SHOWROOMS

By Harold F. Blanchard

THREE-STORY BUILDING FOR IRREGULAR PLOT

Figs. 1 to 6

Editor Motor World:

We are inclosing a diagram of an irregular plot, on which we plan to erect a three-story garage. Will you kindly suggest a suitable arrangement for us to follow and the location of an elevator or ramp?—C. A. Vuille, Huntingdon, Pa.

Fig. 1 shows the ground floor with the offices concentrated at the rear of the showroom and the accessory store at one side. Back of the store is the accessory stockroom and to the rear of it is the tool and parts stockroom, so that the man who has charge of the accessory store may also keep track of the parts stock and the tools.

Figs. 2 and 3 show two layouts which can be used on the second and third floors. The plan followed in Fig. 2 is particularly suitable for active storage, because all the cars except those in the corners may be removed without disturbing any others.

The arrangement shown in Fig. 3 has the advantage that forty-eight cars may be stored instead of thirty-six, as provided for in Fig. 2. As has been explained many times, only those cars directly on the aisle should be on active storage. Those in the two rear rows should be on dead storage or might be new cars, which you knew would not need to be removed except at rare intervals. Probably when it would be necessary to remove some of the cars in the rear rows, all, or nearly all, of the machines in the rows facing directly on the aisle would be outside of the garage.

Fig. 4 shows the first floor as it would look with a ramp, and Fig. 5 illustrates how the cars might be arranged on the second and third floors if a ramp were used. Fig. 6 is a section of the ramp.

Whether it will pay to have a ramp or not depends on the cost of land and building material. If the total investment by the ramp or the total income which might be obtained from space taken up by the ramp is less than the total elevator expense, then it is advisable to have a ramp. The total elevator expense includes interest on investment, cost of current, repair and depreciation charges.

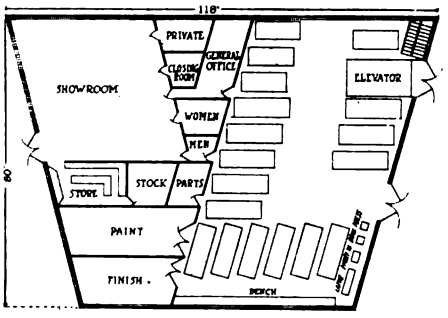

Fig. 1—First floor

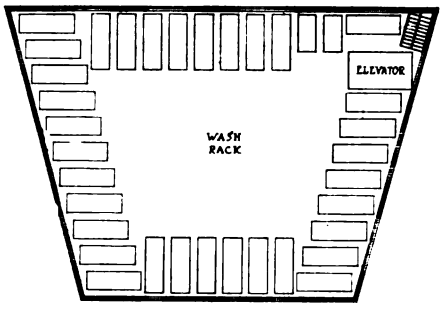

Fig. 2—Second floor

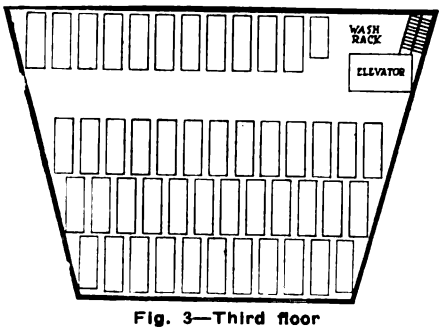

Fig. 3—Third floor

The entrance to the ramp, Fig. 4, was put at the rear so that the full frontage might be used for showroom; however, if it is desirable to have the ramp entrance at the front and change is a simple matter, as it merely means narrowing the two showrooms enough to allow the entrance to be put in and then the second and third floor plans are merely turned around, the front going at the back and the back at the front.

COLORING CONCRETE

To color concrete properly it is not advisable to use paints or stains. Best results are obtained from the use of a pure mineral cement color that is free from clay, gypsum and organic matter.

A well-informed contractor offers the following formula for coloring cement. He says:

"The colors will not fade if the directions are closely followed. These recipes were given me some years ago, and I find, that wherever tried, they have proved to be all that was expected of them. The quantities are given per barrel of cement, the coloring matter in each instance being mixed dry with cement and sand. Caution is given that Venetian red and common lampblack should not be used, as the color obtained with these materials will run and fade. The various colors and quantities of coloring materials for each barrel of cement are as follows:

"For brown, 25 lb. of best roasted iron oxide; or 15 lb. to 20 lb. of brown ochre.

"For black, 45 lb. of manganese dioxide.

"For blue, 19 lb. of ultramarine.

"For buff, 15 lb. of ochre. (This is likely to considerably reduce the strength of the mixture.)

"For Green, 23 lb. of greenish-blue ultramarine.

"For gray, 2 lb. of boneblack.

"For red, 22 lb. of raw iron oxide.

"For bright red, 22 lb. of Pompeiian or bright vermilion.

"In using coloring matter with concrete, the color should always be mixed with the cement dry, before any sand or water is added. The mixing should be thorough."—*Architect and Engineer.*

ONE-STORY GARAGE WITH LARGE SHOWROOM

Figs. 7, 8 and 9

Editor Motor World:

We are on the verge of closing a contract with a local property owner to build a one-story garage, 60 x 167 ft.; the lot is level and situated in the center of block.

As our largest income is from car sales, we want a large and well laid out showroom, and a shop in rear.

We have outlined the general plans as we desire them on back of this letter and ask you to suggest the best place for wash-rack, etc.

The writer takes your paper and it is certainly a live one and has made our firm lots of money.—Jos. J. Curt, Jr., president and treasurer, Anthracite Motor Car Co., Scranton, Pa.

Figs. 7 and 8 show plans which we believe you will find satisfactory. They resemble yours in a general way, but differ in details.

We have not altered the size or shape of either your showroom or shop, because these seem to be about the right dimensions as near as we can judge from this distance and without having all the details at hand.

There is one point upon which we wish we had more information. That is, just what you intend to use your stockroom for. Although you call it a stockroom, it would appear from its location that you were planning to use it as a sort of an accessory store and stockroom combined.

If it is merely to be a stockroom we think that the layout shown in Fig. 7 will prove most satisfactory. This gives you a compact arrangement of offices.

If your roof is high, you might find it advantageous to locate the stockroom on a hanging platform or balcony, thus leaving the floor free for the storage of cars.

Although your letterhead states that you deal in supplies, you have made no provision for a store, unless you intend to sell them in the stockroom, as already suggested. You will find that it will pay to display your accessories. You should have a store window for this purpose. An ideal plan would be to use the vacant store which you evidently intend using for some other purpose for the sale of accessories and then have the stockroom immediately back of it.

Fig. 8 shows a plan which you may use in case you desire to sell your accessories from the stockroom. We would suggest that you have a partition across the room as indicated, using the front as a store and the rear for rough stock. The front edge should be lined with counters.

For that matter, you might utilize that part of the stockroom in Fig. 7 which overlaps the showroom as a store, with no partition, but merely a counter along the dividing line, though it, of course, should have shelves lining the walls.

The entrance to the showroom should be at one side or the other. If you place it in the center there will not be room enough at either side to properly allow for the display of a car. It is better to have one car well-displayed than two poorly.

The idea of having the show window along the driveway is excellent.

We are very pleased to have you say "Motor World is certainly a live wire and has made our firm lots of money." We will be greatly indebted to you if you will be kind enough to give us details regarding how we have been able to help you. We feel that there is a basis for a good story in this statement of yours.

We hope that you will continue to write us whenever you need information or advice on any matter connected with your business. We are always glad to aid our subscribers in any way, and the oftener they write the better we like it.

Republic to Triple Employees

ALMA, MICH., July 31—The Republic Motor Truck Co. will erect two new factory buildings in which to manufacture the new Model 9 ½-ton truck. The main structure is to be 60 x 1000 and one story. Parallel to the large building will be built a stockroom 36 x 500. The two buildings will have a floor space of 48,000 sq. ft. and will cost about $38,000. The company at present employs 700 men and this number will be practically tripled upon completion of the new buildings.

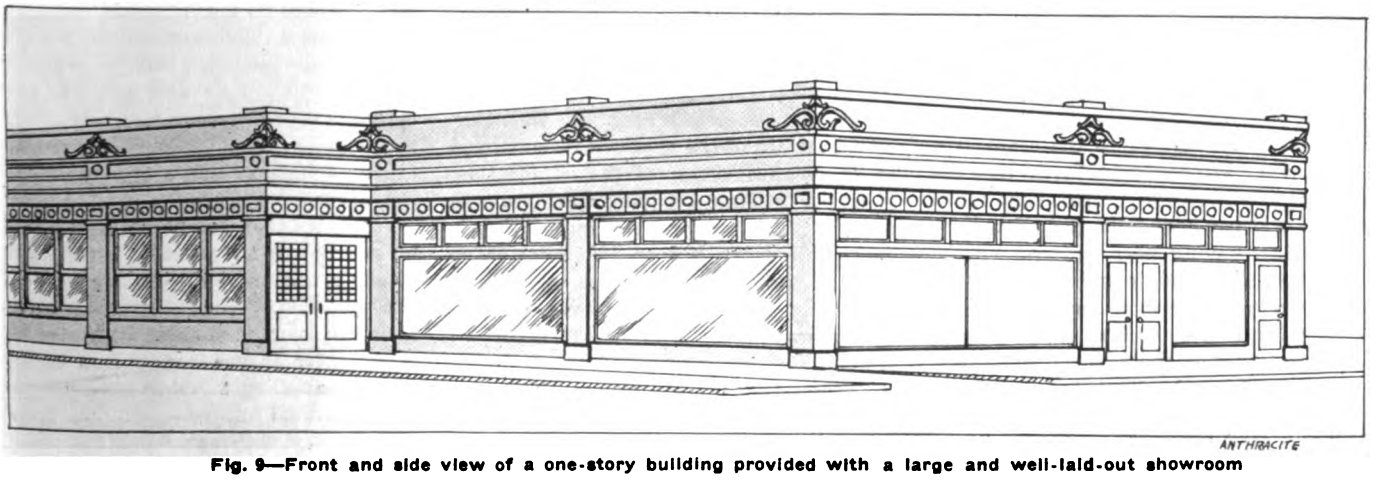

Fig. 9—Front and side view of a one-story building provided with a large and well-laid-out showroom

Do It This Way—

···QUERIES ANSWERED···

SHOULD CRANKCASE OIL BE THROWN AWAY?

Editor Motor World:

I have considerable lubricating oil that has been in the case but a short time. Owing to the oil getting past the piston rings, causing the motor to smoke, the remaining oil becomes dark and smells of smoke. Is there any way in which I could clean same and make fit for use, as I have changed rings and expect no more smoke from motor?—Subscriber.

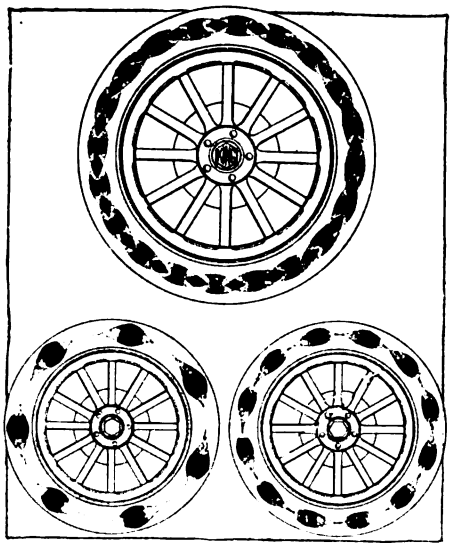
Probably this oil is not so bad but what it is still good for several hundred miles of running. Oil becomes dirty very shortly after it is put in the motor, and the fact that it is now black is no indication that it is not a good lubricant.

According to some engineers it is possible to clean oil that has been used for some time so that the oil is practically as good as new, but there are others who question whether this really can be done; and, furthermore, it is considerable trouble to renovate the oil, anyhow.

C. W. McKinley, chief engineer of the Overland company, says that the oil must first be filtered through waste and charcoal, and finally through pure sand. He also states that there are no detrimental effects through using this oil over and over again, providing it is thoroughly cleaned as described.

J. Whyte, a Maxwell engineer, states that it is questionable economy.

Damage Greater Than Saving



The chief engineer of the Pierce-Arrow company, David Fergusson, advises against the use of motor-lubricating oil over and over again, even though it has been carefully strained. He says that the old oil shohld be drained every 300 to 400 miles, replacing it with a complete charge of new oil, for the reason that after this time the oil becomes exceedingly dirty, containing a considerable amount of carbon deposit, as well as sand, road dust, etc., that has been taken in through the carbureter and has moved past the piston rings into the crankcase.

He says: "We have also found that the viscosity of lubricating oil is very much less after it has been used for a few hundred miles, having been reduced by the addition of the gasoline and in some cases containing a considerable amount of kerosene which may have been used to prevent gumming of the pistons and rings.

"Lubricating oil with all this foreign matter in it is unsuited for feeding an intricate mechanism like an automobile engine. The damage done by the use of such dirty oil is altogether greater than the saving effected by being able to run double or triple or even ten times the mileage on one charge of oil.

Heating May Help

"It might be possible, of course, if proper protection were taken, to filter the oil and by applying heat to it for a long enough time to remove any gasoline that might be present. At the same time it would not do to advise this method unless it were absolutely certain that the proper precautions would be taken and that the resulting oil would be properly tested to see that it was in proper condition to use. The cost of this to the ordinary user would be prohibitive. It would cost him more to have proper tests made by chemists, of his own filtered lubricating oil, than it would to throw it away and buy new oil.

Interesting method of showing at a glance the number of explosions per one revolution of the wheels in four, six and eight cylinder cars. This diagram was originated by the King Motor Car Co.

"If he uses new oil he will be absolutely certain of the quality recommended by the manufacturer of the car that he is using, getting the very best possible results. The cost of using new lubricating oil every 300 or 400 miles is so small an item in the expense of running an automobile that it seems to us a folly to attempt a saving of so small an amount."

Russell Huff says: "There are many reasons why we recommend the changing of engine-lubricating oil every thousand miles or oftener, but I will touch only on the more important reasons.

"In an ordinary oiling system where the oil is used over and over again many thousand times without any fresh oil being added to the original quantity, experience shows that this oil gradually becomes thinner, absorbing fine carbon particles and water, and gradually becomes more acid in nature.

Gasoline Thins Oil

"The thinning down of a good grade of oil is generally caused by the absorption of condensed gasoline which is picked up by the oil film around the top of the pistons, the reciprocating action of the pistons sliding over this oil film many thousonds of times eventually dragging some of this oil with the dissolved gasoline in it down into the crankcase. A strong affinity of oil for gasoline permits the more rapid absorption of the gasoline if there is a poor fit between the piston, piston rings and cylinder wall. A poor fit will allow a certain proportion of the charge to be blown down past the sides of the piston into the crankcase compartment during the compression stroke.

"In the same way the exhaust gases of the high explosive force on the top of the piston will work past the loose fitting pistons and carrying a large percentage of moisture will condense and cause an accumulation of water.

"The oil film on the walls is constantly being burned into carbon. Gradually this carbon works down into the oil and causes the black sediment which rests in engine oils after they have been used over and over.

Evaporation a Small Factor

"I do not believe that the thinning down of the oil from use is caused so much by vaporization of some of its constituents as from the presence of gasoline and water which get into the oil from the above mentioned sources.

"As to the question of rejuvenating used engine oil, I do not consider this practice desirable, owing to the expense involved in accomplishing a first-class job. The suggestion of merely heating the oil for 1 hr. at a temperature of 300 deg. will do much toward driving out the gasoline and water, but I do not believe this operation will neutralize the acids in the oil or pick out the gritty carbon and calcareous substances which are usually found in used engine oil."

Mr. Johnson, laboratory engineer of the Studebaker Corp., says: "In general our idea is that for ordinary use motor oil can be used repeatedly after suitable filtering, and, if necessary, evaporation of the gasoline. For very hard service, however, such as running in new motors, it is better to use new oil, as we have found that a tight motor will seize when run with old oil when it will operate satisfactory with new."

Accounting and Business Systems

By T. W. Snead

WANTS A SYSTEM

System Editor:

We have subscribed to Motor World the past 3 years, but did not notice the accounting department closely until the system, or rather, series of accounting was half completed. We opened a repairshop 2 years ago, intending to keep no books and do only a cash business, and have at the present time a sort of memorandum or scrap book system, which in some respects is worse than none. Our business consists of general repairs (no agency for cars), small amount of storage and considerable welding, also electrical and ignition work.

After this description of our situation, if there are any special suggestions that you can make, be assured that they will be gratefully received. As we would like to open our books with your system, kindly forward the outfit as soon as possible.

Hodges' Auto Repair Shop.
Birmingham, Ala.

After you have installed the system we shall be only too glad to answer any questions or to help you on any points on which you are not entirely clear.

The writer would like to emphasize the fact that no matter how small the volume of your business is, or whether you are doing a cash or charge business, that business is worth recording properly, as so many of us have found after the damage has been done.

AS TO DUPLICATE CUSTOMERS' ACCOUNT FORMS

System Editor:

We would like to ask if it would not be possible for you to furnish the Form No. 3 sheets in such a way that we could use the duplicate statement system, by which at the end of the month the leaf containing the original statement could be torn out of the book or taken out and mailed to the customer, leaving the carbon copy in our possession? Kindly advise us about this and send same if you have it.

We would like to ask if you have any suggestions to make regarding the accounts payable with the automobile manufacturing companies? We find that there are many cases of replacement on cars, also in ordering parts, mistakes are sometimes made in shipments, also parts are sometimes ordered which are not used and this makes a condition in which we are often far behind on credit of parts returned or sent in for replacement, etc. If you have given any time to studying this part of the sales business we shall be very glad to hear from you or have any suggestions which could enable us to simplify this to some extent.

Hugo-Buick Co.
Moscow, Idaho.

Your System

Even if you are not using the Motor World Simplified System of Accounting your questions about system will be welcomed by this department.

The manufacturers of the Motor World Simplified System of Accounting will be glad to submit samples and prices to you covering the duplicate statement system, by which at the end of the month the leaf containing the original statement could be torn out of the book and mailed to customer, leaving carbon copy in your possession.

However, the writer would like to express an opinion which has been published several times in our columns on this way of sending out your statements. If the charges and credits from Form 1 (the Income sheet) are posted to the customers' account sheet in the rear of the binder, then you have a permanent record at all times of the customers' accounts. It seems to me, then, that the carbon sheet would be "excess baggage."

Why not carry just an original statement sheet, which could be made out from day to day and be all ready to mail at the end of the month?

The writer does not know for sure whether you sell gasoline or not, but he has found numbers of cases where charges were made on these kind of sheets (duplicate statement sheets) in gallons and not in dollars and cents. The number of gallons purchased each day were posted to the account and at the end of the month these gallons totaled and multiplied by the cost per gallon, which constituted the charge for that month's business. You can readily see that a mistake of 10, which is so easily made, would mean an error of $3 at 30 cents a gallon in this customer's account.

The worst part of it is, there would be no way of finding this error, for the reason that there is no control over the entire customers' accounts receivable, due to the fact that charges had been made in gallons and not in dollars and cents. This is only one of many objections that we have found with this system. The writer could give you many more.

Possibly you have a different plan for working these monthly statement blanks and if so we would appreciate it very much if you would "tell us the story."

In answer to your inquiry in regard to accounts payable with manufacturers, wish to say that where parts are returned on which you are to receive a credit, the cleanest and the best way to handle this is to place a value on this part when you return same to the manufacturer. Charge it to him as if you were charging a customer on Form 1. Your debit would be in the All Other Accounts column to the manufacturer, and your credit would be to the customer that returned the part.

In this way you have a record of the part going back to the manufacturer and when the credit is received if the amount does not just agree with what you charged, this can be easily adjusted by another entry correcting the amount.

If it is for parts returned that have not been used, you would charge the manufacturer at the cost price and credit your inventory stock on hand; then at the end of each month send the manufacturer a statement of the account as it appears on your books, and in this way you will always be in balance to a certain extent on this end of your business.

I might add that when you credit a customer for a part upon which you are not sure just what the ultimate credit will be to you from the factory, be sure to make some notation of this credit on the customer's sheet; that is, do not allow him to use this credit as a cash payment until you have been definitely advised as to the amount by the factory.

Swan Hokanson, Rosholt, S. D., has bought the H. K. Stowe Garage.

Ben Kliegle, Strandburg, S. D., is building a garage.

C. H. Paxton, Minneapolis, has been appointed Northwestern manager for the Federal Rubber Co., at 1115 Hennepin avenue. He succeeds W. F. Bigelow, resigned July 15.

John Roufs, Jr., Victoria, Minn., has opened a garage. He is from Cologne, Minn.

Emil Strom, Two Harbors, Minn., has been made agent for the Saxon.

The Whi-Kinn Motor Car Co., Duluth, has been incorporated at $50,000 by John Wahl, Ole Kinn, H. C. Wahl, Justin Zuger and Oscar Nilsen.

Erskine, Logan & Co., Grand Rapids, Minn., will build a garage.

L. J. Holub, Preston, Minn., has rented the Munkel Garage.

Joseph Heiling, Maddock, N. D., has taken the Pullman agency.

Brown & Johnson, Madison, S. D., a new firm composed of W. C. Brown and Bud Johnson, have leased the Daniels Garage.

Clemons & Kaupp, Hecla, S. D., garage proprietors, have dissolved, and Clemons will continue.

McKinney-Fuller Motor Co., Grand Forks, N. D., will erect a two-story garage.

Philip O'Neill, Red Lodge, Mont., will erect a garage to cost $10,000, at Main and Montana streets.

Hopkins & Dicks, Hinckley, Minn., have bought the E. A. Elford & Son Garage.

Fred Linberg, Brooklyn, Minn., mail Hibbing, Studebaker and White agent, has moved into a new garage.

William Wishart, Noonan, N. D., has taken the Empire agency.

George Dixon and Major Roberts, Devils Lake, N. D., have let the contract for a garage, 40 x 75.

Siegling Bros., Belt, Minn., have bought the MacLeod Garage and reopened it.

The Jacobs Garage, Wabasha, Minn., and automobile livery has opened.

C. A. Snyder, Barnesville, Minn., has bought the McColl & Possehl Front Street Garage.

The Hall & Finton Garage, Alden, Minn., is ready to open.

The M. L. Johnson Garage, Hastings, Minn., has been bought by J. W. Downs & Son, Chaska, Minn.

L. G. McCormick & Co., Sebeka, Minn., will convert the Kraywinkel blacksmith shop into a garage.

J. W. Rhodes, Maquoketa, Ia., is building a new garage, 50 x 100.

Joseph Schallan, Havelock, Ia., suffered the loss of his garage by fire recently. A motorcycle was burned. Schallan will rebuild.

H. H. Kinner, Elberon, Ia., is putting up a new fireproof garage.

W. F. Vick, Montgomery, Ia., has installed a new free air system at his garage and has added a line of tires and accessories.

Fred Crist, Shenandoah, Ia., has located his garage business in a new building at Sheridan avenue and Sycamore street.

H. A. Wilsey, Spirit Lake, Ia., has established the Wilsey Storage Battery Co. in the old Spirit Lake House building.

The Miller Auto Co., West Bend, Ia., has sold out to L. J. Jergens, of Hardy, the consideration being $38,000 for the business, three new cars and 23 acres near West Bend.

J. R. Stickler, Shenandoah, Ia., will locate his business in a new building at Sheridan avenue and Sycamore street in August.

The Iowa Auto Sales Co., Sioux City, Ia., has been formed to handle the Maxwell and has located in the Motor Mart. J. D. Cullis is manager.

Edwards Bros., Joplin, Mont., have taken over the Joplin Garage.

James K. Banks, Grace City, N. D., is building a garage.

Otto Platz, Calvin, N. D., is building an addition to his garage.

Carl K. Thoe, Nels S. Nelson and Emil S. Nelson, Fordville, N. D., have opened a garage and supply business and taken the Ford and Saxon agencies.

Skurkrud & Anderson, Maynard, Minn., have begun building a garage.

George Anderson, Scobey, Mont., has opened the Scobey vulcanizing shop.

Kinney-Fuller Auto Co., Grand Forks, N. D., state agent for the Dodge Bros. car, is erecting a garage.

The Scobey Motor & Machine Co., Scobey, Mont., has been bought by B. W. and E. W. Battleson and Dwight Benson. Benson Bros. are in charge.

J. M. Carignan, Fort Yates, N. D., has opened a garage and livery. Oscar Baumann is manager.

August Roloff and George Gilliland, Welcome, Minn., have bought the equipment and supplies of the C. C. Stoner Garage. They owned the building.

Edward Milligan, Madison Township, Poweshiek County, Ia., has gone into the garage and repair business in an old blacksmith shop near the Sheridan store.

T. R. Crandall, Albia, Ia., has bought the interest of his partner, A. W. Mangle, in the Vulcan Welders & Electricians and will continue the garage business as heretofore.

The Heikens Motor & Tire Co., Spencer, Ia., has bought the garage of the Van Winkle Auto Co., on South Main street, and has moved to its new location.

Fred J. Benischek, Oxford Junction, Ia., has sold his garage business and building to Louis Trilsch, who will continue the Ford and Buick agencies held by the former owner.

Martin & Carter, Bedford, Ia., has sold its garage business to Charles Sturm and Charles Preston, who will conduct the business in the new Slattery garage building.

S. N. Dawkins, Ute, Ia., has sold his garage to Carl Ballantyne, of Moorhead, who has taken possession.

The Jones Auto Co., Madrid, Ia., has broken ground for a new garage building, two stories high and 44 x 132, which is to be completed this summer.

G. H. Martin, Lenox, Ia., has sold his repairshop to L. E. Neely, of Sharpsburg, Ia.

The Kassler Auto Co., Dubuque, Ia., has secured Lester Cook, one of the most expert repairmen of that city, to take charge of its repairshop in its new building, which will have a complete repair department and service station.

The Overland-Davenport Co., Davenport, Ia., has been organized to handle the Overland in six counties, with C. E. Alford, former Overland man at Huron, S. D., as manager. A new building will be erected. The temporary location is at 324 Harrison street.

Johnson & Fink, Armstrong, Iowa, have bought the Gibbs garage and will take over the agency for Buick and Ford in addition to those they already have for Overland and Chevrolet.

Cuttell Bros., College Springs, Iowa, are now located in a new garage.

Col. I. L. Eells, Ida Grove, popular auctioneer, has purchased the J. M. Wilson garage at Sheldon and has taken possession.

The Wolfer-Cadillac Co., Davenport, Ia., has just been incorporated at $50,000 by H. J. Wolfer and Charles R. Wolfer, formerly of St. Paul, and E. J. Bouder, of Davenport. The company handles the Cadillac exclusively, its territory covering sixteen counties in Eastern Iowa and Western Illinois. A warehouse and office will be erected. Temporary quarters are at the People's Garage, Fifth and Main streets.

The Iowa Auto & Tire Co., Davenport, Ia., has completed negotiations for the handling in the Davenport territory of the Velie. A Velie service station will be opened at the company's garage on Main street, between Fourth and Fifth streets.

George H. Doty, Cedar Rapids, Ia., succeeds to the business of the Foy Supply Co., in which he has been associated for seven years with Charles H. Foy. The concern has sold more than $2,500,000 worth of Overland cars in seven years. Foy retires from the automobile business. Doty will continue at the old location until Oct. 1, when he will move the business to a new building at Third avenue and Eighth street.

A. McDowell, Perry, Ia., has bought out the Clapp Motor Co., located in the Jones Garage in that city.

Braley & Allen, Maxwell, Ia., have sold out their garage business to George Pring and John Oxley, who will continue the Maxwell agency.

R. J. Johnson, Mount Pleasant, Ia., has given up his Velie and Chevrolet agency and has moved to his old home in Amboy, Ill.

SOUTHWEST

The Continental Auto Top Mfg. Co., St. Louis, has taken over the plant and business of the Continental Auto Top Co. Arthur Leeser succeeds George I. Juhlein as owner of the majority interest. The plant is being overhauled. Tops, jiffy curtains, seat coverings and commercial bodies are the output.

The Efficiency Oil Corp., St. Louis, has opened downtown quarters in the Security Building, in addition to storerooms at 3213 Locust. Edward Sterns, president, is the inventor of a new rubber-fiber tube.

Ralph Dillard, for six years in charge of motor car advertising on a daily newspaper, has been made publicity manager for the Missouri Packard Motor Co., St. Louis.

The Newell Motor Car Co., St. Louis, is advertising heavily the appearance in local moving picture houses of a series of reels

Digitized by Google

taken of Gen. Pershing's soldiers in Mexico, in which two Dort cars are in action.

The Franklin Automobile & Supply Co., St. Louis, has leased new showrooms at 3015 Locust street, to be opened as soon as new Franklins are here.

The Clear Ford Storage Battery Co., Lockhart, Tex., has just been chartered with a capital stock of $10,000. Albert A. Borchert, A. E. Lawrence and Otto Borchert are the incorporators.

The Texas Oakland Co., Dallas, has filed a charter at Austin with a capital stock of $60,000. The incorporators are: George P. Miller, C. L. Zutavern, J. M. McCormick and French Davis.

The Nacogdoches Garage Co., Nacogdoches, Tex., has been chartered at $10,000. The incorporators are N. J. Schmidt, Greer Orton and Ben T. Wilson.

The Galveston Motor Car Co., Galveston, Tex., has filed a charter amendment, increasing its capital stock from $6,000 to $12,000.

Moomaw's Garage, Joplin, Mo., formerly the B. B. Garage, is now operating in its new quarters.

W. D. Myers, Joplin, Mo., has opened a tire service store, handling Swinehart tires.

The Brinkman Motor Car Co., St. Louis, has been organized to take over the Maxwell agency, succeeding the George C. Brinkman Motor Car Co., and taking over the latter's plant. Ben G. Brinkman, vice-president of the Lafayette Bank, heads the new company. George S. Danaher, recently sales manager of the Hudson-Phillips Motor Car Co., is manager. George C. Brinkman, head of the former company, is a member of the sales force.

The Double Tread Tire Co., St. Louis, doubles the capacity of its plant by leasing an adjoining building, 30 x 90, at 4376 Olive street. This adds a salesroom for tires. The company makes one tire of two old ones.

The Sunset Auto Repair Co., Sappington, Mo., has opened up near Sunset Inn a favorite road restaurant for St. Louisians. Joseph Huetel, the proprietor, is also a dealer in the Reo.

The Jeffery Distributing Co., St. Louis, is removing to its former showrooms at 2650-52 Locust street, after six months half a block east. In its present quarters the company has the space formerly occupied by three companies and a thoroughly remodeled building. The service department and a parts room will be with main showrooms.

The Modern Motor Car Co., Poplar Bluff, Mo., has moved to the Davis building; Barney Sarafini is owner of the garage and repairshop, and Waller Jus is in charge of the machine shop.

W. F. Heins, Carrollton, Mo., has purchased the Minnis-Arnold Garage from John Archibald, and will operate it.

Harry McGee, Warrenton, Mo., has purchased the interest of Emil Hintz in the Water Tower Garage, and the name of the firm has been changed to Drunert & McGee. McGee is a machinist. The firm is agent for the Ford, Buick and Dodge Bros.

John I. Cooper, Baxter Springs, Kan., is erecting a new brick garage.

The Foreman Auto Co., Hayti, Mo., has opened a new garage and repairshop in the Moro Gaskins building. T. A. Foreman is manager.

The Minnis-Arnold Motor Sales Repair Co., Carrollton, Mo., has been sold by John Archibald to William Heins. Archibald had just purchased the business two days before selling it to Heins.

J. T. Zook, Louisiana, Mo., has opened a garage on the former site of a livery stable managed by him. The entire floor is of concrete and the rear part of the building is of brick and stone.

The Hudkins Garage, Salina, Kan., is now occupying an addition recently completed.

The Price Garage, Salina, Kan., will be completed in August.

Winkley Bros., Marion, Kan., have moved their Ford agency and repair shop to the Old Santa Fe Trail Garage.

Frank Hoover, Marion, Kan., has taken charge of the garage adjoining the Record building, and will handle accessories.

Thorp & Propp, Marion, Kan., have moved to the Ehrlich Garage, and are building an addition.

Lutz Bros., Sharon Springs, Kan., are erecting a garage 40 x 60.

J. T. Rush and J. C. Anthony, Herington, Kan., have secured the agency for the Jones.

J. S. Price, Oakley, Kan., has nearly completed his new garage; he is agent for the Ford.

M. Shelby, Rockingham, Mo., is erecting a garage.

The Cowley County Motor Co., Arkansas City, Kan., is now occupying its new location, and has secured the agency for the Chevrolet. The company consists of A. P. Turner and Frank J. Alexander.

A. L. Hendricks, Fort Smith, Ark., is erecting a new building for the A. L. Hendricks Motor Car Co., distributor of the Overland, and will install a tire and accessory department.

Gilbert Wild, Sarcoxie, Mo., will soon start work on a new garage.

The Motor Sales Co., Wichita, Kan., will soon move to a new location. Its territory for the Chandler has been increased, and it has secured the agency for Southern Kansas of the Marmon.

E. D. Kite, Odessa, Mo., is building an addition to his garage.

Elmer Freebury, Goodman, Mo., has rented the repairshop of A. R. Wardell.

Teater & Delay, Blairstown, Mo., are now occupying their new garage.

Louis Ingennousz, Sumner, Mo., has purchased Little's Garage and renamed it the Sumner Garage.

M. A. King, Marshfield, Mo., has bought the interest of Lee Haymes in the King & Haymes Garage.

F. B. Gunn, Copan, Okla., is remodeling a building for garage purposes.

F. P. Morris and George Pearson, Arrow Rock, Mo., have bought the G. P. Martin Garage.

J. C. Barber, Manhattan, Kan., agent for the Buick, is temporarily in the Maas Garage, pending completion of his new building.

C. H. Briggs, Kanorado, Kan., will occupy his new garage early this month.

Dwight Bennett, Higginsville, Mo., has secured the agency for the Maxwell; he will have headquarters with the Missouri Motor Co.

Sam Herrick & Son, Springfield, Mo., recently conducted an auction sale of automobiles at their garage.

The Springfield Overland Motor Co., recently organized, has temporary headquarters at the Haskett-Mace Garage, pending the erection of a building.

The Jackson-Allen Motor Co., Wichita, Kan., now occupies quarters in the same building with the Apperson Sales Co., 210 South Lawrence Avenue.

J. T. Davis & Son, Gotebo, Okla., have begun work on their new garage.

The Edson Garage, Bethany, Mo., was damaged by fire recently; the machinery was saved.

Seldon Churchill, Sheridan, Mo., has bought the interest of Erna Bainum in the Turner & Bainum Garage; the name has been changed to Turner & Churchill.

Mosher & Berry, Belleville, Kan., have secured the agency for Republic County for the Moon. They conduct the Mosher Garage.

Frank Bloomer and Julius Brock, Claflin, Kan., have opened the Bloomer & Co. Garage.

C. L. Thompson, Pittsburg, Kan., is remodeling his opera house into a garage.

The Auto Supply & Tire Co., Wichita, Kan., has installed a hydraulic press for the application of motor truck tires.

C. W. Johnson and T. B. Holmes, Okmulgee, Okla., have established a Chalmers agency here, temporarily at the L. & M. Garage. They have headquarters at Muskogee.

The Springfield Overland Co., Springfield, Mo., recently incorporated, has arranged for the erection of a one-story building, 40 x 100, to cost $12,000. An expert will be brought from the Overland factory to take charge of the repair and stock departments. The company is temporarily at the Haskett-Mace Garage.

The Mid-Continent Tire Co., Wichita, Kan., has cleared its title to certain land, and will begin at once the erection of its factory.

The A. L. Hendricks Motor Car Co., Fort Smith, Ark., is erecting a two-story, 90 x 140 garage, display room and accessory store. Joseph Bailey, formerly of Little Rock, will have charge of the tire and accessory department, which will be new.

The S. W. Overland Auto & Supply Co., Joplin, Mo., has been incorporated, capital stock $20,000 paid, to deal in and repair motor vehicles. Incorporators and directors are: Carl W. Lehnard, A. F. Lehnard and Willis W. Lehnard, all of Monett, Mo. C. W. Lehnard is president of the Springfield Overland Co., recently incorporated.

The Ollinger Auto Co., Salina, Kan., has been made distributer in Kansas, west of Salina, for the Overland, the company contracting to sell 2,200 cars. J. F. Ollinger, head of the company, has leased a building now being remodeled for its purposes. H. T. Hathaway, formerly sales manager for the Overland in Missouri, becomes connected with the Ollinger company. Additional storage room, and additional salesmen and other men, will be secured to care for the prospective business.

E. J. Sweeney, Kansas City, Mo., head of the Sweeney Automobile School, has ordered work to go ahead on the new building for the school near the Union station. The plans for the building were selected by popular vote, a large majority voting for the kind of building that won the contest.

EAST

The Anthony-Pilling Co., Boston, Marion-Handley dealer, has moved from Cambridge to Washington Street, Brighton.

"Ted" Earle, Boston, has rejoined the Stearns-Knight sales force.

The Reliable Tire & Rubber Co. of New England has been formed at Boston to handle Reliable and Seamless tires and tubes.

E. F. Clark, Montpelier, Vt., has sold his interest in the Groton Garage to H. L. James.

Walter Fraker, Chelsea, Mass., has been granted a permit to erect a garage.

William Emery, Lewiston, Me., is erecting a large garage.

The City Square Garage, Beverly, Mass., has been incorporated. Frank B. Rainey is president, Agnes J. Briggs, treasurer, Robert Gallagher, secretary.

Allen & O'Donnell, Burlington, Vt., Oldsmobile and Stutz dealers, have moved to the Ideal Garage.

James M. Downs, Pittsfield, Mass., has taken the agency for the Buick in Greenfield and has moved there.

The Overland Co., Worcester, Mass., has moved to new quarters on Main Street.

Vallieres Bros., Lynn, Mass., opened a new garage last week.

Percival S. Clark, Providence, R. I., has taken the agency for the Apperson.

The Springfield Motor Sales Co., Springfield, Mass., has been formed to handle the Maxwell.

Digitized by Google

The Willys-Overland Co., Springfield, Mass., has moved into its new building and will have a celebration next week.

The Detroit Electric Car Co. of Connecticut, Hartford, Conn., has leased a brick building, one story high, at Foot Guard and Hoadley Places and has equipped it for a service station. The firm represents the Detroit Electric and recently took on the Locomobile.

COAST

Jett & Sloman, Wenatchee and Waterville, Wash., have added a G. M. C. truck to the fleet of cars used on their stage line between Wenatchee and Waterville. The line is carrying from 80 to 100 people daily over the new $50,000 convict-built road up Pine Creek Canyon. The permanent fleet consists of a Reo, Stevens-Duryea, three Overlands, one Studebaker and a G. M. C.

Floyd J. Logan, Tacoma, Wash., in addition to taking care of Maxwell interests in Tacoma and vicinity, has been given the Spokane territory, adding nineteen counties in Washington, Idaho and Montana.

The Clark-Pearne Motors Co., Seattle, Wash., has been incorporated by W. S. Pearne and J. H. Clark and quarters secured on East Madison Street at Twentieth Avenue.

The Burbank-Thomson Supply Co., Wenatchee, Wash., has installed a Rayfield Carbureter and Jones Speedometer service station. The company is now distributing Diamond and Federal tires and the Johns-Manville line.

Pate & Sagendorf, Wenatchee, Wash., have purchased the business of the Wenatchee Tire & Auto Co. and have installed a complete Williams Foundry vulcanizing equipment. Mohawk tires are carried and business is conducted under the name of the Tire Repair Station.

C. H. Pickett, Cashmere, Wash., has sold his interest in Leuer's Garage to John Leuer. The latter has erected a new building for garage and sales purposes and closed a contract to handle the Overland.

The Ashton-Wright Co., Los Angeles, Cal., has opened a garage at 1048 South Oliver Street. The firm has the Pacific coast distribution of the Inter-State.

C. A. Capitain, Oceanside, Cal., has purchased the Oceanside Garage Second Street between Hill and Freeman from the Oceanside Garage Co., Inc. For many years Capitain has been a prominent garageman in Los Angeles, having come up with the automobile industry from the old bicycle days, when he was rated as one of the finest bicycle mechanics on the Pacific coast. He is planning on making many improvements in the equipment of the Oceanside Garage and has already put in a stock of supplies and installed some new machinery.

C. J. Cadwell, Los Angeles, has been appointed sales manager of the Miller Carbureter Sales Corp. of Los Angeles. Cadwell is well known to members of the racing fraternity as "Doc Caddy."

The White Co., Portland, Ore., is now located in new quarters at Park and Couch Streets.

The Farnsworth-Foulkes Auto Co., Tacoma, Wash., has been organized to handle the Abbott-Detroit in Washington, Oregon and Northern Idaho.

S. J. Baldwin, Tacoma Wash., has opened a repairshop at 2133-35 Jefferson Avenue.

J. A. Collins and B. M. Aycrigg, Tacoma, Wash., of the Sterling Motor Car Co., have purchased the interest of John Larkin. This firm has the Tacoma agency for the Briscoe car and Kissel.

W. B. Conniry, San Diego, Cal., has been appointed San Diego and Imperial counties distributer of the King. Conniry & Shank is the name of the firm under which the King agency and garage business will be operated.

Roy E. Burbank and Thomas Perrin, Los Angeles, have leased the brick garage building at 1317-19 South Hope Street, and will handle the Abbott-Detroit as well as conducting a garage business. Both men are well known in the industry in Los Angeles.

The Los Angeles Electric Auto Co., Los Angeles, has been incorporated to handle the Owen-Magnetic in southern California. The firm has taken over the Washington Street Electric Garage, 1914 West Washington Street, and the R. & L. Garage at 1715 West Seventh Street. The firm will also distribute the Rauch & Lang Electric in southern California.

Olin E. Davis, San Diego, Cal., who won the 1913 Los Angeles-Phoenix road race and who has been connected with the industry in San Diego for several years, has joined the technical force of Earl C. Anthony, Inc., Los Angeles.

The Auto Radiator Works, San Diego, Cal., is now located at Second and Broadway, having moved from Tenth and Broadway into larger quarters.

The Gavin-Williams Co., San Diego, Cal., is now located in the new building at Fifth and D Streets.

The Grable-Young Co., San Diego, Cal., has moved into a new quarters at 1198 West Sixth Street.

Sachs Bros., have opened a new garage on the State highway between Del Mar and La Jolla, Cal., known as the Torrey Pines Garage. The building is but a short distance from the foot of the famous Torrey Pines Grade on the El Camino Real, the main highway between Los Angeles and San Diego.

The Cambria Spring Co., 913-21 South Santee Street, Los Angeles, Cal., has again outgrown its quarters and has taken over the building formerly occupied by the S. B. T. Garage, 920-22 South Los Angeles Street. The new building backs to the Santee Street location and the plant will now run through the entire length of the block.

The Stewart Truck Sales Co., Los Angeles, has opened the southern California agency for the Stewart truck at 1330 South Flower Street with W. Scott Johnson, a veteran truck man, as manager.

Display Helps for the Dealer

The Edward A. Cassidy Co. is distributing this garage hanger which is lithographed in color. In addition to advertising the G. P. muffler cut-out it serves a useful purpose in that it incorporates the sizes of exhaust pipes on practically every car on the market

Digitized by Google

Future Awaits the Dealer in the Land of the Southern Cross

By David Beecroft

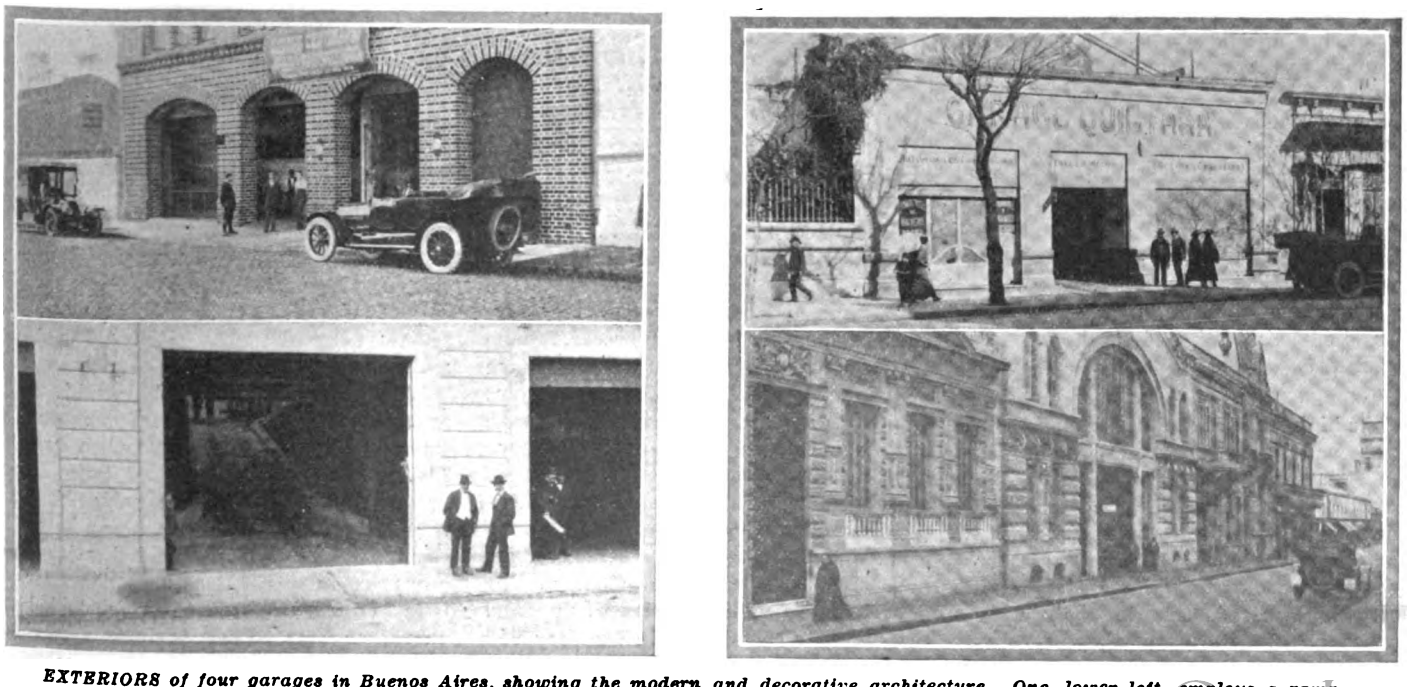
THIS is a story on the car dealers of South America, written by David Beecroft, managing editor of Motor World, who spent nearly three months investigating business conditions on the southern continent. It is of interest to every United States dealer, for there is opportunity for energetic Americans in the Motor marts of the southern Americas.

BUENOS AIRES, ARGENTINE, June 30—The Argentine Republic is of greater interest to the motor car dealers in the United States to-day than ever before. It is of interest to them because U. S. A. motor cars have been selling in greatly increased quantities during the past year and the prospects are that within the next few years there will be a great increase in the sale of our cars in this country.

Up to a year ago any U. S. A. dealer had little reason to be interested in Argentine, because there was little opportunity for him there, but to-day things are different, and it now looks as if the low-priced U. S. A. car is going to sell as rapidly to the farmers in Argentine as it has to the farmer in the Mississippi valley.

Investigate First

Before any U. S. A. dealer makes up his mind to visit this country to see if it is worth while moving to Buenos Aires to take the Argentine agency for a U. S. A. car, he should give the matter very careful investigation. There are great possibilities here, but there are also great handicaps to be overcome, and Argentine is no country to plunge into head first and with both eyes shut. It is a harder country to do business in than the U. S. A., but notwithstanding this, **there are great possibilities for the young man in the car, truck and accessory business.**



The selling of motor cars is not new here. The car is as old here as in the United States, so first eradicate from your mind any thought that Argentine is a new land for motor cars. It is an old land—and yet it is a new land. Argentine has been sold European cars from the days before they were sold in New York or Boston, which were the first American cities to buy the French and German cars. You see more European cars in Buenos Aires than in any of our cities. The streets here are literally filled with them. Nearly all of the taxis are European. Every day you see many European makes that have never been sold in the U. S. A. There are such Italian makes as Scat and Spa and such German makes as Horsch and Adler, names unfamiliar in either New York or Boston.

So it is with English makes, for here are Napiers and Humbers and Wolseleys, and Siddelys and Deasy's and nearly a dozen others that are practically unknown to us. The same is true of French cars and also Belgian, and one or two makes from Spain and Switzerland.

Many European Cars

B. A., as Buenos Aires is generally called, is a literal hot-bed of European cars. The Benz, Renault and Fiat are heavy sellers here, but there are many Mercedes, English Daimlers, Rolls-Royces, Panhards, Clements, Berliets, Isottas, Pipes, Delaunays, Peugeots, and a score of others. You will see whole rows of taxis of such makes at Fiat, Renault, Berliet, Delahaye and Benz.

B. A. is a city of very fine cars, handsome limousines, berlines and landaulets. Here the closed car is more popular than the open car. The Argentine woman prefers the closed type to the open varieties. She is not so fond of the great outdoors as is the U. S. A. woman. Here golf, tennis, surf bathing and mountain resorts have not influenced the women to the same extent they have at home. This has had a direct result in the car purchasing of the people. As a result you

EXTERIORS of four garages in Buenos Aires, showing the modern and decorative architecture. One, lower left, employs a ramp

Digitized by Google

see many finer limousines here than in New York. The cars are immaculate inside and outside. You could scarcely find cleaner cars. Several of the garages here have vacuum cleaners for the insides of the cars. The upholstery must be spotless every day, and the chauffeur sees to it that in and out the car is as spic and span as it can be.

Argentine a Good Buyer

The Argentine was a good buyer of high-priced goods, and is to-day, although now he is not buying as he used to. Previous to the financial chisis of 1911 nothing was too good for the wealthy Argentine. French and German factories had no car too fine for him. He wanted the best. He bought more expensive cars than Paris, Berlin or London. He placed orders with the finest European body builders to give him the last word in style and the last touch in finish and the last iota in good workmanship. He wanted only the best and cared little for what it cost.

But since 1911 there has been a change. On that date they stopped buying high-priced cars here and they have not started since. They stopped because of the financial crisis, and while the crisis is not acute, the war came at a time when finances were getting under way again and stopped any come-back of the high-priced car for the present. and the way people are now talking it is questionable when the high-priced job will come back, if it ever does.

Why the Crisis

A word on the crisis: It was due to a falling off in the price of land, and also to too long credits. Argentine is essentially a country of land. Land offered the great possibilities of making money. People speculated in land. All spare money was invested in land. The majority bought too much land. But prices kept going up and up. So long as they went up all was well, but when the shrinkage started the troubles came. Well, to make a long story short, land prices are to-day very low, almost where they were in 1890. Naturally, millions have been lost. Men who based their wealth on a per-acre value found the value cut in half and lower. As the wealthy people here are big land-owners, it naturally affected them seriously. They had to curtail, and the high-priced motor car—their luxury—felt the pinch first.

The high-priced car stopped selling entirely and has not started again. You can visit many dealers here and see five, six and a dozen high-priced cars on the floor that have been there since 1911. Some have not sold a single car. Others are worse off and have thirty or forty high-priced cars in their warehouses, or depositories, as they call them here. There are others who are in a still worse classification and have cars that have never been taken out of customs. This situation is true in Buenos Aires, it is true in Montevideo, the capital, or Uruguay. It exists to a worse extent in Rio de Janeiro, the capital of Brazil. You find it in Santos, a city of 500,000 population in Brazil. You also find it in a few Argentine cities that are much smaller than B. A., among them Rosario.

It is a very serious situation and has been serious for several years. Put yourself in their place. Turn back in your mind to 1911 and then think of not selling a car since. Where would you be at? Well, many B. A. dealers are in that predicament. But a different method of doing business prevented many dealers here from going into bankruptcy in spite of the fact that they have sold no cars for so long.

Here is the reason: Here the biggest dealers are not exclusive motor car dealers, as in Chicago, Kansas City, St. Louis or San Francisco, not to mention New York, Boston or Philadelphia. Here the big dealer is a machinery dealer. He sells threshing machines, land rollers, stationary steam engines, stationary gasoline engines, plows, cultivators, lathes for garages or factories, valves for water systems; in fact, everything in the machinery line, including farm machines, wagons, buggies, etc. They generally have huge places of business and carry very large stocks on hand. With them the motor car was only an incident.

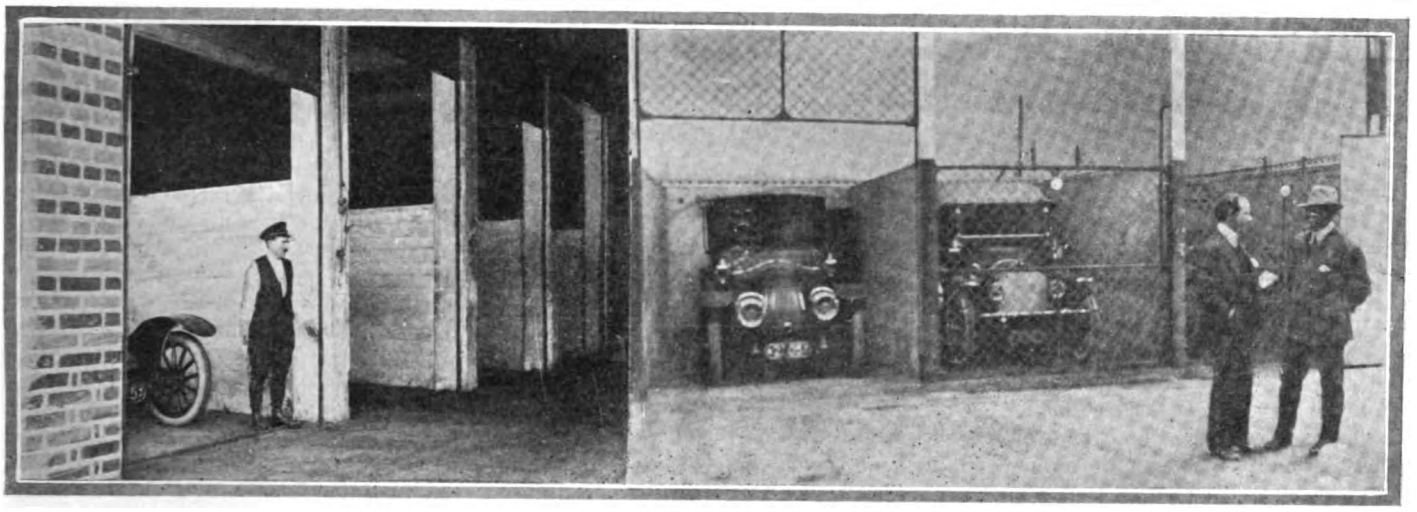
The motor car was perhaps the tail of the business, farm machinery the head, and mill machinery the body. Some sold electrical machinery, others railroad supplies, and a few machinery for shore factories.

Why They Didn't Fail

It was because of this wide nature of their business that they did not go broke. They were able to live through a crisis of 5 years and could go on for 5 years more without selling a motor car. Some of them are very wealthy. They have big capital back of them. Some are large landowners, and one or two of them have large warehouses and import their own gasoline, have factories of their own in different parts of Argentine for the manufacture of sundry articles, and in general are big business men. Some of them have $35,000 worth of motor cars on the floor and are willing to let them stand there a year or so more before they will cut the price very much.

Naturally, many of the dealers' places here are quite mixed up affairs. From the street you would never think they sold motor cars. There is frequently no sign above the doors or on the windows advertising any make of motor car. You stop and look in the window and you may not see a car. When you step inside you may see a line of cars along the wall near the back of the store. In front of the cars are lathes, fanning mills, ditch-digging machines, steam engines and stationary gas engines, and hanging from the ceiling are plows, corn cultivators, and scores of other smaller implements. In a few places where electric supplies are sold there are two-score electric chandeliers hanging from the ceiling, and when you sit in the car you have to lower your head for fear of striking the chandeliers. It is often a true case of a bull in a china shop.

INTERIOR of a typical Buenos Aires taxicab garage. The sign says "No smoking"



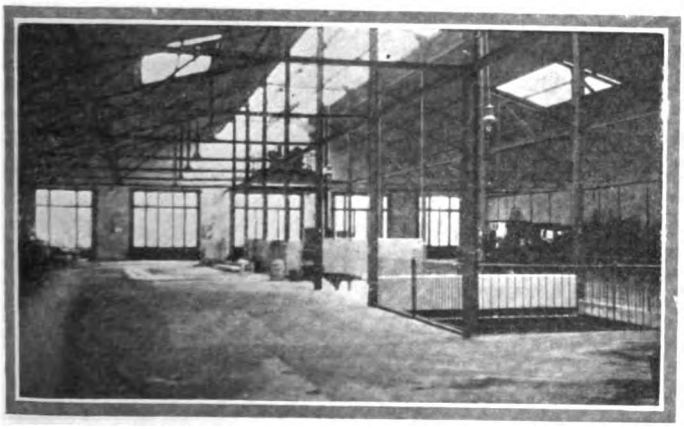
Lax Salesmanship

I have seen well-dressed men and women walk into these machinery houses and go back to the car, open the doors, try the body, look around and then walk out, and nobody come near to ask even that stupid question: "Are you interested in motor cars?"

This has happened not in one, but in a great many places, and in cities in Argentine and also in Brazil. I expect the reason is that these men are often luke-warm on the motor car. They have been stung with it, and they do not think it worth while to have on the floor a salesman to care for those customers who casually drop in. Such is the situation in several dealers' places in B. A., in Rio and in Santos to-day.

What these dealers will do with the numbers of old high-priced European cars on their hands is difficult to say. The bodies are generally old types and naturally the chassis are equally old. It is getting more difficult each day to sell them and yet there is no indication of any price-cutting. It seems a characteristic of business here to prefer to hold on rather than to sell early at a sacrifice. Some of the models are very heavy.

Digitized by Google



STALLS FOR CARS are used by quite a number of Buenos Aires garages. Those at the left have a steel roller curtain in front, while those at the right use a wire mesh door. The sidewalls are concrete

the bodies are high and ungainly, and it will be difficult to dispose of them even at sacrifice prices when the stylish lines of the U. S. A. car become better known here.

What of the War's End?

Whether the ending of the war will bring these expensive cars back into the market is problematic. Here many of the motor-wise heads think otherwise. They are convinced that the day of the high-priced car in Argentine is over. They are convinced that the saturation point has been reached. They do not believe the high-priced job will ever sell again here as it has in the past. They believe that the dealers stocked up with such machines will have to sacrifice them and that already this movement has started.

But they do not believe that the interest of Argentine in the motor car is waning, but that it is just now entering a new stage of development, and this brings us to the question to be considered in our next instalment, namely, "The present invasion of the U. S. A. light car and the possibility of selling it in the future, not only in Argentine, but in many other countries, namely, Brazil, Chile, Uruguay, and the West Coast countries."

METAL ROOFING with sky-lights makes the second floor of this garage airy and light

THE NEW H. A. L. TWELVE

(*Continued from Page 11*)

a key located in the floor in front of the driver's seat. Just back of the gearbox on the driveshaft is mounted the speedometer driving gear, meshing with the flexible speedometer shaft gear which is bracketed to the back side of the gearcase.

The driveshaft is nickel-steel tubing, having a 2-in. outside diameter and a wall thickness of ¼ in. It is stronger and lighter than a solid shaft of similar size, and also prevents whipping. There is a universal joint mounted at either end.

The rear axle is a Timken floating construction, fitted with spiral bevel driving gears carried on Timken roller bearings. The axle housing is a steel pressing with axle tubes in unit with the differential case. A large plate at the rear gives complete access to the differential gears and driving gears for adjustment or repair. The ratio is 4 5/11 to 1.

Long, flat rear springs of semi-elliptic form are fitted, these being underslung from the axle and becoming flat when loaded. They consist of ten leaves 2½ in. wide and are 57 in. long. From this it will be seen that the car should ride very easily, since road shocks tend to force the springs to the reverse side of the horizontal; thus a dampening effect upon the shocks is produced, and at the same time this spring action is best for the spring. The tapered frame narrows at the front in order to give a small turning radius and a firm body support throughout the entire body length as well. Four substantial cross-members brace the frame, in addition to the support it receives by the motor; and since the channel is deep and the flanges have a width of 1⅞ in., there seems little possibility of frame distortion under ordinary operating conditions.

At the rear is mounted a 23-gal. gasoline tank, suspended by steel straps from the rear cross-member. Fuel is fed to the carbureter by the Stewart vacuum system.

In connection with the outward appearance of the car, mention should be made of the distinctive type of radiator used, which is moderately high and narrow, and which blends well with the general sloping lines of the car. There are auxiliary tonneau seats which fold into the back of the front seat, and another attractive feature is the symmetrical grouping of the instrument on the board. All the equipment of the modern car is included.

Stutz Raises Roadster Price

INDIANAPOLIS, July 31—The Stutz Motor Car Co. announces that the new models will have wire wheels as standard equipment, improved carbureters to take care of present low-grade fuel, longer rear springs, increased roominess in the bodies, and an entirely new roadster. A standard wheelbase of 130 in. has been adopted for all models, which will consist of the Bulldog special, with four- and six-passenger bodies, and the new roadster The price of $2,550 for the Bulldog is the same, while the new roadster price is $2,275, an increase justified by a longer wheelbase and many refinements. The roadster has a modified turtle deck with a depression in it for carrying the spare wheels, instead of the exposed tank and trunk, as formerly.

Nash Incorporates His Company

BALTIMORE, July 29—The Thomas B. Jeffery business, which was purchased by C. W. Nash, will be operated by the Nash Motors Co., which has been incorporated in this State at $24,999,500.

Brand New Briscoe Four at $625

Four and Five-passenger Bodies— Gearless Differential—30 H. P. Motor— Gearbox in Unit with Axle

BRISCOE has a brand new car fitted with a four-cylinder motor and priced at $625 either with a five-passenger touring body or a four-passenger roadster type. It is a distinctive car in a number of respects, both in chassis design and body arrangements.

Following the latest body contour, the new Twenty-four, as it is called, has a rather high and narrow radiator and a sloping hood and body.

There is a 3⅛ x 5⅛ four-cylinder block motor having a detachable cylinder-head that gives access to the valves; an inverted type of cone clutch; three-speed gearset in unit with the rear axle; floating type of rear axle, in which is incorporated the Bailey gearless differential; elliptic front and rear springs; tapered frame, and 30 x 3½-in. tires all around. The motor is said to develop 30 hp.

The bottom of the motor is inclosed by a pressed steel pan which acts also as the oil reservoir. On the right is carried the Splitdorf gear-driven generator, with the ignition distributor mounted in unit, and on the left is the starting motor, also a Splitdorf unit. It connects to teeth in the flywheel face. The right side being the valve side, the manifolds are placed here, with the carbureter mounted quite high up, so that there is little or no interference with the reaching of the tappets.

With direct oil feed to the bearings and gears, the lubricating system is a combination of splash and force feed. The oil pump is positioned on the right forward side of the crankcase and is driven off the camshaft. The oil leads to the gears and sight-feed gage run outside on the right. In accordance with usual practice for this kind of oiling, the troughs under the connecting-rods are kept supplied, and the rod ends throw the oil up into the cylinders and onto the various bearing surfaces, from which it eventually drains back into the crankcase. To tell the height of the lubricant in the supply, there are two indicating levers located on the right side of the motor just below the oil pump. There is also an indicator which tells whether or not the oil is flowing as it should. This occupies an unusual position in that it protrudes through the toe board within sight of the driver and ahead of the control levers. Thus it is out of the way and can be readily seen, but the piping is reduced to the minimum. The oil filler and breather is in a new place, too, it being forward on the right and high up, so as to be accessible for filling. It enters the cylinder block just below the exhaust manifold and above the cover plate that houses in the valve tappets.

Briscoe Four

Price—	
Touring	$625
Roadster (four-passenger)	$625
Color	Dark green
Make of Motor	Own
Number of Cylinders	Four
Shape	L-head
How Cast	Block
Bore	3⅛
Stroke	5⅛
S. A. E. Horsepower	15·64
Ignition	Splitdorf distributer
Engine Starter	Splitdorf
Lighting System	Splitdorf
Clutch	Inverted cone
Gearset, three-speed unit with rear axle	
Wheelbase	105
Front Tires	30 by 3½
Rear Tires	30 by 3½ non-skid
Wheels	Wood
Steering	Left
Control	Center
Type Rear Axle	Floating

The radiator top tank is large, and the water flows to it from the large water outlet connection that extends the length of the top of the cylinder casting, as already pointed out. There is also a large water inlet which is attached to the left side of the cylinder block and extends all along it, so as to give good water distribution, and, further, it is of sufficient size to insure against restriction of the flow.

Drive of the generator is unusual, for it is from the rear end of the camshaft through gear connection. The generator is close to the flywheel on the valve side of the engine, and the gearing is housed in the extension of the right rear supporting arm of the engine.

The clutch presents some differences over average practice, principally in the fact that it is inverted. The cone is leather-faced and has six spring plungers acting against the under side of the leather at equal intervals to insure easy action and prevent grabbing.

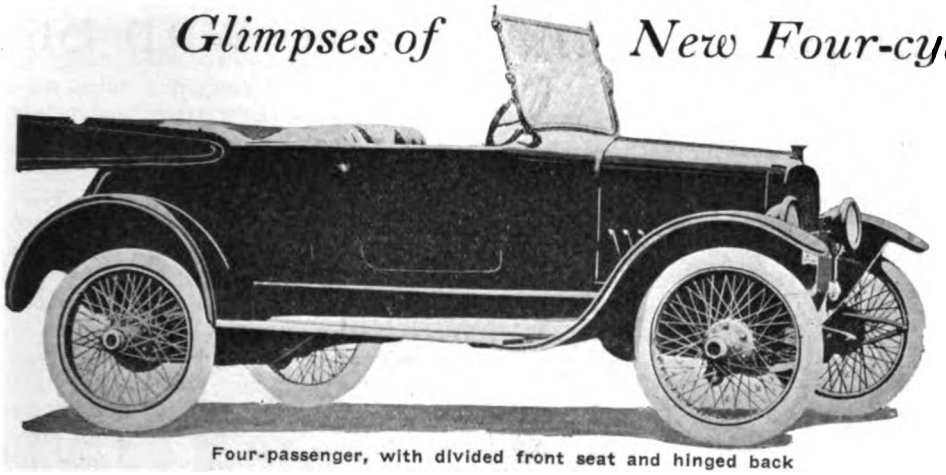
There is a light torsion bar running from the front of the axle housing to the intermediate frame cross-member, this assisting in taking the torque and drive. Compactness is very noticeable in the gearbox, which has three speeds, with the countershaft mounted directly below the mainshaft. The latter runs on taper roller bearings and ball bearings, while the countershaft is carried on plain bushed bearings. Control rods run parallel with the drive shaft from the H-gate that is attached forward to the intermediate cross-member of the frame. These control rods are of quite large diameter and should not have any tendency to whip. Special provision has been made in their mounting, so that there is no likelihood of rattle. Although the pressed-steel rear axle presents no unusual features outwardly, it is fitted with the Bailey gearless differential, which acts, through a series of ratchets and pawls, so that the wheel having the most traction gets the most power, in contradistinction to the standard differential, in which the free wheel receives the bulk of the power. This device is now quite well known and needs no lengthy description here. The axle is a floating design, in which the weight of the car is carried entirely on the axle tubes, with none to be sustained by the axle shafts, they being given the single function of driving the wheels. Hyatt roller bearings carry the axle shafts, acting in conjunction with ball-thrust bearings, which care for the thrust.

A straight taper is given the frame from front to rear, thus allowing for a moderate turning diameter and for rigid attachment of the narrow radiator that fits snugly between the side members. Besides, a sloping frame makes the best kind of support for the tapering body, holding it well along its entire length.

The four-passenger body is deserving of special mention on account of the originality displayed in the arrangement of the front seat back. The aisle between the two front seats allows access to the rear seat and is normally closed by a hinged portion of the pack of the forward seat. This, when closed, affords a back rest all the way across, but when it is desired to get into the rear compartment the entire center upholstery section hinges out of the way and gives an aisleway that is plenty wide enough.

Camping Site at Tractor Field

ST. LOUIS, July 24—A site for camping parties has been laid out on the ground reserved for the Farm Tractor Show here Aug. 1 to 4, open to all visitors bringing camping materials. Water and other conveniences are at hand. Practically all of the State agricultural and road officials will be present during the 4 days. Sufficient land has been acquired for the exhibit to insure all exhibitors space for private demonstrations. Special demonstrations by electric light have been arranged for city men. Aug. 2 is St. Louis and St. Louis County day, Aug. 3 is Agricultural day, and Aug. 4 is Good Roads day.



Show at Oregon Fair

TACOMA, July 29—Motor car dealers throughout the State of Oregon will again exhibit at the State Fair at Salem, Ore., which this year will be held Sept. 25 to 30. Joseph M. Rieg, who managed the two previous exhibitions given in connection with the State Fair, will again manage the show. The shows in the past have been profitable to the dealers, as a great many sales were made during the week.

Haynes Twelve Motor Interchangeable with Six

Valve-in-head Motor Gives Accessibility—Prices $1,985 up—Many Bodies

ALTHOUGH one experimental twelve motor was displayed at the shows last winter, it is not until now that the Haynes Automobile Co., Kokomo, Ind., has found it advisable to offer its newest creation to the buyer. The reason for the delay can be credited to the fact that production of the six has thoroughly taxed every facility of the factory. A vastly increased floor space, available in several newly-constructed buildings, is now being utilized for the construction of the new twelve motor.

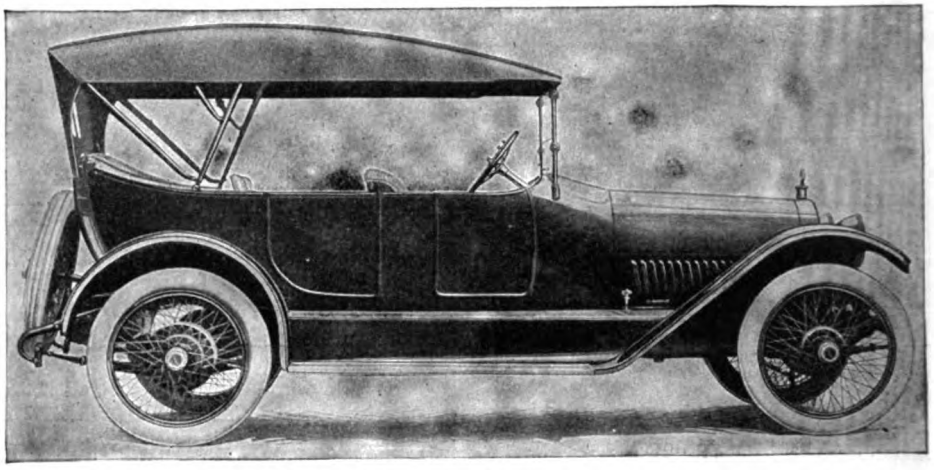
The new power plant is interchangeable with that of the six and the chassis specifications for 1917 will be continued without change. In the motor lies the only difference between the two models, even the supporting members being the same. The same bodies are also used in both models.

The new motor is exceptionally light in weight. It is of the high-speed type, with light reciprocating parts. Great attention has been paid to the matter of quick acceleration.

The cylinders are in two sets of six, each series block cast, of valve-in-the-head construction with removable cylinder-head. The bore and stroke are 2¾ x 5 in., giving a piston displacement of 356 in. and an N. A. C. C. h.p. rating of 36.3. All the cylinders are separately ground after boring; the operation has been considered necessary to insure equal compression and consequently more perfect motor balance.

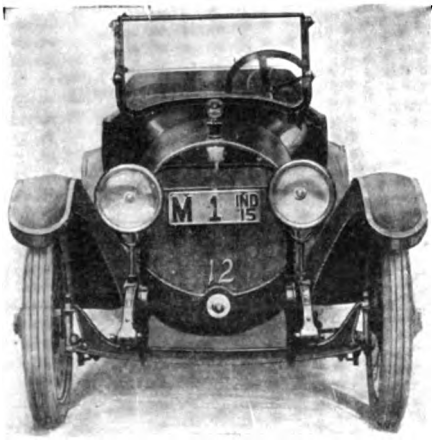
Pistons in the twelve motor are aluminum alloy, carrying three non-leaking piston rings, with an oil groove to drain the oil to the reservoir, minimize the chance of oil entering the combustion chamber and the consequent formation of carbon deposits.

The valve construction is a departure from Haynes practice inasmuch as the valves are in the head. The reason why overhead valves were adopted was because they permitted accessibility of the motor accessories which could not possibly be gained in a side-valve design.



The same type of crankshaft is used on the twelve as on the six. Two connecting-rods are arranged side by side on the same crank-pin. Each is readily adjusted without reference to the other—an arrangement which cannot be obtained in the forked-rod construction. The cylinders are staggered, so that opposite connecting-rods will not play on the same center line.

A split crankcase is used, with all crankshaft bearings carried in the upper half. This section is aluminum, while the lower half is seamless pressed steel.



Lubrication is of the force-feed and splash type, a constant flow of oil at all times being assured by the use of a plunger type of pump with a capacity of ½ gal. per minute. According to the manufacturer, the temperature of the oil can be kept at a constant low point from the fact that air can strike the reservoir directly, there being no pans to retain the heat. Instead of using a mud-pan the pressed steel crankcase half is fitted tightly between the motor and the car frame.

The Leece-Neville starting and lighting system is used. There is a generator for charging the battery and a motor for cranking the engine. Starting is through the Bendix system of drive. Ignition is through a distributer fed by the storage battery.

The chassis construction in both six

and twelve, with the exception of the new twelve motor, is exactly the same as in the 1916 models. Features in the construction are floating rear axle with spiral bevel drive, three-plate dry-disk clutch, cog-adjusting bevel pinion, three-speed selective gearset, etc.

Haynes models at present include five- and seven-passenger touring cars, a three-passenger roadster and a sedan, with promises of something in the nature of a surprise in new closed bodies and a four-passenger roadster to be brought out later. Seat covers are featured on all models as regular equipment. Both five- and seven-passenger models are equipped with adjustable individual front seats. Auxiliary seats in the large cars are of the stowaway type and are entirely out of sight when not in use. The seats drop down into the floor and all that remains visible are two rings, used for pulling them up again.

The wheelbase is 127 in., with a turning radius of slightly over 21 ft. Tires are Goodyear cord, 34 x 4½, on the light twelve and Goodyear or United States optional on the six. Prices of the light twelve are: Five-passenger, $1,985; three-passenger roadster, $1,985; seven-passenger, $2,080; five-passenger sedan, $2,650, and seven-passenger sedan, $2,700.

Ready At Tacoma

TACOMA, July 29—While there is still more than a week in which to make entries in the Montamarathon and Golden Potlatch trophy 300-mile race to be held on the Tacoma Speedway Aug. 5, indications point to a field of more than twenty starters. Secretary George Dunn has announced the following signed entrants:

De Palma, Mercedes; Henderson, Maxwell; Chandler, Crawford; Rawlings, West Duluth Special; Moore, Peusun; Barsby, Hudson Special; Milton, Duesenberg; Franchi, Delage; unnamed, Gandy Special; DeAlene, Duesenberg; Rickenbacher, Maxwell; DeVigne, Delage; Lewis, Crawford; Sorenson, Morse; Taft, Omar; Johnson, Crawford; unnamed, Gandy Special; O'Donnell, Hoskins Special; Price, Gandy Special.

Marmon Makes Coast-to-Coast Run

SAN FRANCISCO, July 29—S. B. Stevens, chairman of the Motor Reserve Division of the American Defense Society, finished a trans-continental run in his Marmon car at 5 p. m. this evening. He left Columbus Circle, New York, at 1.30 a. m., Monday, July 24, and completed the trip in 5 days, 15 hr. and 30 min., allowing for the 3-hr. loss due to difference in time. The object of his trip was to demonstrate the value of good roads in quick mobilization. The car was a Marmon stock job and is the privately-owned vehicle of Stevens, although the co-operation of the Nordyke & Marmon organization was afforded the car and drivers on the trip across the country.

Five drivers divided the time, the greater part of the distance being driven by Stevens. The other drivers were Walter Bieling, Robert Creighton, Wm. Bins and Fred Barbour. A distance of 3390 miles was covered at an average speed of 25.1 m.p.h.

57 Gas is "Naphtha"

TOPEKA, KAN., Aug. 1 — Frank Cumiskey, State oil inspector, after a conference with Governor Capper, issued an order to local inspectors to stamp all refined petroleum testing less than 58 as naphtha. Dealers will be notified that when they receive purchases of gasoline stamped "naphtha" they must sell it as naphtha.

Ford Reduces Prices and Improves Bodies

Reductions from $35 to $95—Touring Now $360—Roadster $345—May Make Body Changes

DETROIT, Aug. 1—Starting with today, new prices on Ford cars prevail. The reduction varies all the way from $35 on the chassis up to $95 on the sedan. The touring car has been reduced $80, from $440 to $360. The runabout is now $345 instead of $390. The chassis alone sells for $325, whereas it formerly sold for $360. The coupelet is $505 instead of $590, the town car $595 instead of $640 and the sedan $645 which is a $95 reduction from the former price of $740.

Accompanying the change of price there will also, it is said, be a change of appearance, as the new Ford cars will be fitted with new hoods and crowned fenders which will give a new outline. The radiator shape also will be remodeled in a moulded form.

Former and Present Prices of Ford Cars

	Aug. 1, 1912	Aug. 1, 1913	Aug. 1, 1914	Aug. 1, 1915	Aug. 1, 1916	Canada

Cleveland To Have Fall Show

CLEVELAND, Aug. 1—Cleveland, which holds annually in January an automobile show of metropolitan proportions, is to have in September its first pretentious fall show.

The Cleveland Chamber of Industry, one of the active civic organizations, is sponsor for an Industrial Exposition and Fair, to be held under canvas at Edgewater Park, Sept. 2-9. One feature of this exposition will be the automobile show.

Gasoline Fight on in Milwaukee

Standard Oil Aims Shaft at the Independents—Variance in Prices

MILWAUKEE, WIS., July 29—Full page advertisements were published in every Milwaukee daily newspaper during the last week by the Standard Oil Co. of Indiana, headed, "You are Paying Too Much for Gasoline." The advertisements point out that to pay more than 18.6 cents per gallon is paying too much.

The heavy advertising campaign is believed to be another step in the war that has been waged between the Standard and the independent oil men for many months. The city of Milwaukee is literally sprinkled with filling stations, and at prominent intersections both the Standard and independents maintain stations at which gasoline is sold at 1 cent above tank wagon prices. Motorists no longer buy gasoline from garages; that is, very few do, because they can get their fuel cheaper at the filling stations and have only a few blocks to go to get it.

There is considerable variance in prices in Milwaukee. The Standard Oil Co.'s filling station price on Red Crown is 18.6 cents per gallon. The Bartles-Maguire Oil Co., a large independent, which operates numerous filling stations, is charging 18.6 cents for tank wagon delivery and 19.6 cents at filling station for the lowest test gasoline it handles. This tests between 57 and 59. The cheapest gasoline sold by the Wadhams Oil Co., another large independent, with many filling stations, is a 60 to 62 test gas, selling at 22 cents per gallon, tank wagon basis, and 23 cents, filling station. Standard Oil advertises that Red Crown is 18.6 cents at filling station, "or we will deliver it to your private garage at the same price."

The page advertisements say: "When your dealer sells you another brand of gasoline at 19.6 cents, 23 cents, 25 cents or 30 cents a gallon, claiming it to be better than Red Crown, he is misrepresenting the facts. . . . . Red Crown gasoline is the only motor fuel to be had that is manufactured under a process developed from scientific data, worked out by the most eminent petroleum chemists and automobile engineers available. The Standard Oil Co. has spent years of time and millions of dollars to make Red Crown gasoline and to make it uniform at all times. It never varies. You never have to adjust your carbureter when you use Red Crown."

Gives Up "Auto Inn"

OCEANSIDE, CAL., Aug. 1—Merrill's Garage, Third and Hill Streets, is the name under which the garage owned by Chas. D. and W. H. Merrill is now operated. It was formerly known as Merrill's Auto Inn, but the proprietors found that motorists believed it to be a hotel, so they changed the name and moved from Third Street between Tremont and Cleveland, to Third and Hill. The owners of the garage operated a filling station on the site of the new garage before moving from the old location. The new place has a floor 100 x 60, two entrances, and a stock room in which is carried a stock of tires and accessories valued at $3,000.

Challenges All Wisconsin!

MILWAUKEE, Aug. 1—The Olson & Pauly Auto Co., 441-443 Jackson Street, State agent for the Ross 8, has issued the following challenge: "We will forfeit $100 to any stock car, 1916 model, that can equal the Ross 8 in hill climbing, carrying the same load of passengers on high gear, and also accelerate or pick up speed as fast, from a standing start, on high gear, in a given time or same distance as the Ross 8. This defi is hurled at any and all stock gas cars in Wisconsin, regardless of price or number of cylinders, four, six, eight or twelve, or size, and we will go to any part of Wisconsin or any favorite hill or ground."

"Harry Newman" Goes Ballooning

MILWAUKEE, July 29—A huge silk balloon, shaped like a Zeppelin airship, attached to a huge sign bearing the words, "Harry Newman Recommends Preparedness," and anchored to the roof of the Harry Newman, Inc., garage and headquarters at 700-704 Grand Avenue, Milwaukee, during the Milwaukee preparedness parade, July 15, broke loose, carrying with it the mammoth banner. Four days later the balloon was sighted in Lake Michigan off Bailey's Harbor, near Sturgeon Bay, Wis., approximately 350 miles north of Milwaukee as the crow flies. The coastguard crew picked up the balloon and returned it to the Newman house. The "stunt" aroused great interest throughout eastern and northeastern Wisconsin and hundreds of people scrambled to sight it on its flight with the wind.

Rubber Club Holds Outing

BOSTON, July 29—The seventeenth annual outing of the Rubber Club of America was held July 17-18 at Boston and Lowell. Akron was represented by a number of leading rubber men. The Rubber Club of America is the successor to the New England Rubber Club, which was organized 17 years ago as a social body, but within the past 4 years has developed into a business organization with offices in New York City. Rubber companies represented were Goodrich, Goodyear, Firestone, Pennsylvania, Swinehart, McGraw, Republic and Mohawk.

May Adjust Texas Freights

AUSTIN, TEX., July 29—The Texas Railroad Commission has issued official notice that it will give a hearing on Sept. 12 to consider a readjustment of the freight rates on motor cars, less than carload shipments, too large to load in ordinary box cars, and requiring automobile cars. A rate of 1½ times the first-class rate is proposed for automobiles, motor trucks and motor wagons, set up or sufficiently knocked down to load in box or stock cars, or when requiring automobile cars or flat cars or when such cars are demanded by shippers. The minimum weight is to be fixed at 5000 lb.

Deny Overland Garage Permit

BUFFALO, July 29—A letter from Judge Albert Haight of the Court of Appeals went far towards determining the City Council in denying the petition of the Overland Stores Co. for permission to erect a public garage at Bryant and Main Streets. Judge Haight's property adjoins a site on which the Overland company is building a brick building, to be used as display rooms and a repairshop. Its petition also included the request that it be allowed to store 10,000 gal. of gasoline on the premises.

Judge Haight said in his letter to the Council that he did not object very strenuously to a repairshop, but did not like the idea of having 10,000 gal. gasoline at his back door.

Portland Has a New Row

PORTLAND, ME., July 29—Preble Street in this city is now becoming a second motor row, rivaling Forest Avenue in the number of salesrooms. The removal this week of the Pierce-Arrow agency to Preble Street places it with the Pathfinder, Auburn, Commerce truck, Allen, Metz, Saxon, Goodrich tire and Excelsior and Henderson motorcycles.

The E. E. Wentworth Corp., which has the entire Maine territory for the Overland, moved into its new salesrooms, 551 Congress Street, a few days ago, where it has one of the finest places in the city.

The Maine Motor Car Co., after some demonstrations at Boston by its officials, has signed a contract to handle the Marmon in Maine as a dealer for Frank E. Wing, New England distributer.

The Maxfer Truck & Tractor Co. was organized here this week, capitalized at $45,000.

Steal Fords and Then Mix Up All the Parts

Car Thieves in Louisville Evolve an Original Plan for Covering Up Their Tracks

LOUISVILLE, KY., July 29—Had King Solomon visited the Police Court this week and heard the case which involved the identity of two Fords, memories of the two women who claimed the same baby, no doubt, would have flashed before his mind. Five owners—Deputy Sheriff Lee Barbour, Dr. J. P. Shacklett, Walter Bliss, Dr. Charles K. Beck and C. M. Rankin—had their cars stolen at some time during the past month and reported their loss to the Detective Department. After some tall manipulating of the arms of the law four of the cars were brought to headquarters. Three men were ar rested in connection with the case.

Testimony of the witnesses showed that the cars stolen had been torn to pieces and reassembled, after having been taken to a garage. Dr. Shacklett, the first witness, testified that he looked at the four Fords that had been found in the garage and he had found that car No. 1 had his chassis. His fender was on car No. 2, as was his wheel. The radiator of his car was on car No. 3, he stated. The top of the doctor's car was on car No. 4. Owing to the great many serial numbers on different parts of the automobile to which reference had to be made so often, both witnesses and counsel became fatigued during the trial. Two of the men on trial, R. C. Collins and Ralph Thornton, were held to answer to the grand jury in the sum of $1,500 each. The third man was dismissed.

Baker Visiting America

NEW YORK, July 31—Fred W. Baker of the Baker Rim Co., Ltd., Stourbridge, England, manufacturer of the Rebak rim for automobile wheels, has arrived in New York and expects to spend a month in this country investigating the automobile rim business. Baker has made several previous trips to this country, visiting our automobile shows.

Dealer Holds a Maxwell Day

KANSAS CITY, MO., July 29—The Acton-Parke Auto Co., Maxwell dealer, held a Maxwell Day, in which nearly 400 Maxwell owners participated. There was a downtown parade and a ride over the boulevards to Fairmount Park, and a water festival at the park, valuable prizes being given to the winners of various contests. Mrs. Mary L. Weber won $100 for having the best decorated Maxwell in the parade. The event was on Saturday and the downtown streets were crowded, the parade arousing a great deal of interest. It was preceded by policemen on motorcycles, clearing the way, the machines being decorated, as were all the Maxwells in the parade. C. B. McLaughlin is manager of the Acton-Parke company.

Jersey Interested in Roads

ATLANTIC CITY, July 29—The committee appointed by the Governor sat last week in the rooms of the Automobile Trades Association of Atlantic City to hear the views of residents relating to the good and efficient road construction and maintenance throughout this State, in the proposed hard surfacing feature of the Egan Bill and other legislation that might be passed.

The Egan Road Bill was gone into at great length and thoroughness. Other plans of topography were laid out as presented to the Legislature at the past session and other new ideas beneficial to the State and the traveling public.

The general idea is that the State would supervise all main arteries of the system, taking the control thereof from the county or municipality entirely insofar as they are the main artery.

Also it considered licensing fees of cars, chauffeurs' examination and fees, reciprocity between this State and other States.

Pearl D. Karshner

KANSAS CITY, MO., Aug. 1—Pearl D. Karshner, manager of the Karshner Motor Car Co., Stutz dealer, died recently in Kansas City, aged 40. He is survived by his widow, by a son Kenneth by a former marriage, and a sister, Mrs. David Black. Karshner was one of the stockholders of the Kansas City Speedway & Exposition Co.

Ends Band of Thieves

DALLAS, July 31—City Detective Edward Erwin has, he believes, broken up a gang of automobile thieves in Dallas, which, within the past few months, has sold, according to his figures, cars netting them a profit of at least $6,000. The gang worked in Dallas and Fort Worth. It would remodel cars in different ways to make them difficult to identify and then would sell them in nearby towns. The leaders are members of well-known families. Two arrests have already been made.

New Piston Ring Company

ST. LOUIS, Aug. 1—Ford-Davis Mfg. Co. has been organized with $30,000 capital to make piston rings. Plant will be at 2315 Locust Street. E. W. Oelfcken is the largest stockholder.

Another Desert Race Planned on the Coast

Will Run in Fall from Los Angeles to Salt Lake City—Not Revival of the Phoenix Classic

SAN BERNARDINO, CAL., July 31—There is to be a great desert road race staged in the Southwest this fall and it will not be a revival of the Phoenix road race either. There is to be a race from Los Angeles to Salt Lake over the famous Arrowhead Trail, a road that cuts in on the National Old Trails route between this city and Needles.

Chas. Biglow, field secretary of the Arrowhead Trail Association, which organization is promoting the great event, was in Los Angeles yesterday for a conference with Al. G. Waddell, representative of the contest board of the A. A. A. and a car is going out to pathfind the route within the next few days. The dates asked for by the Arrowhead Trail Association are Oct. 8, 9 and 10. The race is to finish at Salt Lake at noon of the third day, Oct. 10, which is the opening day of the Mormon Conference. One night control is to be at Sly, Nevada and the second is to be at St. George, Utah.

It is planned to have a large enough purse to offer $5,000 first money. The Salt Lake Railroad is to run the "Howdy Special," which was always a feature of the Phoenix races and it is expected to be the greatest road race ever staged in the West.

Changes in New York Overland

NEW YORK, July 31—The Willys-Overland Co., as a result of taking over its own branches in this city and surrounding territory, has made many changes in its local organization.

E. M. Lied, formerly zone manager in this territory, has been appointed assistant manager of the local branch in the Circle Building, Broadway and West Fifty-ninth Street. H. F. Harris, formerly assistant manager of the L. Michael Co., Chicago, becomes controller.

R. D. Willard, formerly manager of the Carl H. Page Co.'s branch in Philadelphia, has been appointed sales manager. S. D. Miller, also a member of the Carl H. Page Co., having managed the Brooklyn branch, joins the Overland forces as manager of the Newark branch.

L. F. Seeback, formerly manager of the Brooklyn branch of the C. T. Silver Co., remains in that city as manager of the new Willys-Overland branch.

The Brooklyn branch is temporarily located at 338 Flatbush Avenue, while the Newark branch is at 35-37 Halsey Street. The company expects to enlarge its territory by establishing branches in Yonkers and other nearby cities.

Association News

Toledo To Have Tractor Test

TOLEDO, Aug. 1—A practical demonstration of farm tractors will be held in Toledo Aug. 8 by the Toledo implement dealers. The demonstration is expected to attract 5000 people and is to introduce the tractor to the farmer who handles 80 acres or more of land. Ten machines will be demonstrated. A 20-acre farm at Front and Dearborn Streets has been selected for the demonstration.

Getting Ready For Jobbers

ST. LOUIS, July 31—The National Association of Automobile Accessory Jobbers' entertainment committee of the Motor Accessory Trade Association met at the Missouri Athletic Association Friday afternoon and approved a general outline for the entertainment of the delegates for the convention in October. Plans are being made for a series of rides to different parts of the city and surrounding country, a moonlight boat ride on the Mississippi and a dinner at Sunset Inn, the show resort which is located on the historic General U. S. Grant farm. The committee expects that more than 300 accessory dealers will be present. The committee is: L. E. Allmon, president of the St. Louis Association; R. E. Lee, secretary; W. K. Norris, John F. Shuford, W. L. Niekamp and Fred Campbell.

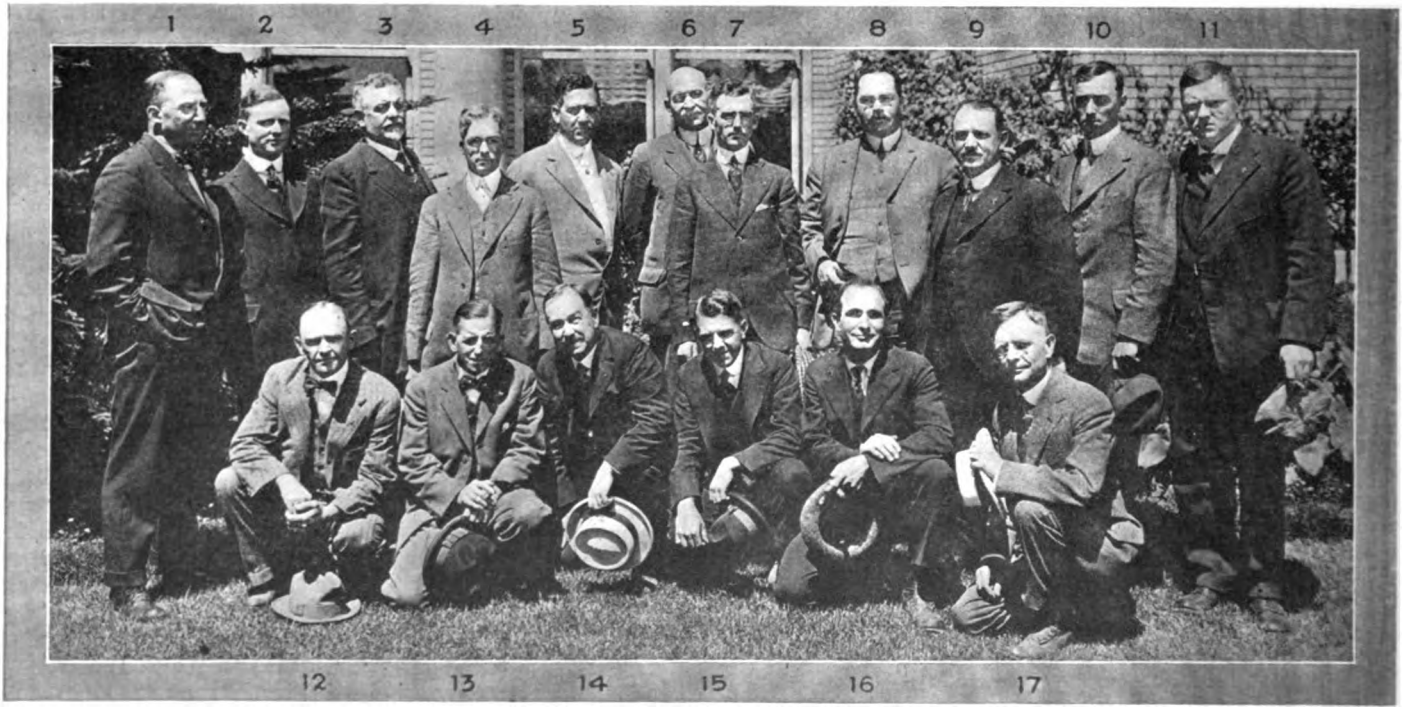
Car Show at Kansas Fair

HUTCHINSON, KAN., Aug. 1—The automobile dealers of Hutchinson have made arrangements with the management of the Kansas State Fair here for an annual motor car show in connection with the fair. The dealers have been given space in the grounds and will erect a stucco building, 40 x 240.

Lee Back On the Job

ST. LOUIS, July 31—Robert E. Lee was elected secretary of the Automobile Manufacturers and Dealers Association of St. Louis by the unanimous vote of the directors July 27. Lee was the organizer of the association and served 5 years as secretary, resigning in October, 1914, because of other duties. The secretary also is manager of the annual show and has had charge of all shows except that of last year. Lee also is secretary of the Motor Accessory Trade Association, of which he was organizer.

Since the members of the Manufacturers and Dealers voted to hold the annual show after that of Chicago instead of in October, as has been the St. Louis custom, there has arisen something of a dissenting opinion. The dealers regret that they will have no opportunity to show their inclosed cars in a show. This feeling is doing much to promote the Locust Street Auto Fair during the fall festivities in October. Arrangements are progressinging nicely whereby all dealers will be allotted space in Locust Street showrooms with non-competing lines.



Washington Dealers to Meet

TACOMA, Aug. 1—Definite arrangements have been completed for the holding of the second annual convention of the Washington Automobile Chamber of Commerce in Tacoma, Wash., scheduled this year for Aug. 4, preceding the Montamarathon races.

Indications already are that the attendance will exceed any meeting of the State dealers ever held, and inquiries are being received daily at the club's headquarters as to the scope of plans. Practical talks by capable men, followed by an open forum for the discussion of questions of peculiar interest to car dealers, will comprise the major features of the program.

At the present time there are upwards of 275 established firms in the State that will be represented.

CASSIDY GETS WORLD DISTRIBUTION OF KIMBALL JACK

NEW YORK, Aug. 1—The Edward A. Cassidy Co., 30 East Forty-second Street, has just completed arrangements with the F. W. Mann Co., Milford, Mass., to market the Kimball ball-bearing automobile jack throughout the world on a long-term exclusive sales contract. Plans now under way for an extension of manufacturing facilities will increase the annual production to 150,000 jacks. Further extensions will be made as needed.

The Kimball jack will be standard equipment on the Franklin car, the H. H. Franklin Mfg. Co., Syracuse, having contracted for 10,000, and several other equipment contracts are pending.

The addition of this jack to the Cassidy line is in accord with this company's policy to handle only accessories of a "shelf" character and for concerns which have large production capacity. This is the fourth item to be carried, the others being the Long horn, the G. P. muffler cut-out and the Cassco engine-driven tire pump.

Studebaker Enlarging

DETROIT, July 27—The Studebaker Corp. has awarded contracts for construction work and will add 40,000 sq. ft. to the floor space of the Studebaker factories. An extra floor, 50 x 300 ft., is to be added to one of the three-story buildings at present used as a warehouse for materials so that the Studebaker plants may be better prepared to stock up on materials in advance of immediate needs.

Baby Republics Coming

ALMA, MICH., July 31—The Republic Motor Truck Co. is planning on increasing the capital stock of the company in order to take care of its increasing volume of business. Two new buildings will be erected, which will give the company altogether 200,000 sq. ft. of floor space. The company is ready to go into the light delivery truck field with a ½-ton truck which it is said will sell at a low price. The company is planning on placing 25,000 of these baby Republics on the market the first year.

Rumely Tractors For Canada

SOUTH BEND, IND., July 31—The Advance-Rumely Co. of Laporte, has received an order for seventy-five cars of tractors and separators to be shipped to Canada as soon as possible. Vern Bush of the sales department stated that the order in dollars and cents would amount to over $150,000.

Union Truck Perfects Organization

BAY CITY, MICH., July 26—The Union Truck Co. perfected its organization to-day, when officers were elected as follows: James R. Tanner, president; H. E. Woodworth, vice-president and general manager; E. C. Tibbetts, secretary, and George Beaulier, treasurer. These officers and C. B. Chatfield, H. E. Buck and W. H. Boutell form the board of directors. The first trucks made by the new company were completed recently and given some severe road tests, and it is said they gave entire satisfaction to its designer.

Allen Holds Dealer Convention

FOSTORIA, OHIO, July 29—The dealers of the Allen Motor Co. held their annual convention at the factory last week. New cars were inspected and business and sales sessions were held.

Factory News of the Week

Firestone Holds Outing

AKRON, July 29—Twenty-five thousand people of Akron attended the annual outing to-day of the Firestone Tire & Rubber Co. The affair was a large family picnic of the Firestone employees and their families.

Four-Wheel Tractor Organizes

CLINTONVILLE, WIS., July 31—The Four-Wheel Tractor Co., a new Wisconsin corporation organized in Antigo, Wis., recently, and later purchased by Clintonville interests, has perfected its organization by the election of the following officers and directors: President, Charles Topp; vice-president, W. H. Finney; secretary, A. B. Mayhew; treasurer, L. C. Larson; directors, F. M. Hyde, Henry Zarling and Alex Stewart. A plant is now being provided and production will start within 30 days.

New Factory For Continental Truck

SUPERIOR, WIS., July 31—The Continental Motor Truck Co., Superior, Wis., expects to break ground Aug. 1 for its new $50,000 factory. The shop is to be ready Nov. 1, at which time the output of trucks will be largely increased.

Collins a G. M. C. Director

NEW YORK, July 28—At a meeting of the board of directors of the General Motors Co. yesterday, R. H. Collins, Flint, Mich., was elected a director to fill the vacancy caused by the resignation of Thomas Neal of Detroit. Collins has been general sales manager of the Buick Motor Co. The General Motors Co. closes its fiscal year this month with net earnings of approximately $25,000,000. The earnings amounted to $14,457,000 in 1915, while its output this year has been 120,000 cars, or an increase of 44,000 over the 76,000 built last year.

A balance of $25,000,000 this year would, after the payment of the dividends on the 7 per cent preferred stock, leave a surplus for the common equivalent to $146 a share, as against $81 a share a year ago.

Victor Rubber Increases Stock

SPRINGFIELD, OHIO, July 29—The Victor Rubber Co. has increased its capital stock from $300,000 to $750,000 and has declared a 100 per cent dividend on its common. The production of pneumatic tires is to be doubled.

Texas Road Under Way

DALLAS, TEX., Aug. 1—D. E. Colb, secretary of the Texas State Highway Association, has completed the log of the proposed paved highway from Laredo to Texarkana, nearly 800 miles.

Prescott a Stutz Director

NEW YORK, July 29—Sherburne Prescott has been elected a director of the Stutz Motor Corp., succeeding K. R. Howard.

STEWART-WARNER BUYS V-RAY PLUG BUSINESS

CHICAGO, July 29—The Stewart-Warner Speedometer Corp. has bought the V-Ray Co., Marshalltown, Iowa, and will extend the manufacture of that product.

Scripps-Booth Is Reorganized

NEW YORK, July 29—The Scripps-Booth Corp. has been organized under the laws of the State of New York with a capitalization of 70,000 shares, no par value, of which 25,000 shares are to be offered for public subscription at $50 per share. The Scripps-Booth Corp. is a consolidation of the Scripps-Booth Co., Detroit, and the Sterling Motor Co., also of Detroit. The corporation will have no bonds or preferred stock and no floating indebtedness.

Goodrich Earns $4,800,000 in 6 Months

AKRON, July 29—The B. F. Goodrich Co. during the first 6 months of 1916 made net profits of $4,800,000, an increase of 20 per cent over the same period of 1915. The increase alone is equal to the 6 months' dividend on the $27,000,000 preferred.

Holt-Welles Recapitalizes

NEW YORK, Aug. 1—The Holt-Welles Co., in order to expand its business, has increased its capital from $50,000 to $200,000. The company makes Browne and Browne-Branford carbureters. W. M. Williams has been made assistant secretary-treasurer and Henry Soeldner production manager. E. H. Stickels is president and sales manager, Paul Welles secretary, Calvert Holt treasurer, and Arthur B. Browne laboratory engineer.

PROMINENT MEN OF THE TRADE WHO ASSUME NEW DUTIES

Otis C. Friend has resigned as sales manager of the Mitchell-Lewis Motor Co., Racine, Wis., to become vice-president and general manager of the new United Motors Co., New York, beginning the middle of August.

B. C. Swinehart, for the past 3 years manager of the Philadelphia branch of the Republic Rubber Co., has been recalled to the main factory at Youngstown, where he will take charge of the solid tire sales. H. D. Worthington, assistant manager of the Philadelphia branch, succeeds Swinehart.

Charles S. Pike has been made sales promotion manager of the Paige-Detroit Motor Car Co., Detroit.

J. J. Kennedy has resigned as manager of the Motor Car Accessory Department of the Interstate Electric Co., New Orleans.

H. S. Frame, until recently with the sales department of the Maxwell Motor Co., Detroit, has been appointed to take charge of the retail department of the Maxwell company's store in Kansas City, Mo.

L. P. Murray, sales manager, has been made Middle Western manager of S. F. Bowser & Co., Fort Wayne. J. G. Rodman has been promoted to Central manager. E. J. Little has been made Eastern manager and E. H. Briggs becomes executive assistant.

Don T. Hastings has recently moved to Indianapolis from Detroit to act as consulting engineer to the Empire Automobile Co. Hastings was previously assistant chief engineer to the Hupp Motor Car Co.

Charles Eastman, formerly with the Utah-Idaho Motor Company of Salt Lake City and a well-known figure in automobile circles on the Pacific Coast, has been made manager of the new factory branch of the Garford Motor Truck Company in Seattle, Wash.

Packard Earnings $6,000,000

DETROIT, July 31—In a comparative statement of its capitalization, net worth, dividends and surplus for the 7 years beginning Sept. 1, 1909, and ending at the close of the current fiscal year on Aug. 31, 1916, the Packard Motor Car Co. shows aggregate earnings of $18,636,506, after deducting more than $9,000,000 for depreciation during this 7-year period. The earnings for the present fiscal year, 9 months of which are based on actual figures and the last 3 months estimated, amount to $6,050,000, as compared with $2,769,518 for the year 1914 to 1915, which was the best previous earnings for the company.

In offering this statement, F. R. Robinson, comptroller of the company, points out that the figures for the fiscal year—1915 to 1916—contain a conservative estimate covering the last quarter of the year and after paying regular preferred and common cash dividend and deducting the 10 per cent common stock dividend declared Feb. 1, 1916, and the 50 per cent common stock dividend to be distributed Aug. 1, the balance in the surplus account the end of the year will undoubtedly exceed $6,376,344. In the 7 years the capital stock of the company has been increased from $5,000,000 common and $5,000,000 preferred to $11,656,930 common stock and $8,000,000 preferred. In the same period the net assets have increased from $10,766,847 to $26,003,274.

Ford Adds 34 New Branches

DETROIT, July 31—The Ford Motor Co. marks an expansion of its branch sales and service organizations by the addition of thirty-four new branches, effective Aug. 1.

The cities selected for the Ford establishments are: Akron, Ohio, Albany, N. Y., Troy, N. Y., Baltimore, Birmingham, Ala., Des Moines, Duluth, Fresno, Cal., Grand Rapids, Havana, Cuba, New Orleans, Oakland, Peoria, Ill., Richmond, Rochester, N. Y., Sacramento, St. Joseph, Mo., Salt Lake City, San Antonio, Scranton, Pa., Sioux City, Iowa, Spokane, Springfield, Mass., Tacoma, Toledo, Trenton, N. Y., Worcester, Mass., and Youngstown, Ohio.

With the establishment of these new branches the total number reaches eighty-five, besides the twenty-eight branch factories.

Leak-Proof is Enlarging

ST. LOUIS, July 31—The McQuay-Norris Mfg. Co. is doubling the capacity and floor space of its piston ring factory.

Fisher to Issue $5,000,000

DETROIT, July 22—To care for further expansion, the Fisher Body Co., already the largest body manufacturing concern in the world, is preparing to float an issue of $5,000,000 of preferred stock through Hallgarten & Co., New York bankers.

Krit Dividend About 40 Per Cent

DETROIT, July 22—Final reports in the case of the Krit Motor Sales Co., the bankrupt selling organization for Krit cars, were filed in the United States District Court here this week and show approximately $13,000 of the company's assets remaining on hand. The total receipts for the sale of the property were $81,126 and the total disbursements $67,883, of the latter $65,047 representing dividends to creditors amounting to 37½ per cent. Indications are that another dividend of about 4 per cent will be declared before the closing of the trusteeship. The Union Trust Co. was appointed trustee, following the placing of the company in bankruptcy on Dec. 28, 1914.

New Factory for Howe Light

CHICAGO, Aug. 1—The Howe Mfg. Co., maker of a spot light, is to have a new factory, giving a manufacturing capacity of 200,000 lamps annually.

Emerson-Brantingham to Make Bodies

ST. LOUIS, Aug. 1—The Emerson-Brantingham Co., Rockford, Ill., notifies customers here that after Aug. 1 the company will make motor car bodies and fenders. The company for 62 years has been a maker of farm implements and recently has been making Big Four and Emerson tractors, which will be continued.

A DIAMOND IN A LEAD SETTING?

Ridiculous! Of course it is. Who would put a rare stone in a cheap setting?

The setting of the

GOLDEN GIANT

is in harmony with the exceptional quality of this Spark Plug.

There could be no more fitting setting for the Golden Giant than its shell of 24 K gold plate. It proclaims to Spark Plug buyers **that the maker is proud of his product.**

The Gold Plate compels favorable attention. It will attract first, and then sell Spark Plugs for you.

Let us tell you how bigger profits and bigger sales have been made by all dealers who have already bought the **gold-plated plug with the Blue Adamant Insulator.** Let us tell you how every dealer who sells this Plug is satisfying his customers for all time, and making friends by each sale.

Write your name across the face of this ad, then mail it to us. It is the cue for us to lay our proposition before you.

500 NEW DEALERS for Velie Biltwel Six

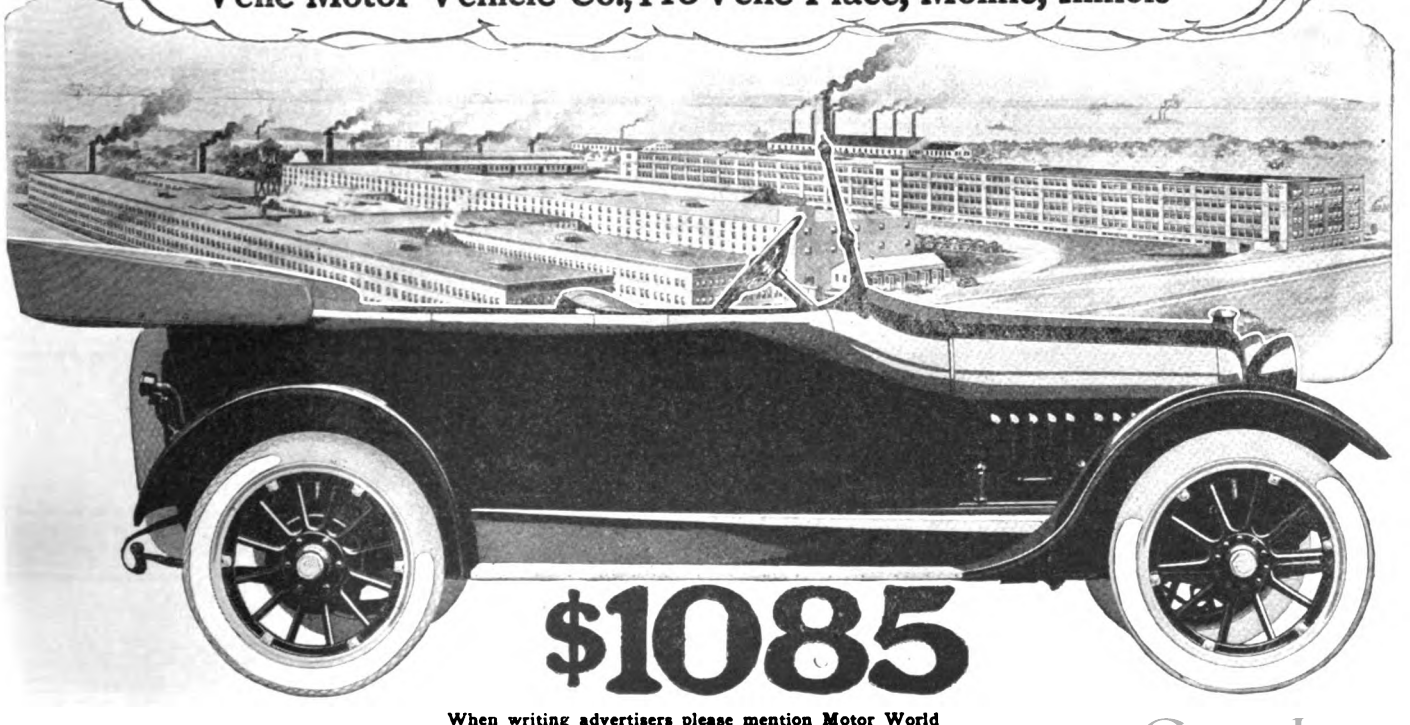
Bigger—Better—More Power

ALTHOUGH the announcement of the new 1917 Velie Biltwel cars was made barely a month ago, more than five hundred new dealers have joined the Velie Sales organization. Buyers and dealers alike are eagerly seeking the opportunity to obtain the new six with its remarkable specifications and equipment at $1085. Such is the demand aroused by the famous Velie values—even greater this year than before. Only the splendid facilities of A Mile of Velie Factory can cope with the market which this year will *again* triple the Velie output.

1917 Cars Are Now Going to Velie Dealers

We are taking care of the demand—promptly and efficiently. Even now the new 1917 Velie Biltwel is appearing in large numbers in every community where the Velie has a connection.

Eight Body Styles Give the Dealers a Complete Line



Model 28, five-passenger Touring, $1085; four-passenger Companionable Roadster (original and exceptionally smart type), $1085; two-passenger Roadster, $1065. Enclosed bodies, exclusively designed: Cabriolet, $1485; Touring Sedan, $1685; four-passenger Sociable Coupe, $1750; Town Car, $2200. Model 27, seven-passenger Six, completes the line; 124-inch wheelbase, 45 h. p., 35x4½-inch tires, 4-speed transmission. The utmost in luxury and refinement. Price $1550.

Such an opportunity was never presented to dealers before. **A car of strictly high-priced features—at low price.** Backed by one of the most substantial organizations in America. Presented by a big national advertising campaign. If your territory is open write or wire for our liberal proposition. Better still, come to the factory.

Velie Biltwel Features Explain the Unprecedented Demand

Six-cylinder Velie-Continental Motor
Timken Axles front and rear
Removable Cylinder Head for Inspection
Helical Gears in Motor—no chains
Enclosed Multiple Dry Disc Clutch
Hotchkiss Drive—no noisy torque arm
Spiral Gears in Floating Rear Axle
Remy Automatic Ignition—Push Button Starter
Double Bulb Headlights—Dashlight
All Wires Enclosed in Metal Conduits
Rear Gasoline Tank—Vacuum Feed
Simple Rocking Gear Shift Lever
Luxurious Body, 4 inches longer
Unusually Wide Doors—easy to enter
High-Grade Leather Upholstery
Cushions Deep Tufted—Real Curled Hair
Long, Flexible Underslung Springs
Expanding Tire Holder—no Straps
Mirror Body Finish—20 Operations Deep
Light of Weight—Economical of Fuel
Everything in and on—ready for the road

Velie Motor Vehicle Co., 115 Velie Place, Moline, Illinois

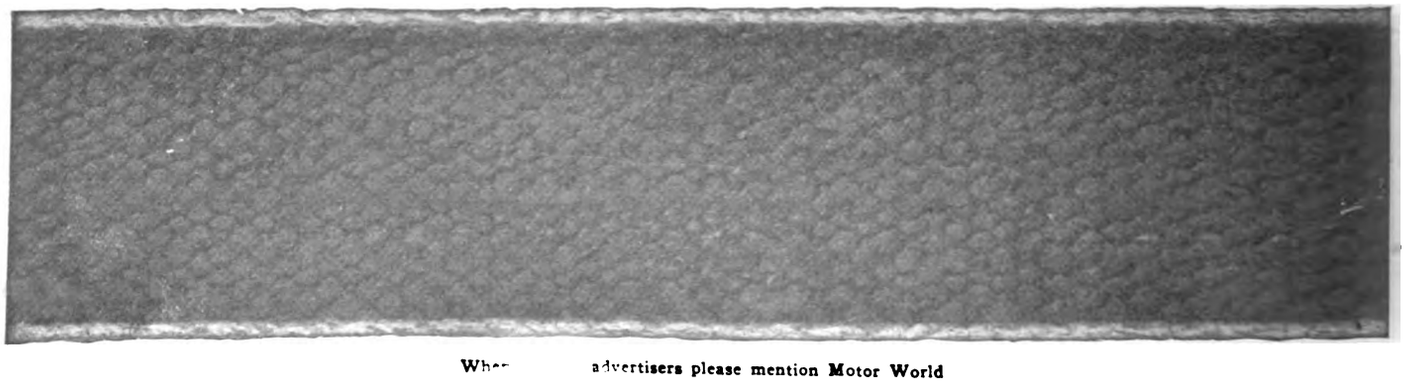
To dealers living in Hilly Country:

How would you like the agency in your locality for a car that was a poor hill-climber?

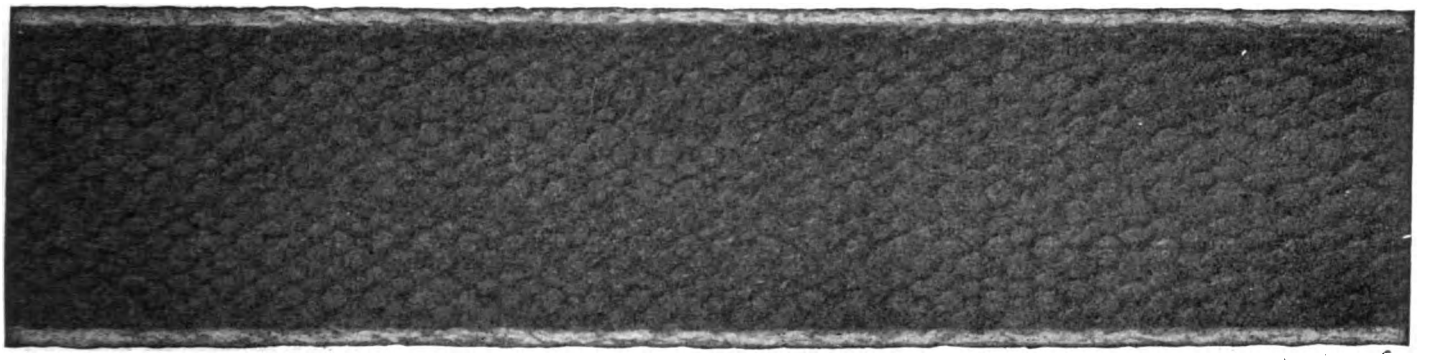
"No thanks," say you.

Very well. ***That's*** off.



But, for every car that's going ***up*** your nearby hills, there's another coming ***down***.

"Well," you say, "What of it?"



This is the what-of-it:

A hilly-country dealer pushing a poor hill-climber is no more ridiculous than a hilly-country dealer who pushes poor-**WEAR**ing brake lining!

Up hills on power—***down*** hills on brake-lining. Maybe that thought never struck you before. Think it over.

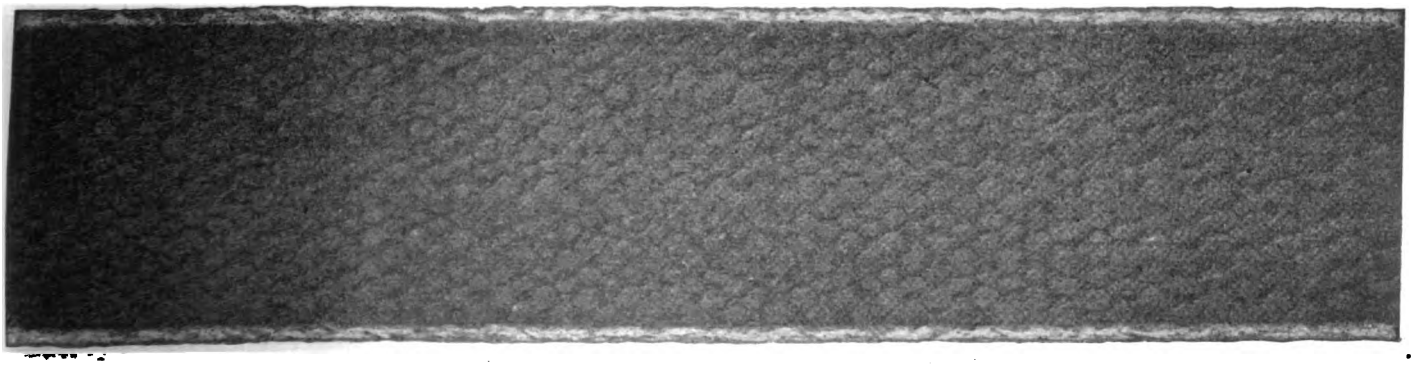
Digitized by Google

The sales of Raybestos today are strongest in hilly sections. That is because motorists in those districts are quickest to learn where **WEAR** ***is*** and where **WEAR** ***isn't.***

Raybestos **WEAR** means far more than mere "safety" down hills. It guarantees ***continued*** safety—as far as a brake lining can. And continued safety is the only kind that counts.

The Raybestos method of weaving and the Raybestos secret compound are found in no other brake lining. That's worth keeping in mind.

Living in hilly country, the chances are that you already know all this. But there are still a few dealers who are taking unnecessary risks in recommending some other brake lining.



We thought they might appreciate having the matter brought to their attention.

The Royal Equipment Company **Bridgeport, Conn.**

LIBERTY SIX

$1095

Largest Dealers Indorse New Liberty. $3,500,000 Worth of Liberty Cars Already Bought

The best indorsement a motor car could ask is the approval of big distributors. The New Liberty has won this approval.

Sales amounting to over three and a half million dollars since the first Liberty announcement is a tremendous expression of dealer confidence.

The dealers who selected the Liberty stand high in the industry. Successful dealers from New York, Detroit, Chicago, Los Angeles, San Francisco, Sioux City, Pittsburgh, Toledo, Rochester, Columbus, New Orleans, Minneapolis and other important centers investigated the Liberty.

They came. They saw. They signed. These men recognize the selling value of the Dominant Liberty Owner Features

Here's the big reason why they chose the Liberty:

"Never in my whole sixteen years' automobile experience have I been able to create such a distinctly favorable impression by a demonstration as I am doing every day with this car."—John F. Plummer, New York.

We propose to continue to select good dealers and to stick by them! We are interested in talking with dealers who have a regard for the character of the car they sell and the company they represent.

Five-Passenger Touring Car, $1095. Four-Passenger Close Coupled, $1095. Also Several Distinctive Types of Enclosed Cars

Liberty Motor Car Company, Detroit

PERCY OWEN, President

LIBERTY

Dominant Liberty Owner Features

1—Light operating balanced clutch—it yields to a finger pressure.

2—Powerful brakes, but easy operating—a pull with one finger on the emergency brake will instantly stop the car.

3—Silent and smooth gear shift—no clashing of gears.

4—Ease of steering.

5—Cradled comfort of spring suspension on rough roads.

6—Wide doors.

7—Comfortable, wide and deep seats—genuine leather. You sit IN the Liberty not ON it.

8—Plenty of room and comfort in driving position.

9—A windshield weather-tight all around.

10—Advanced ideas in simplicity of chassis design.

11—Beautiful body lines, long and low.

Continental-Liberty motor, 3 1-8 x 4 1-2, Timken axles and bearings; Delco equipment; wheelbase, 115 inches; 32 x 4 tires.

Five-Passenger Touring Car, $1095.

Four-Passenger Close Coupled, $1095.

Also distinctive types of Enclosed Cars.

10,850 MILES KING WITHOUT A STO

109,000,000 SPARKS

delivered continuously for 14 days and nights by the *same set of plugs.* This is the wonderful record of

Champion

"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"

DEPENDABLE SPARK PLUGS

in the eight cylinder KING'S 10,850 mile non-motor-stop run under OFFICIAL A. A. A. sanction and supervision.

Never before in the annals of motordom has there been such an amazing spark plug achievement. 10,850 miles amounts to about two years' service in the hands of the average owner, and in all that mileage **not a single one of the eight** CHAMPION SPARK PLUGS **was changed.** When it is considered that never for one instant did the motor stop to cool or rest, this record is almost incredible—but the American Automobile Association officially attests its truth.

For 336 continuous hours, day and night, through rain, fog and boiling sun, the eight CHAMPION PLUGS supplied the vital sparks regularly and efficiently, as the KING MOTOR reeled off this great mileage at an average rate of 34 miles per hour, excluding stops.

The appreciation of the King Motor Car Company is shown in the telegram sent at the end of the run:

> "It is the most wonderful official Spark Plug Record of a stock car under triple A supervision, and speaks volumes for your product."

The CHAMPION'S right to the phrase "Dependable Spark Plugs" is proved a thousand times over by this trial, and it is this dependability, endurance and all-around service that has made the CHAMPION Standard Equipment on not only the KING but four out of every five of the new cars being built this season.

When you replace a plug insist on the CHAMPION. Your dealer best knows which model is best suited for your particular motor. Be sure the word "CHAMPION" is on the porcelain, not merely on the box.

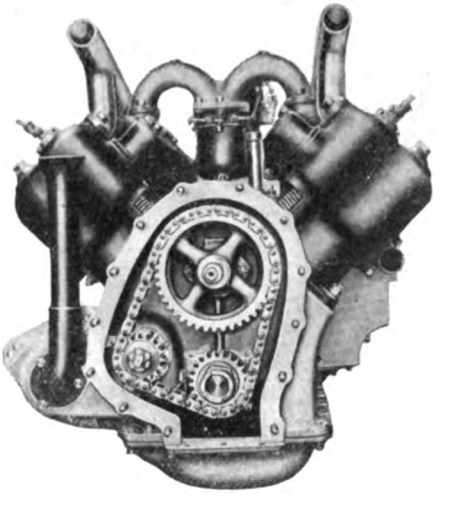
Link-Belt Silent Chain

The Standard Engine Transmission in the King "8" Motor



The uniform, smooth operation of the cam shaft and generator of the King "8" depends largely upon the Link-Belt Silent Chain Drive.

The reason for the great success of Link-Belt Silent Chain is its peculiar patented Pin-Bushed-Joint construction—a round pin and two case-hardened semi-circular bushings. You can identify Link-Belt Silent Chain readily.

Look for the name on the washers. Look for the liners in the joints.

The Pin-Bushed Joint of Link-Belt Silent Chain, showing the pin, bushings and washers.

King "8" Motor, showing Link-Belt Chain.

Strand of Link-Belt Silent Chain.

More than 35 operations and inspections are required before Link-Belt Silent Chain is ready for use on the King motor—every operation is safeguarded through inspection or test. It is made almost as carefully as a watch, in the most modern and efficient chain plant in the world by highly proficient workmen on specialized machinery. Everything humanly possible is done to secure perfection. Upon the accuracy with which the chain is made depends the quiet operation of the drive.

Silent Chain Drives for King Motors fully described in King Book No. 254.

Remember, to identify Link-Belt Silent Chain: Look for the name on the Washers. Look for the Liners in the Joints.

Atwater Kent Ignition

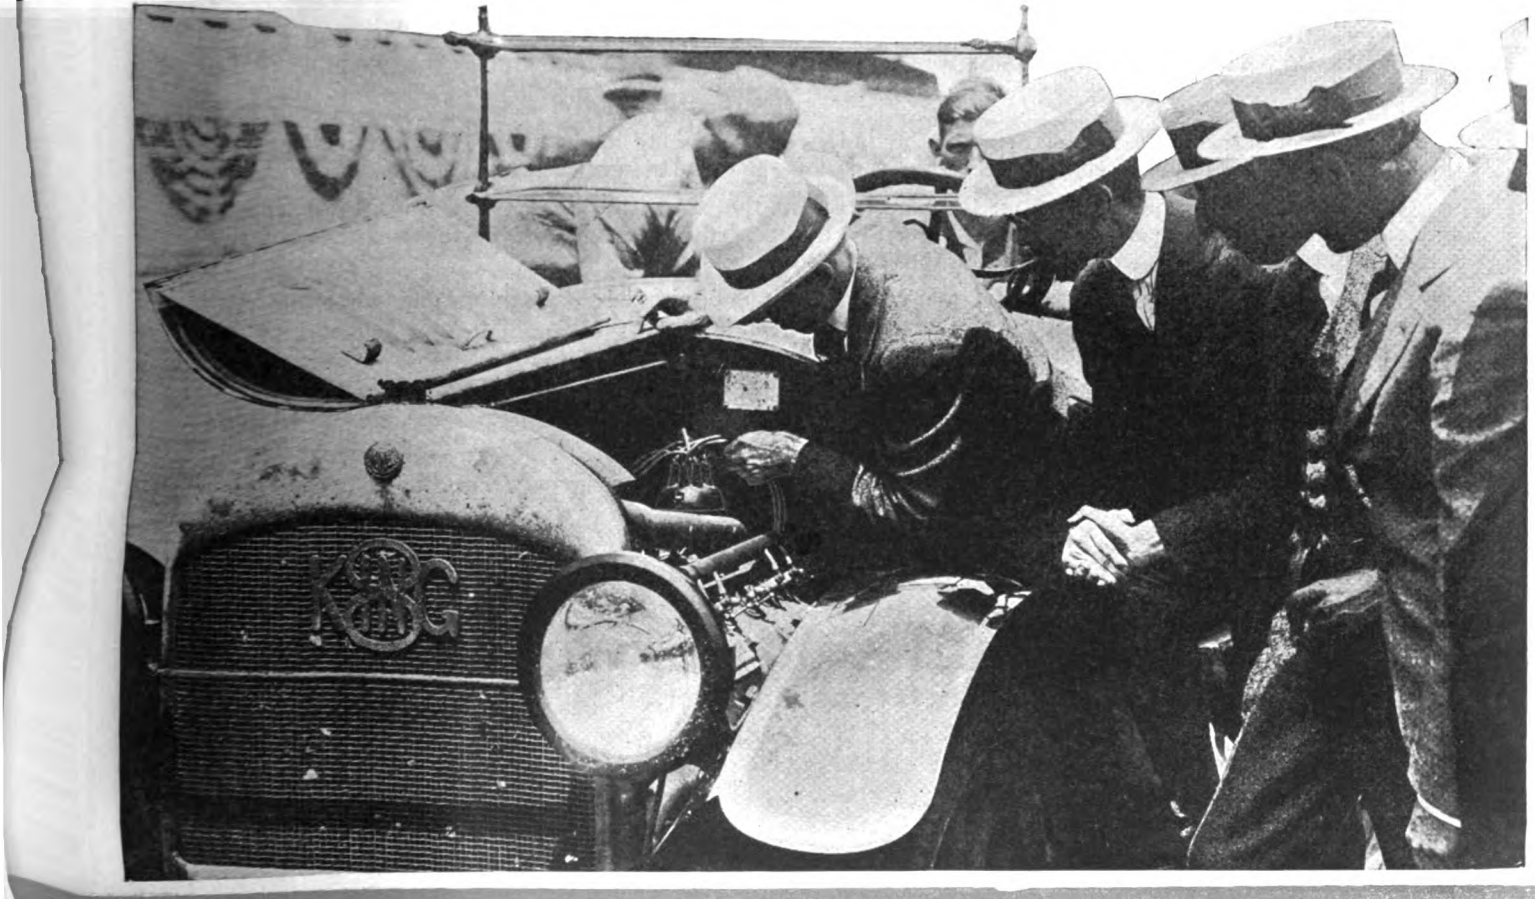
Perfect Score in King Test

(See Newspapers and Automobile Publications)

11,000 miles (including idling distance) in 14 days without stopping motor *and without touching any part of the Ignition System!*

One hundred and twenty millions (120,000,000) of accurately timed, uniformly hot sparks at the rate of 1360 sparks per minute or 22 per second—with the motor firing as smoothly at the end as at the beginning of the run—good for perhaps another ten thousand miles!

This is undoubtedly the most rigid test to which any ignition device has ever been subjected.



The performance of any car depends absolutely on the unfailing efficiency of its ignition system. That is why King and many other standard cars are ATWATER KENT equipped.

Furnished also for magneto replacement on any car—a wonderful opportunity for dealers, garages and repair shops. A special outfit for Ford cars.

President Ward and Chief Engineer Chase of King Company inspecting ignition system at end of 10,850 mile non-stop run.

PRESIDENT ARTEMAS WARD, JR., LEFT; T. P. CHASE, CHIEF ENGINEER KING MOTOR CAR CO., AT RIGHT, AND DAVID W. SOWERS, PRESIDENT SOWERS MFG. CO., CENTER

Here is an actual snap-shot showing the cylinders of the engine in the stock King car which made the ten thousand eight hundred and fifty mile non-stop car owners' service test.

We find this was snapped just after the completion of the run at the Sheepshead Bay Motor Speedway. That the run had been successful is shown by the pleased expressions on the faces of three of the men most interested in this wonderful endurance test.

We could fill this page and a good many hundred more with what we think, and what our customers have told us they think about our cylinder castings, the service they give, and the service we give, but it seems to us that the above photograph tells the story better than words.

Mr. F. E. Edward, the Technical Director of the test for the American Automobile Association, advised that the cylinder bore dimensions which he took after the run checked exactly with those taken before.

That the cylinders in question were from regular production, is shown from the fact we knew nothing about the proposed test until after the run had been started.

10,850 MILES KING WITHOUT A STOP

What Kept It Running?

A remarkable test, to be sure. And think of the part the battery played!

Ignition had to be perfect—otherwise the engine might have stopped.

Lights burned almost continuously. Generator was being driven at high speed.

If the battery failed the test was ruined. But a Willard doesn't fail, even in a severe test.

The stock Willard Battery used was on the job every minute. Water was added three times, as a precaution. And the battery finished in the same perfect condition as it started.

F. E. Edwards, chairman of the run and a member of the A. A. A. Contest Committee, together with Messrs. Shipper and Elsner of this committee, inspected the battery after the test and pronounced it excellent.

The distance covered—10,850 miles—equals two years' mileage of the average owner. But the battery never failed. And why?

Because every part of the electrical system worked in harmony. A Willard Battery will do its work always under those conditions. It depends on the system as much as the system depends upon it. The name Willard is an assurance of battery performance—in hard test or ordinary driving.

Willard Storage Battery Company

Cleveland, Ohio

New York: 228-230 W. 58th St.
Chicago: 2524-30 So. Wabash Ave.
Atlanta, Ga.: 8-10 East Cain St.
San Francisco: 1433 Bush St.
Minneapolis: 36-38-40 So. 10th St.
Indianapolis: 316-318 No. Illinois St.
Detroit: 736-38-40 Woodward Ave.

Direct Factory Representative in Philadelphia, Boston, Dallas, Kansas City, Omaha, Seattle. Service Stations in All Principal Cities in the United States and Canada.

Willard Storage Batteries are for sale by car dealers, garages and all Willard Service Stations and Factory Branches.

10,850 MILES KING WITHOUT A STOP

CAPACITY GURNEY ENDURANCE

ANOTHER DEMONSTRATION

A King "8" Stock Car equipped with

GURNEY
BALL BEARINGS

recently ran for two weeks without once stopping the motor, covering nearly 11,000 miles at an average speed of over 32 miles an hour.

At the end of this remarkable test—approximating two years' actual service—the bearings were in perfect condition, ready to repeat the trip.

These recurring demonstrations of superiority in actual service explain the presence of Gurney Bearings wherever the highest character of performance is required.

WARD LEONARD

Automatic Controller for Dynamo Lighting & Electric System

on the KING Car

Standard King Equipment since electric systems have been used

THIS controller automatically keeps the dynamo output constant, regardless of engine and dynamo speeds. ***It causes*** a ***continuous charging*** of the ***battery*** to its ***maximum capacity*** and ***automatically maintains*** the ***battery*** in a ***perfectly charged condition.***

Ward Leonard Electric Co.
MT. VERNON, N. Y.

A. J. FISK, Western Representative
967 Woodward Avenue
Detroit, Mich.

In covering this distance of 10,850 miles without a motor stop the dynamo armature on the King car revolved 382,200,000 times. There are 28 commutator bars and two brushes. Therefore there were 10,700,000,000 bar-passes under each carbon brush. At the end of the test the dynamo commutator and brushes had a perfect polish—positive proof that the Ward Leonard controller operated perfectly and prevented the slightest overload in amperes or heat at any time.

During the two-week test the controller and dynamo did not require or receive the slightest inspection. All Ward Leonard controllers are shipped sealed. The seal of the controller on the King record breaking car has not been broken.

0,850 M[illegible] KING W[illegible] A S

1172.76 Miles Average per Gallon of Gargoyle Mobiloil "A"

THAT is the remarkable record made by Gargoyle Mobiloil "A" in the King car in its two weeks non-stop test, over a distance of 10,850 miles.

It is one of the most complete demonstrations of the importance of Correct Lubrication that has ever been made. Gargoyle Mobiloil "A" is the oil specified in the Vacuum Oil Company's Chart of Recommendations for the King "Eight."

Only a correctly lubricated motor could have stood up under this test.

Only a lubricant of the highest lubricating efficiency and of the correct body could have shown such a remarkable wearing quality.

Why We Recommend Gargoyle Mobiloil "A" for King "Eight"

Gargoyle Mobiloil "A" is a rich, medium body oil exactly suited to the design, construction and lubricating system of the King motor.

Its body and character suit the piston design and clearance limits of the King motor.

It is of sufficient body to seal the piston rings and maintain compression under the heat of service.
